However, this argument at least seems to prove only that it belongs to the class of goods, and not that it does so more than anything else: for every good is more choicewortby in combination with some other than when taken quite alone. In fact, it is by just such an argument that Plato proves that Pleasure is not the Chief Good:[3] “For,” says he, “the life of Pleasure is more choice-worthy in combination with Practical Wisdom than apart from it; but, if the compound better then simple Pleasure cannot be the Chief Good; because the very Chief Good cannot by any addition become choice-worthy than it is already:” and it is obvious that nothing else can be the Chief Good, which by combination with any of the things in themselves good comes to be more choice-worthy.

What is there then of such a nature? (meaning, of course, whereof we can partake; because that which we are in search of must be such).

As for those who object that “what all aim at is not necessarily good,” I confess I cannot see much in what they say, because what all _think_ we say _is_. And he who would cut away this ground from under us will not bring forward things more dependable: because if the argument had rested on the desires of irrational creatures there might have been something in what he says, but, since the rational also desire Pleasure, how can his objection be allowed any weight? and it may be that, even in the lower animals, there is some natural good principle above themselves which aims at the good peculiar to them.

Nor does that seem to be sound which is urged respecting the argument from the contrary: I mean, some people say “it does not follow that Pleasure must be good because Pain is evil, since evil may be opposed to evil, and both evil and good to what is indifferent:” now what they say is right enough in itself but does not hold in the present instance. If both Pleasure and Pain were bad both would have been objects of avoidance; or if neither then neither would have been, at all events they must have fared alike: but now men do plainly avoid the one as bad and choose the other as good, and so there is a complete opposition.

Nor again is Pleasure therefore excluded from being good because it does not belong to the class of qualities:[4] the acts of Virtue are not qualities, neither is Happiness [yet surely both are goods].

Again, they say the Chief Good is limited but Pleasure unlimited, in that it admits of degrees.

Now if they judge this from the act of feeling Pleasure then the same thing will apply to justice and all the other virtues,[5] in respect of which clearly it is said that men are more or less of such and such characters (according to the different virtues), they are more just or more brave, or one may practise justice and self-mastery more or less.

If, on the other hand, they judge in respect of the Pleasures themselves then it may be they miss the true cause, namely that some are unmixed and others mixed: for just as health being in itself limited, admits of degrees, why should not Pleasure do so and yet be limited? in the former case we account for it by the fact that there is not the same adjustment of parts in all men, nor one and the same always in the same individual: but health, though relaxed, remains up to a certain point, and differs in degrees; and of course the same may be the case with Pleasure.

Again, assuming the Chief Good to be perfect and all Movements[6] and Generations imperfect, they try to shew that Pleasure is a Movement and a Generation.

Yet they do not seem warranted in saying even that it is a Movement: for to every Movement are thought to belong swiftness and slowness, and if not in itself, as to that of the universe, yet relatively: but to Pleasure neither of these belongs: for though one may have got quickly into the state Pleasure, as into that of anger, one cannot be in the state quickly,[7] nor relatively to the state of any other person; but we can walk or grow, and so on, quickly or slowly.

Of course it is possible to change into the state of Pleasure quickly or slowly, but to act in the state (by which, I mean, have the perception of Pleasure) quickly, is not possible.

And how can it be a Generation? because, according to notions generally held, not _any_thing is generated from _any_thing, but a thing resolves itself into that out of which it was generated: whereas of that of which Pleasure is a Generation Pain is a Destruction.

Again, they say that Pain is a lack of something suitable to nature and Pleasure a supply of it.

But these are affections of the body: now if Pleasure really is a supplying of somewhat suitable to nature, that must feel the Pleasure in which the supply takes place, therefore the body of course: yet this is not thought to be so: neither then is Pleasure a supplying, only a person of course will be pleased when a supply takes place just as he will be pained when he is cut short.

This notion would seem to have arisen out of the Pains and Pleasures connected with natural nourishment; because, when people have felt a lack and so have had Pain first, they, of course, are pleased with the supply of their lack.

But this is not the case with all Pleasures: those attendant on mathematical studies, for instance, are unconnected with any Pain; and of such as attend on the senses those which arise through the sense of Smell; and again, many sounds, and sights, and memories, and hopes: now of what can these be Generations? because there has been here no lack of anything to be afterwards supplied.

And to those who bring forward disgraceful Pleasures we may reply that these are not really pleasant things; for it does not follow because they are pleasant to the ill-disposed that we are to admit that they are pleasant except to them; just as we should not say that those things are really wholesome, or sweet, or bitter, which are so to the sick, or those objects really white which give that impression to people labouring under ophthalmia.[8]

Or we might say thus, that the Pleasures are choice-worthy but not as derived from these sources: just as wealth is, but not as the price of treason; or health, but not on the terms of eating anything however loathsome.

Or again, may we not say that Pleasures differ in kind? those derived from honourable objects, for instance are different from those arising from disgraceful ones; and it is not possible to experience the Pleasure of the just man without being just, or of the musical man without being musical; and so on of others.

The distinction commonly drawn between the friend and the flatterer would seem to show clearly either that Pleasure is not a good, or that there are different kinds of Pleasure: for the former is thought to have good as the object of his intercourse, the latter Pleasure only; and this last is reproached, but the former men praise as having different objects in his intercourse.

Again, no one would choose to live with a child's intellect all his life through, though receiving the highest possible Pleasure from such objects as children receive it from; or to take Pleasure in doing any of the most disgraceful things, though sure never to be pained.

There are many things also about which we should be diligent even though they brought no Pleasure; as seeing, remembering, knowing, possessing the various Excellences; and the fact that Pleasures do follow on these naturally makes no difference, because we should certainly choose them even though no Pleasure resulted from them.

It seems then to be plain that Pleasure is not the Chief Good, nor is every kind of it choice-worthy: and that there are some choice-worthy in themselves, differing in kind, _i.e._ in the sources from which they are derived. Let this then suffice by way of an account of the current maxims respecting Pleasure and Pain.

Chapter III.

Now what it is, and how characterised, will be more plain if we take up the subject afresh.

An act of Sight is thought to be complete at any moment; that is to say, it lacks nothing the accession of which subsequently will complete its whole nature.

Well, Pleasure resembles this: because it is a whole, as one may say; and one could not at any moment of time take a Pleasure whose whole nature would be completed by its lasting for a longer time. And for this reason it is not a Movement: for all Movement takes place in time of certain duration and has a certain End to accomplish; for instance, the Movement of house-building[9] is then only complete when the builder has produced what he intended, that is, either in the whole time [necessary to complete the whole design], or in a given portion.[10] But all the subordinate Movements are incomplete in the parts of the time, and are different in kind from the whole movement and from one another (I mean, for instance, that the fitting the stones together is a Movement different from that of fluting the column, and both again from the construction of the Temple as a whole: but this last is complete as lacking nothing to the result proposed; whereas that of the basement, or of the triglyph, is incomplete, because each is a Movement of a part merely).

As I said then, they differ in kind, and you cannot at any time you choose find a Movement complete in its whole nature, but, if at all, in the whole time requisite.

And so it is with the Movement of walking and all others: for, if motion be a Movement from one place to another place, then of it too there are different kinds, flying, walking, leaping, and such-like. And not only so, but there are different kinds even in walking: the where-from and where-to are not the same in the whole Course as in a portion of it; nor in one portion as in another; nor is crossing this line the same as crossing that: because a man is not merely crossing a line but a line in a given place, and this is in a different place from that.

Of Movement I have discoursed exactly in another treatise. I will now therefore only say that it seems not to be complete at any given moment; and that most movements are incomplete and specifically different, since the whence and whither constitute different species.

But of Pleasure the whole nature is complete at any given moment: it is plain then that Pleasure and Movement must be different from one another, and that Pleasure belongs to the class of things whole and complete. And this might appear also from the impossibility of moving except in a definite time, whereas there is none with respect to the sensation of Pleasure, for what exists at the very present moment is a kind of “whole.”

From these considerations then it is plain that people are not warranted in saying that Pleasure is a Movement or a Generation: because these terms are not applicable to all things, only to such as are divisible and not “wholes:” I mean that of an act of Sight there is no Generation, nor is there of a point, nor of a monad, nor is any one of these a Movement or a Generation: neither then of Pleasure is there Movement or Generation, because it is, as one may say, “a whole.”[11]

Chapter IV.

Now since every Percipient Faculty works upon the Object answering to it, and perfectly the Faculty in a good state upon the most excellent of the Objects within its range (for Perfect Working is thought to be much what I have described; and we will not raise any question about saying “the Faculty” works, instead of, “that subject wherein the Faculty resides”), in each case the best Working is that of the Faculty in its best state upon the best of the Objects answering to it. And this will be, further, most perfect and most pleasant: for Pleasure is attendant upon every Percipient Faculty, and in like manner on every intellectual operation and speculation; and that is most pleasant which is most perfect, and that most perfect which is the Working of the best Faculty upon the most excellent of the Objects within its range.

And Pleasure perfects the Working. But Pleasure does not perfect it in the same way as the Faculty and Object of Perception do, being good; just as health and the physician are not in similar senses causes of a healthy state.

And that Pleasure does arise upon the exercise of every Percipient Faculty is evident, for we commonly say that sights and sounds are pleasant; it is plain also that this is especially the case when the Faculty is most excellent and works upon a similar Object: and when both the Object and Faculty of Perception are such, Pleasure will always exist, supposing of course an agent and a patient.

Furthermore, Pleasure perfects the act of Working not in the way of an inherent state but as a supervening finish, such as is bloom in people at their prime. Therefore so long as the Object of intellectual or sensitive Perception is such as it should be and also the Faculty which discerns or realises the Object, there will be Pleasure in the Working: because when that which has the capacity of being acted on and that which is apt to act are alike and similarly related, the same result follows naturally.

How is it then that no one feels Pleasure continuously? is it not that he wearies, because all human faculties are incapable of unintermitting exertion; and so, of course, Pleasure does not arise either, because that follows upon the act of Working. But there are some things which please when new, but afterwards not in the like way, for exactly the same reason: that at first the mind is roused and works on these Objects with its powers at full tension; just as they who are gazing stedfastly at anything; but afterwards the act of Working is not of the kind it was at first, but careless, and so the Pleasure too is dulled.

Again, a person may conclude that all men grasp at Pleasure, because all aim likewise at Life and Life is an act of Working, and every man works at and with those things which also he best likes; the musical man, for instance, works with his hearing at music; the studious man with his intellect at speculative questions, and so forth. And Pleasure perfects the acts of Working, and so Life after which men grasp. No wonder then that they aim also at Pleasure, because to each it perfects Life, which is itself choice-worthy. (We will take leave to omit the question whether we choose Life for Pleasure’s sake of Pleasure for Life’s sake;

because these two plainly are closely connected and admit not of separation; since Pleasure comes not into being without Working, and again, every Working Pleasure perfects.)

And this is one reason why Pleasures are thought to differ in kind, because we suppose that things which differ in kind must be perfected by things so differing: it plainly being the case with the productions of Nature and Art; as animals, and trees, and pictures, and statues, and houses, and furniture; and so we suppose that in like manner acts of Working which are different in kind are perfected by things differing in kind. Now Intellectual Workings differ specifically from those of the Senses, and these last from one another; therefore so do the Pleasures which perfect them.

This may be shown also from the intimate connection subsisting between each Pleasure and the Working which it perfects: I mean, that the Pleasure proper to any Working increases that Working; for they who work with Pleasure sift all things more closely and carry them out to a greater degree of nicety; for instance, those men become geometricians who take Pleasure in geometry, and they apprehend particular points more completely: in like manner men who are fond of music, or architecture, or anything else, improve each on his own pursuit, because they feel Pleasure in them. Thus the Pleasures aid in increasing the Workings, and things which do so aid are proper and peculiar: but the things which are proper and peculiar to others specifically different are themselves also specifically different.

Yet even more clearly may this be shown from the fact that the Pleasures arising from one kind of Workings hinder other Workings; for instance, people who are fond of flute-music cannot keep their attention to conversation or discourse when they catch the sound of a flute; because they take more Pleasure in flute-playing than in the Working they are at the time engaged on; in other words, the Pleasure attendant on flute-playing destroys the Working of conversation or discourse.

Much the same kind of thing takes place in other cases, when a person is engaged in two different Workings at the same time: that is, the pleasanter of the two keeps pushing out the other, and, if the disparity in pleasantness be great, then more and more till a man even ceases altogether to work at the other.

This is the reason why, when we are very much pleased with anything whatever, we do nothing else, and it is only when we are but moderately pleased with one occupation that we vary it with another: people, for instance, who eat sweetmeats in the theatre do so most when the performance is indifferent.

Since then the proper and peculiar Pleasure gives accuracy to the Workings and makes them more enduring and better of their kind, while those Pleasures which are foreign to them mar them, it is plain there is a wide difference between them: in fact, Pleasures foreign to any Working have pretty much the same effect as the Pains proper to it,[12] which, in fact, destroy the Workings; I mean, if one man dislikes writing, or another calculation, the one does not write, the other does not calculate; because, in each case, the Working is attended with some Pain: so then contrary effects are produced upon the Workings by the Pleasures and Pains proper to them, by which I mean those which arise upon the Working, in itself, independently of any other circumstances. As for the Pleasures foreign to a Working, we have said already that they produce a similar effect to the Pain proper to it; that is they destroy the Working, only not in like way.

Well then, as Workings differ from one another in goodness and badness, some being fit objects of choice, others of avoidance, and others in their nature indifferent, Pleasures are similarly related; since its own proper Pleasure attends or each Working: of course that proper to a good Working is good, that proper to a bad, bad: for even the desires for what is noble are praiseworthy, and for what is base blameworthy.

Furthermore, the Pleasures attendant on Workings are more closely connected with them even than the desires after them: for these last are separate both in time and nature, but the former are close to the Workings, and so indivisible from them as to raise a question whether the Working and the Pleasure are identical; but Pleasure does not seem to be an Intellectual Operation nor a Faculty of Perception, because that is absurd; but yet it gives some the impression of being the same from not being separated from these.

As then the Workings are different so are their Pleasures; now Sight differs from Touch in purity, and Hearing and Smelling from Taste; therefore, in like manner, do their Pleasures; and again, Intellectual Pleasures from these Sensual, and the different kinds both of Intellectual and Sensual from one another.

It is thought, moreover, that each animal has a Pleasure proper to itself, as it has a proper Work; that Pleasure of course which is attendant on the Working. And the soundness of this will appear upon particular inspection: for horse, dog, and man have different

Pleasures; as Heraclitus says, an ass would sooner have hay than gold; in other words, provender is pleasanter to asses than gold. So then the Pleasures of animals specifically different are also specifically different, but those of the same, we may reasonably suppose, are without difference.

Yet in the case of human creatures they differ not a little: for the very same things please some and pain others: and what are painful and hateful to some are pleasant to and liked by others. The same is the case with sweet things: the same will not seem so to the man in a fever as to him who is in health: nor will the invalid and the person in robust health have the same notion of warmth. The same is the case with other things also.

Now in all such cases that is held to _be_ which impresses the good man with the notion of being such and such; and if this is a second maxim (as it is usually held to be), and Virtue, that is, the Good man, in that he is such, is the measure of everything, then those must be real Pleasures which gave him the impression of being so and those things pleasant in which he takes Pleasure. Nor is it at all astonishing that what are to him unpleasant should give another person the impression of being pleasant, for men are liable to many corruptions and marrings; and the things in question are not pleasant really, only to these particular persons, and to them only as being thus disposed.

Well of course, you may say, it is obvious that we must assert those which are confessedly disgraceful to be real Pleasures, except to depraved tastes: but of those which are thought to be good what kind, or which, must we say is _The Pleasure of Man?_ is not the answer plain from considering the Workings, because the Pleasures follow upon these?

If then there be one or several Workings which belong to the perfect and blessed man, the Pleasures which perfect these Workings must be said to be specially and properly _The Pleasures of Man;_ and all the rest in a secondary sense, and in various degrees according as the Workings are related to those highest and best ones.

Chapter V.

Now that we have spoken about the Excellences of both kinds, and Friendship in its varieties, and Pleasures, it remains to sketch out Happiness, since we assume that to be the one End of all human things: and we shall save time and trouble by recapitulating what was stated before.

Well then, we said that it is not a State merely; because, if it were, it might belong to one who slept all his life through and merely vegetated, or to one who fell into very great calamities: and so, if these possibilities displease us and we would rather put it into the rank of some kind of Working (as was also said before), and Workings are of different kinds (some being necessary and choice-worthy with a view to other things, while others are so in themselves), it is plain we must rank Happiness among those choice-worthy for their own sakes and not among those which are so with a view to something further: because Happiness has no lack of anything but is self-sufficient.

By choice-worthy in themselves are meant those from which nothing is sought beyond the act of Working: and of this kind are thought to be the actions according to Virtue, because doing what is noble and excellent is one of those things which are choice-worthy for their own sake alone.

And again, such amusements as are pleasant; because people do not choose them with any further purpose: in fact they receive more harm than profit from them, neglecting their persons and their property. Still the common run of those who are judged happy take refuge in such pastimes, which is the reason why they who have varied talent in such are highly esteemed among despots; because they make themselves pleasant in those things which these aim at, and these accordingly want such men.

Now these things are thought to be appurtenances of Happiness because men in power spend their leisure herein: yet, it may be, we cannot argue from the example of such men: because there is neither Virtue nor Intellect necessarily involved in having power, and yet these are the only sources of good Workings: nor does it follow that because these men, never having tasted pure and generous Pleasure, take refuge in bodily ones, we are therefore to believe them to be more choice-worthy: for children too believe that those things are most excellent which are precious in their eyes.

We may well believe that as children and men have different ideas as to what is precious so too have the bad and the good: therefore, as we have many times said, those things are really precious and pleasant which seem so to the good man: and as to each individual that Working is most choice-worthy which is in accordance with his own state to the good man that is so which is in accordance with Virtue.

Happiness then stands not in amusement; in fact the very notion is absurd of the End being amusement, and of one's toiling and enduring hardness all one's life long with a view to amusement: for everything in the world, so to speak, we choose with some further End in view, except Happiness, for that is the End comprehending all others. Now to take pains and to labour with a view to amusement is plainly foolish and very childish: but to amuse one's self with a view to steady employment afterwards, as Anacharsis says, is thought to be right: for amusement is like rest, and men want rest because unable to labour continuously.

Rest, therefore, is not an End, because it is adopted with a view to Working afterwards.

Again, it is held that the Happy Life must be one in the way of Excellence, and this is accompanied by earnestness,[13] and stands not in amusement. Moreover those things which are done in earnest, we say, are better than things merely ludicrous and joined with amusement: and we say that the Working of the better part, or the better man, is more earnest; and the Working of the better is at once better and more capable of Happiness.

Then, again, as for bodily Pleasures, any ordinary person, or even a slave, might enjoy them, just as well as the best man living but Happiness no one supposes a slave to share except so far as it is implied in life: because Happiness stands not in such pastimes but in the Workings in the way of Excellence, as has also been stated before.

Chapter VI.

Now if Happiness is a Working in the way of Excellence of course that Excellence must be the highest, that is to say, the Excellence of the best Principle. Whether then this best Principle is Intellect or some other which is thought naturally to rule and to lead and to conceive of noble and divine things, whether being in its own nature divine or the most divine of all our internal Principles, the Working of this in accordance with its own proper Excellence must be the perfect Happiness.

That it is Contemplative has been already stated: and this would seem to be consistent with what we said before and with truth: for, in the first place, this Working is of the highest kind, since the Intellect is the highest of our internal Principles and the subjects with which it is conversant the highest of all which fall within the range of our knowledge.

Next, it is also most Continuous: for we are better able to contemplate than to do anything else whatever, continuously.

Again, we think Pleasure must be in some way an ingredient in Happiness, and of all Workings in accordance with Excellence that in the way of Science is confessedly most pleasant: at least the pursuit of Science is thought to contain Pleasures admirable for purity and permanence; and it is reasonable to suppose that the employment is more pleasant to those who have mastered, than to those who are yet seeking for, it.[14]

And the Self-Sufficiency which people speak of will attach chiefly to the Contemplative Working: of course the actual necessaries of life are needed alike by the man of science, and the just man, and all the other characters; but, supposing all sufficiently supplied with these, the just man needs people towards whom, and in concert with whom, to practise his justice; and in like manner the man of perfected self-mastery, and the brave man, and so on of the rest; whereas the man of science can contemplate and speculate even when quite alone, and the more entirely he deserves the appellation the more able is he to do so: it may be he can do better for having fellow-workers but still he is certainly most Self-Sufficient.

Again, this alone would seem to be rested in for its own sake, since nothing results from it beyond the fact of having contemplated; whereas from all things which are objects of moral action we do mean to get something beside the doing them, be the same more or less.

Also, Happiness is thought to stand in perfect rest;[15] for we toil that we may rest, and war that we may be at peace. Now all the Practical Virtues require either society or war for their Working, and the actions regarding these are thought to exclude rest; those of war entirely, because no one chooses war, nor prepares for war, for war's sake: he would indeed be thought a bloodthirsty villain who should make enemies of his friends to secure the existence of fighting and bloodshed. The Working also of the statesman excludes the idea of rest, and, beside the actual work of government, seeks for power and dignities or at least Happiness for the man himself and his fellow-citizens: a Happiness distinct[16] from the national Happiness, which we evidently seek as being different and distinct.

If then of all the actions in accordance with the various virtues those of policy and war are pre-eminent in honour and greatness, and these are restless, and aim at some further End and are not choice-worthy for their own sakes, but the Working of the Intellect, being apt for contemplation, is thought to excel in earnestness, and to aim at no End beyond itself and to have Pleasure of its own

which helps to increase the Working, and if the attributes of Self-Sufficiency, and capacity of rest, and unweariedness (as far as is compatible with the infirmity of human nature), and all other attributes of the highest Happiness, plainly belong to this Working, this must be perfect Happiness, if attaining a complete duration of life, which condition is added because none of the points of Happiness is incomplete.

But such a life will be higher than mere human nature, because a man will live thus, not in so far as he is man but in so far as there is in him a divine Principle: and in proportion as this Principle excels his composite nature so far does the Working thereof excel that in accordance with any other kind of Excellence: and therefore, if pure Intellect, as compared with human nature, is divine, so too will the life in accordance with it be divine compared with man's ordinary life.

Yet must we not give ear to those who bid one as man to mind only man's affairs, or as mortal only mortal things; but, so far as we can, make ourselves like immortals and do all with a view to living in accordance with the highest Principle in us, for small as it may be in bulk yet in power and preciousness it far more excels all the others.

In fact this Principle would seem to constitute each man's "Self," since it is supreme and above all others in goodness it _would_ be absurd then for a man not to choose his own life but that of some other.

And here will apply an observation made before, that whatever is proper to each is naturally best and pleasantest to him: such then is to Man the life in accordance with pure Intellect (since this Principle is most truly Man), and if so, then it is also the happiest.

And second in degree of Happiness will be that Life which is in accordance with the other kind of Excellence, for the Workings in accordance with this are proper to Man: I mean, we do actions of justice, courage, and the other virtues, towards one another, in contracts, services of different kinds, and in all kinds of actions and feelings too, by observing what is befitting for each: and all these plainly are proper to man. Further, the Excellence of the Moral character is thought to result in some points from physical circumstances, and to be, in many, very closely connected with the passions.

Again, Practical Wisdom[17] and Excellence of the Moral character are very closely united; since the Principles of Practical Wisdom are in accordance with the Moral Virtues and these are right when they accord with Practical Wisdom.

These moreover, as bound up with the passions, must belong to the composite nature, and the Excellences or Virtues of the composite nature are proper to man: therefore so too will be the life and Happiness which is in accordance with them. But that of the Pure Intellect is separate and distinct: and let this suffice upon the subject, since great exactness is beyond our purpose,

It would seem, moreover, to require supply of external goods to a small degree, or certainly less than the Moral Happiness: for, as far as necessaries of life are concerned, we will suppose both characters to need them equally (though, in point of fact, the man who lives in society does take more pains about his person and all that kind of thing; there will really be some little difference), but when we come to consider their Workings there will be found a great difference.

I mean, the liberal man must have money to do his liberal actions with, and the just man to meet his engagements (for mere intentions are uncertain, and even those who are unjust make a pretence of _wishing_ to do justly), and the brave man must have power, if he is to perform any of the actions which appertain to his particular Virtue, and the man of perfected self-mastery must have opportunity of temptation, else how shall he or any of the others display his real character?

(By the way, a question is sometimes raised, whether the moral choice or the actions have most to do with Virtue, since it consists in both: it is plain that the perfection of virtuous action requires both: but for the actions many things are required, and the greater and more numerous they are the more.) But as for the man engaged in Contemplative Speculation, not only are such things unnecessary for his Working, but, so to speak, they are even hindrances: as regards the Contemplation at least; because of course in so far as he is Man and lives in society he chooses to do what Virtue requires, and so he will need such things for maintaining his character as Man though not as a speculative philosopher.

And that the perfect Happiness must be a kind of Contemplative Working may appear also from the following consideration: our conception of the gods is that they are above all blessed and happy: now what kind of Moral actions are we to attribute to them? those of justice? nay, will they not be set in a ridiculous light if represented as forming contracts, and restoring deposits, and so on? well then, shall we picture them performing brave actions, withstanding objects of fear and meeting dangers, because it is noble to do so? or liberal ones? but to whom shall they be giving? and further, it is absurd to think they have money or anything of the kind. And as for actions of perfected self-mastery, what can theirs be? would it not be a degrading praise that they have no bad desires?

In short, if one followed the subject into all details all the circumstances connected with Moral actions would appear trivial and unworthy of Gods.

Still, every one believes that they live, and therefore that they Work because it is not supposed that they sleep their time away like Endymion: now if from a living being you take away Action, still more if Creation, what remains but Contemplation? So then the Working of the Gods, eminent in blessedness, will be one apt for Contemplative Speculation; and of all human Workings that will have the greatest capacity for Happiness which is nearest akin to this.

A corroboration of which position is the fact that the other animals do not partake of Happiness, being completely shut out from any such Working.

To the Gods then all their life is blessed; and to men in so far as there is in it some copy of such Working, but of the other animals none is happy because it in no way shares in Contemplative Speculation.

Happiness then is co-extensive with this Contemplative Speculation, and in proportion as people have the act of Contemplation so far have they also the being happy, not incidentally, but in the way of Contemplative Speculation because it is in itself precious.

Chapter VII.

So Happiness must be a kind of Contemplative Speculation; but since it is Man we are speaking of he will need likewise External Prosperity, because his Nature is not by itself sufficient for Speculation, but there must be health of body, and nourishment, and tendance of all kinds.

However, it must not be thought, because without external goods a man cannot enjoy high Happiness, that therefore he will require many and great goods in order to be happy: for neither Self-sufficiency, nor Action, stand in Excess, and it is quite possible to act nobly without being ruler of sea and land, since even with moderate means a man may act in accordance with Virtue.

And this may be clearly seen in that men in private stations are thought to act justly, not merely no less than men in power but even more: it will be quite enough that just so much should belong to a man as is necessary, for his life will be happy who works in accordance with Virtue.

Solon perhaps drew a fair picture of the Happy, when he said that they are men moderately supplied with external goods, and who have achieved the most noble deeds, as he thought, and who have lived with perfect self-mastery: for it is quite possible for men of moderate means to act as they ought.

Anaxagoras also seems to have conceived of the Happy man not as either rich or powerful, saying that he should not wonder if he were accounted a strange man in the judgment of the multitude: for they judge by outward circumstances of which alone they have any perception.

And thus the opinions of the Wise seem to be accordant with our account of the matter: of course such things carry some weight, but truth, in matters of moral action, is judged from facts and from actual life, for herein rests the decision. So what we should do is to examine the preceding statements by referring them to facts and to actual life, and when they harmonise with facts we may accept them, when they are at variance with them conceive of them as mere theories.

Now he that works in accordance with, and pays observance to, Pure Intellect, and tends this, seems likely to be both in the best frame of mind and dearest to the Gods: because if, as is thought, any care is bestowed on human things by the Gods then it must be reasonable to think that they take pleasure in what is best and most akin to themselves (and this must be the Pure Intellect); and that they requite with kindness those who love and honour this most, as paying observance to what is dear to them, and as acting rightly and nobly. And it is quite obvious that the man of Science chiefly combines all these: he is therefore dearest to the Gods, and it is probable that he is at the same time most Happy.

Thus then on this view also the man of Science will be most Happy.

Chapter VIII.

Now then that we have said enough in our sketchy kind of way on these subjects; I mean, on the Virtues, and also on Friendship and Pleasure; are we to suppose that our original purpose is completed? Must we not rather acknowledge, what is commonly said, that in matters of moral action mere Speculation and Knowledge is not the real End but rather Practice: and if so, then neither in

respect of Virtue is Knowledge enough; we must further strive to have and exert it, and take whatever other means there are of becoming good.

Now if talking and writing were of themselves sufficient to make men good, they would justly, as Theognis observes have reaped numerous and great rewards, and the thing to do would be to provide them: but in point of fact, while they plainly have the power to guide and stimulate the generous among the young and to base upon true virtuous principle any noble and truly high-minded disposition, they as plainly are powerless to guide the mass of men to Virtue and goodness; because it is not their nature to be amenable to a sense of shame but only to fear; nor to abstain from what is low and mean because it is disgraceful to do it but because of the punishment attached to it: in fact, as they live at the beck and call of passion, they pursue their own proper pleasures and the means of securing them, and they avoid the contrary pains; but as for what is noble and truly pleasurable they have not an idea of it, inasmuch as they have never tasted of it.

Men such as these then what mere words can transform? No, indeed! it is either actually impossible, or a task of no mean difficulty, to alter by words what has been of old taken into men's very dispositions: and, it may be, it is a ground for contentment if with all the means and appliances for goodness in our hands we can attain to Virtue.

The formation of a virtuous character some ascribe to Nature, some to Custom, and some to Teaching. Now Nature's part, be it what it may, obviously does not rest with us, but belongs to those who in the truest sense are fortunate, by reason of certain divine agency,

Then, as for Words and Precept, they, it is to be feared, will not avail with all; but it may be necessary for the mind of the disciple to have been previously prepared for liking and disliking as he ought; just as the soil must, to nourish the seed sown. For he that lives in obedience to passion cannot hear any advice that would dissuade him, nor, if he heard, understand: now him that is thus how can one reform? in fact, generally, passion is not thought to yield to Reason but to brute force. So then there must be, to begin with, a kind of affinity to Virtue in the disposition; which must cleave to what is honourable and loath what is disgraceful. But to get right guidance towards Virtue from the earliest youth is not easy unless one is brought up under laws of such kind; because living with self-mastery and endurance is not pleasant to the mass of men, and specially not to the young. For this reason the food, and manner of living generally, ought to be the subject of legal regulation, because things when become habitual will not be disagreeable.

Yet perhaps it is not sufficient that men while young should get right food and tendance, but, inasmuch as they will have to practise and become accustomed to certain things even after they have attained to man's estate, we shall want laws on these points as well, and, in fine, respecting one's whole life, since the mass of men are amenable to compulsion rather than Reason, and to punishment rather than to a sense of honour.

And therefore some men hold that while lawgivers should employ the sense of honour to exhort and guide men to Virtue, under the notion that they will then obey who have been well trained in habits; they should impose chastisement and penalties on those who disobey and are of less promising nature; and the incurable expel entirely: because the good man and he who lives under a sense of honour will be obedient to reason; and the baser sort, who grasp at pleasure, will be kept in check, like beasts of burthen by pain. Therefore also they say that the pains should be such as are most contrary to the pleasures which are liked.

As has been said already, he who is to be good must have been brought up and habituated well, and then live accordingly under good institutions, and never do what is low and mean, either against or with his will. Now these objects can be attained only by men living in accordance with some guiding Intellect and right order, with power to back them.

As for the Paternal Rule, it possesses neither strength nor compulsory power, nor in fact does the Rule of any one man, unless he is a king or some one in like case: but the Law has power to compel, since it is a declaration emanating from Practical Wisdom and Intellect. And people feel enmity towards their fellow-men who oppose their impulses, however rightly they may do so: the Law, on the contrary, is not the object of hatred, though enforcing right rules.

The Lacedæmonian is nearly the only State in which the framer of the Constitution has made any provision, it would seem, respecting the food and manner of living of the people: in most States these points are entirely neglected, and each man lives just as he likes, ruling his wife and children Cyclops-Fashion.

Of course, the best thing would be that there should be a right Public System and that we should be able to carry it out: but, since as a public matter those points are neglected, the duty would seem to devolve upon each individual to contribute to the cause of

Virtue with his own children and friends, or at least to make this his aim and purpose: and this, it would seem, from what has been said, he will be best able to do by making a Legislator of himself: since all public systems, it is plain, are formed by the instrumentality of laws and those are good which are formed by that of good laws: whether they are written or unwritten, whether they are applied to the training of one or many, will not, it seems, make any difference, just as it does not in music, gymnastics, or any other such accomplishments, which are gained by practice.

For just as in Communities laws and customs prevail, so too in families the express commands of the Head, and customs also: and even more in the latter, because of blood-relationship and the benefits conferred: for there you have, to begin with, people who have affection and are naturally obedient to the authority which controls them.

Then, furthermore, Private training has advantages over Public, as in the case of the healing art: for instance, as a general rule, a man who is in a fever should keep quiet, and starve; but in a particular case, perhaps, this may not hold good; or, to take a different illustration, the boxer will not use the same way of fighting with all antagonists.

It would seem then that the individual will be most exactly attended to under Private care, because so each will be more likely to obtain what is expedient for him. Of course, whether in the art of healing, or gymnastics, or any other, a man will treat individual cases the better for being acquainted with general rules; as, “that so and so is good for all, or for men in such and such cases:” because general maxims are not only said to be but are the object-matter of sciences: still this is no reason against the possibility of a man’s taking excellent care of some _one_ case, though he possesses no scientific knowledge but from experience is exactly acquainted with what happens in each point; just as some people are thought to doctor themselves best though they would be wholly unable to administer relief to others. Yet it may seem to be necessary nevertheless, for one who wishes to become a real artist and well acquainted with the theory of his profession, to have recourse to general principles and ascertain all their capacities: for we have already stated that these are the object-matter of sciences.

If then it appears that we may become good through the instrumentality of laws, of course whoso wishes to make men better by a system of care and training must try to make a Legislator of himself; for to treat skilfully just any one who may be put before you is not what any ordinary person can do, but, if any one, he who has knowledge; as in the healing art, and all others which involve careful practice and skill.

Will not then our next business be to enquire from what sources, or how one may acquire this faculty of Legislation; or shall we say, that, as in similar cases, Statesmen are the people to learn from, since this faculty was thought to be a part of the Social Science? Must we not admit that the Political Science plainly does not stand on a similar footing to that of other sciences and faculties? I mean, that while in all other cases those who impart the faculties and themselves exert them are identical (physicians and painters for instance) matters of Statesmanship the Sophists profess to teach, but not one of them practises it, that being left to those actually engaged in it: and these might really very well be thought to do it by some singular knack and by mere practice rather than by any intellectual process: for they neither write nor speak on these matters (though it might be more to their credit than composing speeches for the courts or the assembly), nor again have they made Statesmen of their own sons or their friends.

One can hardly suppose but that they would have done so if they could, seeing that they could have bequeathed no more precious legacy to their communities, nor would they have preferred, for themselves or their dearest friends, the possession of any faculty rather than this.

Practice, however, seems to contribute no little to its acquisition; merely breathing the atmosphere of politics would never have made Statesmen of them, and therefore we may conclude that they who would acquire a knowledge of Statesmanship must have in addition practice.

But of the Sophists they who profess to teach it are plainly a long way off from doing so: in fact, they have no knowledge at all of its nature and objects; if they had, they would never have put it on the same footing with Rhetoric or even on a lower: neither would they have conceived it to be “an easy matter to legislate by simply collecting such laws as are famous because of course one could select the best,” as though the selection were not a matter of skill, and the judging aright a very great matter, as in Music: for they alone, who have practical knowledge of a thing, can judge the performances rightly or understand with what means and in what way they are accomplished, and what harmonises with what: the unlearned must be content with being able to discover whether the result is good or bad, as in painting.

Now laws may be called the performances or tangible results of Political Science; how then can a man acquire from these the faculty of Legislation, or choose the best? we do not see men made physicians by compilations: and yet in these treatises men endeavour to give not only the cases but also how they may be cured, and the proper treatment in each case, dividing the various bodily habits. Well, these are thought to be useful to professional men, but to the unprofessional useless. In like manner it may be that collections of laws and Constitutions would be exceedingly useful to such as are able to speculate on them, and judge what is well, and what ill, and what kind of things fit in with what others: but they who without this qualification should go through such matters cannot have right judgment, unless they have it by instinct, though they may become more intelligent in such matters.

Since then those who have preceded us have left uninvestigated the subject of Legislation, it will be better perhaps for us to investigate it ourselves, and, in fact, the whole subject of Polity, that thus what we may call Human Philosophy may be completed as far as in us lies.

First then, let us endeavour to get whatever fragments of good there may be in the statements of our predecessors, next, from the Polities we have collected, ascertain what kind of things preserve or destroy Communities, and what, particular Constitutions; and the cause why some are well and others ill managed, for after such enquiry, we shall be the better able to take a concentrated view as to what kind of Constitution is best, what kind of regulations are best for each, and what laws and customs.

NOTES

BOOK I

[1] For this term, as here employed, our language contains no equivalent expression except an inconvenient paraphrase.

There are three senses which it bears in this treatise: the first (in which it is here employed) is its strict etymological signfication “The science of Society,” and this includes everything which can bear at all upon the well-being of Man in his social capacity, “Quicquid agunt homines nostri est farrago libelli.” It is in this view that it is fairly denominated most commanding and inclusive.

The second sense (in which it occurs next, just below) is “Moral Philosophy.” Aristotle explains the term in this sense in the Rhetoric (1 2) [Greek: hae peri ta aethae pragmateia aen dikaion esti prosagoreuen politikaen]. He has principally in view in this treatise the moral training of the Individual, the branch of the Science of Society which we call Ethics Proper, bearing the same relation to the larger Science as the hewing and squaring of the stones to the building of the Temple, or the drill of the Recruit to the manoeuvres of the field. Greek Philosophy viewed men principally as constituent parts of a [Greek: polis], considering this function to be the real End of each, and this state as that in which the Individual attained his highest and most complete development.

The third sense is “The detail of Civil Government,” which Aristotle expressly states (vi. 8) was the most common acceptation of the term.

[2] Matters of which a man is to judge either belong to some definite art or science, or they do not. In the former case he is the best judge who has thorough acquaintance with that art or science, in the latter, the man whose powers have been developed and matured by education. A lame horse one would show to a farmer, not to the best and wisest man of one’s acquaintance; to the latter, one would apply in a difficult case of conduct.

Experience answers to the first, a state of self-control to the latter.

[3] In the last chapter of the third book of this treatise it is said of the fool, that his desire of pleasure is not only insatiable, but indiscriminate in its objects, παντα■θεν.

[4] ■ρ■ is a word used in this treatise in various significations. The primary one is “beginning or first cause,” and this runs through all its various uses.

“Rule,” and sometimes “Rulers,” are denoted by this term the initiative being a property of Rule.

“Principle” is a very usual signification of it, and in fact the most characteristic of the Ethics. The word Principle means “starting-point.” Every action has two beginnings, that of Resolve ο■ ■νεκα, and that of Action (■θεν ■ κιν■σις). I desire praise of men this then is the beginning of Resolve. Having considered how it is to be attained, I resolve upon some course and this Resolve is the beginning of Action.

The beginnings of Resolve, ■ρχ■ or Motives, when formally stated, are the major premisses of what Aristotle calls the συλλογ■σμοι τ■ν πρακτ■ν, i.e. the reasoning into which actions may be analysed.

Thus we say that the desire of human praise was the motive of the Pharisees, or the principle on which they acted.

Their practical syllogism then would stand thus:

Whatever gains human praise is to be done; Public praying and almsgiving gave human praise: [ergo] Public praying and almsgiving are to be done.

The major premisses may be stored up in the mind as rules of action, and this is what is commonly meant by having principles good or bad.

[5] The difficulty of this passage consists in determining the signification of the terms [Greek: gnorima aemin] and [Greek: gnorima aplos]

I have translated them without reference to their use elsewhere, as denoting respectively what _is_ and what _may_ be known. All truth is [Greek: gnorimon aplos], but that alone [Greek: aemin] which we individually realise, therefore those principles alone are [Greek: gnorima aemin] which _we have received as true_. From this appears immediately the necessity of good training as preparatory to the study of Moral Philosophy for good training in habits will either work principles into our nature, or make us capable of accepting them as soon as they are put before us; which no mere intellectual training can do. The child who has been used to obey his parents may never have heard the fifth Commandment but it is in the very texture of his nature, and the first time he hears it he will recognise it as morally true and right the principle is in his case a fact, the reason for which he is as little inclined to ask as any one would be able to prove its truth if he should ask.

But these terms are employed elsewhere (Analytica Post I cap. 11. sect. 10) to denote respectively particulars and universals The latter are so denominated, because principles or laws must be supposed to have existed before the instances of their operation. Justice must have existed before just actions, Redness before red things, but since what we meet with are the concrete instances (from which we gather the principles and laws), the particulars are said to be [Greek: gnorimotera aemin]

Adopting this signification gives greater unity to the whole passage, which will then stand thus. The question being whether we are to assume principles, or obtain them by an analysis of facts, Aristotle says, “We must begin of course with what is known but then this term denotes either particulars or universals perhaps we then must begin with particulars and hence the necessity of a previous good training in habits, etc. (which of course is beginning with particular facts), for a fact is a starting point, and if this be sufficiently clear, there will be no want of the reason for the fact in addition”

The objection to this method of translation is, that [Greek: archai] occurs immediately afterwards in the sense of “principles.”

Utere tuo judicio nihil enim impedio.

[6] Or “prove themselves good,” as in the Prior Analytics, ii 25, [Greek: apanta pisteuomen k.t l] but the other rendering is supported by a passage in Book VIII. chap. ix. [Greek: oi d’ upo ton epieikon kai eidoton oregomenoi timaes bebaiosai ten oikeian doxan ephientai peri auton chairousi de oti eisin agathoi, pisteuontes te ton legonton krisei]

[7] [Greek: thesis] meant originally some paradoxical statement by any philosopher of name enough to venture on one, but had come to mean any dialectical question. Topics, I. chap. ix.

[8] A lost work, supposed to have been so called, because containing miscellaneous questions.

[9] It is only quite at the close of the treatise that Aristotle refers to this, and allows that [Greek: theoria] constitutes the highest happiness because it is the exercise of the highest faculty in man the reason of thus deferring the statement being that till the lower, that is the moral, nature has been reduced to perfect order, [Greek: theoria] cannot have place, though, had it been held out from the first, men would have been for making the experiment at once, without the trouble of self-discipline.

[10] Or, as some think, “many theories have been founded on them.”

[11] The ■δ■α is the archetype, the ε■δος the concrete embodying the resemblance of it; hence Aristotle alludes to the theory under both names, and this is the reason for retaining the Greek terms.

[12] The list ran thus—

[Greek: to peras to apeiron | to euthu to perisson to artion | to phos to en to plethos | to tetragonon to dexion to aristeron | to aeremoun to arren to thelu | to agathon]

[13] Plato's sister's son.

[14] This is the capital defect in Aristotle's eyes, who being eminently practical, could not like a theory which not only did not necessarily lead to action, but had a tendency to discourage it by enabling unreal men to talk finely. If true, the theory is merely a way of stating facts, and leads to no action.

[15] _i.e._ the identification of Happiness with the Chief Good.

[16] _i.e._ without the capability of addition.

[17] And then Happiness would at once be shown not to be the Chief Good. It is a contradiction in terms to speak of adding to the Chief Good. See Book X. chap. 11. [Greek: delon os oud allo ouden tagathon an eiae o meta tenos ton kath' auto agathon airetoteron ginetai.]

[18] Compare Bishop Butler's account of "Human Nature as a System" in the Preface to his Sermons.

[19] _i.e._ as working or as quiescent.

[20] The mere translation of this term would convey no idea of its meaning, I have therefore retained the Greek term. It is afterwards explained to include space of time and external appliances requisite for the full development of Man's energies; here the time only is alluded to.

[21] This principle is more fully stated, with illustrations, in the Topics, I. chap. ix.

[22] Either that of the bodily senses, or that of the moral senses. "Fire burns," is an instance of the former, "Treason is odious," of the latter.

[23] I have thought it worthwhile to vary the interpretation of this word, because though "habitus" may be equivalent to all the senses of [Greek: exis], "habit" is not, at least according to our colloquial usage we commonly denote by "habit" a state formed by habituation.

[24] Another and perhaps more obvious method of rendering this passage is to apply [Greek: kalon kagathon] to things, and let them depend grammatically on [Greek: epaeboli]. It is to be remembered, however, that [Greek: kalos kagathos] bore a special and well-known meaning also the comparison is in the text more complete, and the point of the passage seems more completely brought out.

[25] "Goodness always implies the love of itself, an affection to goodness." (Bishop Butler, Sermon xiii) Aristotle describes pleasure in the Tenth Book of this Treatise as the result of any faculty of perception meeting with the corresponding object, vicious pleasure being as truly pleasure as the most refined and exalted. If Goodness then implies the love of itself, the percipient will always have its object present, and pleasure continually result.

[26] In spite of theory, we know as a matter of fact that external circumstances are necessary to complete the idea of Happiness not that Happiness is capable of addition, but that when we assert it to be identical with virtuous action we must understand that it is to have a fair field; in fact, the other side of [Greek: bios teleios].

[27] It is remarkable how Aristotle here again shelves what he considers an unpractical question. If Happiness were really a direct gift from Heaven, independently of human conduct, all motive to self-discipline and moral improvement would vanish He shows therefore that it is no depreciation of the value of Happiness to suppose it to come partly at least from ourselves, and he then goes on with other reasons why we should think with him.

[28] This term is important, what has been maimed was once perfect; he does not contemplate as possible the case of a man being born incapable of virtue, and so of happiness.

[29] [Greek] Plato. Phædon. xlvi.

[30] But why give materials and instruments, if there is no work to do?

[31] The supposed pair of ancestors.

[32] Solon says, “Call no man happy till he is dead.” He must mean either, The man when dead _is_ happy (a), or, The man when dead _may be said to have been happy_ (b). If the former, does he mean positive happiness (a)? or only freedom from unhappiness (β)? _We_ cannot allow (a), Men’s opinions disallow (β), We revert now to the consideration of (b).

[33] The difficulty was raised by the clashing of a notion commonly held, and a fact universally experienced. Most people conceive that Happiness should be abiding, every one knows that fortune is changeable. It is the notion which supports the definition, because we have therein based Happiness on the most abiding cause.

[34] I have taken το■τον α■τ■ν to refer to ■πιστημ■ν, against Magirus and the Paraphrase of Andronicus Rhodius. I would refer to Aristotle’s account of θεωρ■α in the Tenth Book, chap. vii. where he expressly says of the working of νο■ς or pure intelect, that it is “most continuous.”

[35] The term seems to be employed advisedly. The Choragus, of course, dressed his actors _for their parts;_ not according to their fancies or his own.

Hooker has (E. P. v. ixxvi. 5) a passage which seems to be an admirable paraphrase on this.

“Again, that the measure of our outward prosperity be taken by proportion with that which every man’s estate in this present life requireth. External abilities are instruments of action. It contenteth wise artificers to have their instruments proportionable to their work, rather fit for use than huge and goodly to please the eye. Seeing then the actions of a servant do not need that which may be necessary for men of calling and place in the world, neither men of inferior condition many things which greater personages can hardly want; surely they are blessed in worldly respects who have wherewith to perform what their station and place asketh, though they have no more.”

[36] Always bearing in mind that man “never continueth in one stay.”

[37] The meaning is this: personal fortunes, we have said, must be in certain weight and number to affect our own happiness, this will be true, of course, of those which are reflected on us from our friends: and these are the only ones to which the dead are supposed to be liable? add then the difference of sensibility which it is fair to presume, and there is a very small residuum of joy or sorrow.

[38] This is meant for an exhaustive division of goods, which are either so _in esse_ or _in posse_.

If _in esse_, they are either above praise, or subjects of praise. Those _in posse_, here called faculties, are good only when rightly used. Thus Rhetoric is a faculty which may be used to promote justice or abused to support villainy. Money in like way.

[39] The doubt is, whether [Greek] or [Greek] is the subject of the sentence. It is translated as above, not merely with reference to the sense of this passage, but on a comparison with a similar one in Book X. chap 8. [Greek].

[40] Eudoxus, a philosopher holding the doctrine afterwards adopted by Epicurus respecting pleasure, but (as Aristotle testifies in the Tenth Book) of irreproachable character.

[41] See the Rhetoric, Book I. chap ix.

[42] The unseen is at least as real as the seen.

[43] The terms are borrowed from the Seventh Book and are here used in their strict philosophical meaning. The [Greek: enkrates] is he who has bad or unruly appetites, but whose reason is strong enough to keep them under. The [Greek: akrates] is he whose appetites constantly prevail over his reason and previous good resolutions.

By the law of habits the former is constantly approximating to a state in which the appetites are wholly quelled. This state is called [Greek: sophrosyne], and the man in it [Greek: sophron]. By the same law the remonstrances of reason in the latter grow fainter and fainter till they are silenced for ever. This state is called [Greek: akolasia], and the man in it [Greek: akolastos].

[44] This is untranslateable. As the Greek phrase, [Greek: echein logon tinos], really denotes substituting that person’s [Greek: logos] for one’s own, so the Irrational nature in a man of self-control or perfected self-mastery substitutes the orders of Reason for

its own impulses. The other phrase means the actual possession of mathematical truths as part of the mental furniture, _i.e._ knowing them.

[45] [Greek: xin] may be taken as opposed to [Greek: energeian], and the meaning will be, to show a difference between Moral and Intellectual Excellences, that men are commended for merely having the latter, but only for exerting and using the former.

BOOK II

[1] Which we call simply virtue.

[2] For nature must of course supply the capacity.

[3] Or “as a simple result of nature.”

[4] This is done in the Sixth Book.

[5] It is, in truth, in the application of rules to particular details of practice that our moral Responsibility chiefly lies no rule can be so framed, that evasion shall be impossible. See Bishop Butler’s Sermon on the character of Balaam, and that on Self-Deceit.

[6] The words ■κ■λαστος and δειλ■ς are not used here in their strict significations to denote confirmed states of vice: the ■γκρατ■ς necessarily feels pain, because he must always be thwarting passions which are a real part of his nature; though this pain will grow less and less as he nears the point of σωφροσ■νη or perfected Self-Mastery, which being attained the pain will then and then only cease entirely. So a certain degree of fear is necessary to the _formation_ of true courage. All that is meant here is, that no habit of courage or self-mastery can be said to be matured, until pain altogether vanishes.

[7] Virtue consists in the due regulation of _all_ the parts of our nature our passions are a real part of that nature, and as such have their proper office, it is an error then to aim at their extirpation. It is true that in a perfect moral state emotion will be rare, but then this will have been gained by regular process, being the legitimate result of the law that “passive impressions weaken as active habits are strengthened, by repetition.” If musical instruments are making discord, I may silence or I may bring them into harmony in either case I get rid of discord, but in the latter I have the positive enjoyment of music. The Stoics would have the passions rooted out, Aristotle would have them cultivated to use an apt figure (whose I know not), They would pluck the blossom off at once, he would leave it to fall in due course when the fruit was formed. Of them we might truly say, _Solitudinem faciunt, pacem appellant_. See on this point Bishop Butler’s fifth Sermon, and sect. 11. of the chapter on Moral Discipline in the first part of his Analogy.

[8] I have adopted this word from our old writers, because our word _act_ is so commonly interchanged with _action_. [Greek: Praxis] (action) properly denotes the whole process from the conception to the performance. [Greek: Pragma] (fact) only the result. The latter may be right when the former is wrong if, for example, a murderer was killed by his accomplices. Again, the [Greek: praxis] may be _good_ though the [Greek: pragma] be wrong, as if a man under erroneous impressions does what would have been right if his impressions had been true (subject of course to the question how far he is guiltless of his original error), but in this case we could not call the [Greek: praxis] _right_. No repetition of [Greek: pragmata] goes to form a habit. See Bishop Butler on the Theory of Habits m the chapter on Moral Discipline, quoted above, sect. 11. “And in like manner as habits belonging to the body,” etc.

[9] Being about to give a strict logical definition of Virtue, Aristotle ascertains first what is its genus [Greek: ti estin].

[10] That is, not for _merely having_ them, because we did not make ourselves.

See Bishop Butler’s account of our nature as containing “particular propensions,” in sect. iv. of the chapter on Moral discipline, and in the Preface to the Sermons.

[11] This refers to the division of quantity ([Greek: poson]) in the Categories. Those Quantities are called by Aristotle Continuous whose parts have position relatively to one another, as a line, surface, or solid, those discrete, whose parts have no such relation, as numbers themselves, or any string of words grammatically unconnected.

[12] Numbers are in arithmetical proportion (more usually called progression), when they increase or decrease by a common difference thus, 2, 6, 10 are so, because 2 + 4 = 6, 6 + 4= 10, or _vice versa_, 10 - 4 = 6, 6 - 4 = 2.

[13] If the mina be taken at 15 oz. avoirdupois, (Dict. of G. and R. Antiquities, article _Talentum_,) we must be sadly degenerate in our gastric capacity.

[14] The two are necessary, because since the reason itself may be perverted, a man must have recourse to an external standard; we may suppose his [Greek: logos] originally to have been a sufficient guide, but when he has injured his moral perceptions in any degree, he must go out of himself for direction.

[15] This is one of the many expressions which seem to imply that this treatise is rather a collection of notes of a _vivâ voce_ lecture than a set formal treatise. “The table” of virtues and vices probably was sketched out and exhibited to the audience.

[16] Afterwards defined as “All things whose value is measured by money.”

[17] We have no term exactly equivalent; it may be illustrated by Horace’s use of the term _hiatus_:

“Quid dignum tanto feret hic promissor hiatu?” Opening the mouth wide gives a promise of something great to come, if nothing great does come, this is a case of [Greek: chaunotes] or fruitless and unmeaning _hiatus_; the transference to the present subject is easy.

[18] In like manner _we_ talk of laudable ambition, implying of course there may be that which is not laudable.

[19] An expression of Bishop Butler’s, which corresponds exactly to the definition of [Greek: nemesis] in the Rhetoric.

[20] That is, in the same genus; to be contraries, things must be generically connected: [Greek: ta pleiston allelon diestekota ton en to auto genei enantia orizontai]. Categories, iv. 15.

[21] “[Greek: Deuteros plous] is a proverb,” says the Scholiast on the Phaedo, “used of those who do anything safely and cautiously inasmuch as they who have miscarried in their first voyage, set about then: preparations for the second cautiously,” and he then alludes to this passage.

[22] That is, you must allow for the _recoil_. “Naturam expellas furca tamen usque recurret.”

P. 43, l. 2. This illustration sets in so clear a light the doctrines entertained respectively by Aristotle, Eudoxus, and the Stoics regarding pleasure, that it is worth while to go into it fully.

The reference is to Iliad iii. 154-160. The old counsellors, as Helen comes upon the city wall, acknowledge her surpassing beauty, and have no difficulty in understanding how both nations should have incurred such suffering for her sake still, fair as she is, home she must go, that she bring not ruin on themselves and their posterity.

This exactly represents Aristotle’s relation to Pleasure he does not, with Eudoxus and his followers, exalt it into the Summum Bonum (as Paris would risk all for Helen), nor does he the the Stoics call it wholly evil, as Hector might have said that the woes Helen had caused had “banished all the beauty from her cheek,” but, with the aged counsellors, admits its charms, but aware of their dangerousness resolves to deny himself, he “feels her sweetness, yet defies her thrall.”

[24] A■σθησις is here used as an analogous noun, to denote the faculty which, in respect of moral matters, discharges the same function that bodily sense does in respect of physical objects. It is worth while to notice how in our colloquial language we carry out the same analogy. We say of a transaction, that it “looks ugly,” “sounds oddly,” is a “nasty job,” “stinks in our nostrils,” is a “hard dealing.”

BOOK III

[1] A man is not responsible for being [Greek: theratos], because “particular propensions, from their very nature, must be felt, the objects of them being present, though they cannot be gratified at all, or not with the allowance of the moral principle.” But he is responsible for being [Greek: eutheratos], because, though thus formed, he “might have improved and raised himself to an higher and more secure state of virtue by the contrary behaviour, by steadily following the moral principle, supposed to be one part of his nature, and thus withstanding that unavoidable danger of defection which necessarily arose from propension, the other part of it. For by thus preserving his integrity for some time, his danger would lessen, since propensions, by being inured to submit, would do it more easily and of course and his security against this lessening danger would increase, since the moral principle would gain additional strength by exercise, both which things are implied in the notion of virtuous habits.” (From the chapter on Moral Discipline

m the Analogy, sect. iv.) The purpose of this disquisition is to refute the Necessitarians; it is resumed in the third chapter of this Book.

[2] Virtue is not only the duty, but (by the laws of the Moral Government of the World) also the interest of Man, or to express it in Bishop Butler's manner, Conscience and Reasonable self-love are the two principles in our nature which of right have supremacy over the rest, and these two lead in point of fact the same course of action. (Sermon II.)

[3] Any ignorance of particular facts affects the rightness not of the [Greek: praxis], but of the [Greek: pragma], but ignorance of _i.e._ incapacity to discern, Principles, shows the Moral Constitution to have been depraved, _i.e._ shows Conscience to be perverted, or the sight of Self-love to be impaired.

[4] [Greek: eneka] primarily denotes the relation of cause and effect all circumstances which in any way contribute to a cert result are [Greek: eneka] that result.

From the power which we have or acquire of deducing future results from present causes we are enabled to act towards, with a view to produce, these results thus [Greek: eneka] comes to mean not causation merely, but _designed_ causation and so [Greek: on eneka] is used for Motive, or final cause.

It is the primary meaning which is here intended, it would be a contradiction in terms to speak of a man's being ignorant of his own Motive of action.

When the man "drew a bow at a venture and smote the King of Israel between the joints of the harnesss" (i Kings xxii 34) he did it [Greek: eneka ton apdkteinai] the King of Israel, in the primary sense of [Greek: eneka] that is to say, the King's death was _in fact the result_, but could not have been the motive, of the shot, because the King was disguised and the shot was at a venture.

[5] Bishop Butler would agree to this: he says of settled deliberate anger, "It seems in us plainly connected with a sense of virtue and vice, of moral good and evil." See the whole Sermon on Resentment.

[6] Aristotle has, I venture to think, rather quibbled here, by using [Greek: epithumia] and its verb, equivocally as there is no following his argument without condescending to the same device, I have used our word lust in its ancient signification Ps. xxiv. 12, "What man is he that lusteth to live?"

[7] The meaning is, that the _onus probandi_ is thrown upon the person who maintains the distinction, Aristotle has a _prima facie_ case. The whole passage is one of difficulty. Card wells text gives the passage from [Greek: dokei de] as a separate argument Bekker's seems to intend al 81 ir/jd£eis as a separate argument but if so, the argument would be a mere _petitio principii_. I have adopted Cardwell's reading in part, but retain the comma at [Greek: dmpho] and have translated the last four words as applying to the whole discussion, whereas Cardwell's reading seems to restrict them to the last argument.

[8] _i.e._ on objects of Moral Choice, opinion of this kind is not the same as Moral Choice, because actions alone form habits and constitute character, opinions are in general _signs_ of character, but when they begin to be acted on they cease to be opinions, and merge in Moral Choice.

"Treason doth never prosper, what's the reason? When it doth prosper, none dare call it Treason."

[9] The introduction of the words [Greek: dia tinos] seems a mere useless repetition, as in the second chapter [Greek: en tini] added to [Greek: peri ti]. These I take for some among the many indications that the treatise is a collection of notes for lectures, and not a finished or systematic one.

[10] Suppose that three alternatives lay before a man, each of the three is of course an object of Deliberation; when he has made his choice, the alternative chosen does not cease to be in nature an object of Deliberation, but superadds the character of being chosen and so distinguished. Three men are admitted candidates for an office, the one chosen is the successful candidate, so of the three [Greek: bouleuta], the one chosen is the [Greek: bouleuton proaireton].

[11] Compare Bishop Butler's "System of Human Nature," in the Preface to the Sermons.

[12] These words, [Greek: ek tou bouleusasthai—bouleusin], contain the account of the whole mental machinery of any action. The first step is a Wish, implied in the first here mentioned, viz. Deliberation, for it has been already laid down that Deliberation has for its object-matter means to Ends supposed to be set before the mind, the next step is Deliberation, the next Decision, the last the

definite extending of the mental hand towards the object thus selected, the two last constitute [Greek: proairesis] in its full meaning. The word [Greek: orexis] means literally “a grasping at or after” now as this physically may be either vague or definite, so too may the mental act, consequently the term as transferred to the mind has two uses, and denotes either the first wish, [Greek: boulaesis], or the last definite movement, Will in its strict and proper sense. These two uses are recognised in the Rhetoric (I 10), where [Greek: orexis] is divided into [Greek: alogos] and [Greek: logistikae].

The illustration then afforded by the polities alluded to is this, as the Kings first decided and then announced their decision for acceptance and execution by their subjects, so Reason, having decided on the course to be taken, communicates its decision to the Will, which then proceeds to move [Greek: ta organika merae]. To instance in an action of the mixed kind mentioned in the first chapter, safe arrival at land is naturally desired, two means are suggested, either a certain loss of goods, or trying to save both lives and goods, the question being debated, the former is chosen, this decision is communicated to the Will, which causes the owner’s hands to throw overboard his goods: the act is denominated voluntary, because the Will is consenting, but in so denominating it, we leave out of sight how that consent was obtained. In a purely compulsory case the never gets beyond the stage of Wish, for no means are power and deliberation therefore is useless, consequently there is neither Decision nor Will, in other words, no Choice.

[13] Compare the statement in the Rhetoric, 1 10, [Greek: esti d hae men boulaeis agathou orexis (oudeis gar bouletai all ae otan oiaetho einai agathon)]

[14] A stone once set in motion cannot be recalled, because it is then placed under the operation of natural laws which cannot be controlled or altered, so too in Moral declension, there is a point at which gravitation operates irretrievably, “there is a certain bound to imprudence and misbehaviour which being transgressed, there remains no place for repentance in the natural course of things.” Bishop Butler’s Analogy, First Part, chap 11.

[15] Habits being formed by acting in a certain way under certain circumstances we can only choose how we will act not what circumstances we will have to act under.

[16] “_Moral_ Courage” is our phrase.

[17] The meaning of this passage can scarcely be conveyed except by a paraphrase.

“The object of each separate act of working is that which accords with the habit they go to form. Courage is the habit which separate acts of bravery go to form, therefore the object of these is that which accords with Courage, _i.e._ Courage itself. But Courage is honourable (which implies that the end and object of it is honour, since things are denominated according to their end and object), therefore the object of each separate act of bravery is honour.”

[18] For true Courage is required, i. Exact appreciation of danger. 2. A Proper motive for resisting fear. Each of the Spurious kinds will be found to fail in one or other, or both.

[19] This may merely mean, “who give strict orders” not to flinch, which would imply the necessity of compulsion The word is capable of the sense given above, which seems more forcible.

[20] See Book VI. chap. xiii. near the end [Greek: sokrataes aehen oun logous tas aretas oeto einai (epiotaemas gar einai pasas)]

[21] Such as the noise, the rapid movements, and apparent confusion which to an inexperienced eye and ear would be alarming. So Livy says of the Gauls, v. 37, Nata in _vanos_ tumultus gens.

[22]In Coronea in Bœotia, on the occasion of the citadel being betrayed to some Phocians. “The regulars” were Boeotian troops, the [Greek: politika] Coroneans.

[23] By the difference of tense it seems Aristotle has mixed up two things, beginning to speak of the particular instance, and then carried into the general statement again. This it is scarce worth while to imitate.

[24] The meaning of the phrase [Greek: kata sumbebaekos], as here used, in given in the Seventh Book, chap. X. [Greek: ei gar tis todi dia todi aireitai ae diokei, kath ahuto men touto diokei kai aireitai, kata sumbebaekos de to proteron].

BOOK V

[1] Each term is important to make up the character of Justice, men must have the capacity, do the acts, and do them from moral choice.

[2] But not always. [Greek: Philein], for instance, has two senses, “to love” and “to kiss,” [Greek: misein] but one. Topics, I. chap. XIII. 5.

[3] _Things_ are [Greek: homonuma] which have only their name in common, being in themselves different. The [Greek: homonumia] is _close_ therefore when the difference though real is but slight. There is no English expression for [Greek: homonumia], “equivocal” being applied to a term and not to its various significates.

[4] See Book I. chap. 1. [Greek: toiautaen de tina planaen echei kai tagatha k.t.l.]

[5] A man habitually drunk in private is viewed by our law as confining his vice to himself, and the law therefore does not attempt to touch him; a religious hermit may be viewed as one who confines his virtue to his own person.

[6] See the account of Sejanus and Livia. Tac. Annal. IV. 3.

[7] Cardwell’s text, which here gives [Greek: paranomon], yields a much easier and more natural sense. All Injustice violates law, but only the particular kinds violate equality; and therefore the unlawful : the unequal :: universal Injustice the particular _i.e._ as whole to part.

There is a reading which also alters the words within the parenthesis, but this hardly affects the gist of the passage.

[8] There are two reasons why the characters are not necessarily coincident. He is a good citizen, who does his best to carry out the [Greek: politeia] under which he lives, but this may be faulty, so therefore _pro tanto_ is he.

Again, it is sufficient, so far as the Community is concerned, that he does the _facts_ of a good man but for the perfection of his own individual character, he must do them virtuously. A man may move rightly in his social orbit, without revolving rightly on his own axis.

The question is debated in the Politics, III. 2. Compare also the distinction between the brave man, and good soldier (supra, Book III. chap. xii.), and also Bishop Butler’s first Sermon.

[9] Terms used for persons.

[10] By [Greek:——] is meant numbers themselves, 4, 20, 50, etc, by [Greek:——] these numbers exemplified, 4 horses, 20 sheep, etc.

[11] The profits of a mercantile transaction (say £1000) are to be divided between A and B, in the ratio of 2 to 3 (which is the real point to be settled); then,

A : B :: 400 : 600.

A : 400 :: B : 600 (permutando, and assuming a value for A and B, so as to make them commensurable with the respectiy sums).

A+400 : B+600 :: A : B. This represents the actual distribution; its fairness depending entirely on that of the first proportion.

[12] _i.e._ where the ratio is that of equality, thus 2 : 2 :: 40 : 40

[13] Her Majesty’s “Justices.”

[14] I have omitted the next three lines, as they seem to be out of place here, and to occur much more naturally afterwards; it not being likely that they were originally twice written, one is perhaps at liberty to give Aristotle the benefit of the doubt, and conclude that he put them where they made the best sense.

[15] This I believe to be the meaning of the passage but do not pretend to be able to get it out of the words.

[16] This is apparently contrary to what was said before, but not really so. Aristotle does not mean that the man in authority struck wrongfully, but he takes the extreme case of simple Reciprocation, and in the second case, the man who strikes one in authority commits two offences, one against the person (and so far they are equal), and another against the office.

[17] χ■ρις denotes, 1st, a kindly feeling issuing in a gratuitous act of kindness, 2ndly, the effect of this act of kindness on a generous mind; 3rdly, this effect issuing in a requital of the kindness.

[18] The Shoemaker would get a house while the Builder only had (say) one pair of shoes, or at all events not so many as he ought to have. Thus the man producing the least valuable ware would get the most valuable, and _vice versa_.

Adopting, as I have done, the reading which omits [Greek:——] at [Greek:——], we have simply a repetition of the caution, that before Reciprocation is attempted, there must be the same ratio between the wares as between the persons, _i.e._ the ratio of equality.

If we admit [Greek: ou], the meaning may be, that you must not bring into the proportion the difference mentioned above [Greek: eteron kai ouk ison], since for the purposes of commerce all men are equal.

Say that the Builder is to the Shoemaker as 10:1. Then there must be the same ratio between the wares, consequently the highest artist will carry off the most valuable wares, thus combining in himself both [Greek: uperochai]. The following are the three cases, given 100 pr. shoes = 1 house.

Builder : Shoemaker : : 1 pr. shoes : 1 house—_wrong_. —— —— 100 pr. shoes : 1 house—_right_ —— —— 10 (100 pr. shoes) : 1 house—_wrong_.

[19] [Greek] Compare a similar use of [Greek]. De Interpretatione, II. 2. [Greek].

[20] Every unjust act embodies [Greek: to adikon], which is a violation of [Greek: to ison], and so implies a greater and a less share, the former being said to fall to the doer, the latter to the sufferer, of injury.

[21] This passage certainly occurs awkwardly here. If attached to the close of the preceding Chapter it would leave that Chapter incomplete, for the question is not gone into, but only stated. As the commencement of this Chapter it is yet more out of place; I should propose to insert it at the commencement of the following Chapter, to which it forms an appropriate introduction.

[22] In a pure democracy men are absolutely, _i.e._ numerically, equal, in other forms only proportionately equal. Thus the meanest British subject is proportionately equal to the Sovereign, that is to say, is as fully secured in his rights as the Sovereign in hers.

[23] Or, according to Cardwell's reading ([Greek: kineton ou mentoi pan]) "but amongst ourselves there is Just, which is naturally variable, but certainly all Just is not such." The sense of the passage is not affected by the reading. In Bekker's text we must take [Greek: kineton] to mean the same as [Greek: kinoumenon], _i.e._ "we admit there is no Just which has not been sometimes disallowed, still," etc. With Cardwell's, [Greek: kineton] will mean "which not only _does_ but naturally _may_ vary."

[24] Murder is unjust by the law of nature, Smuggling by enactment. Therefore any act which can be referred to either of these heads is an unjust act, or, as Bishop Butler phrases it, an act _materially_ unjust. Thus much may be decided without reference to the agent. See the note on page 32, l. 16.

[25] "As distinct from pain or loss." Bishop Butler's Sermon on Resentment. See also, Rhet. 11. 2 Def. of [Greek: orgae].

[26] This method of reading the passage is taken from Zell as quoted in Cardwell's Notes, and seems to yield the best sense. The Paraphrast gives it as follows:

"But the aggressor is not ignorant that he began, and so he feels himself to be wrong [and will not acknowledge that he is the aggressor], but the other does not."

[27] As when a man is "_justified_ at the Grass Market," _i.e._ hung.

[28] Where the stock of good is limited, if any individual takes more than his share some one else must have less than his share; where it is infinite, or where there is no good at all this cannot happen.

[29] The reference is to chap. vii. where it was said that the law views the parties in a case of particular injustice as originally equal, but now unequal, the wrong doer the gainer and the sufferer the loser by the wrong, but in the case above supposed there is but _one_ party.

[30] So in the Politics, 1. 2.

Hae men gar psuchae tou somatos archei despotikaen archaen, o de nous taes orexeos politikaen kai despotikaev.

Compare also Bishop Butler's account of human nature as a system—of the different authority of certain principles, and specially the supremacy of Conscience.

BOOK VI

[1] I understand the illustration to be taken from the process of lowering a weight into its place; a block of marble or stone, for instance, in a building.

[2] Called for convenience sake Necessary and Contingent matter.

[3] One man learns Mathematics more easily than another, in common language, _he has a turn for_ Mathematics, _i e_ something in his mental conformation answers to that science The Phrenologist shows the bump denoting this aptitude.

[4] And therefore the question resolves itself into this, "What is the work of the Speculative, and what of the Practical, faculty of Reason." See the description of _apetae_ II. 5.

[5] _praxis_ is here used in its strict and proper meaning.

[6] That is to say, the Will waits upon deliberation in which Reason is the judge; when the decision is pronounced, the Will must act accordingly.

The question at issue always is, _Is this Good?_ because the Will is only moved by an impression of Good; the Decision then will be always _Aye or No_, and the mental hand is put forth to grasp in the former case, and retracted in the later.

So far as what must take place in _every_ Moral Action, right or wrong, the Machinery of the mind being supposed uninjured but to constitute a good Moral Choice, _i e._. a good Action, the Reason must have said Aye when it ought.

The cases of faulty action will be, either when the Machinery is perfect but wrongly directed, as in the case of a deliberate crime, or when the direction given by the Reason is right but the Will does not move in accordance with that direction, in other words, when the Machinery is out of order; as in the case of the [Greek: akrates]—video meliora proboque, Deteriora sequor.

[7] See the note on [Greek: Arche] on page 4, l. 30.

[8] The cobbler is at his last, why? to make shoes, which are to clothe the feet of someone and the price to be paid, _i.e._ the produce of his industry, is to enable him to support his wife and children; thus his production is subordinate to Moral Action.

[9] It may be fairly presumed that Aristotle would not thus have varied his phrase without some real difference of meaning. That difference is founded, I think, on the two senses of [Greek: orexis] before alluded to (note, p. 53, l. 33). The first impulse of the mind towards Action may be given either by a vague desire or by the suggestion of Reason. The vague desire passing through the deliberate stage would issue in Moral Choice. Reason must enlist the Will before any Action can take place.

Reason ought to be the originator in all cases, as Bishop Butler observes that Conscience should be. If this were so, every act of Moral Choice would be [Greek: orektikos nous].

But one obvious function of the feelings and passions in our composite nature is to instigate Action, when Reason and Conscience by themselves do not: so that as a matter of fact our Moral Choice is, in general, fairly described as [Greek: orexis dianoetike]. See Bishop Butler's Sermon II. and the First upon Compassion.

[10] The mind attains truth, either for the sake of truth itself ([Greek: aplos]), or for the sake of something further ([Greek: eneka tinos]). If the first then either syllogistically ([Greek: episteme]), non-syllogistically ([Greek: nous]), or by union of the two methods ([Greek: sophla]). If the second, either with a view to _act_ ([Greek: phronesis]), or with a view to _make_ ([Greek: techne]).

Otherwise. The mind contemplates Matter Necessary or Contingent. If necessary, Principles ([Greek: nous]), Deductions ([Greek: episteme]), or Mixed ([Greek: sophla]). If Contingent, Action ([Greek: phronesis]), Production ([Greek: techen]). (Giphanius quoted in Cardwell's notes.)

[11] It is the opening statement of the Post Analytics.

[12] Aristotle in his logical analysis of Induction, Prior. Analytics II. 25, defines it to be “the proving the inherence of the major term in the middle (_i.e._ proving the truth of the major premiss in fig. 1) through the minor term.” He presupposes a Syllogism in the first Figure with an universal affirmative conclusion, which reasons, of course, from an universal, which universal is to be taken as proved by Induction. His doctrine turns upon a canon which he there quotes. “If of one and the same term two others be predicated, one of which is coextensive with that one and the same, the other may be predicated of that which is thus coextensive.” The fact of this coextensiveness must be ascertained by [Greek: nous], in other words, by the Inductive Faculty. We will take Aldrich’s instance. All Magnets attract iron A B C are Magnets A B C attract iron. Presupposed Syllogism reasoning from an universal.

A B C attract iron (Matter of observation and experiment)

All Magnets are A B C (Assumed by [Greek: nous], i.e. the Inductive faculty)

All Magnets attract iron (Major premiss of the last Syllogism proved by taking the minor term of that for the middle term of this.)

Or, according to the canon quoted above: A B C are Magnets. A B C attract iron.

But [Greek: nous] tells me that the term Magnets is coextensive with the term A B C, therefore of all Magnets I may predicate that they attract iron.

Induction is said by Aristotle to be [Greek: hoia phanton], but he says in the same place that for this reason we must _conceive_ ([Greek: noehin]) the term containing the particular Instances (as A B C above) as composed of all the Individuals.

If Induction implied actual examination of all particular instances it would cease to be Reasoning at all and sink into repeated acts of Simple Apprehension it is really the bridging over of a chasm, not the steps cut in the rock on either side to enable us to walk down into and again out of it. It is a branch of probable Reasoning, and its validity depends _entirely_ upon the quality of the particular mind which performs it. Rapid Induction has always been a distinguishing mark of Genius the certainty produced by it is Subjective and not Objective. It may be useful to exhibit it Syllogistically, but the Syllogism which exhibits it is either nugatory, or contains a premiss _literally_ false. It will be found useful to compare on the subject of Induction _as the term is used by Aristotle_, Analytica Prior. II 25 26 Analytica Post. I. 1, 3, and I. Topics VI I and X.

[13] The reference is made to the Post Analyt I II and it is impossible to understand the account of [Greek: epistaemae] without a perusal of the chapter, the additions to the definition referred to relate to the nature of the premisses from which [Greek: epistaemae] draws its conclusions they are to be “true, first principles incapable of any syllogistic proof, better known than the conclusion, prior to it, and causes of it.” (See the appendix to this Book.)

[14] This is the test of correct logical division, that the _membra dividentia_ shall be opposed, _i.e._ not included the one by the other.

[15] The meaning of the [Greek: hepehi] appears to be this: the appeal is made in the first instance to popular language, just as it the case of [Greek: epistaemae], and will be in those of [Greek: phronaesis] and [Greek: sophia]. We commonly call Architecture an Art, and it is so and so, therefore the name Art and this so and so are somehow connected to prove that connection to be “coextensiveness,” we predicate one of the other and then simply convert the proposition, which is the proper test of any logical definition, or of any specific property. See the Topics, 1. vi.

[16] See the parable of the unjust Steward, in which the popular sense of [Greek: phronaesis] is strongly brought out; [Greek: ephaenesen ho kurios ton oikonomon taes adikias oti phronimos epoiaesen hoti ohi viohi tou aionos toutou phronimoteroi, k.t.l.]—Luke xvi. 8.

[17] Compare the [Greek: aplos] and [Greek: kath’ ekasta pepaideumenos] of Book I. chap. 1.

[18] The two aspects under which Virtue may be considered as claiming the allegiance of moral agents are, that of being right, and that of being truly expedient, because Conscience and Reasonable Self-Love are the two Principles of our moral constitution naturally supreme and “Conscience and Self-Love, _if we understand our true happiness_, always lead us the same way.” Bishop Butler, end of Sermon III.

And again:

“If by _a sense of interest_ is meant a practical regard to what is upon the whole our Happiness this is not only coincident with the principle of Virtue or Moral Rectitude, but is a part of the idea itself. And it is evident this Reasonable Self-Love wants to be improved as really as any principle in our nature. So little cause is there for Moralists to disclaim this principle.” From the note on sect. iv. of the chapter on Moral Discipline, Analogy, part I chap. v.

[19] See the note on [Greek: Arche] on page 4, l. 30.

The student will find it worth while to compare this passage with the following—Chap. xiii. of this book beginning [Greek: e d’ exis to ommati touto k. t. l]—vii. 4. [Greek: eti kai ode physikos. k.t.l.] vii. 9.—[Greek: ae gar arethae kai ae mochthaeria. k.t.l.]—iii. 7 _ad finem_. [Greek: ei de tis legoi. k.t.l.]

[20] This is not quite fair. Used in its strict sense, Art does not admit of degrees of excellence any more than Practical Wisdom. In popular language we use the term “wiser man,” as readily as “better artist” really denoting in each case different degrees of approximation to Practical Wisdom and Art respectively, [Greek: dia to ginesthai tous epainous di anaphoras]. I. 12.

[21] He would be a _better Chymist_ who should poison intentionally, than he on whose mind the prevailing impression was that “Epsom Salts mean Oxalic Acid, and Syrup of Senna Laudanum.”

[22]The term Wisdom is used in our English Translation of the Old Testament in the sense first given to [Greek:——] here. “Then wrought Bezaleel and Ahohab, and every _wise-hearted man, in whom the Lord put wisdom and understanding_ to know how to work all manner of work for the service of the Sanctuary” Exodus xxxvi. i.

[23] [Greek:——] and [Greek:——], (in the strict sense, for it is used in many different senses in this book) are different parts of the whole function [Greek:——], [Greek:——] takes in conclusions, drawn by strict reasoning from Principles of a certain kind which [Greek: ——] supplies. It is conceivable that a man might go on gaining these principles by Intuition and never reasoning from them, and so [Greek: ——] might exist independent of [Greek:——], but not this without that. Put the two together, the head to the trunk, and you form the living being [Greek:——]. There are three branches of [Greek:——] according to Greek Philosophy, [Greek:——], [Greek:——], [Greek:——]. Science is perhaps the nearest English term, but we have none really equivalent.

[24][Greek:——] is here used in its most extensive sense, [Greek:——] would be its chief Instrument.

[25] The faculty concerned with which is [Greek:——].

[26] In every branch of Moral Action in which Practical Wisdom is employed there will be general principles, and the application of them, but in some branches there are distinct names appropriated to the operations of Practical Wisdom, in others there are not.

Thus Practical Wisdom, when employed on the general principles of Civil Government, is called Legislation, as administering its particular functions it is called simply Government. In Domestic Management, there are of course general Rules, and also the particular application of them; but here the faculty is called only by one name. So too when Self-Interest is the object of Practical Wisdom.

[27] [Greek:——], “our mere Operatives in Public business.” (Chalmers.)

[28] Practical Wisdom may be employed either respecting Self, (which is [Greek:——] proper) or not-Self, _i.e._ either one’s family=[Greek:——], or one’s community=[Greek:——], but here the supreme and subordinate are distinguished, the former is [Greek:——], the latter [Greek:——] proper, whose functions are deliberation and the administration of justice.

[29] But where can this be done, if there be no community? see Horace’s account of the way in which his father made him reap instruction from the examples in the society around him. 1. Sat. iv. 105, etc. See also Bishop Butler, Analogy, part I. chap. v. sect. iii.

The whole question of the Selfish Morality is treated in Bishop Butler’s first three and the eleventh Sermons, in which he shows the coincidence in _fact_ of enlightened Self-Love and Benevolence _i.e._ love of others. Compare also what is said in the first Book of this treatise, chap. v., about [Greek: autarkeia].

[30] More truly “implied,” namely, that Practical Wisdom results from experience.

[31] This observation seems to be introduced, simply because suggested by the last, and not because at all relevant to the matter in hand.

[32] An instance of Principles gained [Greek: aisthesei]. (Book 1. chap. viii.)

[33] Particulars are called [Greek: eschata] because they are last arrived at in the deliberative process, but a little further on we have the term applied to first principles, because they stand at one extremity, and facts at the other, of the line of action.

[34] I prefer the reading [Greek: e phronesis], which gives this sense, “Well, as I have said, Practical Wisdom is this kind of sense, and the other we mentioned is different in kind.” In a passage so utterly unimportant, and thrown in almost colloquially, it is not worth while to take much trouble about such a point.

[35] The definition of it in the Organon (Post Analyt. 1. xxiv.), “a happy conjecture of the middle term without time to consider of it.”

The quaestio states the phenomena, and the middle term the causation the rapid ascertaining of which constitutes [Greek: anchinoia]. All that receives light from the sun is bright on the side next to the sun. The moon receives light from the sun, The moon is bright on the side next the sun. The [Greek: anchinoia] consists in rapidly and correctly accounting for the observed fact, that the moon is bright on the side next to the sun.

[36] Opinion is a complete, deliberation an incomplete, mental act.

[37] The End does not sanctify the Means.

[38] The meaning is, there is one End including all others; and in this sense [Greek: phronesis] is concerned with means, not Ends but there are also many subordinate Ends which are in fact Means to the Great End of all. Good counsel has reference not merely to the grand End, but to the subordinate Ends which [Greek: phronesis] selects as being right means to the Grand End of all.

[39] The relative [Greek: on] might be referred to [Greek: sumpheron], but that [Greek: eubonlia] has been already divided into two kinds, and this construction would restrict the name to one of them, namely that [Greek: pros ti telos] as opposed to that [Greek: pros to telos aplos].

[40] We have no term which at all approximates to the meaning of this word, much less will our language admit of the play upon it which connects it with [Greek: suggnomae].

[41] Meaning, of course, all those which relate to Moral Action. [Greek: psronaesis] is equivalent to [Greek: euboulia, ounesis, gnomae, and nous] (in the new sense here given to it).

The faculty which guides us truly in all matters of Moral Action is [Greek: phronaesis], i.e. Reason directed by Goodness or Goodness informed by Reason. But just as every faculty of body and soul is not actually in operation at the same time, though the Man is acting, so proper names are given to the various Functions of Practical Wisdom.

Is the [Greek: phronimos] forming plans to attain some particular End? he is then [Greek: euboulos]—is he passing under review the suggestions of others? he is [Greek: sunetos]—is he judging of the acts of others? he admits [Greek: gnomae] to temper the strictness of justness—is he applying general Rules to particular cases? he is exercising [Greek: nous praktikos] or [Greek: agsthaesis]—while in each and all he is [Greek: phronimos]?

[42] See note, on p. 140.

[43] There are cases where we must simply accept or reject without proof: either when Principles are propounded which are prior to all reasoning, or when particular facts are brought before us which are simply matters of [Greek: agsthaesis]. Aristotle here brings both these cases within the province of [Greek: nous], _i.e._ he calls by this name the Faculty which attains Truth in each.

[44] _i.e._ of the [Greek: syllogisimai ton prakton].

[45] See the note on [Greek: Archae] on p. 4,1 30. As a matter of fact and mental experience the Major Premiss of the Practica Syllogism is wrought into the mind by repeatedly acting upon the Minor Premiss (_i.e._ by [Greek: ethismos]).

All that is pleasant is to be done, This is pleasant, This is to be done

By habitually acting on the Minor Premiss, _i.e._ on the suggestions of [Greek: epithymia], a man comes really to hold the Major Premiss. Aristotle says of the man destitute of all self-control that he is firmly persuaded that it is his proper line to pursue the gratification of his bodily appetites, [Greek: dia to toioytos einai oios diokein aytas]. And his analysis of [Greek: akrasia] (the state of

progress towards this utter abandonment to passion) shows that each case of previous good resolution succumbing to temptation is attributable to [Greek: epithymia] suggesting its own Minor Premiss in place of the right one. Book VII. 8 and 5.

[46] The _consequentia_ is this:

There are cases both of principles and facts which cannot admit of reasoning, and must be authoritatively determined by [Greek: nous]. What makes [Greek: nous] to be a true guide? only practice, i.e. Experience, and _therefore_, etc.

[47] This is a note to explain [Greek: hygieina] and [Greek: euektika], he gives these three uses of the term [Greek: hygieinon] in the Topics, I. xiii. 10,

{ [Greek: to men hygieias poiætikon], [Greek: hygieinon legetai] { [Greek: to de phylaktikon], { [Greek: to de sæmantikon].

Of course the same will apply to [Greek: euektikon].

[48] Healthiness is the formal cause of health. Medicine is the efficient cause of health.

See Book X. chap. iv. [Greek: hosper oud hæ hygieia kai ho iatros homoios aitia esti tou ugiainein].

[49] [Greek: phronæsis] is here used in a partial sense to signify the Intellectual, as distinct from the Moral, element of Practical Wisdom.

[50] This is another case of an observation being thrown in _obiter_, not relevant to, but suggested by, the matter in hand.

[51] See Book II. chap. iii. and V. xiii.

[52]The article is supplied at [Greek: panourgous], because the abstract word has just been used expressly in a bad sense. “Up to anything” is the nearest equivalent to [Greek: panourgos], but too nearly approaches to a colloquial vulgarism.

[53] See the note on [Greek: Archæ] on page 4, l. 30.

P. 147, l. 14. And for the Minor, of course,

“This particular action is———.”

We may paraphrase [Greek: to telos] by [Greek: ti dei prattein—ti gar dei prattein hæ mæ, to telos autæs estin] i.e. [Greek: tæs phronæseos].—(Chap. xi. of this Book.)

[55] “Look asquint on the face of truth.” Sir T. Browne, Religio Medici.

[56] The term [Greek: sophronikoi] must be understood as governing the signification of the other two terms, there being no single Greek term to denote in either case mere dispositions towards these Virtues.

[57] Compare the passage at the commencement of Book X. [Greek: nun de phainontai] [Greek: katokochimon ek tæs aretæs].

[58] It must be remembered, that [Greek: phronæsis] is used throughout this chapter in two senses, its proper and complete sense of Practical Wisdom, and its incomplete one of merely the Intellectual Element of it.

BOOK VII

[1] The account of Virtue and Vice hitherto given represents rather what men _may be_ than what they _are_. In this book we take a practical view of Virtue and Vice, in their ordinary, every day development.

[2] This illustrates the expression, “_Deceits_ of the Flesh.”

[3] Another reading omits the [Greek:——]; the meaning of the whole passage would be exactly the same—it would then run, “if he had been convinced of the rightness of what he does, _i.e._ if he were now acting on conviction, he might stop in his course on a change of conviction.”

[4] Major and minor Premises of the [Greek:——] [Greek——]

[5]Some necessarily implying knowledge of the particular, others not.

[6] As a modern parallel, take old Trumbull in Scott's "Red Gauntlet."

[7] That is, as I understand it, either the major or the minor premise, it is true, that "all that is sweet is pleasant," it is true also, that "this is sweet," what is contrary to Right Reason is the bringing in this minor to the major _i.e._ the universal maxim, forbidding to taste. Thus, a man goes to a convivial meeting with the maxim in his mind "All excess is to be avoided," at a certain time his [Greek:——] tells him "This glass is excess." As a matter of mere reasoning, he cannot help receiving the conclusion "This glass is to be avoided," and supposing him to be morally sound he would accordingly abstain. But [Greek:——], being a simple tendency towards indulgence suggests, in place of the minor premise "This is excess," its own premise "This is sweet," this again suggests the self-indulgent maxim or principle ('[Greek:——]), "All that is sweet is to be tasted," and so, by strict logical sequence, proves "This glass is to be tasted."

The solution then of the phænomenon of [Greek:——] is this that [Greek:——], by its direct action on the animal nature, swamps the suggestions of Right Reason.

On the high ground of Universals, [Greek:——] i.e. [Greek:——] easily defeats [Greek:——]. The [Greek:——], an hour before he is in temptation, would never deliberately prefer the maxim "All that is sweet is to be tasted" to "All excess is to be avoided." The [Greek:——] would.

Horace has a good comment upon this (II Sat 2):

Quæ virtus et quanta, bom, sit vivere parvo Discite, _non inter lances mensasque nitentes_ Verum hic _impransi_ mecum disquirite

Compare also Proverbs XXIII. 31. "Look not thou upon the wine when it is red," etc.

[8] As we commonly speak, Metaphysicians. Physiology of course includes Metaphysics.

[9] [Greek: oron]. Aristotle's own account of this word (Prior Analyt ii. 1) is [Greek: eis on dialuetai hae protasis], but both in the account of [Greek: nous] and here it seems that the proposition itself is really indicated by it.

[10] The Greek would give "avoids excessive pain," but this is not true, for the excess of pain would be ground for excuse the warrant for translating as in the text, is the passage occurring just below [Greek: diokei tas uperbolas kai pheugei metrias lupas].

[11] Compare Bishop Butler on Particular Propensions, Analogy, Part I chap v sect. iv.

[12] That is, they are to the right states as Vice to Virtue.

[14] Consult in connection with this Chapter the Chapter on [Greek: orgae] in the Rhetoric, II. 2, and Bishop Butler's Sermon on Resentment.

[15] The reasoning here being somewhat obscure from the concisement of expression, the following exposition of it is subjoined.

Actions of Lust are wrong actions done with pleasure, Wrong actions done with pleasure are more justly objects of wrath,[*] Such as are more justly objects of wrath are more unjust, Actions of Lust are more unjust

[*] [Greek: hubpis] is introduced as the single instance from which this premiss is proved inductively. See the account of it in the Chapter of the Rhetoric referred to in the preceding note.

[16][Greek: ton dae lechthenton]. Considerable difference of opinion exists as to the proper meaning of these words. The emendation which substitutes [Greek: akrataes] for [Greek: akolastos] removes all difficulty, as the clause would then naturally refer to [Greek: ton mae proairoumenon] but Zell adheres to the reading in the text of Bekker, because the authority of MSS and old editions is all on this side.

I understand [Greek: mallon] as meant to modify the word [Greek: malakias], which properly denotes that phase of [Greek: akrasia] (not [Greek: akolasia]) which is caused by pain.

The [Greek: akolastos] _deliberately_ pursues pleasure and declines pain if there is to be a distinct name for the latter phase, it comes under [Greek: malakia] more nearly than any other term, though perhaps not quite properly.

Or the words may be understood as referring to the class of wrong acts caused by avoidance of pain, whether deliberate or otherwise, and then of course the names of [Greek: malakia] and [Greek: akolasia] may be fitly given respectively.

[17] “If we went into a hospital where all were sick or dying, we should think those least ill who were insensible to pain; a physician who knew the whole, would behold them with despair. And there is a mortification of the soul as well as of the body, in which the first symptoms of returning hope are pain and anguish” Sewell, Sermons to Young Men (Sermon xii.)

[18] Before the time of trial comes the man deliberately makes his Moral Choice to act rightly, but, at the moment of acting, the powerful strain of desire makes him contravene this choice his Will does not act in accordance with the affirmation or negation of his Reason. His actions are therefore of the mixed kind. See Book III. chap. i, and note on page 128.

[19] Let a man be punctual _on principle_ to any one engagement in the day, and he must, as a matter of course, keep all his others in their due places relatively to this one; and so will often wear an appearance of being needlessly punctilious in trifles.

[20] Because he is destitute of these minor springs of action, which are intended to supply the defects of the higher principle.

See Bishop Butler’s first Sermon on Compassion, and the conclusion of note on p. 129.

BOOK VIII

[1] “Owe no man anything, but to _love_ one another for he that loveth another _hath fulfilled the Law_.” Romans XIII. 8.

[2] [Greek: kerameis]. The Proverb in full is a line from Hesiod, [Greek: kahi keramehus keramei koteei kai tektoni tekton].

[3] In this sense, therefore, is it sung of Mrs. Gilpin that she

“two stone bottles found, To hold the liquor that she _loved_, And keep it safe and sound.”

[4] Cardwell’s reading, [Greek: tautae gar omoioi, kai ta loipa] is here adopted, as yielding a better sense than Bekker’s.

[5]The Great man will have a right to look for more Friendship than he bestows, but the Good man _can_ feel Friendship only for, and in proportion to, the goodness of the other.

[6] See note on page 68, 1. 8.

[7] See I. Topics, Chap. v. on the various senses of [Greek: tauton].

[8] “For the mutual society, help, and comfort that the one ought to have of the other, both in prosperity and adversity.”

[9] Which one would be assuming he was, if one declined to recognise the obligation to requite the favour or kindness.

BOOK IX

[1] “Neither the Son of man, that He should _repent_.” Numbers xxiii. 19.

“In a few instances the Second Intention, or Philosophical employment of a Term, is more extensive than the First Intention, or popular use.” Whately, Logic, iii. 10.

[2] “I have sometimes considered in what troublesome case is that Chamberlain in an Inn who being but one is to give attendance to many guests. For suppose them all in one chamber, yet, if one shall command him to come to the window, and the other to the table, and another to the bed, and another to the chimney, and another to come upstairs, and another to go downstairs, and all in the same instant, how would he be distracted to please them all? And yet such is the sad condition of nay soul by nature, not only a servant but a slave unto sin. Pride calls me to the window, gluttony to the table, wantonness to the bed, laziness to the chimney, ambition commands me to go upstairs, and covetousness to come down. Vices, I see, are as well contrary to themselves as to Virtue.” (Fuller’s Good Thoughts in Bad Times. Mix’t Contemplations, viii.)

BOOK X

[1] See note, p. 43.

[2] See Book II. chap. ix.

[3] See Book I. chap. v. ad finem.

[4] The notion alluded to is that of the [greek: idea]: that there is no real substantial good except the [greek: auto agathon], and therefore whatever is so called is so named in right of its participation in that.

[5] See note on page 136, 1. 15.

P. 238, 1. 24. Movement is, according to Aristotle, of six kinds: From not being to being . . . . Generation From being to not being . . . . Destruction From being to being more . . . . Increase From being to being less . . . . Diminution From being here to being there . . Change of Place From being in this way to being in that Alteration

[7] _A_ may go to sleep quicker than _B_, but cannot _do more sleep_ in a given time.

[8] Compare Book III. chap. vi. [Greek: osper kai epi ton somaton, k. t. l.]

[9] Which is of course a [Greek: genesis].

[10] That is, subordinate Movements are complete before the whole Movement is.

[11] Pleasure is so instantaneous a sensation, that it cannot be conceived divisible or incomplete; the longest continued Pleasure is only a succession of single sparks, so rapid as to give the appearance of a stream, of light.

[12] A man is as effectually hindered from taking a walk by the [Greek: allotria haedouae] of reading a novel, as by the [Greek: oikeia lupae] of gout in the feet.

[13] I have thus rendered [Greek: spoudae (ouk agnoon to hamartanomenon)]; but, though the English term does not represent the depth of the Greek one, it is some approximation to the truth to connect an earnest serious purpose with Happiness.

[14] Bishop Butler, _contra_ (Sermon XV.).

“Knowledge is not our proper Happiness. Whoever will in the least attend to the thing will see that it is the gaining, not the having, of it, which is the entertainment of the mind.” The two statements may however be reconciled. Aristotle may be well understood only to mean, that the pursuit of knowledge will be the pleasanter, the freer it is from the minor hindrances which attend on _learning_.

[15] The clause immediately following indicates that Aristotle felt this statement to be at first sight startling, Happiness having been all the way through connected with [Greek: energeia], but the statement illustrates and confirms what was said in note on page 6, 1. 15.

[16] That is to say, he aims at producing not merely a happy aggregate, but an aggregate of happy individuals. Compare what is said of Legislators in the last chapter of Book I and the first of Book II.

[17] See note, page 146, 1. 17.

PUBLISHERS' NOTE

Merrill's English Texts

This series of books will include in complete editions those masterpieces of English Literature that are best adapted for the use of schools and colleges. The editors of the several volumes will be chosen for their special qualifications in connection with the texts to be issued under their individual supervision, but familiarity with the practical needs of the classroom, no less than sound scholarship, will characterize the editing of every book in the series.

In connection with each text, a critical and historical introduction, including a sketch of the life of the author and his relation to the thought of his time, critical opinions of the work in question chosen from the great body of English criticism, and, where possible, a portrait of the author, will be given. Ample explanatory notes of such passages in the text as call for special attention will be supplied, but irrelevant annotation and explanations of the obvious will be rigidly excluded.

CHARLES E. MERRILL CO.

LIFE OF EMERSON

Ralph Waldo Emerson was born in Boston, May 25, 1803. He was descended from a long line of New England ministers, men of refinement and education. As a school-boy he was quiet and retiring, reading a great deal, but not paying much attention to his lessons. He entered Harvard at the early age of fourteen, but never attained a high rank there, although he took a prize for an essay on Socrates, and was made class poet after several others had declined. Next to his reserve and the faultless propriety of his conduct, his contemporaries at college seemed most impressed by the great maturity of his mind. Emerson appears never to have been really a boy. He was always serene and thoughtful, impressing all who knew him with that spirituality which was his most distinguishing characteristic.

After graduating from college he taught school for a time, and then entered the Harvard Divinity School under Dr. Channing, the great Unitarian preacher. Although he was not strong enough to attend all the lectures of the divinity course, the college authorities deemed the name Emerson sufficient passport to the ministry. He was accordingly "approbated to preach" by the Middlesex Association of Ministers on October 10, 1826. As a preacher, Emerson was interesting, though not particularly original. His talent seems to have been in giving new meaning to the old truths of religion. One of his hearers has said: "In looking back on his preaching I find he has impressed truths to which I always assented in such a manner as to make them appear new, like a clearer revelation." Although his sermons were always couched in scriptural language, they were touched with the light of that genius which avoids the conventional and commonplace. In his other pastoral duties Emerson was not quite so successful. It is characteristic of his deep humanity and his dislike for all fuss and commonplace that he appeared to least advantage at a funeral. A connoisseur in such matters, an old sexton, once remarked that on such occasions "he did not appear at ease at all. To tell the truth, in my opinion, that young man was not born to be a minister."

Emerson did not long remain a minister. In 1832 he preached a sermon in which he announced certain views in regard to the communion service which were disapproved by a large part of his congregation. He found it impossible to continue preaching, and, with the most friendly feelings on both sides, he parted from his congregation.

A few months later (1833) he went to Europe for a short year of travel. While abroad, he visited Walter Savage Landor, Coleridge and Wordsworth, and Thomas Carlyle. This visit to Carlyle was to both men a most interesting experience. They parted feeling that they had much intellectually in common. This belief fostered a sympathy which, by the time they had discovered how different they really were, had grown so strong a habit that they always kept up their intimacy. This year of travel opened Emerson's eyes to many things of which he had previously been ignorant; he had profited by detachment from the concerns of a limited community and an isolated church.

After his return he began to find his true field of activity in the lecture-hall, and delivered a number of addresses in Boston and its vicinity. While thus coming before the open public on the lecture platform, he was all the time preparing the treatise which was to embody all the quintessential elements of his philosophical doctrine. This was the essay _Nature_, which was published in 1836. By its conception of external Nature as an incarnation of the Divine Mind it struck the fundamental principle of Emerson's religious belief. The essay had a very small circulation at first, though later it became widely known.

In the winter of 1836 Emerson followed up his discourse on Nature by a course of twelve lectures on the "Philosophy of History," a considerable portion of which eventually became embodied in his essays. The next year (1837) was the year of the delivery of the _Man Thinking, or the American Scholar_ address before the Phi Beta Kappa Society at Cambridge.

This society, composed of the first twenty-five men in each class graduating from college, has annual meetings which have called forth the best efforts of many distinguished scholars and thinkers. Emerson's address was listened to with the most profound interest. It declared a sort of intellectual independence for America. Henceforth we were to be emancipated from clogging foreign influences, and a national literature was to expand under the fostering care of the Republic.

These two discourses, _Nature_ and _The American Scholar_, strike the keynote of Emerson's philosophical, poetical, and moral teachings. In fact he had, as every great teacher has, only a limited number of principles and theories to teach. These principles of life can all be enumerated in twenty words--self-reliance, culture, intellectual and moral independence, the divinity of nature and man, the necessity of labor, and high ideals.

Emerson spent the latter part of his life in lecturing and in literary work. His son, Dr. Edward Emerson, gave an interesting account of how these lectures were constructed. "All through his life he kept a journal. This book, he said, was his 'Savings Bank.' The thoughts thus received and garnered in his journals were indexed, and a great many of them appeared in his published works. They were religiously set down just as they came, in no order except chronological, but later they were grouped, enlarged or pruned, illustrated, worked into a lecture or discourse, and, after having in this capacity undergone repeated testing and rearranging, were finally carefully sifted and more rigidly pruned, and were printed as essays."

Besides his essays and lectures Emerson left some poetry in which is embodied those thoughts which were to him too deep for prose expression. Oliver Wendell Holmes in speaking of this says: "Emerson wrote occasionally in verse from his school-days until he had reached the age which used to be known as the grand climacteric, sixty-three.... His poems are not and hardly can become popular; they are not meant to be liked by the many, but to be dearly loved and cherished by the few.... His occasional lawlessness in technical construction, his somewhat fantastic expressions, his enigmatic obscurities hardly detract from the pleasant surprise his verses so often bring with them.... The poetic license which we allow in the verse of Emerson is more than excused by the noble spirit which makes us forget its occasional blemishes, sometimes to be pleased with them as characteristic of the writer."

Emerson was always a striking figure in the intellectual life of America. His discourses were above all things inspiring. Through them many were induced to strive for a higher self-culture. His influence can be discerned in all the literary movements of the time. He was the central figure of the so-called transcendental school which was so prominent fifty years ago, although he always rather held aloof from any enthusiastic participation in the movement.

Emerson lived a quiet life in Concord, Massachusetts. "He was a first-rate neighbor and one who always kept his fences up." He traveled extensively on his lecturing tours, even going as far as England. In _English Traits_ he has recorded his impressions of what he saw of English life and manners.

Oliver Wendell Holmes has described him in this wise: "His personal appearance was that of the typical New Englander of college-bred ancestry. Tall, spare, slender, with sloping shoulders, slightly stooping in his later years, with light hair and eyes, the scholar's complexion, the prominent, somewhat arched nose which belongs to many of the New England sub-species, thin lips, suggestive of delicacy, but having nothing like primness, still less of the rigidity which is often noticeable in the generation succeeding next to that of the men in their shirt-sleeves, he would have been noticed anywhere as one evidently a scholarly thinker astray from the alcove or the study, which were his natural habitats. His voice was very sweet, and penetrating without any loudness or mark of effort. His enunciation was beautifully clear, but he often hesitated as if waiting for the right word to present itself. His manner was very quiet, his smile was pleasant, but he did not like explosive laughter any better than Hawthorne did. None who met him can fail to recall that serene and kindly presence, in which there was mingled a certain spiritual remoteness with the most benignant human welcome to all who were privileged to enjoy his companionship."

Emerson died April 27, 1882, after a few days' illness from pneumonia. Dr. Garnett in his excellent biography says: "Seldom had 'the reaper whose name is Death' gathered such illustrious harvest as between December 1880 and April 1882. In the first month of this period George Eliot passed away, in the ensuing February Carlyle followed; in April Lord Beaconsfield died, deplored by his party, nor unregretted by his country; in February of the following year Longfellow was carried to the tomb; in April Rossetti was laid to rest by the sea, and the pavement of Westminster Abbey was disturbed to receive the dust of Darwin. And now Emerson lay down in death beside the painter of man and the searcher of nature, the English-Oriental statesman, the poet of the plain man and the poet of the artist, and the prophet whose name is indissolubly linked with his own. All these men passed into eternity laden with the spoils of Time, but of none of them could it be said, as of Emerson, that the most shining intellectual glory and the most potent intellectual force of a continent had departed along with him."

CRITICAL OPINIONS OF EMERSON AND HIS WRITINGS.

Matthew Arnold, in an address on Emerson delivered in Boston, gave an excellent estimate of the rank we should accord to him in the great hierarchy of letters. Some, perhaps, will think that Arnold was unappreciative and cold, but dispassionate readers will be

inclined to agree with his judgment of our great American.

After a review of the poetical works of Emerson the English critic draws his conclusions as follows:

"I do not then place Emerson among the great poets. But I go farther, and say that I do not place him among the great writers, the great men of letters. Who are the great men of letters? They are men like Cicero, Plato, Bacon, Pascal, Swift, Voltaire--writers with, in the first place, a genius and instinct for style.... Brilliant and powerful passages in a man's writings do not prove his possession of it. Emerson has passages of noble and pathetic eloquence; he has passages of shrewd and felicitous wit; he has crisp epigram; he has passages of exquisitely touched observation of nature. Yet he is not a great writer.... Carlyle formulates perfectly the defects of his friend's poetic and literary productions when he says: 'For me it is too ethereal, speculative, theoretic; I will have all things condense themselves, take shape and body, if they are to have my sympathy.' ...

".... Not with the Miltons and Grays, not with the Platos and Spinozas, not with the Swifts and Voltaires, not with the Montaignes and Addisons, can we rank Emerson. No man could see this clearer than Emerson himself. 'Alas, my friend,' he writes in reply to Carlyle, who had exhorted him to creative work,--'Alas, my friend, I can do no such gay thing as you say. I do not belong to the poets, but only to a low department of literature,--the reporters; suburban men.' He deprecated his friend's praise; praise 'generous to a fault' he calls it; praise 'generous to the shaming of me,--cold, fastidious, ebbing person that I am.'"

After all this unfavorable criticism Arnold begins to praise. Quoting passages from the Essays, he adds:

"This is tonic indeed! And let no one object that it is too general; that more practical, positive direction is what we want.... Yes, truly, his insight is admirable; his truth is precious. Yet the secret of his effect is not even in these; it is in his temper. It is in the hopeful, serene, beautiful temper wherewith these, in Emerson, are indissolubly united; in which they work and have their being.... One can scarcely overrate the importance of holding fast to happiness and hope. It gives to Emerson's work an invaluable virtue. As Wordsworth's poetry is, in my judgment, the most important done in verse, in our language, during the present century, so Emerson's Essays are, I think, the most important work done in prose.... But by his conviction that in the life of the spirit is happiness, and by his hope that this life of the spirit will come more and more to be sanely understood, and to prevail, and to work for happiness,--by this conviction and hope Emerson was great, and he will surely prove in the end to have been right in them.... You cannot prize him too much, nor heed him too diligently."

Herman Grimm, a German critic of great influence in his own country, did much to obtain a hearing for Emerson's works in Germany. At first the Germans could not understand the unusual English, the unaccustomed turns of phrase which are so characteristic of Emerson's style.

"Macaulay gives them no difficulty; even Carlyle is comprehended. But in Emerson's writings the broad turnpike is suddenly changed into a hazardous sandy foot-path. His thoughts and his style are American. He is not writing for Berlin, but for the people of Massachusetts.... It is an art to rise above what we have been taught.... All great men are seen to possess this freedom. They derive their standard from their own natures, and their observations on life are so natural and spontaneous that it would seem as if the most illiterate person with a scrap of common-sense would have made the same.... We become wiser with them, and know not how the difficult appears easy and the involved plain.

"Emerson possesses this noble manner of communicating himself. He inspires me with courage and confidence. He has read and seen but conceals the labor. I meet in his works plenty of familiar facts, but he does not employ them to figure up anew the old worn-out problems: each stands on a new spot and serves for new combinations. From everything he sees the direct line issuing which connects it with the focus of life....

".... Emerson's theory is that of the 'sovereignty of the individual.' To discover what a young man is good for, and to equip him for the path he is to strike out in life, regardless of any other consideration, is the great duty to which he calls attention. He makes men self-reliant. He reveals to the eyes of the idealist the magnificent results of practical activity, and unfolds before the realist the grandeur of the ideal world of thought. No man is to allow himself, through prejudice, to make a mistake in choosing the task to which he will devote his life. Emerson's essays are, as it were, printed sermons--all having this same text.... The wealth and harmony of his language overpowered and entranced me anew. But even now I cannot say wherein the secret of his influence lies. What he has written is like life itself--the unbroken thread ever lengthened through the addition of the small events which make up each day's experience."

Froude in his famous "Life of Carlyle" gives an interesting description of Emerson's visit to the Carlyles in Scotland:

"The Carlyles were sitting alone at dinner on a Sunday afternoon at the end of August when a Dumfries carriage drove to the door, and there stepped out of it a young American then unknown to fame, but whose influence in his own country equals that of Carlyle in ours, and whose name stands connected with his wherever the English language is spoken. Emerson, the younger of the two, had just broken his Unitarian fetters, and was looking out around him like a young eagle longing for light. He had read Carlyle's articles and had discerned with the instinct of genius that here was a voice speaking real and fiery convictions, and no longer echoes and conventionalisms. He had come to Europe to study its social and spiritual phenomena; and to the young Emerson as to the old Goethe, the most important of them appeared to be Carlyle.... The acquaintance then begun to their mutual pleasure ripened into a deep friendship, which has remained unclouded in spite of wide divergences of opinion throughout their working lives."

Carlyle wrote to his mother after Emerson had left:

"Our third happiness was the arrival of a certain young unknown friend named Emerson, from Boston, in the United States, who turned aside so far from his British, French, and Italian travels to see me here! He had an introduction from Mill and a Frenchman (Baron d'Eichthal's nephew) whom John knew at Rome. Of course, we could do no other than welcome him; the rather as he seemed to be one of the most lovable creatures in himself we had ever looked on. He stayed till next day with us, and talked and heard to his heart's content, and left us all really sad to part with him."

In 1841 Carlyle wrote to John Sterling a few words apropos of the recent publication of Emerson's essays in England:

"I love Emerson's book, not for its detached opinions, not even for the scheme of the general world he has framed for himself, or any eminence of talent he has expressed that with, but simply because it is his own book; because there is a tone of veracity, an unmistakable air of its being _his_, and a real utterance of a human soul, not a mere echo of such. I consider it, in that sense, highly remarkable, rare, very rare, in these days of ours. Ach Gott! It is frightful to live among echoes. The few that read the book, I imagine, will get benefit of it. To America, I sometimes say that Emerson, such as he is, seems to me like a kind of New Era."

John Morley, the acute English critic, has made an analytic study of Emerson's style, which may reconcile the reader to some of its exasperating peculiarities.

"One of the traits that every critic notes in Emerson's writing is that it is so abrupt, so sudden in its transitions, so discontinuous, so inconsecutive. Dislike of a sentence that drags made him unconscious of the quality that French critics name _coulant_. Everything is thrown in just as it comes, and sometimes the pell-mell is enough to persuade us that Pope did not exaggerate when he said that no one qualification is so likely to make a good writer as the power of rejecting his own thoughts.... Apart from his difficult staccato, Emerson is not free from secondary faults. He uses words that are not only odd, but vicious in construction; he is sometimes oblique and he is often clumsy; and there is a visible feeling after epigrams that do not always come. When people say that Emerson's style must be good and admirable because it fits his thought, they forget that though it is well that a robe should fit, there is still something to be said about its cut and fashion.... Yet, as happens to all fine minds, there came to Emerson ways of expression deeply marked with character. On every page there is set the strong stamp of sincerity, and the attraction of a certain artlessness; the most awkward sentence rings true; and there is often a pure and simple note that touches us more than if it were the perfection of elaborated melody. The uncouth procession of the periods discloses the travail of the thought, and that, too, is a kind of eloquence. An honest reader easily forgives the rude jolt or unexpected start when it shows a thinker faithfully working his way along arduous and unworn tracks. Even at the roughest, Emerson often interjects a delightful cadence. As he says of Landor, his sentences are cubes which will stand firm, place them how or where you will. He criticised Swedenborg for being superfluously explanatory, and having an exaggerated feeling of the ignorance of men. 'Men take truths of this nature,' said Emerson, 'very fast;' and his own style does no doubt very boldly take this capacity for granted in us. In 'choice and pith of diction,' again, of which Mr. Lowell speaks, he hits the mark with a felicity that is almost his own in this generation. He is terse, concentrated, and free from the important blunder of mistaking intellectual dawdling for meditation. Nor in fine does his abruptness ever impede a true urbanity. The accent is homely and the apparel plain, but his bearing has a friendliness, a courtesy, a hospitable humanity, which goes nearer to our hearts than either literary decoration or rhetorical unction. That modest and lenient fellow-feeling which gave such charm to his companionship breathes in his gravest writing, and prevents us from finding any page of it cold or hard or dry."

E.P. Whipple, the well-known American critic, wrote soon after Emerson's death:

"But 'sweetness and light' are precious and inspiring only so far as they express the essential sweetness of the disposition of the thinker, and the essential illuminating power of his intelligence. Emerson's greatness came from his character. Sweetness and light

streamed from him because they were _in_ him. In everything he thought, wrote, and did, we feel the presence of a personality as vigorous and brave as it was sweet, and the particular radical thought he at any time expressed derived its power to animate and illuminate other minds from the might of the manhood, which was felt to be within and behind it. To 'sweetness and light' he therefore added the prime quality of fearless manliness.

"If the force of Emerson's character was thus inextricably blended with the force of all his faculties of intellect and imagination, and the refinement of all his sentiments, we have still to account for the peculiarities of his genius, and to answer the question, why do we instinctively apply the epithet 'Emersonian' to every characteristic passage in his writings? We are told that he was the last in a long line of clergymen, his ancestors, and that the modern doctrine of heredity accounts for the impressive emphasis he laid on the moral sentiment; but that does not solve the puzzle why he unmistakably differed in his nature and genius from all other Emersons. An imaginary genealogical chart of descent connecting him with Confucius or Gautama would be more satisfactory.

"What distinguishes _the_ Emerson was his exceptional genius and character, that something in him which separated him from all other Emersons, as it separated him from all other eminent men of letters, and impressed every intelligent reader with the feeling that he was not only 'original but aboriginal.' Some traits of his mind and character may be traced back to his ancestors, but what doctrine of heredity can give us the genesis of his genius? Indeed, the safest course to pursue is to quote his own words, and despairingly confess that it is the nature of genius 'to spring, like the rainbow daughter of Wonder, from the invisible, to abolish the past, and refuse all history.'"

THE AMERICAN SCHOLAR.

This address was delivered at Cambridge in 1837, before the Harvard Chapter of the Phi Beta Kappa Society, a college fraternity composed of the first twenty-five men in each graduating class. The society has annual meetings, which have been the occasion for addresses from the most distinguished scholars and thinkers of the day.

MR. PRESIDENT AND GENTLEMEN,

I greet you on the recommencement of our literary year. Our anniversary is one of hope, and, perhaps, not enough of labor. We do not meet for games of strength[1] or skill, for the recitation of histories, tragedies, and odes, like the ancient Greeks; for parliaments of love and poesy, like the Troubadours;[2] nor for the advancement of science, like our co-temporaries in the British and European capitals. Thus far, our holiday has been simply a friendly sign of the survival of the love of letters amongst a people too busy to give to letters any more. As such it is precious as the sign of an indestructible instinct. Perhaps the time is already come when it ought to be, and will be, something else; when the sluggard intellect of this continent will look from under its iron lids and fill the postponed expectation of the world with something better than the exertions of mechanical skill. Our day of dependence, our long apprenticeship to the learning of other lands, draws to a close. The millions that around us are rushing into life cannot always be fed on the sere remains of foreign harvests.[3] Events, actions arise that must be sung, that will sing themselves. Who can doubt that poetry will revive and lead in a new age, as the star in the constellation Harp, which now flames in our zenith, astronomers announce, shall one day be the pole-star[4] for a thousand years?

In the light of this hope I accept the topic which not only usage but the nature of our association seem to prescribe to this day,--the AMERICAN SCHOLAR. Year by year we come up hither to read one more chapter of his biography. Let us inquire what new lights, new events, and more days have thrown on his character, his duties, and his hopes.

It is one of those fables which out of an unknown antiquity convey an unlooked-for wisdom, that the gods, in the beginning, divided Man into men, that he might be more helpful to himself; just as the hand was divided into fingers, the better to answer its end.[5]

The old fable covers a doctrine ever new and sublime; that there is One Man,--present to all particular men only partially, or through one faculty; and that you must take the whole society to find the whole man. Man is not a farmer, or a professor, or an engineer, but he is all. Man is priest, and scholar, and statesman, and producer, and soldier. In the _divided_ or social state these functions are parceled out to individuals, each of whom aims to do his stint[6] of the joint work, whilst each other performs his. The fable implies

that the individual, to possess himself, must sometimes return from his own labor to embrace all the other laborers. But, unfortunately, this original unit, this fountain of power, has been so distributed to multitudes, has been so minutely subdivided and peddled out, that it is spilled into drops, and cannot be gathered. The state of society is one in which the members have suffered amputation from the trunk and strut about so many walking monsters,--a good finger, a neck, a stomach, an elbow, but never a man.

Man is thus metamorphosed into a thing, into many things. The planter, who is Man sent out into the field to gather food, is seldom cheered by any idea of the true dignity of his ministry. He sees his bushel and his cart, and nothing beyond, and sinks into the farmer, instead of Man on the farm. The tradesman scarcely ever gives an ideal worth to his work, but is ridden[7] by the routine of his craft, and the soul is subject to dollars. The priest becomes a form; the attorney a statute-book; the mechanic a machine; the sailor a rope of the ship.

In this distribution of functions the scholar is the delegated intellect. In the right state he is _Man Thinking_. In the degenerate state, when the victim of society, he tends to become a mere thinker, or, still worse, the parrot of other men's thinking.

In this view of him, as Man Thinking, the whole theory of his office is contained. Him Nature solicits with all her placid, all her monitory pictures.[8] Him the past instructs. Him the future invites. Is not indeed every man a student, and do not all things exist for the student's behoof? And, finally, is not the true scholar the only true master? But as the old oracle said, "All things have two handles: Beware of the wrong one."[9] In life, too often, the scholar errs with mankind and forfeits his privilege. Let us see him in his school, and consider him in reference to the main influences he receives.

* * * * *

I. The first in time and the first in importance of the influences upon the mind is that of nature. Every day, the sun;[10] and, after sunset, Night and her stars. Ever the winds blow; ever the grass grows. Every day, men and women, conversing, beholding and beholden.[11] The scholar must needs stand wistful and admiring before this great spectacle. He must settle its value in his mind. What is nature to him? There is never a beginning, there is never an end, to the inexplicable continuity of this web of God, but always circular power returning into itself.[12] Therein it resembles his own spirit, whose beginning, whose ending, he never can find,--so entire, so boundless. Far too as her splendors shine, system on system shooting like rays, upward, downward, without center, without circumference,--in the mass and in the particle, Nature hastens to render account of herself to the mind. Classification begins. To the young mind everything is individual, stands by itself. By and by it finds how to join two things and see in them one nature; then three, then three thousand; and so, tyrannized over by its own unifying instinct, it goes on tying things together, diminishing anomalies, discovering roots running under ground whereby contrary and remote things cohere and flower out from one stem. It presently learns that since the dawn of history there has been a constant accumulation and classifying of facts. But what is classification but the perceiving that these objects are not chaotic, and are not foreign, but have a law which is also a law of the human mind? The astronomer discovers that geometry, a pure abstraction of the human mind, is the measure of planetary motion. The chemist finds proportions and intelligible method throughout matter; and science is nothing but the finding of analogy, identity, in the most remote parts. The ambitious soul sits down before each refractory fact; one after another reduces all strange constitutions, all new powers, to their class and their law, and goes on forever to animate the last fiber of organization, the outskirts of nature, by insight.

Thus to him, to this school-boy under the bending dome of day, is suggested that he and it proceed from one Root; one is leaf and one is flower; relation, sympathy, stirring in every vein. And what is that root? Is not that the soul of his soul?--A thought too bold?--A dream too wild? Yet when this spiritual light shall have revealed the law of more earthly natures,--when he has learned to worship the soul, and to see that the natural philosophy that now is, is only the first gropings of its gigantic hand,--he shall look forward to an ever-expanding knowledge as to a becoming creator.[13] He shall see that nature is the opposite of the soul, answering to it part for part. One is seal and one is print. Its beauty is the beauty of his own mind. Its laws are the laws of his own mind. Nature then becomes to him the measure of his attainments. So much of nature as he is ignorant of, so much of his own mind does he not yet possess. And, in fine, the ancient precept, "Know thyself,"[14] and the modern precept, "Study nature," become at last one maxim.

* * * * *

II. The next great influence into the spirit of the scholar is the mind of the Past,--in whatever form, whether of literature, of art, of institutions, that mind is inscribed. Books are the best type of the influence of the past, and perhaps we shall get at the truth,--learn

the amount of this influence more conveniently,--by considering their value alone.

The theory of books is noble. The scholar of the first age received into him the world around; brooded thereon; gave it the new arrangement of his own mind, and uttered it again. It came into him life; it went out from him truth. It came to him short-lived actions; it went out from him immortal thoughts. It came to him business; it went from him poetry. It was dead fact; now, it is quick thought. It can stand, and it can go. It now endures, it now flies, it now inspires.[15] Precisely in proportion to the depth of mind from which it issued, so high does it soar, so long does it sing.

Or, I might say, it depends on how far the process had gone, of transmuting life into truth. In proportion to the completeness of the distillation, so will the purity and imperishableness of the product be. But none is quite perfect. As no air-pump can by any means make a perfect vacuum,[16] so neither can any artist entirely exclude the conventional, the local, the perishable from his book, or write a book of pure thought, that shall be as efficient, in all respects, to a remote posterity, as to contemporaries, or rather to the second age. Each age, it is found, must write its own books; or rather, each generation for the next succeeding. The books of an older period will not fit this.

Yet hence arises a grave mischief. The sacredness which attaches to the act of creation, the act of thought, is instantly transferred to the record. The poet chanting was felt to be a divine man. Henceforth the chant is divine also. The writer was a just and wise spirit. Henceforward it is settled the book is perfect; as love of the hero corrupts into worship of his statue. Instantly the book becomes noxious.[17] The guide is a tyrant. We sought a brother, and lo, a governor. The sluggish and perverted mind of the multitude, always slow to open to the incursions of Reason, having once so opened, having once received this book, stands upon it, and makes an outcry if it is disparaged. Colleges are built on it. Books are written on it by thinkers, not by Man Thinking, by men of talent, that is, who start wrong, who set out from accepted dogmas, not from their own sight of principles. Meek young men grow up in libraries, believing it their duty to accept the views which Cicero, which Locke,[18] which Bacon,[19] have given; forgetful that Cicero, Locke and Bacon were only young men in libraries when they wrote these books.

Hence, instead of Man Thinking, we have the bookworm. Hence the book-learned class, who value books, as such; not as related to nature and the human constitution, but as making a sort of Third Estate[20] with the world and soul. Hence the restorers of readings,[21] the emendators,[22] the bibliomaniacs[23] of all degrees. This is bad; this is worse than it seems.

Books are the best of things, well used; abused, among the worst. What is the right use? What is the one end which all means go to effect? They are for nothing but to inspire.[24] I had better never see a book than to be warped by its attraction clean out of my own orbit, and made a satellite instead of a system. The one thing in the world of value is the active soul,--the soul, free, sovereign, active. This every man is entitled to; this every man contains within him, although in almost all men obstructed, and as yet unborn. The soul active sees absolute truth and utters truth, or creates. In this action it is genius; not the privilege of here and there a favorite, but the sound estate of every man.[25] In its essence it is progressive. The book, the college, the school of art, the institution of any kind, stop with some past utterance of genius. This is good, say they,--let us hold by this. They pin me down.[26] They look backward and not forward. But genius always looks forward. The eyes of man are set in his forehead, not in his hindhead. Man hopes. Genius creates. To create,--to create,--is the proof of a divine presence. Whatever talents may be, if the man create not, the pure efflux of the Deity is not his;[27]--cinders and smoke there may be, but not yet flame. There are creative manners, there are creative actions, and creative words; manners, actions, words, that is, indicative of no custom or authority, but springing spontaneous from the mind's own sense of good and fair.

On the other part, instead of being its own seer, let it receive always from another mind its truth, though it were in torrents of light, without periods of solitude, inquest, and self-recovery; and a fatal disservice[28] is done. Genius is always sufficiently the enemy of genius by over-influence.[29] The literature of every nation bear me witness. The English dramatic poets have Shakespearized now for two hundred years.[30]

Undoubtedly there is a right way of reading, so it be sternly subordinated. Man Thinking must not be subdued by his instruments. Books are for the scholar's idle times. When he can read God directly, the hour is too precious to be wasted in other men's transcripts of their readings.[31] But when the intervals of darkness come, as come they must,--when the soul seeth not, when the sun is hid and the stars withdraw their shining,--we repair to the lamps which were kindled by their ray, to guide our steps to the East again, where the dawn is.[32] We hear, that we may speak. The Arabian proverb says, "A fig-tree, looking on a fig-tree, becometh fruitful."

It is remarkable, the character of the pleasure we derive from the best books. They impress us ever with the conviction that one nature wrote and the same reads. We read the verses of one of the great English poets, of Chaucer,[33] of Marvell,[34] of Dryden,[35] with the most modern joy,--with a pleasure, I mean, which is in great part caused by the abstraction of all _time_ from their verses. There is some awe mixed with the joy of our surprise, when this poet, who lived in some past world, two or three hundred years ago, says that which lies close to my own soul, that which I also had well-nigh thought and said. But for the evidence thence afforded to the philosophical doctrine of the identity of all minds, we should suppose some pre-established harmony, some foresight of souls that were to be, and some preparation of stores for their future wants, like the fact observed in insects, who lay up food before death for the young grub they shall never see.

I would not be hurried by any love of system, by any exaggeration of instincts, to underrate the Book. We all know that as the human body can be nourished on any food, though it were boiled grass and the broth of shoes, so the human mind can be fed by any knowledge. And great and heroic men have existed who had almost no other information than by the printed page. I only would say that it needs a strong head to bear that diet. One must be an inventor to read well. As the proverb says, "He that would bring home the wealth of the Indies must carry out the wealth of the Indies." There is then creative reading as well as creative writing. When the mind is braced by labor and invention, the page of whatever book we read becomes luminous with manifold allusion. Every sentence is doubly significant, and the sense of our author is as broad as the world. We then see, what is always true, that as the seer's hour of vision is short and rare among heavy days and months, so is its record, perchance, the least part of his volume. The discerning will read, in his Plato[36] or Shakespeare, only that least part,--only the authentic utterances of the oracle;--all the rest he rejects, were it never so many times Plato's and Shakespeare's.

Of course there is a portion of reading quite indispensable to a wise man. History and exact science he must learn by laborious reading. Colleges, in like manner, have their indispensable office,--to teach elements. But they can only highly serve us when they aim not to drill, but to create; when they gather from far every ray of various genius to their hospitable halls, and by the concentrated fires set the hearts of their youth on flame. Thought and knowledge are natures in which apparatus and pretension avail nothing. Gowns[37] and pecuniary foundations,[38] though of towns of gold, can never countervail the least sentence or syllable of wit.[39] Forget this, and our American colleges will recede in their public importance, whilst they grow richer every year.

* * * * *

III. There goes in the world a notion that the scholar should be a recluse, a valetudinarian,[40]--as unfit for any handiwork or public labor as a penknife for an axe. The so-called "practical men" sneer at speculative men, as if, because they speculate or _see_, they could do nothing. I have heard it said that the clergy--who are always, more universally than any other class, the scholars of their day--are addressed as women; that the rough, spontaneous conversation of men they do not hear, but only a mincing[41] and diluted speech. They are often virtually disfranchised; and indeed there are advocates for their celibacy. As far as this is true of the studious classes, it is not just and wise. Action is with the scholar subordinate, but it is essential. Without it he is not yet man. Without it thought can never ripen into truth. Whilst the world hangs before the eye as a cloud of beauty, we cannot even see its beauty. Inaction is cowardice, but there can be no scholar without the heroic mind. The preamble[42] of thought, the transition through which it passes from the unconscious to the conscious, is action. Only so much do I know, as I have lived. Instantly we know whose words are loaded with life, and whose not.

The world--this shadow of the soul, or _other me_, lies wide around. Its attractions are the keys which unlock my thoughts and make me acquainted with myself. I launch eagerly into this resounding tumult. I grasp the hands of those next me, and take my place in the ring to suffer and to work, taught by an instinct that so shall the dumb abyss[43] be vocal with speech. I pierce its order; I dissipate its fear;[44] I dispose of it within the circuit of my expanding life. So much only of life as I know by experience, so much of the wilderness have I vanquished and planted, or so far have I extended my being, my dominion. I do not see how any man can afford, for the sake of his nerves and his nap, to spare any action in which he can partake. It is pearls and rubies to his discourse. Drudgery, calamity, exasperation, want, are instructors in eloquence and wisdom. The true scholar grudges every opportunity of action passed by, as a loss of power.

It is the raw material out of which the intellect molds her splendid products. A strange process too, this by which experience is converted into thought, as a mulberry-leaf is converted into satin.[45] The manufacture goes forward at all hours.

The actions and events of our childhood and youth are now matters of calmest observation. They lie like fair pictures in the air. Not so with our recent actions,--with the business which we now have in hand. On this we are quite unable to speculate. Our affections

as yet circulate through it. We no more feel or know it than we feel the feet, or the hand, or the brain of our body. The new deed is yet a part of life,--remains for a time immersed in our unconscious life. In some contemplative hour it detaches itself from the life like a ripe fruit,[46] to become a thought of the mind. Instantly it is raised, transfigured; the corruptible has put on incorruption.[47] Henceforth it is an object of beauty, however base its origin and neighborhood. Observe, too, the impossibility of antedating this act. In its grub state it cannot fly, it cannot shine, it is a dull grub. But suddenly, without observation, the selfsame thing unfurls beautiful wings, and is an angel of wisdom. So is there no fact, no event, in our private history, which shall not, sooner or later, lose its adhesive, inert form, and astonish us by soaring from our body into the empyrean.[48] Cradle and infancy, school and playground, the fear of boys, and dogs, and ferules,[49] the love of little maids and berries, and many another fact that once filled the whole sky, are gone already; friend and relative, profession and party, town and country, nation and world, must also soar and sing.[50]

Of course, he who has put forth his total strength in fit actions has the richest return of wisdom. I will not shut myself out of this globe of action, and transplant an oak into a flower-pot, there to hunger and pine; nor trust the revenue of some single faculty, and exhaust one vein of thought, much like those Savoyards,[51] who, getting their livelihood by carving shepherds, shepherdesses, and smoking Dutchmen, for all Europe, went out one day to the mountain to find stock, and discovered that they had whittled up the last of their pine-trees. Authors we have, in numbers, who have written out their vein, and who, moved by a commendable prudence, sail for Greece or Palestine, follow the trapper into the prairie, or ramble round Algiers, to replenish their merchantable stock.

If it were only for a vocabulary, the scholar would be covetous of action. Life is our dictionary.[52] Years are well spent in country labors; in town; in the insight into trades and manufactures; in frank intercourse with many men and women; in science; in art; to the one end of mastering in all their facts a language by which to illustrate and embody our perceptions. I learn immediately from any speaker how much he has already lived, through the poverty or the splendor of his speech. Life lies behind us as the quarry from whence we get tiles and copestones for the masonry of to-day. This is the way to learn grammar. Colleges and books only copy the language which the field and the work-yard made.

But the final value of action, like that of books, and better than books, is that it is a resource. That great principle of Undulation in nature, that shows itself in the inspiring and expiring of the breath; in desire and satiety; in the ebb and flow of the sea; in day and night; in heat and cold; and, as yet more deeply ingrained in every atom and every fluid, is known to us under the name of Polarity,--these "fits of easy transmission and reflection," as Newton[53] called them, are the law of nature because they are the law of spirit.

The mind now thinks, now acts, and each fit reproduces the other. When the artist has exhausted his materials, when the fancy no longer paints, when thoughts are no longer apprehended and books are a weariness,--he has always the resource _to live_. Character is higher than intellect. Thinking is the function. Living is the functionary. The stream retreats to its source. A great soul will be strong to live, as well as strong to think. Does he lack organ or medium to impart his truth? He can still fall back on this elemental force of living them. This is a total act. Thinking is a partial act. Let the grandeur of justice shine in his affairs. Let the beauty of affection cheer his lowly roof. Those "far from fame," who dwell and act with him, will feel the force of his constitution in the doings and passages of the day better than it can be measured by any public and designed display. Time shall teach him that the scholar loses no hour which the man lives. Herein he unfolds the sacred germ of his instinct, screened from influence. What is lost in seemliness is gained in strength. Not out of those on whom systems of education have exhausted their culture comes the helpful giant to destroy the old or to build the new, but out of unhandselled[54] savage nature; out of terrible Druids[55] and Berserkers[56] come at last Alfred[57] and Shakespeare. I hear therefore with joy whatever is beginning to be said of the dignity and necessity of labor to every citizen. There is virtue yet in the hoe and the spade,[58] for learned as well as for unlearned hands. And labor is everywhere welcome; always we are invited to work; only be this limitation observed, that a man shall not for the sake of wider activity sacrifice any opinion to the popular judgments and modes of action.

* * * * *

I have now spoken of the education of the scholar by nature, by books, and by action. It remains to say somewhat of his duties.

They are such as become Man Thinking. They may all be comprised in self-trust. The office of the scholar is to cheer, to raise, and to guide men by showing them facts amidst appearances. He plies the slow, unhonored, and unpaid task of observation. Flamsteed[59] and Herschel,[60] in their glazed observatories, may catalogue the stars with the praise of all men, and, the results

being splendid and useful, honor is sure. But he, in his private observatory, cataloguing obscure and nebulous[61] stars of the human mind, which as yet no man has thought of as such,--watching days and months sometimes for a few facts; correcting still his old records,--must relinquish display and immediate fame. In the long period of his preparation he must betray often an ignorance and shiftlessness in popular arts, incurring the disdain of the able who shoulder him aside. Long he must stammer in his speech; often forego the living for the dead. Worse yet, he must accept--how often!--poverty and solitude. For the ease and pleasure of treading the old road, accepting the fashions, the education, the religion of society, he takes the cross of making his own, and, of course, the self-accusation, the faint heart, the frequent uncertainty and loss of time, which are the nettles and tangling vines in the way of the self-relying and self-directed; and the state of virtual hostility in which he seems to stand to society, and especially to educated society. For all this loss and scorn, what offset? He is to find consolation in exercising the highest functions of human nature. He is one who raises himself from private considerations and breathes and lives on public and illustrious thoughts. He is the world's eye. He is the world's heart. He is to resist the vulgar prosperity that retrogrades ever to barbarism, by preserving and communicating heroic sentiments, noble biographies, melodious verse, and the conclusions of history. Whatsoever oracles the human heart, in all emergencies, in all solemn hours, has uttered as its commentary on the world of actions,--these he shall receive and impart. And whatsoever new verdict Reason from her inviolable seat pronounces on the passing men and events of to-day,--this he shall hear and promulgate.

These being his functions, it becomes him to feel all confidence in himself, and to defer never to the popular cry. He and he only knows the world. The world of any moment is the merest appearance. Some great decorum, some fetich[62] of a government, some ephemeral trade, or war, or man, is cried up[63] by half mankind and cried down by the other half, as if all depended on this particular up or down. The odds are that the whole question is not worth the poorest thought which the scholar has lost in listening to the controversy. Let him not quit his belief that a popgun is a popgun, though the ancient and honorable[64] of the earth affirm it to be the crack of doom. In silence, in steadiness, in severe abstraction, let him hold by himself; add observation to observation, patient of neglect, patient of reproach, and bide his own time,--happy enough if he can satisfy himself alone that this day he has seen something truly. Success treads on every right step. For the instinct is sure that prompts him to tell his brother what he thinks. He then learns that in going down into the secrets of his own mind he has descended into the secrets of all minds. He learns that he who has mastered any law in his private thoughts is master to that extent of all men whose language he speaks, and of all into whose language his own can be translated. The poet, in utter solitude remembering his spontaneous thoughts and recording them, is found to have recorded that which men in cities vast find true for them also. The orator distrusts at first the fitness of his frank confessions, his want of knowledge of the persons he addresses, until he finds that he is the complement[65] of his hearers;--that they drink his words because he fulfills for them their own nature; the deeper he dives into his privatest, secretest presentiment, to his wonder he finds this is the most acceptable, most public and universally true. The people delight in it; the better part of every man feels--This is my music; this is myself.

In self-trust all the virtues are comprehended. Free should the scholar be,--free and brave. Free even to the definition of freedom, "without any hindrance that does not arise out of his own constitution." Brave; for fear is a thing which a scholar by his very function puts behind him. Fear always springs from ignorance. It is a shame to him if his tranquility, amid dangerous times, arise from the presumption that like children and women his is a protected class; or if he seek a temporary peace by the diversion of his thoughts from politics or vexed questions, hiding his head like an ostrich in the flowering bushes, peeping into microscopes, and turning rhymes, as a boy whistles to keep his courage up. So is the danger a danger still; so is the fear worse. Manlike let him turn and face it. Let him look into its eye and search its nature, inspect its origin,--see the whelping of this lion,--which lies no great way back; he will then find in himself a perfect comprehension of its nature and extent; he will have made his hands meet on the other side, and can henceforth defy it and pass on superior. The world is his who can see through its pretension. What deafness, what stone-blind custom, what overgrown error you behold is there only by sufferance,--by your sufferance. See it to be a lie, and you have already dealt it its mortal blow.

Yes, we are the cowed,--we the trustless. It is a mischievous notion that we are come late into nature; that the world was finished a long time ago. As the world was plastic and fluid in the hands of God, so it is ever to so much of his attributes as we bring to it. To ignorance and sin it is flint. They adapt themselves to it as they may; but in proportion as a man has any thing in him divine, the firmament flows before him and takes his signet[66] and form. Not he is great who can alter matter, but he who can alter my state of mind. They are the kings of the world who give the color of their present thought to all nature and all art, and persuade men, by the cheerful serenity of their carrying the matter, that this thing which they do is the apple which the ages have desired to pluck, now at last ripe, and inviting nations to the harvest. The great man makes the great thing. Wherever Macdonald[67] sits, there is the head of the table. Linnæus[68] makes botany the most alluring of studies, and wins it from the farmer and the herb-woman: Davy,[69]

chemistry; and Cuvier,[70] fossils. The day is always his who works in it with serenity and great aims. The unstable estimates of men crowd to him whose mind is filled with a truth, as the heaped waves of the Atlantic follow the moon.[71]

For this self-trust, the reason is deeper than can be fathomed,--darker than can be enlightened. I might not carry with me the feeling of my audience in stating my own belief. But I have already shown the ground of my hope, in adverting to the doctrine that man is one. I believe man has been wronged; he has wronged himself. He has almost lost the light that can lead him back to his prerogatives. Men are become of no account. Men in history, men in the world of to-day, are bugs, are spawn, and are called "the mass" and "the herd." In a century, in a millennium, one or two men;[72] that is to say, one or two approximations to the right state of every man. All the rest behold in the hero or the poet their own green and crude being,--ripened; yes, and are content to be less, so _that_ may attain to its full stature. What a testimony, full of grandeur, full of pity, is borne to the demands of his own nature, by the poor clansman, the poor partisan, who rejoices in the glory of his chief! The poor and the low find some amends to their immense moral capacity, for their acquiescence in a political and social inferiority.[73] They are content to be brushed like flies from the path of a great person, so that justice shall be done by him to that common nature which it is the dearest desire of all to see enlarged and glorified. They sun themselves in the great man's light, and feel it to be their own element. They cast the dignity of man from their downtrod selves upon the shoulders of a hero, and will perish to add one drop of blood to make that great heart beat, those giant sinews combat and conquer. He lives for us, and we live in him.

Men such as they[74] are very naturally seek money or power; and power because it is as good as money,--the "spoils," so called, "of office." And why not? For they aspire to the highest, and this, in their sleep-walking, they dream is highest. Wake them and they shall quit the false good and leap to the true, and leave governments to clerks and desks. This revolution is to be wrought by the gradual domestication of the idea of Culture. The main enterprise of the world for splendor, for extent, is the upbuilding of a man. Here are the materials strewn along the ground. The private life of one man shall be a more illustrious monarchy, more formidable to its enemy, more sweet and serene in its influence to its friend, than any kingdom in history. For a man, rightly viewed, comprehendeth[75] the particular natures of all men. Each philosopher, each bard, each actor has only done for me, as by a delegate, what one day I can do for myself. The books which once we valued more than the apple of the eye, we have quite exhausted. What is that but saying that we have come up with the point of view which the universal mind took through the eyes of one scribe; we have been that man, and have passed on. First, one, then another, we drain all cisterns, and waxing greater by all these supplies, we crave a better and a more abundant food. The man has never lived that can feed us ever. The human mind cannot be enshrined in a person who shall set a barrier on any one side to this unbounded, unboundable empire. It is one central fire, which, flaming now out of the lips of Etna, lightens the capes of Sicily, and now out of the throat of Vesuvius, illuminates the towers and vineyards of Naples. It is one light which beams out of a thousand stars. It is one soul which animates all men.

* * * * *

But I have dwelt perhaps tediously upon this abstraction of the Scholar. I ought not to delay longer to add what I have to say of nearer reference to the time and to this country.

Historically, there is thought to be a difference in the ideas which predominate over successive epochs, and there are data for marking the genius of the Classic, of the Romantic, and now of the Reflective or Philosophical age.[76] With the views I have intimated of the oneness or the identity of the mind through all individuals, I do not much dwell on these differences. In fact, I believe each individual passes through all three. The boy is a Greek; the youth, romantic; the adult, reflective. I deny not, however, that a revolution in the leading idea may be distinctly enough traced.

Our age is bewailed as the age of Introversion.[77] Must that needs be evil? We, it seems, are critical. We are embarrassed with second thoughts.[78] We cannot enjoy anything for hankering to know whereof the pleasure consists. We are lined with eyes. We see with our feet. The time is infected with Hamlet's unhappiness,--

"Sicklied o'er with the pale cast of thought."[79]

Is it so bad then? Sight is the last thing to be pitied. Would we be blind? Do we fear lest we should outsee nature and God, and drink truth dry? I look upon the discontent of the literary class as a mere announcement of the fact that they find themselves not in the state of mind of their fathers, and regret the coming state as untried; as a boy dreads the water before he has learned that he can swim. If there is any period one would desire to be born in, is it not the age of Revolution; when the old and the new stand side by side and admit of being compared; when the energies of all men are searched by fear and by hope; when the historic glories of the old can be compensated by the rich possibilities of the new era? This time, like all times, is a very good one, if we but know

what to do with it.

I read with some joy of the auspicious signs of the coming days, as they glimmer already through poetry and art, through philosophy and science, through church and state.

One of these signs is the fact that the same movement[80] which effected the elevation of what was called the lowest class in the state assumed in literature a very marked and as benign an aspect. Instead of the sublime and beautiful, the near, the low, the common, was explored and poetized. That which had been negligently trodden under foot by those who were harnessing and provisioning themselves for long journeys into far countries, is suddenly found to be richer than all foreign parts. The literature of the poor, the feelings of the child, the philosophy of the street, the meaning of household life, are the topics of the time. It is a great stride. It is a sign--is it not?--of new vigor when the extremities are made active, when currents of warm life run into the hands and the feet. I ask not for the great, the remote, the romantic; what is doing in Italy or Arabia; what is Greek art, or Provençal minstrelsy; I embrace the common, I explore and sit at the feet of the familiar, the low. Give me insight into to-day, and you may have the antique and future worlds. What would we really know the meaning of? The meal in the firkin; the milk in the pan; the ballad in the street; the news of the boat; the glance of the eye; the form and the gait of the body;--show me the ultimate reason of these matters; show me the sublime presence of the highest spiritual cause lurking, as always it does lurk, in these suburbs and extremities of nature; let me see every trifle bristling with the polarity that ranges it instantly on an eternal law;[81] and the shop, the plow, and the ledger referred to the like cause by which light undulates and poets sing;--and the world lies no longer a dull miscellany and lumber-room, but has form and order: there is no trifle, there is no puzzle, but one design unites and animates the farthest pinnacle and the lowest trench.

This idea has inspired the genius of Goldsmith,[82] Burns,[83] Cowper,[84] and, in a newer time, of Goethe,[85] Wordsworth,[86] and Carlyle.[87] This idea they have differently followed and with various success. In contrast with their writing, the style of Pope,[88] of Johnson,[89] of Gibbon,[90] looks cold and pedantic. This writing is blood-warm. Man is surprised to find that things near are not less beautiful and wondrous than things remote. The near explains the far. The drop is a small ocean. A man is related to all nature. This perception of the worth of the vulgar is fruitful in discoveries. Goethe, in this very thing the most modern of the moderns, has shown us, as none ever did, the genius of the ancients.

There is one man of genius who has done much for this philosophy of life, whose literary value has never yet been rightly estimated:--I mean Emanuel Swedenborg.[91] The most imaginative of men, yet writing with the precision of a mathematician, he endeavored to engraft a purely philosophical Ethics on the popular Christianity of his time. Such an attempt of course must have difficulty which no genius could surmount. But he saw and showed the connexion between nature and the affections of the soul. He pierced the emblematic or spiritual character of the visible, audible, tangible world. Especially did his shade-loving muse hover over and interpret the lower parts of nature; he showed the mysterious bond that allies moral evil to the foul material forms, and has given in epical parables a theory of insanity, of beasts, of unclean and fearful things.

Another sign of our times, also marked by an analogous political movement, is the new importance given to the single person. Everything that tends to insulate the individual--to surround him with barriers of natural respect, so that each man shall feel the world is his, and man shall treat with man as a sovereign state with a sovereign state--tends to true union as well as greatness. "I learned," said the melancholy Pestalozzi,[92] "that no man in God's wide earth is either willing or able to help any other man." Help must come from the bosom alone. The scholar is that man who must take up into himself all the ability of the time, all the contributions of the past, all the hopes of the future. He must be an university of knowledges. If there be one lesson more than another that should pierce his ear, it is--The world is nothing, the man is all; in yourself is the law of all nature, and you know not yet how a globule of sap ascends; in yourself slumbers the whole of Reason; it is for you to know all; it is for you to dare all. Mr. President and Gentlemen, this confidence in the unsearched might of man belongs, by all motives, by all prophecy, by all preparation, to the American Scholar. We have listened too long to the courtly muses of Europe. The spirit of the American freeman is already suspected to be timid, imitative, tame. Public and private avarice make the air we breathe thick and fat. The scholar is decent, indolent, complaisant. See already the tragic consequence. The mind of this country, taught to aim at low objects, eats upon itself. There is no work for any one but the decorous and the complaisant. Young men of the fairest promise, who begin life upon our shores, inflated by the mountain winds, shined upon by all the stars of God, find the earth below not in unison with these, but are hindered from action by the disgust which the principles on which business is managed inspire, and turn drudges, or die of disgust, some of them suicides. What is the remedy? They did not yet see, and thousands of young men as hopeful now crowding to the barriers for the career do not yet see, that if the single man plant himself indomitably on his instincts, and there abide, the huge world will come round to him. Patience,--patience; with the shades of all the good and great for company; and for solace the

perspective of your own infinite life; and for work the study and the communication of principles, the making those instincts prevalent, the conversion of the world. Is it not the chief disgrace in the world, not to be an unit; not to be reckoned one character; not to yield that peculiar fruit which each man was created to bear, but to be reckoned in the gross, in the hundred, or the thousand, of the party, the section, to which we belong; and our opinion predicted geographically, as the north, or the south? Not so, brothers and friends,--please God, ours shall not be so. We will walk on our own feet; we will work with our own hands; we will speak our own minds. Then shall man be no longer a name for pity, for doubt, and for sensual indulgence. The dread of man and the love of man shall be a wall of defense and a wreath of joy around all. A nation of men will for the first time exist, because each believes himself inspired by the Divine Soul which also inspires all men.

COMPENSATION.[93]

The wings of Time are black and white, Pied with morning and with night. Mountain tall and ocean deep Trembling balance duly keep. In changing moon, in tidal wave, Glows the feud of Want and Have. Gauge of more and less through space Electric star and pencil plays. The lonely Earth amid the balls That hurry through the eternal halls, A makeweight flying to the void, Supplemental asteroid, Or compensatory spark, Shoots across the neutral Dark.

Man's the elm, and Wealth the vine, Stanch and strong the tendrils twine; Through the frail ringlets thee deceive, None from its stock that vine can reave. Fear not, then, thou child infirm, There's no god dare wrong a worm. Laurel crowns cleave to deserts, And power to him who power exerts; Hast not thy share? On winged feet, Lo! it rushes thee to meet; And all that Nature made thy own, Floating in air or pent in stone, Will rive the hills and swim the sea, And, like thy shadow, follow thee.

Ever since I was a boy, I have wished to write a discourse on Compensation: for it seemed to me when very young, that on this subject life was ahead of theology, and the people knew more than the preachers taught. The documents,[94] too, from which the doctrine is to be drawn, charmed my fancy by their endless variety, and lay always before me, even in sleep; for they are the tools in our hands, the bread in our basket, the transactions of the street, the farm, and the dwelling-house, greetings, relations, debts and credits, the influence of character, the nature and endowment of all men. It seemed to me, also, that in it might be shown men a ray of divinity, the present action of the soul of this world, clean from all vestige of tradition, and so the heart of man might be bathed by an inundation of eternal love, conversing with that which he knows was always and always must be, because it really is now. It appeared, moreover, that if this doctrine could be stated in terms with any resemblance to those bright intuitions in which this truth is sometimes revealed to us, it would be a star in many dark hours and crooked passages in our journey that would not suffer us to lose our way.

I was lately confirmed in these desires by hearing a sermon at church. The preacher, a man esteemed for his orthodoxy, unfolded in the ordinary manner the doctrine of the Last Judgment. He assumed that judgment is not executed in this world; that the wicked are successful; that the good are miserable;[95] and then urged from reason and from Scripture a compensation to be made to both parties in the next life. No offense appeared to be taken by the congregation at this doctrine. As far as I could observe, when the meeting broke up, they separated without remark on the sermon.

Yet what was the import of this teaching? What did the preacher mean by saying that the good are miserable in the present life? Was it that houses and lands, offices, wine, horses, dress, luxury, are had by unprincipled men, whilst the saints are poor and despised; and that a compensation is to be made to these last hereafter, by giving them the like gratifications another day,--bank stock and doubloons,[96] venison and champagne? This must be the compensation intended; for what else? Is it that they are to have leave to pray and praise? to love and serve men? Why, that they can do now. The legitimate inference the disciple would draw was: "We are to have _such_ a good time as the sinners have now"; or, to push it to its extreme import: "You sin now; we shall sin by and by; we would sin now, if we could; not being successful, we expect our revenue to-morrow."

The fallacy lay in the immense concession that the bad are successful; that justice is not done now. The blindness of the preacher consisted in deferring to the base estimate of the market of what constitutes a manly success, instead of confronting and convicting the world from the truth; announcing the presence of the soul; the omnipotence of the will: and so establishing the standard of good and ill, of success and falsehood.

I find a similar base tone in the popular religious works of the day, and the same doctrines assumed by the literary men when occasionally they treat the related topics. I think that our popular theology has gained in decorum, and not in principle, over the superstitions it has displaced. But men are better than this theology. Their daily life gives it the lie. Every ingenuous and aspiring

soul leaves the doctrine behind him in his own experience; and all men feel sometimes the falsehood which they cannot demonstrate. For men are wiser than they know. That which they hear in schools and pulpits without afterthought, if said in conversation, would probably be questioned in silence. If a man dogmatize in a mixed company on Providence and the divine laws, he is answered by a silence which conveys well enough to an observer the dissatisfaction of the hearer, but his incapacity to make his own statement.

I shall attempt in this and the following chapter to record some facts that indicate the path of the law of Compensation; happy beyond my expectation, if I shall truly draw the smallest arc of this circle.

POLARITY,[97] or action and reaction, we meet in every part of nature; in darkness and light; in heat and cold; in the ebb and flow of waters; in male and female; in the inspiration and expiration of plants and animals; in the equation of quantity and quality in the fluids of the animal body; in the systole and diastole[98] of the heart; in the undulations of fluids, and of sound; in the centrifugal and centripetal gravity; in electricity, galvanism, and chemical affinity. Superinduce magnetism at one end of a needle; the opposite magnetism takes place at the other end. If the south attracts, the north repels. To empty here, you must condense there. An inevitable dualism bisects nature, so that each thing is a half, and suggests another thing to make it whole; as, spirit, matter; man, woman; odd, even; subjective, objective; in, out; upper, under; motion, rest; yea, nay.

Whilst the world is thus dual, so is every one of its parts. The entire system of things gets represented in every particle. There is somewhat that resembles the ebb and flow of the sea, day and night, man and woman, in a single needle of the pine, in a kernel of corn, in each individual of every animal tribe. The reaction, so grand in the elements, is repeated within these small boundaries. For example, in the animal kingdom the physiologist has observed that no creatures are favorites, but a certain compensation balances every gift and every defect. A surplusage given to one part is paid out of a reduction from another part of the same creature. If the head and neck are enlarged, the trunk and extremities are cut short.

The theory of the mechanic forces is another example. What we gain in power is lost in time; and the converse. The periodic or compensating errors of the planets is another instance. The influences of climate and soil in political history is another. The cold climate invigorates. The barren soil does not breed fevers, crocodiles, tigers, or scorpions.

The same dualism underlies the nature and condition of man. Every excess causes a defect; every defect an excess. Every sweet hath its sour; every evil its good. Every faculty which is a receiver of pleasure has an equal penalty put on its abuse. It is to answer for its moderation with its life. For every grain of wit there is a grain of folly. For everything you have missed, you have gained something else; and for everything you gain, you lose something. If riches increase, they are increased[99] that use them. If the gatherer gathers too much, nature takes out of the man what she puts into his chest, swells the estate, but kills the owner. Nature hates monopolies and exceptions. The waves of the sea do not more speedily seek a level from their loftiest tossing, than the varieties of condition tend to equalize themselves. There is always some leveling circumstance that puts down the overbearing, the strong, the rich, the fortunate, substantially on the same ground with all others. Is a man too strong and fierce for society, and by temper and position a bad citizen,--a morose ruffian, with a dash of the pirate in him;--nature sends him a troop of pretty sons and daughters, who are getting along in the dame's classes at the village school, and love and fear for them smooths his grim scowl to courtesy. Thus she contrives to intenerate[100] the granite and felspar, takes the boar out and puts the lamb in, and keeps her balance true.

The farmer imagines power and place are fine things. But the President has paid dear for his White House.[101] It has commonly cost him all his peace, and the best of his many attributes. To preserve for a short time so conspicuous an appearance before the world, he is content to eat dust[102] before the real masters who stand erect behind the throne. Or, do men desire the more substantial and permanent grandeur of genius? Neither has this an immunity. He who by force of will or of thought, is great, and overlooks[103] thousands, has the charges of that eminence. With every influx of light comes new danger. Has he light? he must bear witness to the light, and always outrun that sympathy which gives him such keen satisfaction, by his fidelity to new revelations of the incessant soul. He must hate father and mother, wife and child. Has he all that the world loves and admires and covets?--he must cast behind him their admiration, and afflict them by faithfulness to his truth, and become a by-word and a hissing.

This law writes the laws of cities and nations. It is in vain to build or plot or combine against it. Things refuse to be mismanaged long. _Res nolunt diu male administrari._[104] Though no checks to a new evil appear, the checks exist, and will appear. If the government is cruel, the governor's life is not safe. If you tax too high, the revenue will yield nothing. If you make the criminal code sanguinary, juries will not convict. If the law is too mild, private vengeance comes in. If the government is a terrific democracy, the

pressure is resisted by an overcharge of energy in the citizen, and life glows with a fiercer flame. The true life and satisfactions of man seem to elude the utmost rigors or felicities of condition, and to establish themselves with great indifferency under all varieties of circumstances. Under all governments the influence of character remains the same,--in Turkey and in New England about alike. Under the primeval despots of Egypt, history honestly confesses that man must have been as free as culture could make him.

These appearances indicate the fact that the universe is represented in every one of its particles. Everything in nature contains all the powers of nature. Everything is made of one hidden stuff; as the naturalist sees one type under every metamorphosis, and regards a horse as a running man, a fish as a swimming man, a bird as a flying man, a tree as a rooted man. Each new form repeats not only the main character of the type, but part for part all the details, all the aims, furtherances, hindrances, energies, and whole system of every other. Every occupation, trade, art, transaction, is a compend of the world and a correlative of every other. Each one is an entire emblem of human life; of its good and ill, its trials, its enemies, its course and its end. And each one must somehow accommodate the whole man, and recite all his destiny.

The world globes itself in a drop of dew.[105] The microscope cannot find the animalcule which is less perfect for being little.[106] Eyes, ears, taste, smell, motion, resistance, appetite, and organs of reproduction that take hold on eternity,--all find room to consist in the small creature. So do we put our life into every act. The true doctrine of omnipresence is, that God reappears with all his parts in every moss and cobweb.[107] The value of the universe contrives to throw itself into every point. If the good is there, so is the evil; if the affinity, so the repulsion; if the force, so the limitation.

Thus is the universe alive. All things are moral. That soul, which within us is a sentiment, outside of us is a law. We feel its inspiration; out there in history we can see its fatal strength. "It is in the world, and the world was made by it." Justice is not postponed. A perfect equity adjusts its balance in all parts of life. [Greek: Hoi kyboi Dios aei eupiptousi],[108]--the dice of God are always loaded. The world looks like a multiplication table, or a mathematical equation, which, turn it how you will, balances itself. Take what figure you will, its exact value, nor more nor less, still returns to you. Every secret is told, every crime is punished, every virtue rewarded, every wrong redressed, in silence and certainty. What we call retribution is the universal necessity by which the whole appears wherever a part appears. If you see smoke, there must be fire. If you see a hand or limb, you know that the trunk to which it belongs is there behind.

Every act rewards itself, or, in other words, integrates itself, in a twofold manner; first, in the thing, or in real nature; and secondly, in the circumstance, or in apparent nature. Men call the circumstance the retribution. The causal retribution is in the thing, and is seen by the soul. The retribution in the circumstance is seen by the understanding; it is inseparable from the thing, but is often spread over a long time, and so does not become distinct until after many years. The specific stripes may follow late after the offense, but they follow because they accompany it. Crime and punishment grow out of one stem. Punishment is a fruit that unsuspected ripens within the flower of the pleasure which concealed it. Cause and effect, means and ends, seed and fruit, cannot be severed; for the effect already blooms in the cause, the end preëxists in the means, the fruit in the seed.

Whilst thus the world will be whole, and refuses to be disparted, we seek to act partially, to sunder, to appropriate; for example,--to gratify the senses, we sever the pleasure of the senses from the needs of the character. The ingenuity of man has always been dedicated to the solution of one problem,--how to detach the sensual sweet, the sensual strong, the sensual bright, etc., from the moral sweet, the moral deep, the moral fair; that is, again, to contrive to cut clean off this upper surface so thin as to leave it bottomless; to get a _one end_, without an _other end_. The soul says, Eat; the body would feast. The soul says, The man and woman shall be one flesh and one soul; the body would join the flesh only. The soul says, Have dominion over all things to the ends of virtue; the body would have the power over things to its own ends.

The soul strives amain[109] to live and work through all things. It would be the only fact. All things shall be added unto it,--power, pleasure, knowledge, beauty. The particular man aims to be somebody; to set up for himself; to truck and higgle for a private good; and, in particulars, to ride, that he may ride; to dress, that he may be dressed; to eat, that he may eat; and to govern, that he may be seen. Men seek to be great; they would have offices, wealth, power, and fame. They think that to be great is to possess one side of nature,--the sweet, without the other side,--the bitter.

This dividing and detaching is steadily counteracted. Up to this day, it must be owned, no projector has had the smallest success. The parted water reunites behind our hand. Pleasure is taken out of pleasant things, profit out of profitable things, power out of strong things, as soon as we seek to separate them from the whole. We can no more have things and get the sensual good, by itself, than we can get an inside that shall have no outside, or a light without a shadow. "Drive out nature with a fork, she comes

running back."[110]

Life invests itself with inevitable conditions, which the unwise seek to dodge, which one and another brags that he does not know; that they do not touch him;--but the brag is on his lips, the conditions are in his soul. If he escapes them in one part, they attack him in another more vital part. If he has escaped them in form, and in the appearance, it is because he has resisted his life, and fled from himself, and the retribution is so much death. So signal is the failure of all attempts to make this separation of the good from the tax, that the experiment would not be tried,--since to try it is to be mad,--but for the circumstance, that when the disease began in the will, of rebellion and separation, the intellect is at once infected, so that the man ceases to see God whole in each object, but is able to see the sensual allurement of an object, and not see the sensual hurt; he sees the mermaid's head, but not the dragon's tail; and thinks he can cut off that which he would have, from that which he would not have. "How secret art thou who dwellest in the highest heavens in silence, O thou only great God, sprinkling with an unwearied Providence certain penal blindnesses upon such as have unbridled desires!"[111]

The human soul is true to these facts in the painting of fable, of history, of law, of proverbs, of conversation. It finds a tongue in literature unawares. Thus the Greeks called Jupiter,[112] Supreme Mind; but having traditionally ascribed to him many base actions, they involuntarily made amends to reason, by tying up the hands[113] of so bad a god. He is made as helpless as a king of England.[114] Prometheus[115] knows one secret which Jove must bargain for; Minerva,[116] another. He cannot get his own thunders; Minerva keeps the key of them.

"Of all the gods, I only know the keys That ope the solid doors within whose vaults His thunders sleep."

A plain confession of the in-working of the All, and of its moral aim. The Indian mythology ends in the same ethics; and it would seem impossible for any fable to be invented to get any currency which was not moral. Aurora[117] forgot to ask youth for her lover, and though Tithonus is immortal, he is old, Achilles[118] is not quite invulnerable; the sacred waters did not wash the heel by which Thetis held him. Siegfried,[119] in the Niebelungen, is not quite immortal, for a leaf fell on his back whilst he was bathing in the dragon's blood, and that spot which it covered is mortal. And so it must be. There is a crack in everything God has made. It would seem, there is always this vindictive circumstance stealing in at unawares, even into the wild poesy in which the human fancy attempted to make bold holiday, and to shake itself free of the old laws,--this back-stroke, this kick of the gun, certifying that the law is fatal; that in nature nothing can be given, all things are sold.

This is that ancient doctrine of Nemesis,[120] who keeps watch in the universe, and lets no offense go unchastised. The Furies,[121] they said, are attendants on justice, and if the sun in heaven should transgress his path, they would punish him. The poets related that stone walls, and iron swords, and leathern thongs had an occult sympathy with the wrongs of their owners; that the belt which Ajax gave Hector[122] dragged the Trojan hero over the field at the wheels of the car of Achilles, and the sword which Hector gave Ajax was that on whose point Ajax fell. They recorded, that when the Thasians[123] erected a statue to Theagenes, a victor in the games, one of his rivals went to it by night, and endeavored to throw it down by repeated blows, until at last he moved it from its pedestal, and was crushed to death beneath its fall.

This voice of fable has in it somewhat divine. It came from thought above the will of the writer. That is the best part of each writer, which has nothing private in it;[124] that which he does not know, that which flowed out of his constitution, and not from his too active invention; that which in the study of a single artist you might not easily find, but in the study of many, you would abstract as the spirit of them all. Phidias it is not, but the work of man in that early Hellenic[125] world, that I would know. The name and circumstance of Phidias, however convenient for history, embarrass when we come to the highest criticism. We are to see that which man was tending to do in a given period, and was hindered, or, if you will, modified in doing, by the interfering volitions of Phidias, of Dante, of Shakespeare, the organ whereby man at the moment wrought.

Still more striking is the expression of this fact in the proverbs of all nations, which are always the literature of reason, or the statements of an absolute truth, without qualification. Proverbs, like the sacred books of each nation, are the sanctuary of the intuitions. That which the droning world, chained to appearances, will not allow the realist to say in his own words, it will suffer him to say in proverbs without contradiction. And this law of laws which the pulpit, the senate, and the college deny, is hourly preached in all markets and workshops by flights of proverbs, whose teaching is as true and as omnipresent as that of birds and flies.

All things are double, one against another.--Tit for tat;[126] an eye for an eye; a tooth for a tooth; blood for blood; measure for measure; love for love.--Give and it shall be given you.--- He that watereth shall be watered himself.--What will you have? quoth God; pay for it and take it.--Nothing venture, nothing have.--Thou shalt be paid exactly for what thou hast done, no more, no

less.--Who doth not work shall not eat.--Harm watch, harm catch.--Curses always recoil on the head of him who imprecates them.--If you put a chain around the neck of a slave, the other end fastens itself around your own.--Bad counsel confounds the adviser.--The Devil is an ass.

It is thus written, because it is thus in life. Our action is overmastered and characterized above our will by the law of nature. We aim at a petty end quite aside from the public good, but our act arranges itself by irresistible magnetism in a line with the poles of the world.

A man cannot speak but he judges himself. With his will, or against his will, he draws his portrait to the eye of his companions by every word. Every opinion reacts on him who utters it. It is a thread-ball thrown at a mark, but the other end remains in the thrower's bag. Or, rather, it is a harpoon hurled at the whale, unwinding, as it flies, a coil of cord in the boat, and if the harpoon is not good, or not well thrown, it will go nigh to cut the steersman in twain, or to sink the boat.

You cannot do wrong without suffering wrong. "No man had ever a point of pride that was not injurious to him," said Burke.[127] The exclusive in fashionable life does not see that he excludes himself from enjoyment in the attempt to appropriate it. The exclusionist in religion does not see that he shuts the door of heaven on himself, in striving to shut out others. Treat men as pawns[128] and ninepins, and you shall suffer as well as they. If you leave out their heart, you shall lose your own. The senses would make things of all persons; of women, of children, of the poor. The vulgar proverb, "I will get it from his purse or get it from his skin," is sound philosophy.

All infractions of love and equity in our social relations are speedily punished. They are punished by fear. Whilst I stand in simple relations to my fellow-man, I have no displeasure in meeting him. We meet as water meets water, or as two currents of air mix, with perfect diffusion and interpenetration of nature. But as soon as there is any departure from simplicity, and attempt at halfness, or good for me that is not good for him, my neighbor feels the wrong; he shrinks from me as far as I have shrunk from him; his eyes no longer seek mine; there is war between us; there is hate in him and fear in me.

All the old abuses in society, universal and particular, all unjust accumulations of property and power, are avenged in the same manner. Fear is an instructor of great sagacity, and the herald of all revolutions. One thing he teaches, that there is rottenness where he appears. He is a carrion crow, and though you see not well what he hovers for, there is death somewhere. Our property is timid, our laws are timid, our cultivated classes are timid. Fear for ages has boded and mowed and gibbered over government and property. That obscene[129] bird is not there for nothing. He indicates great wrongs which must be revised.

Of the like nature is that expectation of change which instantly follows the suspension of our voluntary activity. The terror of cloudless noon, the emerald of Polycrates,[130] the awe of prosperity, the instinct which leads every generous soul to impose on itself tasks of a noble asceticism and vicarious virtue, are the tremblings of the balance of justice through the heart and mind of man.

Experienced men of the world know very well that it is best to pay scot and lot[131] as they go along, and that a man often pays dear for a small frugality. The borrower runs in his own debt. Has a man gained anything who has received a hundred favors and rendered none? Has he gained by borrowing, through indolence or cunning, his neighbor's wares, or horses, or money? There arises on the deed the instant acknowledgment of benefit on the one part, and of debt on the other; that is, of superiority and inferiority. The transaction remains in the memory of himself and his neighbor; and every new transaction alters, according to its nature, their relation to each other. He may soon come to see that he had better have broken his own bones than to have ridden in his neighbor's coach, and that "the highest price he can pay for a thing is to ask for it."

A wise man will extend this lesson to all parts of life, and know that it is the part of prudence to face every claimant, and pay every just demand on your time, your talents, or your heart. Always pay; for, first or last, you must pay your entire debt. Persons and events may stand for a time between you and justice, but it is only a postponement. You must pay at last your own debt. If you are wise, you will dread a prosperity which only loads you with more. Benefit is the end of nature. But for every benefit which you receive, a tax is levied. He is great who confers the most benefits. He is base--and that is the one base thing in the universe--to receive favors and render none. In the order of nature we cannot render benefits to those from whom we receive them, or only seldom.[132] But the benefit we receive must be rendered again, line for line, deed for deed, cent for cent, to somebody. Beware of too much good staying in your hand. It will fast corrupt and worm worms.[133] Pay it away quickly in some sort.

Labor is watched over by the same pitiless laws. Cheapest, say the prudent, is the dearest labor. What we buy in a broom, a mat, a wagon, a knife, is some application of good sense to a common want. It is best to pay in your land a skillful gardener, or to buy good sense applied to gardening; in your sailor, good sense applied to navigation; in the house, good sense applied to cooking, sewing, serving; in your agent, good sense applied to accounts and affairs. So do you multiply your presence, or spread yourself throughout your estate. But because of the dual constitution of things, in labor as in life there can be no cheating. The thief steals from himself. The swindler swindles himself. For the real price of labor is knowledge and virtue, whereof wealth and credit are signs. These signs, like paper money, may be counterfeited or stolen, but that which they represent, namely, knowledge and virtue, cannot be counterfeited or stolen. These ends of labor cannot be answered but by real exertions of the mind, and in obedience to pure motives. The cheat, the defaulter, the gambler, cannot extort the knowledge of material and moral nature which his honest care and pains yield to the operative. The law of nature is, Do the thing, and you shall have the power: but they who do not the thing have not the power.

Human labor, through all its forms, from the sharpening of a stake to the construction of a city or an epic, is one immense illustration of the perfect compensation of the universe. The absolute balance of Give and Take, the doctrine that everything has its price,--and if that price is not paid, not that thing but something else is obtained, and that it is impossible to get anything without its price,--is not less sublime in the columns of a ledger than in the budgets of states, in the laws of light and darkness, in all the action and reaction of nature. I cannot doubt that the high laws which each man sees implicated in those processes with which he is conversant, the stern ethics which sparkle on his chisel edge, which are measured out by his plumb and foot rule, which stand as manifest in the footing of the shop bill as in the history of a state,--do recommend to him his trade, and though seldom named, exalt his business to his imagination.

The league between virtue and nature engages all things to assume a hostile front to vice. The beautiful laws and substances of the world persecute and whip the traitor. He finds that things are arranged for truth and benefit, but there is no den in the wide world to hide a rogue. Commit a crime,[134] and the earth is made of glass. Commit a crime, and it seems as if a coat of snow fell on the ground, such as reveals in the woods the track of every partridge and fox and squirrel and mole. You cannot recall the spoken word,[135] you cannot wipe out the foot-track, you cannot draw up the ladder, so as to leave no inlet or clew. Some damning circumstance always transpires. The laws and substances of nature--water, snow, wind, gravitation--become penalties to the thief.

On the other hand, the law holds with equal sureness for all right action. Love, and you shall be loved. All love is mathematically just, as much as the two sides of an algebraic equation. The good man has absolute good, which like fire turns everything to its own nature, so that you cannot do him any harm; but as the royal armies sent against Napoleon, when he approached, cast down their colors and from enemies became friends, so disasters of all kinds, as sickness, offense, poverty, prove benefactors:--

"Winds blow and waters roll Strength to the brave, and power and deity, Yet in themselves are nothing."

The good are befriended even by weakness and defect. As no man had ever a point of pride that was not injurious to him, so no man had ever a defect that was not somewhere made useful to him. The stag in the fable[136] admired his horns and blamed his feet, but when the hunter came, his feet saved him, and afterwards, caught in the thicket, his horns destroyed him. Every man in his lifetime needs to thank his faults. As no man thoroughly understands a truth until he has contended against it, so no man has a thorough acquaintance with the hindrances or talents of men, until he has suffered from the one, and seen the triumph of the other over his own want of the same. Has he a defect of temper that unfits him to live in society? Thereby he is driven to entertain himself alone, and acquire habits of self-help; and thus, like the wounded oyster, he mends his shell with pearl.

Our strength grows out of our weakness. The indignation which arms itself with secret forces does not awaken until we are pricked and stung and sorely assailed. A great man is always willing to be little. Whilst he sits on the cushion of advantages, he goes to sleep. When he is punished, tormented, defeated, he has a chance to learn something; he has been put on his wits, on his manhood; he has gained facts; learns his ignorance; is cured of the insanity of conceit; has got moderation and real skill. The wise man throws himself on the side of his assailants. It is more his interest than it is theirs to find his weak point. The wound cicatrizes and falls off from him like a dead skin, and when they would triumph, lo! he has passed on invulnerable. Blame is safer than praise. I hate to be defended in a newspaper. As long as all that is said is said against me, I feel a certain assurance of success. But as soon as honeyed words of praise are spoken for me, I feel as one that lies unprotected before his enemies. In general, every evil to which we do not succumb is a benefactor. As the Sandwich Islander believes that the strength and valor of the enemy he kills passes into himself, so we gain the strength of the temptation we resist.

The same guards which protect us from disaster, defect, and enmity, defend us, if we will, from selfishness and fraud. Bolts and bars are not the best of our institutions, nor is shrewdness in trade a mark of wisdom. Men suffer all their life long, under the foolish superstition that they can be cheated. But it is as impossible for a man to be cheated by anyone but himself,[137] as for a thing to be and not to be at the same time. There is a third silent party to all our bargains. The nature and soul of things takes on itself the guaranty of the fulfillment of every contract, so that honest service cannot come to loss. If you serve an ungrateful master, serve him the more. Put God in your debt. Every stroke shall be repaid. The longer the payment is withholden,[138] the better for you; for compound interest on compound interest is the rate and usage of this exchequer.

The history of persecution is a history of endeavors to cheat nature, to make water run up hill, to twist a rope of sand. It makes no difference whether the actors be many or one, a tyrant or a mob. A mob[139] is a society of bodies voluntarily bereaving themselves of reason, and traversing its work. The mob is man voluntarily descending to the nature of the beast. Its fit hour of activity is night. Its actions are insane like its whole constitution; it persecutes a principle; it would whip a right; it would tar and feather justice, by inflicting fire and outrage upon the houses and persons of those who have these. It resembles the prank of boys, who run with fire engines to put out the ruddy aurora streaming to the stars. The inviolate spirit turns their spite against the wrongdoers. The martyr cannot be dishonored. Every lash inflicted is a tongue of fame; every prison, a more illustrious abode; every burned book or house enlightens the world; every suppressed or expunged word reverberates through the earth from side to side. Hours of sanity and consideration are always arriving to communities, as to individuals, when the truth is seen, and the martyrs are justified.

Thus do all things preach the indifferency of circumstances. The man is all. Everything has two sides, a good and an evil. Every advantage has its tax. I learn to be content. But the doctrine of compensation is not the doctrine of indifferency. The thoughtless say, on hearing these representations, What boots it to do well? there is one event to good and evil; if I gain any good, I must pay for it; if I lose any good, I gain some other; all actions are indifferent.

There is a deeper fact in the soul than compensation, to wit, its own nature. The soul is not a compensation, but a life. The soul _is_. Under all this running sea of circumstance, whose waters ebb and flow with perfect balance, lies the aboriginal abyss of real Being. Essence, or God, is not a relation, or a part, but the whole. Being is the vast affirmative, excluding negation, self-balanced, and swallowing up all relations, parts, and times within itself. Nature, truth, virtue, are the influx from thence. Vice is the absence or departure of the same. Nothing, Falsehood, may indeed stand as the great Night or shade, on which, as a background, the living universe paints itself forth, but no fact is begotten by it; it cannot work, for it is not. It cannot work any good; it cannot work any harm. It is harm inasmuch as it is worse not to be than to be.

We feel defrauded of the retribution due to evil acts, because the criminal adheres to his vice and contumacy, and does not come to a crisis or judgment anywhere in visible nature. There is no stunning confutation of his nonsense before men and angels. Has he therefore outwitted the law? Inasmuch as he carries the malignity and the lie with him, he so far deceases from nature. In some manner there will be a demonstration of the wrong to the understanding also; but should we not see it, this deadly deduction makes square the eternal account.

Neither can it be said, on the other hand, that the gain of rectitude must be bought by any loss. There is no penalty to virtue; no penalty to wisdom; they are proper additions of being. In a virtuous action, I properly _am_; in a virtuous act, I add to the world; I plant into deserts conquered from Chaos and Nothing, and see the darkness receding on the limits of the horizon. There can be no excess to love; none to knowledge; none to beauty, when these attributes are considered in the purest sense. The soul refuses limits, and always affirms an Optimism,[140] never a Pessimism.

Man's life is a progress, and not a station. His instinct is trust. Our instinct uses "more" and "less" in application to man, of the _presence of the soul_, and not of its absence; the brave man is greater than the coward; the true, the benevolent, the wise, is more a man, and not less, than the fool and knave. There is no tax on the good of virtue; for that is the incoming of God himself, or absolute existence without any comparative. Material good has its tax, and if it came without desert or sweat, has no root in me, and the next wind will blow it away. But all the good of nature is the soul's, and may be had, if paid for in nature's lawful coin, that is, by labor which the heart and the head allow. I no longer wish to meet a good I do not earn; for example, to find a pot of buried gold, knowing that it brings with it new burdens. I do not wish more external goods,--neither possessions, nor honors, nor powers, nor persons. The gain is apparent; the tax is certain. But there is no tax on the knowledge that the compensation exists, and that it is not desirable to dig up treasure. Herein I rejoice with a serene eternal peace. I contract the boundaries of possible mischief. I learn the wisdom of St. Bernard,[141]--"Nothing can, work me damage except myself; the harm, that I sustain I carry about with me, and

never am a real sufferer but by my own fault."

In the nature of the soul is the compensation for the inequalities of condition. The radical tragedy of nature seems to be the distinction of More and Less. How can Less not feel the pain; how not feel indignation or malevolence towards More? Look at those who have less faculty, and one feels sad, and knows not well what to make of it. He almost shuns their eye; he fears they will upbraid God. What should they do? It seems a great injustice. But see the facts nearly, and these mountainous inequalities vanish. Love reduces them, as the sun melts the iceberg in the sea. The heart and soul of all men being one, this bitterness of _His_ and _Mine_ ceases. His is mine. I am my brother, and my brother is me. If I feel overshadowed and outdone by great neighbors, I can yet love; I can still receive; and he that loveth maketh his own the grandeur he loves. Thereby I make the discovery that my brother is my guardian, acting for me with the friendliest designs, and the estate I so admired and envied is my own. It is the nature of the soul to appropriate all things. Jesus[142] and Shakespeare are fragments of the soul, and by love I conquer and incorporate them in my own conscious domain. His[143] virtue,--is not that mine? His wit,--if it cannot be made mine, it is not wit.

Such, also, is the natural history of calamity. The changes which break up at short intervals the prosperity of men are advertisements of a nature whose law is growth. Every soul is by this intrinsic necessity quitting its whole system of things, its friends, and home, and laws, and faith, as the shellfish crawls out of its beautiful but stony case, because it no longer admits of its growth, and slowly forms a new house. In proportion to the vigor of the individual, these revolutions are frequent, until in some happier mind they are incessant, and all worldly relations hang very loosely about him, becoming, as it were, a transparent fluid membrane through which the living form is seen, and not, as in most men, an indurated heterogeneous fabric of many dates, and of no settled character, in which the man is imprisoned. Then there can be enlargement, and the man of to-day scarcely recognizes the man of yesterday. And such should be the outward biography of man in time, a putting off of dead circumstances day by day, as he renews his raiment day by day. But to us, in our lapsed estate, resting, not advancing, resisting, not coöperating with the divine expansion, this growth comes by shocks.

We cannot part with our friend. We cannot let our angels go. We do not see that they only go out, that archangels may come in. We are idolaters of the old. We do not believe in the riches of the soul, in its proper eternity and omnipresence. We do not believe there is any force in to-day to rival or recreate that beautiful yesterday. We linger in the ruins of the old tent, where once we had bread and shelter and organs, nor believe that the spirit can feed, cover, and nerve us again. We cannot again find aught so dear, so sweet, so graceful. But we sit and weep in vain. The voice of the Almighty saith, "Up and onward forevermore!" We cannot stay amid the ruins. Neither will we rely on the new; and so we walk ever with reverted eyes, like those monsters who look backwards.

And yet the compensations of calamity are made apparent to the understanding also, after long intervals of time. A fever, a mutilation, a cruel disappointment, a loss of wealth, a loss of friends, seems at the moment unpaid loss, and unpayable. But the sure years reveal the deep remedial force that underlies all facts. The death of a dear friend, wife, brother, lover, which seemed nothing but privation, somewhat later assumes the aspect of a guide or genius; for it commonly operates revolutions in our way of life, terminates an epoch of infancy or of youth which was waiting to be closed, breaks up a wonted occupation, or a household, or style of living, and allows the formation of new ones more friendly to the growth of character. It permits or constrains the formation of new acquaintances, and the reception of new influences that prove of the first importance to the next years; and the man or woman who would have remained a sunny garden flower, with no room for its roots and too much sunshine for its head, by the falling of the walls and the neglect of the gardener, is made the banyan[144] of the forest, yielding shade and fruit to wide neighborhoods of men.

SELF-RELIANCE

"Ne te quæsiveris extra."[145]

"Man is his own star; and the soul that can Render an honest and a perfect man, Commands all light, all influence, all fate; Nothing to him falls early or too late. Our acts our angels are, or good or ill, Our fatal shadows that walk by us still."[146]

* * * * *

Cast the bantling on the rocks, Suckle him with the she-wolf's teat; Wintered with the hawk and fox, Power and speed be hands and feet.[147]

I read the other day some verses written by an eminent painter which were original and not conventional. The soul always hears an admonition in such lines, let the subject be what it may. The sentiment they instill is of more value than any thought they may contain. To believe your own thought, to believe that what is true for you in your private heart is true for all men,--that is genius.[148] Speak your latent conviction, and it shall be the universal sense;[149] for the inmost in due time becomes the outmost,--and our first thought is rendered back to us by the trumpets of the Last Judgment. Familiar as the voice of the mind is to each, the highest merit we ascribe to Moses, Plato,[150] and Milton[151] is, that they set at naught books and traditions, and spoke not what men, but what they thought. A man should learn to detect and watch that gleam of light which flashes across his mind from within, more than the luster of the firmament of bards and sages. Yet he dismisses without notice his thought, because it is his. In every work of genius we recognize our own rejected thoughts:[152] they come back to us with a certain alienated majesty. Great works of art have no more affecting lesson for us than this. They teach us to abide by our spontaneous impression with good-humored inflexibility then most when[153] the whole cry of voices is on the other side. Else, to-morrow a stranger will say with masterly good sense precisely what we have thought and felt all the time, and we shall be forced to take with shame our own opinion from another.

There is a time in every man's education when he arrives at the conviction that envy is ignorance; that imitation is suicide;[154] that he must take himself for better, for worse, as his portion; that though the wide universe is full of good, no kernel of nourishing corn can come to him but through his toil bestowed on that plot of ground which is given to him to till. The power which resides in him is new in nature, and none but he knows what that is which he can do, nor does he know until he has tried. Not for nothing one face, one character, one fact, makes much impression on him, and another none. This sculpture in the memory is not without preëstablished harmony. The eye was placed where one ray should fall, that it might testify of that particular ray. We but half express ourselves,[155] and are ashamed of that divine idea which each of us represents. It may be safely trusted as proportionate and of good issues, so it be faithfully imparted, but God will not have his work made manifest by cowards. A man is relieved and gay when he has put his heart into his work and done his best; but what he has said or done otherwise shall give him no peace. It is a deliverance which does not deliver. In the attempt his genius deserts him; no muse befriends; no invention, no hope.

Trust thyself:[156] every heart vibrates to that iron string. Accept the place the divine providence has found for you, the society of your contemporaries, the connection of events. Great men have always done so, and confided themselves childlike to the genius of their age, betraying their perception that the absolutely trustworthy was seated at their heart, working through their hands, predominating in all their being. And we are now men, and must accept in the highest mind the same transcendent destiny; and not minors and invalids in a protected corner, not cowards fleeing before a revolution, but guides, redeemers, and benefactors, obeying the Almighty effort, and advancing on Chaos[157] and the Dark.

What pretty oracles nature yields us on this text, in the face and behavior of children, babes, and even brutes! That divided and rebel mind, that distrust of a sentiment because our arithmetic has computed the strength and means opposed to our purpose, these[158] have not. Their mind being whole, their eye is as yet unconquered, and when we look in their faces we are disconcerted. Infancy conforms to nobody: all conform to it, so that one babe commonly makes four or five[159] out of the adults who prattle and play to it. So God has armed youth and puberty and manhood no less with its own piquancy and charm, and made it enviable and gracious and its claims not to be put by, if it will stand by itself. Do not think the youth has no force, because he cannot speak to you and me. Hark! in the next room his voice is sufficiently clear and emphatic. It seems he knows how to speak to his contemporaries. Bashful or bold, then, he will know how to make us seniors very unnecessary.

The nonchalance[160] of boys who are sure of a dinner, and would disdain as much as a lord to do or say aught to conciliate one, is the healthy attitude of human nature. A boy is in the parlor what the pit is in the playhouse;[161] independent, irresponsible, looking out from his corner on such people and facts as pass by, he tries and sentences them on their merits, in the swift, summary way of boys, as good, bad, interesting, silly, eloquent, troublesome. He cumbers himself never about consequences about interests; he gives an independent, genuine verdict. You must court him: he does not court you. But the man is, as it were, clapped into jail by his consciousness. As soon as he has once acted or spoken with _éclat_[162] he is a committed person, watched by the sympathy or the hatred of hundreds, whose affections must now enter into his account. There is no Lethe[163] for this. Ah, that he could pass again into his neutrality! Who[164] can thus avoid all pledges, and having observed, observe again from the same unaffected, unbiased, unbribable, unaffrighted innocence, must always be formidable. He would utter opinions on all passing affairs, which being seen to be not private, but necessary, would sink like darts into the ear of men, and put them in fear.

These are the voices which we hear in solitude, but they grow faint and inaudible as we enter into the world. Society everywhere is in conspiracy against the manhood of every one of its members. Society is a joint-stock company, in which the members agree, for

the better securing of his bread to each shareholder, to surrender the liberty and culture of the eater. The virtue in most request is conformity. Self-reliance is its aversion. It loves not realities and creators, but names and customs.

Whoso would be a man must be a nonconformist.[165] He who would gather immortal palms must not be hindered by the name of goodness, but must explore if it be goodness.[166] Nothing is at last sacred but the integrity of your own mind. Absolve you to yourself, and you shall have the suffrage[167] of the world. I remember an answer which when quite young I was prompted to make to a valued adviser, who was wont to importune me with the dear old doctrines of the church. On my saying, What have I to do with the sacredness of traditions, if I live wholly from within? my friend suggested: "But these impulses may be from below, not from above." I replied: "They do not seem to me to be such; but if I am the Devil's child, I will live then from the Devil." No law can be sacred to me but that of my nature. Good and bad are but names very readily transferable to that or this;[168] the only right is what is after my constitution, the only wrong what is against it. A man is to carry himself in the presence of all opposition, as if everything were titular and ephemeral but he. I am ashamed to think how easily we capitulate to badges and names, to large societies and dead institutions. Every decent and well-spoken individual affects and sways me more than is right. I ought to go upright and vital, and speak the rude truth in all ways. If malice and vanity wear the coat of philanthropy, shall that pass? If an angry bigot assumes this bountiful cause of Abolition, and comes to me with his last news from Barbadoes,[169] why should I not say to him: "Go love thy infant; love thy wood-chopper: be good-natured and modest: have that grace; and never varnish your hard, uncharitable ambition with this incredible tenderness for black folk a thousand miles off. Thy love afar is spite at home." Rough and graceless would be such greeting, but truth is handsomer than the affectation of love. Your goodness must have some edge to it,--else it is none. The doctrine of hatred must be preached as the counteraction of the doctrine of love when that pules and whines. I shun father and mother and wife and brother, when my genius calls me. I would write on the lintels of the door-post, _Whim_.[170] I hope it is somewhat better than whim at last, but we cannot spend the day in explanation. Expect me not to show cause why I seek or why I exclude company. Then, again, do not tell me, as a good man did to-day, of my obligation to put all poor men in good situations. Are they _my_ poor? I tell thee, thou foolish philanthropist, that I grudge the dollar, the dime, the cent, I give to such men as do not belong to me and to whom I do not belong. There is a class of persons to whom by all spiritual affinity I am bought and sold; for them I will go to prison, if need be; but your miscellaneous popular charities; the education at college of fools; the building of meeting-houses to the vain end to which many now stand; alms to sots; and the thousand-fold Relief Societies;--though I confess with shame I sometimes succumb and give the dollar, it is a wicked dollar which by and by I shall have the manhood to withhold.

Virtues are, in the popular estimate, rather the exception than the rule. There is the man _and_ his virtues. Men do what is called a good action, as some piece of courage or charity, much as they would pay a fine in expiation of daily non-appearance on parade. Their works are done as an apology or extenuation of their living in the world,--as invalids and the insane pay a high board. Their virtues are penances. I do not wish to expiate, but to live. My life is for itself and not for a spectacle. I much prefer that it should be of a lower strain, so it be genuine and equal, than that it should be glittering and unsteady. I wish it to be sound and sweet, and not to need diet and bleeding.[171] I ask primary evidence that you are a man, and refuse this appeal from the man to his actions. I know that for myself it makes no difference whether I do or forbear those actions which are reckoned excellent. I cannot consent to pay for a privilege where I have intrinsic right. Few and mean as my gifts may be, I actually am, and do not need for my own assurance or the assurance of my fellows any secondary testimony.

What I must do is all that concerns me, not what the people think. This rule, equally arduous in actual and in intellectual life, may serve for the whole distinction between greatness and meanness. It is the harder, because you will always find those who think they know what is your duty better than you know it. It is easy in the world to live after the world's opinion; it is easy in solitude to live after our own; but the great man is he who in the midst of the crowd keeps with perfect sweetness the independence of solitude.[172]

The objection to conforming to usages that have become dead to you is, that it scatters your force. It loses your time and blurs the impression of your character. If you maintain a dead church, contribute to a dead Bible-society, vote with a great party either for the government or against it, spread your table like base housekeepers,--under all these screens I have difficulty to detect the precise[173] man you are. And, of course, so much force is withdrawn from your proper life. But do your work, and I shall know you.[174] Do your work, and you shall reinforce yourself. A man must consider what a blindman's-buff is this game of conformity. If I know your sect, I anticipate your argument. I hear a preacher announce for his text and topic the expediency of one of the institutions of his church. Do I not know beforehand that not possibly can he say a new and spontaneous word? Do I not know that, with[175] all this ostentation of examining the grounds of the institution, he will do no such thing? Do I not know that he is pledged to himself not to look but at one side,--the permitted side, not as a man, but as a parish minister? He is a retained attorney, and

these airs of the bench[176] are the emptiest affectation. Well, most men have bound their eyes with one or another handkerchief,[177] and attached themselves to some one of these communities of opinion.[178] This conformity makes them not false in a few particulars, authors of a few lies, but false in all particulars. Their every truth is not quite true. Their two is not the real two, their four not the real four; so that every word they say chagrins us, and we know not where to begin to set them right. Meantime nature is not slow to equip us in the prison-uniform of the party to which we adhere. We come to wear one cut of face and figure, and acquire by degrees the gentlest asinine expression. There is a mortifying experience in particular which does not fail to wreak itself also in the general history; I mean "the foolish face of praise," the forced smile which we put on in company where we do not feel at ease in answer to conversation which does not interest us. The muscles, not spontaneously moved, but moved by a low usurping willfulness, grow tight about the outline of the face with the most disagreeable sensation.

For nonconformity the world whips you with its displeasure.[179] And therefore a man must know how to estimate a sour face. The bystanders look askance on him in the public street or in the friend's parlor. If this aversation had its origin in contempt and resistance like his own, he might well go home with a sad countenance; but the sour faces of the multitude, like their sweet faces, have no deep cause, but are put on and off as the wind blows and a newspaper directs.[180] Yet is the discontent of the multitude more formidable than that of the senate and the college. It is easy enough for a firm man who knows the world to brook the rage of the cultivated classes. Their rage is decorous and prudent, for they are timid as being very vulnerable themselves. But when to their feminine rage the indignation of the people is added, when the ignorant and the poor are aroused, when the unintelligent brute force that lies at the bottom of society is made to growl and mow, it needs the habit of magnanimity and religion to treat it godlike as a trifle of no concernment.

The other terror[181] that scares us from self-trust is our consistency;[182] a reverence for our past act or word, because the eyes of others have no other data for computing our orbit[183] than our past acts, and we are loth to disappoint them.

But why should you keep your head over your shoulder? Why drag about this corpse of your memory, lest you contradict somewhat[184] you have stated in this or that public place? Suppose you should contradict yourself; what then? It seems to be a rule of wisdom never to rely on your memory alone, scarcely even in acts of pure memory, but to bring the past for judgment into the thousand-eyed present, and live ever in a new day. In your metaphysics you have denied personality to the Deity; yet when the devout motions of the soul come, yield to them heart and life, though they should clothe God with shape and color. Leave your theory, as Joseph his coat in the hand of the harlot, and flee.[185]

A foolish consistency is the hobgoblin of little minds, adored by little statesmen and philosophers and divines. With consistency a great soul has simply nothing to do. He may as well concern himself with the shadow on the wall. Speak what you think now in hard words, and to-morrow speak what to-morrow thinks in hard words again, though it contradict everything you said to-day.--"Ah, so you shall be sure to be misunderstood."--Is it so bad, then, to be misunderstood? Pythagoras[186] was misunderstood, and Socrates,[187] and Jesus, and Luther,[188] and Copernicus,[189] and Galileo,[190] and Newton,[191] and every pure and wise spirit that ever took flesh. To be great is to be misunderstood.

I suppose no man can violate his nature. All the sallies of his will are rounded in by the law of his being, as the inequalities of Andes[192] and Himmaleh[193] are insignificant in the curve of the sphere. Nor does it matter how you gauge and try him. A character is like an acrostic or Alexandrian stanza;[194]--read it forward, backward, or across, it still spells the same thing. In this pleasing, contrite wood-life which God allows me, let me record day by day my honest thought without prospect or retrospect, and, I cannot doubt, it will be found symmetrical, though I mean it not, and see it not. My book should smell of pines and resound with the hum of insects. The swallow over my window should interweave that thread or straw he carries in his bill into my web also. We pass for what we are. Character teaches above our wills. Men imagine that they communicate their virtue or vice only by overt actions, and do not see that virtue or vice emit a breath every moment.

There will be an agreement in whatever variety of actions, so they be each honest and natural in their hour. For of one will, the actions will be harmonious, however unlike they seem. These varieties are lost sight of at a little distance, at a little height of thought. One tendency unites them all. The voyage of the best ship is a zigzag line of a hundred tacks.[195] See the line from a sufficient distance, and it straightens itself to the average tendency. Your genuine action will explain itself, and will explain your other genuine actions. Your conformity explains nothing. Act singly, and what you have already done singly will justify you now. Greatness appeals to the future. If I can be firm enough to-day to do right, and scorn eyes,[196] I must have done so much right before as to defend me now. Be it how it will, do right now. Always scorn appearances, and you always may. The force of character is cumulative. All the foregone days of virtue work their health into this. What makes the majesty of the heroes of the senate and the

field, which so fills the imagination? The consciousness of a train of great days and victories behind. They shed an united light on the advancing actor. He is attended as by a visible escort of angels. That is it which throws thunder into Chatham's[197] voice, and dignity into Washington's port, and America into Adams's[198] eye. Honor is venerable to us because it is no ephemeris. It is always ancient virtue. We worship it to-day because it is not of to-day. We love it and pay it homage, because it is not a trap for our love and homage, but is self-dependent, self-derived, and therefore of an old immaculate pedigree, even if shown in a young person.

I hope in these days we have heard the last of conformity and consistency. Let the words be gazetted and ridiculous henceforward. Instead of the gong for dinner, let us hear a whistle from the Spartan[199] fife. Let us never bow and apologize more. A great man is coming to eat at my house. I do not wish to please him; I wish that he should wish to please me. I will stand here for humanity, and though I would make it kind, I would make it true. Let us affront and reprimand the smooth mediocrity and squalid contentment of the times, and hurl in the face of custom, and trade, and office, the fact which is the upshot of all history, that there is a great responsible Thinker and Actor working wherever a man works; that a true man belongs to no other time or place, but is the center of things. Where he is, there is nature. He measures you, and all men, and all events. Ordinarily, everybody in society reminds us of somewhat else, or of some other person. Character, reality, reminds you of nothing else; it takes place of the whole creation. The man must be so much, that he must make all circumstances indifferent. Every true man is a cause, a country, and an age; requires infinite spaces and numbers and time fully to accomplish his design;--and posterity seem to follow his steps as a train of clients. A man Cæsar[200] is born, and for ages after we have a Roman Empire. Christ is born, and millions of minds so grow and cleave to his genius, that he is confounded with virtue and the possible of man. An institution is the lengthened shadow of one man; as Monachism, of the hermit Antony;[201] the Reformation, of Luther; Quakerism, of Fox;[202] Methodism, of Wesley;[203] Abolition, of Clarkson.[204] Scipio,[205] Milton called "the height of Rome"; and all history resolves itself very easily into the biography of a few stout and earnest persons.

Let a man then know his worth, and keep things under his feet. Let him not peep or steal, or skulk up and down with the air of a charity-boy, a bastard, or an interloper, in the world which exists for him. But the man in the street, finding no worth in himself which corresponds to the force which built a tower or sculptured a marble god, feels poor when he looks on these. To him a palace, a statue, a costly book, have an alien and forbidding air, much like a gay equipage, and seem to say like that, "Who are you, Sir?" Yet they all are his, suitors for his notice, petitioners to his faculties that they will come out and take possession. The picture waits for my verdict: it is not to command me, but I am to settle its claims to praise. That popular fable of the sot who was picked up dead drunk in the street, carried to the duke's house, washed and dressed and laid in the duke's bed, and, on his waking, treated with all obsequious ceremony like the duke, and assured that he had been insane,[206] owes its popularity to the fact that it symbolizes so well the state of man, who is in the world a sort of sot, but now and then wakes up, exercises his reason, and finds himself a true prince.

Our reading is mendicant and sycophantic. In history, our imagination plays us false. Kingdom and lordship, power and estate, are a gaudier vocabulary than private John and Edward in a small house and common day's work; but the things of life are the same to both; the sum total of both is the same. Why all this deference to Alfred,[207] and Scanderbeg,[208] and Gustavus?[209] Suppose they were virtuous; did they wear out virtue? As great a stake depends on your private act to-day, as followed their public and renowned steps. When private men shall act with original views, the luster will be transferred from the actions of kings to those of gentlemen.

The world has been instructed by its kings, who have so magnetized the eyes of nations. It has been taught by this colossal symbol the mutual reverence that is due from man to man. The joyful loyalty with which men have everywhere suffered the king, the noble, or the great proprietor to walk among them by a law of his own, make his own scale of men and things, and reverse theirs, pay for benefits not with money but with honor, and represent the law in his person, was the hieroglyphic[210] by which they obscurely signified their consciousness of their own right and comeliness, the right of every man.

The magnetism which all original action exerts is explained when we inquire the reason of self-trust. Who is the Trustee? What is the aboriginal Self, on which a universal reliance may be grounded? What is the nature and power of that science-baffling star, without parallax,[211] without calculable elements, which shoots a ray of beauty even into trivial and impure actions, if the least mark of independence appear? The inquiry leads us to that source, at once the essence of genius, of virtue, and of life, which we call Spontaneity or Instinct. We denote this primary wisdom as Intuition, whilst all later teachings are tuitions. In that deep force, the last fact behind which analysis cannot go, all things find their common origin. For the sense of being which in calm hours rises, we know not how, in the soul, is not diverse from things, from space, from light, from time, from man, but one with them, and proceeds

obviously from the same source whence their life and being also proceed. We first share the life by which things exist, and afterwards see them as appearances in nature, and forget that we have shared their cause. Here is the fountain of action and of thought. Here are the lungs of that inspiration which giveth man wisdom, and which cannot be denied without impiety and atheism. We lie in the lap of immense intelligence, which makes us receivers of its truth and organs of its activity. When we discern justice, when we discern truth, we do nothing of ourselves, but allow a passage to its beams. If we ask whence this comes, if we seek to pry into the soul that causes, all philosophy is at fault. Its presence or its absence is all we can affirm. Every man discriminates between the voluntary acts of his mind, and his involuntary perceptions, and knows that to his involuntary perceptions a perfect faith is due. He may err in the expression of them, but he knows that these things are so, like day and night, not to be disputed. My willful actions and acquisitions are but roving;--the idlest reverie, the faintest native emotion, command my curiosity and respect. Thoughtless people contradict as readily the statement of perceptions as of opinions, or rather much more readily; for, they do not distinguish between perception and notion. They fancy that I choose to see this or that thing. But perception is not whimsical, it is fatal. If I see a trait, my children will see it after me, and in course of time, all mankind,--although it may chance that no one has seen it before me. For my perception of it is as much a fact as the sun.

The relations of the soul to the divine spirit are so pure, that it is profane to seek to interpose helps. It must be that when God speaketh he should communicate, not one thing, but all things; should fill the world with his voice; should scatter forth light, nature, time, souls, from the center of the present thought; and new date and new create the whole. Whenever a mind is simple, and receives a divine wisdom, old things pass away,--means, teachers, texts, temples, fall; it lives now, and absorbs past and future into the present hour. All things are made sacred by relation to it,--one as much as another. All things are dissolved to their center by their cause, and, in the universal miracle, petty and particular miracles disappear. If, therefore, a man claims to know and speak of God, and carries you backward to the phraseology of some old moldered nation in another country, in another world, believe him not. Is the acorn better than the oak which is its fullness and completion? Is the parent better than the child into whom he has cast his ripened being?[212] Whence, then, this worship of the past?[213] The centuries are conspirators against the sanity and authority of the soul. Time and space are but physiological colors which the eye makes, but the soul is light; where it is, is day; where it was, is night; and history is an impertinence and an injury, if it be anything more than a cheerful apologue or parable of my being and becoming.

Man is timid and apologetic; he is no longer upright; he dares not say "I think," "I am," but quotes some saint or sage. He is ashamed before the blade of grass or the blowing rose. These roses under my window make no reference to former roses or to better ones; they are for what they are; they exist with God to-day. There is no time to them. There is simply the rose; it is perfect in every moment of its existence. Before a leaf-bud has burst, its whole life acts; in the full-blown flower there is no more; in the leafless root there is no less. Its nature is satisfied, and it satisfies nature, in all moments alike. But man postpones, or remembers; he does not live in the present, but with a reverted eye laments the past, or, heedless of the riches that surround him, stands on tiptoe to foresee the future. He cannot be happy and strong until he too lives with nature in the present, above time.

This should be plain enough. Yet see what strong intellects dare not yet hear God himself, unless he speak the phraseology of I know not what David, or Jeremiah, or Paul. We shall not always set so great a price on a few texts, on a few lives.[214] We are like children who repeat by rote the sentences of grandames and tutors, and, as they grow older, of the men and talents and characters they chance to see,--painfully recollecting the exact words they spoke; afterwards, when they come into the point of view which those had who uttered those saying, they understand them, and are willing to let the words go; for, at any time, they can use words as good when occasion comes. If we live truly, we shall see truly. It is as easy for the strong man to be strong, as it is for the weak to be weak. When we have new perception, we shall gladly disburden the memory of its hoarded treasures as old rubbish. When a man lives with God, his voice shall be as sweet as the murmur of the brook and the rustle of the corn.

And now at last the highest truth on this subject remains unsaid; probably cannot be said; for all that we say is the far-off remembering of the intuition. That thought, by what I can now nearest approach to say it, is this. When good is near you, when you have life in yourself, it is not by any known or accustomed way; you shall not discern the footprints of any other; you shall not see the face of man; you shall not hear any name;--the way, the thought, the good, shall be wholly strange and new. It shall exclude example and experience. You take the way from man, not to man. All persons that ever existed are its forgotten ministers. Fear and hope are alike beneath it. There is somewhat low even in hope. In the hour of vision, there is nothing that can be called gratitude, nor properly joy. The soul raised over passion beholds identity and eternal causation, perceives the self-existence of Truth and Right, and calms itself with knowing that all things go well. Vast spaces of nature, the Atlantic Ocean, the South Sea,--long intervals of time, years, centuries,--are of no account. This which I think and feel underlay every former state of life and circumstances, as it

does underlie my present, and what is called life, and what is called death.

Life only avails, not the having lived. Power ceases in the instant of repose; it resides in the moment of transition from a past to a new state, in the shooting of the gulf, in the darting to an aim. This one fact the world hates, that the soul _becomes_; for that forever degrades the past, turns all riches to poverty, all reputation to shame, confounds the saint with the rogue, shoves Jesus and Judas[215] equally aside. Why, then, do we prate of self-reliance? Inasmuch as the soul is present, there will be power not confident but agent.[216] To talk of reliance is a poor external way of speaking. Speak rather of that which relies, because it works and is. Who has more obedience than I masters me, though he should not raise his finger. Round him I must revolve by the gravitation of spirits. We fancy it rhetoric, when we speak of eminent virtue. We do not yet see that virtue is Height, and that a man or a company of men, plastic and permeable to principles, by the law of nature must overpower and ride all cities, nations, kings, rich men, poets, who are not.

This is the ultimate fact which we so quickly reach on this, as on every topic, the resolution of all into the ever-blessed ONE. Self-existence is the attribute of the Supreme Cause, and it constitutes the measure of good by the degree in which it enters into all lower forms. All things real are so by so much virtue as they contain. Commerce, husbandry, hunting, whaling, war eloquence, personal weight, are somewhat, and engage my respect as examples of its presence and impure action. I see the same law working in nature for conservation and growth. Power is in nature the essential measure of right. Nature suffers nothing to remain in her kingdoms which cannot help itself. The genesis and maturation of a planet, its poise and orbit, the bended tree recovering itself from the strong wind, the vital resources of every animal and vegetable, are demonstrations of the self-sufficing, and therefore self-relying soul.

Thus all concentrates: let us not rove; let us sit at home with the cause. Let us stun and astonish the intruding rabble of men and books and institutions, by a simple declaration of the divine fact. Bid the invaders take the shoes from off their feet, for God is here within.[217] Let our simplicity judge them, and our docility to our own law demonstrate the poverty of nature and fortune beside our native riches.

But now we are a mob. Man does not stand in awe of man, nor is his genius admonished to stay at home to put itself in communication with the internal ocean, but it goes abroad to beg a cup of water of the urns of other men. We must go alone. I like the silent church before the service begins, better than any preaching. How far off, how cool, how chaste the persons look, begirt each one with a precinct or sanctuary! So let us always sit. Why should we assume the faults of our friend, or wife, or father, or child, because they sit around our hearth, or are said to have the same blood? All men have my blood, and I have all men's.[218] Not for that will I adopt their petulance or folly, even to the extent of being ashamed of it. But your isolation must not be mechanical, but spiritual, that is, must be elevation. At times the whole world seems to be in conspiracy to importune you with emphatic trifles. Friend, client, child, sickness, fear, want, charity, all knock at once at thy closet door, and say, "Come out unto us." But keep thy state; come not into their confusion. The power men possess to annoy men, I give them by a weak curiosity. No man can come near me but through my act. "What we love that we have, but by desire we bereave ourselves of the love."

If we cannot at once rise to the sanctities of obedience and faith, let us at least resist our temptations; let us enter into the state of war, and wake Thor and Woden,[219] courage and constancy, in our Saxon breasts. This is to be done in our smooth times by speaking the truth. Check this lying hospitality and lying affection. Live no longer to the expectation of these deceived and deceiving people with whom we converse. Say to them, O father, O mother, O wife, O brother, O friend, I have lived with you after appearances hitherto. Henceforward I am the truth's. Be it known unto you that henceforward I obey no law less than the eternal law. I will have no covenants but proximities.[220] I shall endeavor to nourish my parents, to support my family, to be the chaste husband of one wife,--but these relations I must fill after a new and unprecedented way. I appeal from your customs. I must be myself. I cannot break myself any longer for you, or you.[221] If you can love me for what I am, we shall be the happier. If you cannot, I will still seek to deserve that you should. I will not hide my tastes or aversions. I will so trust that what is deep is holy, that I will do strongly before the sun and moon whatever inly rejoices me, and the heart appoints. If you are noble, I will love you; if you are not, I will not hurt you and myself by hypocritical attentions. If you are true, but not in the same truth with me, cleave to your companions; I will seek my own. I do this not selfishly, but humbly and truly. It is alike your interest, and mine, and all men's however long we have dwelt in lies, to live in truth. Does this sound harsh to-day? You will soon love what is dictated by your nature as well as mine, and, if we follow the truth, it will bring us out safe at last.[222] But so may you give these friends pain. Yes, but I cannot sell my liberty and my power, to save their sensibility. Besides, all persons have their moments of reason, when they look out into the region of absolute truth; then will they justify me, and do the same thing.

The populace think that your rejection of popular standards is a rejection of all standard, and mere antinomianism;[223] and the bold sensualist will use the name of philosophy to gild his crimes. But the law of consciousness abides. There are two confessionals, in one or the other of which we must be shriven. You may fulfill your round of duties by clearing yourself in the _direct_, or in the _reflex_ way. Consider whether you have satisfied your relations to father, mother, cousin, neighbor, town, cat, and dog; whether any of these can upbraid you. But I may also neglect this reflex standard, and absolve me to myself. I have my own stern claims and perfect circle. It denies the name of duty to many offices that are called duties. But if I can discharge its debts, it enables me to dispense with the popular code. If any one imagines that this law is lax, let him keep its commandment one day.

And truly it demands something godlike in him who has cast off the common motives of humanity, and has ventured to trust himself for a taskmaster. High be his heart, faithful his will, clear his sight, that he may in good earnest be doctrine, society, law, to himself, that a simple purpose may be to him as strong as iron necessity is to others!

If any man consider the present aspects of what is called by distinction _society_, he will see the need of these ethics. The sinew and heart of man seem to be drawn out, and we are become timorous, desponding whimperers. We are afraid of truth, afraid of fortune, afraid of death, and afraid of each other. Our age yields no great and perfect persons. We want men and women who shall renovate life and our social state, but we see that most natures are insolvent, cannot satisfy their own wants, have an ambition out of all proportion to their practical force,[224] and do lean and beg day and night continually. Our housekeeping is mendicant, our arts, our occupations, our marriages, our religion, we have not chosen, but society has chosen for us. We are parlor soldiers. We shun the rugged battle of fate, where strength is born.

If our young men miscarry in their first enterprises, they lose all heart. If the young merchant fails, men say he is _ruined_. If the finest genius studies at one of our colleges, and is not installed in an office within one year afterwards in the cities or suburbs of Boston or New York, it seems to his friends and to himself that he is right in being disheartened, and in complaining the rest of his life. A sturdy lad from New Hampshire or Vermont, who in turn tries all the professions, who _teams it, farms it_,[225] _peddles_, keeps a school, preaches, edits a newspaper, goes to Congress, buys a township, and so forth, in successive years, and always, like a cat, falls on his feet, is worth a hundred of these city dolls. He walks abreast with his days, and feels no shame in not "studying a profession," for he does not postpone his life, but lives already. He has not one chance, but a hundred chances. Let a Stoic[226] open the resources of man, and tell men they are not leaning willows, but can and must detach themselves; that with the exercise of self-trust, new powers shall appear; that a man is the word made flesh,[227] born to shed healing to the nations,[228] that he should be ashamed of our compassion, and that the moment he acts from himself, tossing the laws, the books, idolatries and customs out of the window, we pity him no more, but thank and revere him,--and that teacher shall restore the life of man to splendor, and make his name dear to all history.

It is easy to see that a greater self-reliance must work a revolution in all the offices and relations of men; in their religion; in their education; in their pursuits; their modes of living; their association; in their property; in their speculative views.

1. In what prayers do men allow themselves![229] That which they call a holy office is not so much as brave and manly. Prayer looks abroad and asks for some foreign addition to come through some foreign virtue, and loses itself in endless mazes of natural and supernatural, and mediatorial and miraculous. Prayer that craves a particular commodity,--anything less than all good,--is vicious. Prayer is the contemplation of the facts of life from the highest point of view. It is the soliloquy of a beholding and jubilant soul.[230] It is the spirit of God pronouncing his works good. But prayer as a means to effect a private end is meanness and theft. It supposes dualism and not unity in nature and consciousness. As soon as the man is at one with God, he will not beg. He will then see prayer in all action. The prayer of the farmer kneeling in his field to weed it, the prayer of the rower kneeling with the stroke of his oar, are true prayers heard throughout nature, though for cheap ends. Caratach,[231] in Fletcher's Bonduca, when admonished to inquire the mind of the god Audate, replies,--

"His hidden meaning lies in our endeavors; Our valors are our best gods."

Another sort of false prayers are our regrets. Discontent is the want of self-reliance; it is infirmity of will. Regret calamities, if you can thereby help the sufferer; if not, attend your own work, and already the evil begins to be repaired. Our sympathy is just as base. We come to them who weep foolishly, and sit down and cry for company, instead of imparting to them truth and health in rough electric shocks, putting them once more in communication with their own reason. The secret of fortune is joy in our hands. Welcome evermore to gods and men is the self-helping man. For him all doors are flung wide: him all tongues greet, all honors crown, all eyes follow with desire. Our love goes out to him and embraces him, because he did not need it. We solicitously and apologetically

caress and celebrate him, because he held on his way and scorned our disapprobation. The gods love him because men hated him. "To the persevering mortal," said Zoroaster,[232] "the blessed Immortals are swift."

As men's prayers are a disease of the will, so are their creeds a disease of the intellect. They say with those foolish Israelites, "Let not God speak to us, lest we die. Speak thou, speak any man with us, and we will obey."[233] Everywhere I am hindered of meeting God in my brother, because he has shut his own temple doors, and recites fables merely of his brother's, or his brother's brother's God. Every new mind is a new classification. If it prove a mind of uncommon activity and power, a Locke,[234] a Lavoisier,[235] a Hutton,[236] a Betham,[237] a Fourier,[238] it imposes its classification on other men, and lo! a new system. In proportion to the depth of the thought, and so to the number of the objects it touches and brings within reach of the pupil, is his complacency. But chiefly is this apparent in creeds and churches, which are also classifications of some powerful mind acting on the elemental thought of duty, and man's relation to the Highest. Such is Calvinism,[239] Quakerism,[240] Swedenborgism.[241] The pupil takes the same delight in subordinating everything to the new terminology, as a girl who has just learned botany in seeing a new earth and new seasons thereby. It will happen for a time, that the pupil will find his intellectual power has grown by the study of his master's mind. But in all unbalanced minds, the classification is idolized, passes for the end, and not for a speedily exhaustible means, so that the walls of the system blend to their eye in the remote horizon with the walls of the universe; the luminaries of heaven seem to them hung on the arch their master built. They cannot imagine how you aliens have any right to see,--how you can see; "It must be somehow that you stole the light from us." They do not yet perceive that light, unsystematic, indomitable, will break into any cabin, even into theirs. Let them chirp awhile and call it their own. If they are honest and do well, presently their neat new pinfold will be too strait and low, will crack, will lean, will rot and vanish, and the immortal light, all young and joyful, million-orbed, million-colored, will beam over the universe as on the first morning.

2. It is for want of self-culture that the superstition of Traveling, whose idols are Italy, England, Egypt, retains its fascination for all educated Americans. They who made England, Italy, or Greece venerable in the imagination did so by sticking fast where they were, like an axis of the earth. In manly hours, we feel that duty is our place. The soul is no traveler; the wise man stays at home, and when his necessities, his duties, on any occasion call him from his house, or into foreign lands, he is at home still; and shall make men sensible by the expression of his countenance, that he goes the missionary of wisdom and virtue, and visits cities and men like a sovereign, and not like an interloper or a valet.

I have no churlish objection to the circumnavigation of the globe, for the purposes of art, of study, and benevolence, so that the man is first domesticated, or does not go abroad with the hope of finding somewhat greater than he knows. He who travels to be amused, or to get somewhat which he does not carry,[242] travels away from himself, and grows old even in youth among old things. In Thebes,[243] in Palmyra,[244] his will and mind have become old and dilapidated as they. He carries ruins to ruins.

Traveling is a fool's paradise. Our first journeys discover to us the indifference of places. At home I dream that at Naples, at Rome, I can be intoxicated with beauty, and lose my sadness. I pack my trunk, embrace my friends, embark on the sea, and at last wake up in Naples, and there beside me is the stern fact, the sad self, unrelenting, identical, that I fled from.[245] I seek the Vatican,[246] and the palaces. I affect to be intoxicated with sights and suggestions, but I am not intoxicated. My giant goes with me wherever I go.

3. But the rage of traveling is a symptom of a deeper unsoundness affecting the whole intellectual action. The intellect is vagabond, and our system of education fosters restlessness. Our minds travel when our bodies are forced to stay at home. We imitate; and what is imitation but the traveling of the mind? Our houses are built with foreign taste; our shelves are garnished with foreign ornaments; our opinions, our tastes, our faculties, lean, and follow the Past and the Distant. The soul created the arts wherever they have flourished. It was in his own mind that the artist sought his model. It was an application of his own thought to the thing to be done and the conditions to be observed. And why need we copy the Doric[247] or the Gothic[248] model? Beauty, convenience, grandeur of thought, and quaint expression are as near to us as to any, and if the American artist will study with hope and love the precise thing to be done by him considering the climate, the soil, the length of the day, the wants of the people, the habit and form of the government, he will create a house in which all these will find themselves fitted, and taste and sentiment will be satisfied also.

Insist on yourself; never imitate.[249] Your own gift you can present every moment with the cumulative force of a whole life's cultivation; but of the adopted talent of another, you have only an extemporaneous, half possession. That which each can do best, none but his Maker can teach him. No man yet knows what it is, nor can, till that person has exhibited it. Where is the master who could have taught Shakespeare?[250] Where is the master who could have instructed Franklin,[251] or Washington, or Bacon,[252] or Newton?[253] Every great man is a unique. The Scipionism of Scipio[254] is precisely that part he could not borrow.

Shakespeare will never be made by the study of Shakespeare. Do that which is assigned to you, and you cannot hope too much or dare too much. There is at this moment for you an utterance brave and grand as that of the colossal chisel of Phidias,[255] or trowel of the Egyptians,[256] or the pen of Moses,[257] or Dante,[258] but different from all these. Not possibly will the soul all rich, all eloquent, with thousand-cloven tongue, deign to repeat itself; but if you can hear what these patriarchs say, surely you can reply to them in the same pitch of voice; for the ear and the tongue are two organs of one nature. Abide in the simple and noble regions of thy life, obey thy heart, and thou shalt reproduce the Foreworld[259] again.

4. As our Religion, our Education, our Art look abroad, so does our spirit of society. All men plume themselves on the improvement of society, and no man improves.

Society never advances. It recedes as fast on one side as it gains on the other. It undergoes continual changes; it is barbarous, it is civilized, it is Christianized, it is rich, it is scientific; but this change is not amelioration. For everything that is given, something is taken. Society acquires new arts, and loses old instincts. What a contrast between the well-clad, reading, writing, thinking American, with a watch, a pencil, and a bill of exchange in his pocket, and the naked New Zealander,[260] whose property is a club, a spear, a mat, and an undivided twentieth of a shed to sleep under! But compare the health of the two men, and you shall see that the white man has lost his aboriginal strength. If the traveler tell us truly, strike the savage with a broad ax, and in a day or two the flesh shall unite and heal as if you struck the blow into soft pitch, and the same blow shall send the white to his grave.

The civilized man has built a coach, but has lost the use of his feet. He is supported on crutches, but lacks so much support of muscle. He has a fine Geneva[261] watch, but he fails of the skill to tell the hour by the sun. A Greenwich nautical almanac[262] he has, and so being sure of the information when he wants it, the man in the street does not know a star in the sky. The solstice[263] he does not observe; the equinox he knows as little; and the whole bright calendar of the year is without a dial in his mind. His notebooks impair his memory; his libraries overload his wit; the insurance office increases the number of accidents; and it may be a question whether machinery does not encumber; whether we have not lost by refinement some energy, by a Christianity entrenched in establishments and forms, some vigor of wild virtue. For every Stoic was a Stoic; but in Christendom where is the Christian?

There is no more deviation in the moral standard than in the standard of height or bulk. No greater men are now than ever were. A singular equality may be observed between great men of the first and of the last ages; nor can all the science, art, religion, and philosophy of the nineteenth century avail to educate greater men than Plutarch's[264] heroes, three or four and twenty centuries ago. Not in time is the race progressive. Phocion,[265] Socrates, Anaxagoras,[266] Diogenes,[267] are great men, but they leave no class. He who is really of their class will not be called by their name, but will be his own man, and, in his turn, the founder of a sect. The arts and inventions of each period are only its costume, and do not invigorate men. The harm of the improved machinery may compensate its good. Hudson[268] and Bering[269] accomplished so much in their fishing boats, as to astonish Parry[270] and Franklin,[271] whose equipment exhausted the resources of science and art. Galileo, with an opera-glass, discovered a more splendid series of celestial phenomena than any one since. Columbus[272] found the New World in an undecked boat. It is curious to see the periodical disuse and perishing of means and machinery, which were introduced with loud laudation a few years or centuries before. The great genius returns to essential man. We reckoned the improvements of the art of war among the triumphs of science, and yet Napoleon[273] conquered Europe by the bivouac, which consisted of falling back on naked valor, and disencumbering it of all aids. The Emperor held it impossible to make a perfect army, says Las Casas,[274] "without abolishing our arms, magazines, commissaries, and carriages, until, in imitation of the Roman custom, the soldier should receive his supply of corn, grind it in his handmill, and bake his bread himself."

Society is a wave. The wave moves onward, but the water of which it is composed does not. The same particle does not rise from the valley to the ridge. Its unity is only phenomenal. The persons who make up a nation to-day, next year die, and their experience with them.

And so the reliance on Property, including the reliance on governments which protect it, is the want of self-reliance. Men have looked away from themselves and at things so long, that they have come to esteem the religious, learned, and civil institutions as guards of property, and they deprecate assaults on these, because they feel them to be assaults on property. They measure their esteem of each other by what each has, and not by what each is. But a cultivated man becomes ashamed of his property, out of new respect for his nature. Especially he hates what he has, if he see that it is accidental,--came to him by inheritance, or gift, or crime; then he feels that it is not having; it does not belong to him, has no root in him, and merely lies there, because no revolution or no robber takes it away. But that which a man is, does always by necessity acquire, and what the man acquires is living property,

which does not wait the beck of rulers, or mobs, or revolutions, or fire, or storm, or bankruptcies, but perpetually renews itself wherever the man breathes. "Thy lot or portion of life," said the Caliph Ali,[275] "is seeking after thee; therefore be at rest from seeking after it." Our dependence on these foreign goods leads us to our slavish respect for numbers. The political parties meet in numerous conventions; the greater the concourse, and with each new uproar of announcement, The delegation from Essex![276] The Democrats from New Hampshire! The Whigs of Maine! the young patriot feels himself stronger than before by a new thousand of eyes and arms. In like manner the reformers summon conventions, and vote and resolve in multitude. Not so, O friends! will the god deign to enter and inhabit you, but by a method precisely the reverse. It is only as a man puts off all foreign support, and stands alone, that I see him to be strong and to prevail. He is weaker by every recruit to his banner. Is not a man better than a town? Ask nothing of men, and in the endless mutation, thou only firm column must presently appear the upholder of all that surrounds thee. He who knows that power is inborn, that he is weak because he has looked for good out of him and elsewhere, and so perceiving, throws himself unhesitatingly on his thought, instantly rights himself, stands in the erect position, commands his limbs, works miracles; just as a man who stands on his feet is stronger than a man who stands on his head.

So use all that is called Fortune.[277] Most men gamble with her, and gain all, and lose all, as her wheel rolls. But do thou leave as unlawful these winnings, and deal with Cause and Effect, the chancelors of God. In the Will work and acquire, and thou hast chained the wheel of Chance, and shalt sit hereafter out of fear from her rotations. A political victory, a rise of rents, the recovery of your sick, or the return of your absent friend, or some other favorable event, raises your spirits, and you think good days are preparing for you. Do not believe it. Nothing can bring you peace but yourself. Nothing can bring you peace but the triumph of principles.

FRIENDSHIP.[278]

1. We have a great deal more kindness than is ever spoken. Barring all the selfishness that chills like east winds the world, the whole human family is bathed with an element of love like a fine ether. How many persons we meet in houses, whom we scarcely speak to, whom yet we honor, and who honor us! How many we see in the street, or sit with in church, whom, though silently, we warmly rejoice to be with! Read the language of these wandering eyebeams. The heart knoweth.

2. The effect of the indulgence of this human affection is a certain cordial exhilaration. In poetry, and in common speech, the emotions of benevolence and complacency which are felt toward others, are likened to the material effects of fire; so swift, or much more swift, more active, more cheering are these fine inward irradiations. From the highest degree of passionate love, to the lowest degree of good will, they make the sweetness of life.

3. Our intellectual and active powers increase with our affection. The scholar sits down to write, and all his years of meditation do not furnish him with one good thought or happy expression; but it is necessary to write a letter to a friend, and, forthwith, troops of gentle thoughts invest themselves, on every hand, with chosen words. See in any house where virtue and self-respect abide, the palpitation which the approach of a stranger causes. A commended stranger is expected and announced, and an uneasiness between pleasure and pain invades all the hearts of a household. His arrival almost brings fear to the good hearts that would welcome him. The house is dusted, all things fly into their places, the old coat is exchanged for the new, and they must get up a dinner if they can. Of a commended stranger, only the good report is told by others, only the good and new is heard by us. He stands to us for humanity. He is, what we wish. Having imagined and invested him, we ask how we should stand related in conversation and action with such a man, and are uneasy with fear. The same idea exalts conversation with him. We talk better than we are wont. We have the nimblest fancy, a richer memory, and our dumb devil has taken leave for the time. For long hours we can continue a series of sincere, graceful, rich communications, drawn from the oldest, secretest experience, so that they who sit by, of our own kinsfolk and acquaintance, shall feel a lively surprise at our unusual powers. But as soon as the stranger begins to intrude his partialities, his definitions, his defects, into the conversation, it is all over. He has heard the first, the last and best, he will ever hear from us. He is no stranger now. Vulgarity, ignorance, misapprehension, are old acquaintances. Now, when he comes, he may get the order, the dress, and the dinner, but the throbbing of the heart, and the communications of the soul, no more.

4. What is so pleasant as these jets of affection which relume[279] a young world for me again? What is so delicious as a just and firm encounter of two, in a thought, in a feeling? How beautiful, on their approach to this beating heart, the steps and forms of the gifted and the true! The moment we indulge our affections, the earth is metamorphosed; there is no winter, and no night; all tragedies, all ennuis vanish; all duties even; nothing fills the proceeding eternity but the forms all radiant of beloved persons. Let the soul be assured that somewhere in the universe it should rejoin its friend, and it would be content and cheerful alone for a thousand

years.

5. I awoke this morning with devout thanksgiving for my friends, the old and the new. Shall I not call God, the Beautiful, who daily showeth himself so to me in his gifts? I chide society, I embrace solitude, and yet I am not so ungrateful as not to see the wise, the lovely, and the noble-minded, as from time to time they pass my gate.[280] Who hears me, who understands me, becomes mine,--a possession for all time. Nor is nature so poor, but she gives me this joy several times, and thus we weave social threads of our own, a new web of relations; and, as many thoughts in succession substantiate themselves, we shall by-and-by stand in a new world of our own creation, and no longer strangers and pilgrims is a traditionary globe. My friends have come[281] to me unsought. The great God gave them to me. By oldest right, by the divine affinity of virtue with itself, I find them, or rather, not I, but the Deity in me and in them, both deride and cancel the thick walls of individual character, relation, age, sex and circumstance, at which he usually connives, and now makes many one. High thanks I owe you, excellent lovers, who carry out the world for me to new and noble depths, and enlarge the meaning of all my thoughts. These are new poetry of the first Bard[282]--poetry without stop--hymn, ode and epic,[283] poetry still flowing, Apollo[284] and the Muses[285] chanting still. Will these two separate themselves from me again, or some of them? I know not, but I fear it not; for my relation to them is so pure, that we hold by simple affinity, and the Genius[286] of my life being thus social, the same affinity will exert its energy on whomsoever is as noble as these men and women, wherever I may be.

6. I confess to an extreme tenderness of nature on this point. It is almost dangerous to me to "crush the sweet poison,[287] of misused wine" of the affections. A new person is to me a great event, and hinders me from sleep. I have had such fine fancies lately about two or three persons, as have given me delicious hours, but the joy ends in the day: it yields no fruit. Thought is not born of it; my action is very little modified. I must feel pride in my friend's accomplishments as if they were mine, and a property in his virtues. I feel as warmly when he is praised, as the lover when he hears applause of his engaged maiden. We over-estimate the conscience of our friend. His goodness seems better than our goodness, his nature finer, his temptations less. Everything that is his,--his name, his form, his dress, books and instruments,--fancy enhances. Our own thought sounds new and larger from his mouth.

7. Yet the systole and diastole[288] of the heart are not without their analogy in the ebb and flow of love. Friendship, like the immortality[289] of the soul, is too good to be believed. The lover, beholding his maiden, half knows that she is not verily that which he worships; and in the golden hour of friendship, we are surprised with shades of suspicion and unbelief. We doubt that we bestow on our hero the virtues in which he shines, and afterward worship the form to which we have ascribed this divine inhabitation. In strictness, the soul does not respect men as it respects itself. In strict science, all persons underlie the same condition of an infinite remoteness. Shall we fear to cool our love by mining for the metaphysical foundation of this Elysian temple?[290] Shall I not be as real as the things I see? If I am, I shall not fear to know them for what they are. Their essence is not less beautiful than their appearance, though it needs finer organs for its apprehension. The root of the plant is not unsightly to science, though for chaplets and festoons we cut the stem short. And I must hazard the production of the bald fact amid these pleasing reveries, though it should prove an Egyptian skull at our banquet.[291] A man who stands united with his thought, conceives magnificently to himself. He is conscious of a universal success,[292] even though bought by uniform particular failures. No advantages, no powers, no gold or force can be any match for him. I cannot choose but rely on my own poverty, more than on your wealth. I cannot make your consciousness tantamount to mine. Only the star dazzles; the planet has a faint, moon-like ray. I hear what you say of the admirable parts and tried temper of the party you praise, but I see well that for all his purple cloaks I shall not like him, unless he is at least a poor Greek like me. I cannot deny it, O friend, that the vast shadow of the Phenomenal includes thee, also, in its pied and painted immensity,--thee, also, compared with whom all else is shadow. Thou art not Being, as Truth is, as Justice is,--thou art not my soul, but a picture and effigy of that. Thou hast come to me lately, and already thou art seizing thy hat and cloak. It is not that the soul puts forth friends, as the tree puts forth leaves, and presently, by the germination of new buds, extrudes the old leaf?[293] The law of nature is alternation forevermore. Each electrical state superinduces the opposite. The soul environs itself with friends, that it may enter into a grander self-acquaintance or solitude; and it goes alone, for a season, that it may exalt its conversation or society. This method betrays itself along the whole history of our personal relations. The instinct of affection revives the hope of union with our mates, and the returning sense of insulation recalls us from the chase. Thus every man passes his life in the search after friendship, and if he should record his true sentiment, he might write a letter like this, to each new candidate for his love:--

DEAR FRIEND:--

If I was sure of thee, sure of thy capacity, sure to match my mood with thine, I should never think again of trifles, in relation to thy comings and goings. I am not very wise; my moods are quite attainable; and I respect thy genius; it is to me as yet unfathomed; yet

dare I not presume in thee a perfect intelligence of me, and so thou art to me a delicious torment. Thine ever, or never.

8. Yet these uneasy pleasures and fine pains are for curiosity, and not for life. They are not to be indulged. This is to weave cobweb, and not cloth. Our friendships hurry to short and poor conclusions, because we have made them a texture of wine and dreams,[294] instead of the tough fiber of the human heart. The laws of friendship are great, austere, and eternal, of one web with the laws of nature and of morals. But we have aimed at a swift and petty benefit, to suck a sudden sweetness. We snatch at the slowest fruit in the whole garden of God, which many summers and many winters must ripen. We seek our friend not sacredly but with an adulterate passion which would appropriate him to ourselves. In vain. We are armed all over with subtle antagonisms, which, as soon as we meet, begin to play, and translate all poetry into stale prose. Almost all people descend to meet. All association must be a compromise, and, what is worst, the very flower and aroma of the flower of each of the beautiful natures disappears as they approach each other. What a perpetual disappointment is actual society, even of the virtuous and gifted! After interviews have been compassed with long foresight, we must be tormented presently by baffled blows, by sudden, unseasonable apathies, by epilepsies of wit and of animal spirits, in the heyday of friendship and thought. Our faculties do not play us true, and both parties are relieved by solitude.

9. I ought to be equal to every relation. It makes no difference how many friends I have, and what content I can find in conversing with each, if there be one to whom I am not equal. If I have shrunk unequal from one contest instantly, the joy I find in all the rest becomes mean and cowardly. I should hate myself, if then I made my other friends my asylum.

"The valiant warrior[295] famoused for fight, After a hundred victories, once foiled, Is from the book of honor razed quite, And all the rest forgot for which he toiled."

10. Our impatience is thus sharply rebuked. Bashfulness and apathy are a tough husk in which a delicate organization is protected from premature ripening. It would be lost if it knew itself before any of the best souls were yet ripe enough to know and own it. Respect the _naturlangsamkeit_[296] which hardens the ruby in a million years, and works in duration, in which Alps and Andes come and go as rainbows. The good spirit of our life has no heaven which is the price of rashness. Love, which is the essence of God, is not for levity, but for the total worth of man. Let us not have this childish luxury in our regards, but the austerest worth; let us approach our friend with an audacious trust in the truth of his heart, in the breadth, impossible to be overturned, of his foundations.

11. The attractions of this subject are not to be resisted, and I leave, for the time, all account of subordinate social benefit, to speak of that select and sacred relation which is a kind of absolute, and which even leaves the language of love suspicious and common, so much is this purer, and nothing is so much divine.

12. I do not wish to treat friendships daintily, but with roughest courage. When they are real, they are not glass threads or frost-work, but the solidest thing we know. For now, after so many ages of experience, what do we know of nature, or of ourselves? Not one step has man taken toward the solution of the problem of his destiny. In one condemnation of folly stand the whole universe of men. But the sweet sincerity of joy and peace, which I draw from this alliance with my brother's soul, is the nut itself whereof all nature and all thought is but the husk and shell. Happy is the house that shelters a friend! It might well be built, like a festal bower or arch, to entertain him a single day. Happier, if he know the solemnity of that relation, and honor its law! He who offers himself a candidate for that covenant comes up, like an Olympian,[297] to the great games, where the first-born of the world are the competitors. He proposes himself for contest where Time, Want, Danger are in the lists, and he alone is victor who has truth enough in his constitution to preserve the delicacy of his beauty from the wear and tear of all these. The gifts of fortune may be present or absent, but all the hap in that contest depends on intrinsic nobleness, and the contempt of trifles. There are two elements that go to the composition of friendship, each so sovereign, that I can detect no superiority in either, no reason why either should be first named. One is Truth. A friend is a person with whom I may be sincere. Before him, I may think aloud. I am arrived at last in the presence of a man so real and equal that I may drop even those undermost garments of dissimulation, courtesy, and second thought, which men never put off, and may deal with him with the simplicity and wholeness, with which one chemical atom meets another. Sincerity is the luxury allowed, but diadems and authority, only to the highest rank, _that_ being permitted to speak truth as having none above it to court or conform unto. Every man alone is sincere. At the entrance of a second person, hypocrisy begins. We parry and fend the approach of our fellow-man by compliments, by gossip, by amusements, by affairs. We cover up our thought from him under a hundred folds. I knew a man who,[298] under a certain religious frenzy, cast off this drapery, and omitting all compliments and commonplace, spoke to the conscience of every person he encountered, and that with great insight and beauty. At first he was resisted, and all men agreed he was mad. But persisting, as indeed he could not help doing, for some time in this course, he attained to the advantage of bringing every man of his acquaintance into true relations with him. No man would think

of speaking falsely with him, or of putting him off with any chat of markets or reading-rooms. But every man was constrained by so much sincerity to the like plain dealing and what love of nature, what poetry, what symbol of truth he had, he did certainly show him. But to most of us society shows not its face and eye, but its side and its back. To stand in true relations with men in a false age, is worth a fit of insanity, is it not? We can seldom go erect. Almost every man we meet requires some civility,--requires to be humored; he has some fame, some talent, some whim of religion or philanthropy in his head that is not to be questioned, and which spoils all conversation with him. But a friend is a sane man who exercises not my ingenuity, but me. My friend gives me entertainment without requiring any stipulation on my part. A friend, therefore, is a sort of paradox[299] in nature. I who alone am, I who see nothing in nature whose existence I can affirm with equal evidence to my own, behold now the semblance of my being in all its height, variety and curiosity, reiterated in a foreign form; so that a friend may well be reckoned the masterpiece of nature.

13. The other element of friendship is tenderness. We are holden to men by every sort of tie, by blood, by pride, by fear, by hope, by lucre, by lust, by hate, by admiration, by every circumstance and badge and trifle, but we can scarce believe that so much character can subsist in another as to draw us by love. Can another be so blessed, and we so pure, that we can offer him tenderness? When a man becomes dear to me, I have touched the goal of fortune. I find very little written directly to the heart of this matter in books. And yet I have one text which I cannot choose but remember. My author says,[300]--"I offer myself faintly and bluntly to those whose I effectually am, and tender myself least to him to whom I am the most devoted." I wish that friendship should have feet, as well as eyes and eloquence. It must plant itself on the ground, before it vaults over the moon. I wish it to be a little of a citizen, before it is quite a cherub.[301] We chide the citizen because he makes love a commodity. It is an exchange of gifts, of useful loans; it is good neighborhood; it watches with the sick; it holds the pall at the funeral; and quite loses sight of the delicacies and nobility of the relation. But though we cannot find the god under this disguise of a sutler, yet, on the other hand, we cannot forgive the poet if he spins his thread too fine, and does not substantiate his romance by the municipal virtues of justice, punctuality, fidelity and pity. I hate the prostitution of the name of friendship to signify modish and worldly alliances. I much prefer the company of plow-boys and tin-peddlers, to the silken and perfumed amity which only celebrates its days of encounter by a frivolous display, by rides in a curricle,[302] and dinners at the best taverns. The end of friendship is a commerce the most strict and homely that can be joined; more strict than any of which we have experience. It is for aid and comfort through all the relations and passages of life and death. It is fit for serene days, and graceful gifts, and country rambles, but also for rough roads and hard fare, shipwreck, poverty, and persecution. It keeps company with the sallies of the wit and the trances of religion. We are to dignify to each other the daily needs and offices of man's life, and embellish it by courage, wisdom and unity. It should never fall into something usual and settled, but should be alert and inventive, and add rhyme and reason to what was drudgery.

14. Friendship may be said to require natures so rare and costly, each so well-tempered, and so happily adapted, and withal so circumstanced, (for even in that particular, a poet says, love demands that the parties be altogether paired,) that its satisfaction can very seldom be assured. It cannot subsist in its perfection, say some of those who are learned in this warm lore of the heart, betwixt more than two. I am not quite so strict in my terms, perhaps because I have never known so high a fellowship as others. I please my imagination more with a circle of godlike men and women variously related to each other, and between whom subsists a lofty intelligence. But I find this law of _one to one_,[303] peremptory for conversation, which is the practice and consummation of friendship. Do not mix waters too much. The best mix as ill as good and bad. You shall have very useful and cheering discourse at several times with two several men, but let all three of you come together, and you shall not have one new and hearty word. Two may talk and one may hear, but three cannot take part in a conversation of the most sincere and searching sort. In good company there is never such discourse between two, across the table, as takes place when you leave them alone. In good company, the individuals at once merge their egotism into a social soul exactly co-extensive with the several consciousnesses there present. No partialities of friend to friend, no fondnesses of brother to sister, of wife to husband, are there pertinent, but quite otherwise. Only he may then speak who can sail on the common thought of the party, and not poorly limited to his own. Now this convention, which good sense demands, destroys the high freedom of great conversation, which requires an absolute running of two souls into one.

15. No two men but being left alone with each other, enter into simpler relations. Yet it is affinity that determines _which_ two shall converse. Unrelated men give little joy to each other; will never suspect the latent powers of each. We talk sometimes of a great talent for conversation, as if it were a permanent property in some individuals. Conversation is an evanescent relation,--no more. A man is reputed to have thought and eloquence; he cannot, for all that, say a word to his cousin or his uncle. They accuse his silence with as much reason as they would blame the insignificance of a dial in the shade. In the sun it will mark the hour. Among those who enjoy his thought, he will regain his tongue.

16. Friendship requires that rare mean betwixt likeness and unlikeness, that piques each with the presence of power and of consent in the other party. Let me be alone to the end of the world, rather than that my friend should overstep by a word or a look his real sympathy. I am equally balked by antagonism and by compliance. Let him not cease an instant to be himself. The only joy I have in his being mine, is that the _not mine_ is _mine_. I hate, where I looked for a manly furtherance, or at least a manly resistance, to find a mush of concession. Better be a nettle in the side of your friend, than his echo. The condition which high friendship demands is ability to do without it. That high office requires great and sublime parts. There must be very two before there can be very one. Let it be an alliance of two large formidable natures, mutually beheld, mutually feared, before yet they recognize the deep identity which beneath these disparities unites them.

17. He only is fit for this society who is magnanimous; who is sure that greatness and goodness are always economy; who is not swift to intermeddle with his fortunes. Let him not intermeddle with this. Leave to the diamond its ages to grow, nor expect to accelerate the births of the eternal. Friendship demands a religious treatment. We talk of choosing our friends, but friends are self-elected. Reverence is a great part of it. Treat your friend as a spectacle. Of course he has merits that are not yours, and that you cannot honor, if you must needs hold him close to your person. Stand aside; give those merits room; let them mount and expand. Are you the friend of your friend's buttons, or of his thought? To a great heart he will still be a stranger in a thousand particulars, that he may come near in the holiest ground. Leave it to girls and boys to regard a friend as property, and to suck a short and all-confounding pleasure instead of the noblest benefits.

18. Let us buy our entrance to this guild by a long probation. Why should we desecrate noble and beautiful souls by intruding on them? Why insist on rash personal relations with your friend? Why go to his house, or know his mother and brother and sisters? Why be visited by him at your own? Are these things material to our covenant? Leave this touching and clawing. Let him be to me a spirit. A message, a thought, a sincerity, a glance from him I want, but not news, nor pottage. I can get politics, and chat, and neighborly conveniences, from cheaper companions. Should not the society of my friend be to me poetic, pure, universal, and great as nature itself? Ought I to feel that our tie is profane in comparison with yonder bar of cloud that sleeps on the horizon, or that clump of waving grass that divides the brook? Let us not vilify but raise it to that standard. That great defying eye, that scornful beauty of his mien and action, do not pique yourself on reducing, but rather fortify and enhance. Worship his superiorities; wish him not less by a thought, but hoard and tell them all. Guard him as thy counterpart. Let him be to thee forever a sort of beautiful enemy, untamable, devoutly revered, and not a trivial conveniency to be soon outgrown and cast aside. The hues of the opal, the light of the diamond, are not to be seen, if the eye is too near. To my friend I write a letter, and from him I receive a letter. That seems to you a little. It suffices me. It is a spiritual gift worthy of him to give and of me to receive. It profanes nobody. In these warm lines the heart will trust itself, as it will not to the tongue, and pour out the prophecy of a godlier existence than all the annals of heroism have yet made good.

19. Respect so far the holy laws of this fellowship as not to prejudice its perfect flower by your impatience for its opening. We must be our own before we can be another's. There is at least this satisfaction in crime, according to the Latin proverb;--you can speak to your accomplice on even terms. _Crimen quos[304] inquinat, æquat_. To those whom we admire and love, at first we cannot. Yet the least defect of self-possession vitiates, in my judgment, the entire relation. There can never be deep peace between two spirits, never mutual respect until, in their dialogue, each stands for the whole world.

20. What is so great as friendship, let us carry with what grandeur of spirit we can. Let us be silent,--so we may hear the whisper of the gods. Let us not interfere. Who set you to cast about what you should say to the select souls, or how to say anything to such? No matter how ingenious, no matter how graceful and bland. There are innumerable degrees of folly and wisdom, and for you to say aught is to be frivolous. Wait, and thy heart shall speak. Wait until the necessary and everlasting overpowers you, until day and night avail themselves of your lips. The only reward of virtue, is virtue; the only way to have a friend is to be one. You shall not come nearer a man by getting into his house. If unlike, his soul only flees the faster from you, and you shall catch never a true glance of his eye. We see the noble afar off, and they repel us; why should we intrude? Late,--very late,--we perceive that no arrangements, no introductions, no consuetudes or habits of society, would be of any avail to establish us in such relations with them as we desire,--but solely the uprise of nature in us to the same degree it is in them; then shall we meet as water with water; and if we should not meet them then, we shall not want them, for we are already they. In the last analysis, love is only the reflection of a man's own worthiness from other men. Men have sometimes exchanged names with their friends, as if they would signify that in their friend each loved his own soul.

21. The higher the style we demand of friendship, of course the less easy to establish it with flesh and blood. We walk alone in the world. Friends, such as we desire, are dreams and fables. But a sublime hope cheers ever the faithful heart, that elsewhere, in

other regions of the universal power, souls are now acting, enduring and daring, which can love us, and which we can love. We may congratulate ourselves that the period of nonage,[305] of follies, of blunders, and of shame, is passed in solitude, and when we are finished men, we shall grasp heroic hands in heroic hands. Only be admonished by what you already see, not to strike leagues of friendship with cheap persons, where no friendship can be. Our impatience betrays us into rash and foolish alliances which no God attends. By persisting in your path, though you forfeit the little you gain the great. You demonstrate yourself, so as to put yourself out of the reach of false relations, and you draw to you the first-born of the world, those rare pilgrims whereof only one or two wander in nature at once, and before whom the vulgar great show as specters and shadows merely.

22. It is foolish to be afraid of making our ties too spiritual, as if so we could lose any genuine love. Whatever correction of our popular views we make from insight, nature will be sure to bear us out in, and though it seem to rob us of some joy, will repay us with a greater. Let us feel, if we will, the absolute insulation of man. We are sure that we have all in us. We go to Europe, or we pursue persons, or we read books, in the instinctive faith that these will call it out and reveal us to ourselves. Beggars all. The persons are such as we; the Europe, an old faded garment of dead persons; the books, their ghosts. Let us drop this idolatry. Let us give over this mendicancy. Let us even bid our dearest friends farewell, and defy them, saying, "Who are you? Unhand me. I will be dependent no more." Ah! seest thou not, O brother, that thus we part only to meet again on a higher platform, and only be more each other's, because we are more our own? A friend is Janus-faced:[306] he looks to the past and the future. He is the child of all my foregoing hours, the prophet of those to come, and the harbinger[307] of a greater friend.

23. I do then with my friends as I do with my books. I would have them where I can find them, but I seldom use them. We must have society on our own terms, and admit or exclude it on the slightest cause. I cannot afford to speak much with my friend. If he is great, he makes me so great that I cannot descend to converse. In the great days, presentiments hover before me, far before me in the firmament. I ought then to dedicate myself to them. I go in that I may seize them, I go out that I may seize them. I fear only that I may lose them receding into the sky in which now they are only a patch of brighter light. Then, though I prize my friends, I cannot afford to talk with them and study their visions, lest I lose my own. It would indeed give me a certain household joy to quit this lofty seeking, this spiritual astronomy, or search of stars, and come down to warm sympathies with you; but then I know well I shall mourn always the vanishing of my mighty gods. It is true, next week I shall have languid moods, when I can well afford to occupy myself with foreign objects; then I shall regret the lost literature of your mind, and wish you were by my side again. But if you come, perhaps you will fill my mind only with new visions, not with yourself but with your lusters, and I shall not be able any more than now to converse with you. So I will owe to my friends this evanescent intercourse. I will receive from them, not what they have, but what they are. They shall give me that which properly they cannot give, but which emanates from them. But they shall not hold me by any relations less subtile and pure. We will meet as though we met not, and part as though we parted not.

24. It has seemed to me lately more possible than I knew, to carry a friendship greatly, on one side, without due correspondence on the other. Why should I cumber myself with regrets that the receiver is not capacious? It never troubles the sun that some of his rays fall wide and vain into ungrateful space, and only a small part on the reflecting planet. Let your greatness educate the crude and cold companion. If he is unequal, he will presently pass away; but thou art enlarged by thy own shining, and no longer a mate for frogs and worms, dost soar and burn with the gods of the empyrean.[308] It is thought a disgrace to love unrequited. But the great will see that true love cannot be unrequited. True love transcends the unworthy object, and dwells and broods on the eternal, and when the poor interposed mask crumbles, it is not sad, but feels rid of so much earth, and feels its independency the surer. Yet these things may hardly be said without a sort of treachery to the relation. The essence of friendship is entireness, a total magnanimity and trust. It must not surmise or provide for infirmity. It treats its object as a god, that it may deify both.

HEROISM[309]

"Paradise is under the shadow of swords,"[310] _Mahomet._

1. In the elder English dramatists,[311] and mainly in the plays of Beaumont and Fletcher,[312] there is a constant recognition of gentility, as if a noble behavior were as easily marked in the society of their age, as color is in our American population. When any Rodrigo, Pedro, or Valerio[313] enters, though he be a stranger, the duke or governor exclaims, This is a gentleman,--and proffers civilities without end; but all the rest are slag and refuse. In harmony with this delight in personal advantages, there is in their plays a certain heroic cast of character and dialogue,--as in Bonduca, Sophocles, the Mad Lover, the Double Marriage,[314]--wherein the speaker is so earnest and cordial, and on such deep grounds of character, that the dialogue, on the slightest additional incident in the plot, rises naturally into poetry. Among many texts, take the following. The Roman Martius has conquered Athens--all but the

invincible spirits of Sophocles, the duke of Athens, and Dorigen, his wife. The beauty of the latter inflames Martius, and he seeks to save her husband; but Sophocles will not ask his life, although assured, that a word will save him, and the execution of both proceeds.

"_Valerius._ Bid thy wife farewell.

Soph. No, I will take no leave. My Dorigen, Yonder, above, 'bout Ariadne's crown.[315] My spirit shall hover for thee. Prithee, haste.

Dor. Stay, Sophocles--with this, tie up my sight; Let not soft nature so transformed be, And lose her gentler sexed humanity, To make me see my lord bleed. So, 'tis well; Never one object underneath the sun Will I behold before my Sophocles: Farewell; now teach the Romans how to die.

Mar. Dost know what 'tis to die?

Soph. Thou dost not, Martius, And therefore, not what 'tis to live; to die Is to begin to live. It is to end An old, stale, weary work, and to commence A newer and a better. 'Tis to leave Deceitful knaves for the society Of gods and goodness. Thou, thyself, must part At last, from all thy garlands, pleasures, triumphs, And prove thy fortitude what then 'twill do.

Val. But art not grieved nor vexed to leave thy life thus?

Soph. Why should I grieve or vex for being sent To them I ever loved best? Now, I'll kneel, But with my back toward thee; 'tis the last duty This trunk can do the gods.

Mar. Strike, strike, Valerius, Or Martius' heart will leap out at his mouth: This is a man, a woman! Kiss thy lord, And live with all the freedom you were wont. O love! thou doubly hast afflicted me With virtue and with beauty. Treacherous heart, My hand shall cast thee quick into my urn, Ere thou transgress this knot of piety.

Val. What ails my brother?

Soph. Martius, oh Martius, Thou now hast found a way to conquer me.

Dor. O star of Rome! what gratitude can speak Fit words to follow such a deed as this?

Mar. This admirable duke, Valerius, With his disdain of fortune and of death, Captived himself, has captived me, And though my arm hath ta'en his body here, His soul hath subjugated Martius' soul. By Romulus,[316] he is all soul, I think; He hath no flesh, and spirit cannot be gyved; Then we have vanquished nothing; he is free, And Martius walks now in captivity."

2. I do not readily remember any poem, play, sermon, novel, or oration, that our press vents in the last few years, which goes to the same tune. We have a great many flutes and flageolets, but not often the sound of any fife. Yet, Wordsworth's Laodamia, and the ode of "Dion,"[317] and some sonnets, have a certain noble music; and Scott[318] will sometimes draw a stroke like the portrait of Lord Evandale, given by Balfour of Burley.[319] Thomas Carlyle,[320] with his natural taste for what is manly and daring in character, has suffered no heroic trait in his favorites to drop from his biographical and historical pictures. Earlier, Robert Burns[321] has given us a song or two. In the Harleian Miscellanies,[322] there is an account of the battle of Lutzen,[323] which deserves to be read. And Simon Ockley's[324] History of the Saracens recounts the prodigies of individual valor with admiration, all the more evident on the part of the narrator, that he seems to think that his place in Christian Oxford[325] requires of him some proper protestations of abhorrence. But if we explore the literature of Heroism, we shall quickly come to Plutarch,[326] who is its Doctor and historian. To him we owe the Brasidas,[327] the Dion,[328] the Epaminondas,[329] the Scipio[330] of old, and I must think we are more deeply indebted to him than to all the ancient writers. Each of his "Lives" is a refutation to the despondency and cowardice of our religious and political theorists. A wild courage, a Stoicism[331] not of the schools, but of the blood, shines in every anecdote, and has given that book its immense fame.

3. We need books of this tart cathartic virtue, more than books of political science, or of private economy. Life is a festival only to the wise. Seen from the nook and chimney-side of prudence, it wears a ragged and dangerous front. The violations of the laws of nature by our predecessors and our contemporaries are punished in us also. The disease and deformity around us certify the infraction of natural, intellectual, and moral laws, and often violation on violation to breed such compound misery. A lockjaw that bends a man's head back to his heels, hydrophobia that makes him bark at his wife and babes, insanity that makes him eat grass; war, plague, cholera, famine indicate a certain ferocity in nature, which, as it had its inlet by human crime, must have its outlet by

human suffering. Unhappily, almost no man exists who has not in his own person become, to some amount, a stockholder in the sin, and so made himself liable to a share in the expiation.

4. Our culture, therefore, must not omit the arming of the man. Let him hear in season that he is born into the state of war, and that the commonwealth and his own well-being require that he should not go dancing in the weeds of peace, but warned, self-collected, and neither defying nor dreading the thunder, let him take both reputation and life in his hand, and, with perfect urbanity, dare the gibbet and the mob by the absolute truth of his speech, and the rectitude of his behavior.

5. Toward all this external evil, the man within the breast assumes a warlike attitude, and affirms his ability to cope single-handed with the infinite army of enemies. To this military attitude of the soul we give the name of Heroism. Its rudest form is the contempt for safety and ease, which makes the attractiveness of war. It is a self-trust which slights the restraints of prudence, in the plenitude of its energy and power to repair the harms it may suffer. The hero is a mind of such balance that no disturbances can shake his will, but pleasantly, and, as it were, merrily, he advances to his own music, alike in frightful alarms, and in the tipsy mirth of universal dissoluteness. There is somewhat not philosophical in heroism; there is somewhat not holy in it; it seems not to know that other souls are of one texture with it; it has pride; it is the extreme of individual nature. Nevertheless, we must profoundly revere it. There is somewhat in great actions, which does not allow us to go behind them. Heroism feels and never reasons, and therefore is always right; and although a different breeding, different religion, and greater intellectual activity, would have modified or even reversed the particular action, yet for the hero, that thing he does is the highest deed, and is not open to the censure of philosophers or divines. It is the avowal of the unschooled man, that he finds a quality in him that is negligent of expense, of health, of life, of danger, of hatred, of reproach, and knows that his will is higher and more excellent than all actual and all possible antagonists.

6. Heroism works in contradiction to the voice of mankind, and in contradiction, for a time, to the voice of the great and good. Heroism is an obedience[332] to a secret impulse of an individual's character. Now to no other man can its wisdom appear as it does to him, for every man must be supposed to see a little further on his own proper path than any one else. Therefore, just and wise men take umbrage at his act, until after some little time be past: then they see it to be in unison with their acts. All prudent men see that the action is clean contrary to a sensual prosperity; for every heroic act measures itself by its contempt of some external good. But it finds its own success at last, and then the prudent also extol.

7. Self-trust is the essence of heroism. It is the state of the soul at war, and its ultimate objects are the last defiance of falsehood and wrong, and the power to bear all that can be inflicted by evil agents. It speaks the truth, and it is just, generous, hospitable, temperate, scornful of petty calculations, and scornful of being scorned. It persists; it is of an undaunted boldness, and of a fortitude not to be wearied out. Its jest is the littleness of common life. That false prudence which dotes on health and wealth is the butt and merriment of heroism. Heroism, like Plotinus,[333] is almost ashamed of its body. What shall it say, then, to the sugar-plums, and cats'-cradles, to the toilet, compliments, quarrels, cards, and custard, which rack the wit of all human society. What joys has kind nature provided for us dear creatures! There seems to be no interval between greatness and meanness. When the spirit is not master of the world then it is its dupe. Yet the little man takes the great hoax so innocently, works in it so headlong and believing, is born red, and dies gray, arranging his toilet, attending on his own health, laying traps for sweet food and strong wine, setting his heart on a horse or a rifle, made happy with a little gossip or a little praise, that the great soul cannot choose but laugh at such earnest nonsense. "Indeed, these humble considerations[334] make me out of love with greatness. What a disgrace is it to me to take note how many pairs of silk stockings thou hast, namely, these and those that were the peach-colored ones; or to bear the inventory of thy shirts, as one for superfluity, and one other for use!"

8. Citizens, thinking after the laws of arithmetic, consider the inconvenience of receiving strangers at their fireside, reckon narrowly the loss of time and the unusual display: the soul of a better quality thrusts back the unreasonable economy into the vaults of life, and says, I will obey the God, and the sacrifice and the fire he will provide. Ibn Hankal,[335] the Arabian geographer, describes a heroic extreme in the hospitality of Sogd, in Bokhar,[336] "When I was in Sogd I saw a great building, like a palace, the gates of which were open and fixed back to the wall with large nails. I asked the reason, and was told that the house had not been shut, night or day, for a hundred years. Strangers may present themselves at any hour, and in whatever number; the master has amply provided for the reception of the men and their animals, and is never happier than when they tarry for some time. Nothing of the kind have I seen in any other country." The magnanimous know very well that they who give time, or money, or shelter, to the stranger--so it be done for love, and not for ostentation--do, as it were, put God under obligation to them, so perfect are the compensations of the universe. In some way the time they seem to lose is redeemed, and the pains they seem to take remunerate themselves. These men fan the flame of human love, and raise the standard of civil virtue among mankind. But hospitality must be

for service, and not for show, or it pulls down the host. The brave soul rates itself too high to value itself by the splendor of its table and draperies. It gives what it hath, and all it hath, but its own majesty can lend a better grace to bannocks[337] and fair water than belong to city feasts.

9. The temperance of the hero proceeds from the same wish to do no dishonor to the worthiness he has. But he loves it for its elegancy, not for its austerity. It seems not worth his while to be solemn, and denounce with bitterness flesh-eating or wine-drinking, the use of tobacco, or opium, or tea, or silk, or gold. A great man scarcely knows how he dines, how he dresses; but without railing or precision, his living is natural and poetic. John Eliot,[338] the Indian Apostle, drank water, and said of wine,--"It is a noble, generous liquor, and we should be humbly thankful for it, but, as I remember, water was made before it." Better still is the temperance of king David[339] who poured out on the ground unto the Lord the water which three of his warriors had brought him to drink, at the peril of their lives.

10. It is told of Brutus,[340] that when he fell on his sword, after the battle of Philippi,[341] he quoted a line of Euripides,[342]--"O virtue! I have followed thee through life, and I find thee at last but a shade." I doubt not the hero is slandered by this report. The heroic soul does not sell its justice and its nobleness. It does not ask to dine nicely, and to sleep warm. The essence of greatness is the perception that virtue is enough. Poverty is its ornament. It does not need plenty, and can very well abide its loss.

11. But that which takes my fancy most, in the heroic class, is the good humor and hilarity they exhibit. It is a height to which common duty can very well attain, to suffer and to dare with solemnity. But these rare souls set opinion, success, and life, at so cheap a rate, that they will not soothe their enemies by petitions, or the show of sorrow, but wear their own habitual greatness. Scipio,[343] charged with peculation, refuses to do himself so great a disgrace as to wait for justification, though he had the scroll of his accounts in his hands, but tears it to pieces before the tribunes. Socrates'[344] condemnation of himself to be maintained in all honor in the Prytaneum,[345] during his life, and Sir Thomas More's[346] playfulness at the scaffold, are of the same strain. In Beaumont and Fletcher's "Sea Voyage," Juletta tells the stout captain and his company,

Jul. Why, slaves, 'tis in our power to hang ye.

Master. Very likely, 'Tis in our powers, then, to be hanged, and scorn ye.

These replies are sound and whole. Sport is the bloom and glow of a perfect health. The great will not condescend to take anything seriously; all must be as gay as the song of a canary, though it were the building of cities, or the eradication of old and foolish churches and nations, which have cumbered the earth long thousands of years. Simple hearts put all the history and customs of this world behind them, and play their own play in innocent defiance of the Blue-Laws[347] of the world; and such would appear, could we see the human race assembled in vision, like little children frolicking together; though, to the eyes of mankind at large, they wear a stately and solemn garb of works and influences.

12. The interest these fine stories have for us, the power of a romance over the boy who grasps the forbidden book under his bench at school, our delight in the hero, is the main fact to our purpose. All these great and transcendent properties are ours. If we dilate in beholding the Greek energy, the Roman pride, it is that we are already domesticating the same sentiment. Let us find room for this great guest in our small houses. The first step of worthiness will be to disabuse us of our superstitious associations with places and times, with number and size. Why should these words, Athenian, Roman, Asia, and England, so tingle in the ear? Where the heart is, there the muses, there the gods sojourn, and not in any geography of fame. Massachusetts, Connecticut River, and Boston Bay, you think paltry places, and the ear loves names of foreign and classic topography. But here we are; and, if we will tarry a little, we may come to learn that here is best. See to it only that thyself is here;--and art and nature, hope and fate, friends, angels, and the Supreme Being, shall not be absent from the chamber where thou sittest. Epaminondas,[348] brave and affectionate, does not seem to us to need Olympus[349] to die upon, nor the Syrian sunshine. He lies very well where he is. The Jerseys[350] were handsome ground enough for Washington to tread, and London streets for the feet of Milton.[351] A great man makes his climate genial in the imagination of men, and its air the beloved element of all delicate spirits. That country is the fairest, which is inhabited by the noblest minds. The pictures which fill the imagination in reading the actions of Pericles,[352] Xenophon,[353] Columbus,[354] Bayard,[355] Sidney,[356] Hampden,[357] teach us how needlessly mean our life is, that we, by the depth of our living, should deck it with more than regal or national splendor, and act on principles that should interest man and nature in the length of our days.

13. We have seen or heard of many extraordinary young men, who never ripened, or whose performance in actual life was not extraordinary. When we see their air and mien, when we hear them speak of society, or books, or religion, we admire their

superiority; they seem to throw contempt on our entire polity and social state; theirs is the tone of a youthful giant, who is sent to work revolutions. But they enter an active profession, and the forming Colossus[358] shrinks to the common size of man. The magic they used was the ideal tendencies, which always make the Actual ridiculous; but the tough world had its revenge the moment they put their horses of the sun to plow in its furrow. They found no example and no companion, and their heart fainted. What then? The lesson they gave in their first aspirations, is yet true; and a better valor and a purer truth shall one day organize their belief. Or why should a woman liken herself to any historical woman, and think, because Sappho,[359] or Sévigné,[360] or De Staël,[361] or the cloistered souls who have had genius and cultivation, do not satisfy the imagination and the serene Themis,[362] none can,--certainly not she. Why not? She has a new and unattempted problem to solve, perchance that of the happiest nature that ever bloomed. Let the maiden, with erect soul, walk serenely on her way, accept the hint of each new experience, search, in turn, all the objects that solicit her eye, that she may learn the power and the charm of her new-born being which is the kindling of a new dawn in the recesses of space. The fair girl, who repels interference by a decided and proud choice of influences, so careless of pleasing, so wilful and lofty, inspires every beholder with somewhat of her own nobleness. The silent heart encourages her; O friend, never strike sail to a fear! Come into port greatly, or sail with God the seas. Not in vain you live, for every passing eye is cheered and refined by the vision.

14. The characteristic of a genuine heroism is its persistency. All men have wandering impulses, fits and starts of generosity. But when you have chosen your part, abide by it, and do not weakly try to reconcile yourself with the world. The heroic cannot be the common, nor the common the heroic. Yet we have the weakness to expect the sympathy of people in those actions whose excellence is that they outrun sympathy, and appeal to a tardy justice. If you would serve your brother, because it is fit for you to serve him, do not take back your words when you find that prudent people do not commend you. Adhere to your own act, and congratulate yourself if you have done something strange and extravagant, and broken the monotony of a decorous age. It was a high counsel[363] that I once heard given to a young person,--"Always do what you are afraid to do." A simple manly character need never make an apology, but should regard its past action with the calmness of Phocion,[364] when he admitted that the event of the battle was happy, yet did not regret his dissuasion from the battle.

15. There is no weakness or exposure for which we cannot find consolation in the thought,--this is a part of my constitution, part of my relation and office to my fellow-creature. Has nature covenanted with me that I should never appear to disadvantage, never make a ridiculous figure? Let us be generous of our dignity as well as of our money. Greatness once and forever has done with opinion. We tell our charities, not because we wish to be praised for them, not because we think they have great merit, but for our justification. It is a capital blunder; as you discover, when another man recites his charities.

16. To speak the truth, even with some austerity, to live with some rigor of temperance, or some extremes of generosity, seems to be an asceticism which common good-nature would appoint to those who are at ease and in plenty, in sign that they feel a brotherhood with the great multitude of suffering men. And not only need we breathe and exercise the soul by assuming the penalties of abstinence, of debt, of solitude, of unpopularity, but it behooves the wise man to look with a bold eye into those rarer dangers which sometimes invade men, and to familiarize himself with disgusting forms of disease, with sounds of execration, and the vision of violent death.

17. Times of heroism are generally times of terror, but the day never shines in which this element may not work. The circumstances of man, we say, are historically somewhat better in this country, and at this hour, than perhaps ever before. More freedom exists for culture. It will not now run against an ax at the first step out of the beaten track of opinion. But whoso is heroic will always find crises to try his edge. Human virtue demands her champions and martyrs, and the trial of persecution always proceeds. It is but the other day that the brave Lovejoy[365] gave his breast to the bullets of a mob, for the rights of free speech and opinion, and died when it was better not to live.

18. I see not any road to perfect peace which a man can walk, but to take counsel of his own bosom. Let him quit too much association, let him go home much, and establish himself in those courses he approves. The unremitting retention of simple and high sentiments in obscure duties is hardening the character to that temper which will work with honor, if need be, in the tumult, or on the scaffold. Whatever outrages have happened to men may befall a man again; and very easily in a republic, if there appear any signs of a decay of religion. Coarse slander, fire, tar and feathers, and the gibbet, the youth may freely bring home to his mind, and with what sweetness of temper he can, and inquire how fast he can fix his sense of duty, braving such penalties, whenever it may please the next newspaper and a sufficient number of his neighbors to pronounce his opinions incendiary.

19. It may calm the apprehension of calamity in the most susceptible heart to see how quick a bound nature has set to the utmost infliction of malice. We rapidly approach a brink over which no enemy can follow us.

"Let them rave:[366] Thou art quiet in thy grave."

In the gloom of our ignorance of what shall be, in the hour when we are deaf to the higher voices, who does not envy them who have seen safely to an end their manful endeavor? Who that sees the meanness of our politics, but inly congratulates Washington that he is long already wrapped in his shroud, and forever safe; that he was laid sweet in his grave, the hope of humanity not yet subjugated in him? Who does not sometimes envy the good and brave, who are no more to suffer from the tumults of the natural world, and await with curious complacency the speedy term of his own conversation with finite nature? And yet the love that will be annihilated sooner than treacherous has already made death impossible, and affirms itself no mortal, but a native of the deeps of absolute and inextinguishable being.

MANNERS[367]

1. Half the world, it is said, knows not how the other half live. Our Exploring Expedition saw the Feejee Islanders[368] getting their dinner off human bones; and they are said to eat their own wives and children. The husbandry of the modern inhabitants of Gournou[369] (west of old Thebes) is philosophical to a fault. To set up their housekeeping, nothing is requisite but two or three earthen pots, a stone to grind meal, and a mat which is the bed. The house, namely, a tomb, is ready without rent or taxes. No rain can pass through the roof, and there is no door, for there is no want of one, as there is nothing to lose. If the house do not please them, they walk out and enter another, as there are several hundreds at their command. "It is somewhat singular," adds Berzoni, to whom we owe this account, "to talk of Happiness among people who live in sepulchers, among corpses and rags of an ancient nation which they knew nothing of." In the deserts of Borgoo[370] the rock-Tibboos still dwell in caves, like cliff-swallows, and the language of these negroes is compared by their neighbors to the shrieking of bats, and to the whistling of birds. Again, the Bornoos[371] have no proper names; individuals are called after their height, thickness, or other accidental quality, and have nick-names merely. But the salt, the dates, the ivory, and the gold, for which these horrible regions are visited, find their way into countries, where the purchaser and consumer can hardly be ranked in one race with these cannibals and man-stealers; countries where man serves himself with metals, wood, stone, glass, gum, cotton, silk and wool; honors himself with architecture;[372] writes laws, and contrives to execute his will through the hands of many nations; and, especially, establishes a select society, running through all the countries of intelligent men, a self-constituted aristocracy, or fraternity of the best, which, without written law, or exact usage of any kind, perpetuates itself, colonizes every new-planted island, and adopts and makes its own whatever personal beauty or extraordinary native endowment anywhere appears.

2. What fact more conspicuous in modern history, than the creation of the gentleman? Chivalry[373] is that, and loyalty is that, and, in English literature, half the drama, and all the novels, from Sir Philip Sidney[374] to Sir Walter Scott,[375] paint this figure. The word _gentleman_, which, like the word Christian, must hereafter characterize the present and the few preceding centuries, by the importance attached to it, is a homage to personal and incommunicable properties. Frivolous and fantastic additions have got associated with the name, but the steady interest of mankind in it must be attributed to the valuable properties which it designates. An element which unites all the most forcible persons of every country; makes them intelligible and agreeable to each other, and is somewhat so precise, that it is at once felt if an individual lack the masonic sign,[376] cannot be any casual product, but must be an average result of the character and faculties universally found in men. It seems a certain permanent average; as the atmosphere is a permanent composition, whilst so many gases are combined only to be decompounded. _Comme il faut_, is the Frenchman's description of good society, _as we must be_. It is a spontaneous fruit of talents and feelings of precisely that class who have most vigor, who take the lead in the world of this hour, and, though far from pure, far from constituting the gladdest and highest tone of human feeling, is as good as the whole society permits it to be. It is made of the spirit, more than of the talent of men, and is a compound result, into which every great force enters as an ingredient, namely, virtue, wit, beauty, wealth, and power.

3. There is something equivocal in all the words in use to express the excellence of manners and social cultivation, because the qualities are fluxional, and the last effect is assumed by the senses as the cause. The word _gentleman_ has not any correlative abstract[377] to express the quality. _Gentility_ is mean, and _gentilesse_[378] is obsolete. But we must keep alive in the vernacular the distinction between _fashion_, a word of narrow and often sinister meaning, and the heroic character which the gentleman imports. The usual words, however, must be respected: they will be found to contain the root of the matter. The point of distinction in all this class of names, as courtesy, chivalry, fashion, and the like, is, that the flower and fruit, not the grain of the tree,

are contemplated. It is beauty which is the aim this time, and not worth. The result is now in question, although our words intimate well enough the popular feeling, that the appearance supposes a substance. The gentleman is a man of truth, lord of his own actions, and expressing that lordship in his behavior, not in any manner dependent and servile either on persons, or opinions, or possessions. Beyond this fact of truth and real force, the word denotes good-nature and benevolence: manhood first, and then gentleness. The popular notion certainly adds a condition of ease and fortune; but that is a natural result of personal force and love, that they should possess and dispense the goods of the world. In times of violence, every eminent person must fall in with many opportunities to approve his stoutness and worth; therefore every man's name that emerged at all from the mass in the feudal ages,[379] rattles in our ear like a flourish of trumpets. But personal force never goes out of fashion. That is still paramount to-day, and, in the moving crowd of good society, the men of valor and reality are known, and rise to their natural place. The competition is transferred from war to politics and trade, but the personal force appears readily enough in these new arenas.

4. Power first, or no leading class. In politics and in trade, bruisers and pirates are of better promise than talkers and clerks. God knows[380] that all sorts of gentlemen knock at the door; but whenever used in strictness, and with any emphasis, the name will be found to point at original energy. It describes a man standing in his own right, and working after untaught methods. In a good lord, there must first be a good animal, at least to the extent of yielding the incomparable advantage of animal spirits.[381] The ruling class must have more, but they must have these, giving in every company the sense of power,[382] which makes things easy to be done which daunt the wise. The society of the energetic class, in their friendly and festive meetings, is full of courage, and of attempts, which intimidate the pale scholar. The courage which girls exhibit is like a battle of Lundy's Lane,[383] or a sea-fight. The intellect relies on memory to make some supplies to face these extemporaneous squadrons. But memory is a base mendicant with basket and badge, in the presence of these sudden masters. The rulers of society must be up to the work of the world, and equal to their versatile office: men of the right Cæsarian pattern,[384] who have great range of affinity. I am far from believing the timid maxim[385] of Lord Falkland,[386] ("That for ceremony there must go two to it; since a bold fellow will go through the cunningest forms,") and am of opinion that the gentleman is the bold fellow whose forms are not to be broken through; and only that plenteous nature is rightful master, which is the complement of whatever person it converses with. My gentleman gives the law where he is; he will outpray saints in chapel, outgeneral veterans in the field, and outshine all courtesy in the hall. He is good company for pirates, and good with academicians; so that it is useless to fortify yourself against him; he has the private entrance to all minds, and I could as easily exclude myself as him. The famous gentlemen of Asia and Europe have been of this strong type: Saladin,[387] Sapor,[388] the Cid,[389] Julius Cæsar,[390] Scipio,[391] Alexander,[392] Pericles,[393] and the lordliest personages. They sat very carelessly in their chairs, and were too excellent themselves to value any condition at a high rate.

5. A plentiful fortune is reckoned necessary, in the popular judgment, to the completion of this man of the world: and it is a material deputy which walks through the dance which the first has led. Money is not essential, but this wide affinity is, which transcends the habits of clique and caste, and makes itself felt by men of all classes. If the aristocrat is only valid in fashionable circles, and not with truckmen, he will never be a leader in fashion; and if the man of the people cannot speak on equal terms with the gentleman, so that the gentleman shall perceive that he is already really of his own order, he is not to be feared. Diogenes,[394] Socrates,[395] and Epaminondas[396] are gentlemen of the best blood, who have chosen the condition of poverty, when that of wealth was equally open to them. I use these old names, but the men I speak of are my contemporaries.[397] Fortune will not supply to every generation one of these well-appointed knights, but every collection of men furnishes some example of the class: and the politics of this country, and the trade of every town, are controlled by these hardy and irresponsible doers, who have invention to take the lead, and a broad sympathy which puts them in fellowship with crowds, and makes their action popular.

6. The manners of this class are observed and caught with devotion by men of taste. The association of these masters with each other, and with men intelligent of their merits, is mutually agreeable and stimulating. The good forms, the happiest expressions of each, are repeated and adopted. By swift consent, everything superfluous is dropped, everything graceful is renewed. Fine manners[398] show themselves formidable to the uncultivated man. They are a subtler science of defence to parry and intimidate; but once matched by the skill of the other party, they drop the point of the sword,--points and fences disappear, and the youth finds himself in a more transparent atmosphere, wherein life is a less troublesome game, and not a misunderstanding rises between the players. Manners aim to facilitate life, to get rid of impediments, and bring the man pure to energize. They aid our dealing and conversation, as a railway aids traveling, by getting rid of all avoidable obstructions of the road, and leaving nothing to be conquered but pure space. These forms very soon become fixed, and a fine sense of propriety is cultivated with more heed, that it becomes a badge of social and civil distinctions. Thus grows up Fashion, an equivocal semblance, the most puissant, the most fantastic and frivolous, the most feared and followed, and which morals and violence assault in vain.

7. There exists a strict relation between the class of power, and the exclusive and polished circles. The last are always filled or filling from the first. The strong men usually give some allowance even to the petulances of fashion, for that affinity they find in it. Napoleon,[399] child of the revolution, destroyer of the old noblesse,[400] never ceased to court the Faubourg St. Germain:[401] doubtless with the feeling, that fashion is a homage to men of his stamp. Fashion, though in a strange way, represents all manly virtue. It is a virtue gone to seed: it is a kind of posthumous honor. It does not often caress the great, but the children of the great: it is a hall of the Past. It usually sets its face against the great of this hour. Great men are not commonly in its halls: they are absent in the field: they are working, not triumphing. Fashion is made up of their children; of those, who, through the value and virtue of somebody, have acquired lustre to their name, marks of distinction, means of cultivation and generosity, and, in their physical organization, a certain health and excellence, which secures to them, if not the highest power to work, yet high power to enjoy. The class of power, the working heroes, the Cortez,[402] the Nelson,[403] the Napoleon, see that this is the festivity and permanent celebration of such as they; that fashion is funded talent; is Mexico,[404] Marengo,[405] and Trafalgar[406][407] beaten out thin; that the brilliant names of fashion run back to just such busy names as their own, fifty or sixty years ago. They are the sowers, their sons shall be the reapers, and _their_ sons, in the ordinary course of things, must yield the possession of the harvest, to new competitors with keener eyes and stronger frames. The city is recruited from the country. In the year 1805, it is said, every legitimate monarch in Europe was imbecile. The city would have died out, rotted, and exploded, long ago, but that it was reinforced from the fields. It is only country which came to town day before yesterday, that is city and court to-day.

8. Aristocracy and fashion are certain inevitable results. These mutual selections are indestructible. If they provoke anger in the least favored class, and the excluded majority revenge themselves on the excluding minority, by the strong hand, and kill them, at once a new class finds itself at the top, as certainly as cream rises in a bowl of milk: and if the people should destroy class after class, until two men only were left, one of these would be the leader, and would be involuntarily served and copied by the other. You may keep this minority out of sight and out of mind, but it is tenacious of life, and is one of the estates of the realm.[408] I am the more struck with this tenacity, when I see its work. It respects the administration of such unimportant matters, that we should not look for any durability in its rule. We sometimes meet men under some strong moral influence, as a patriotic, a literary, a religious movement, and feel that the moral sentiment rules man and nature. We think all other distinctions and ties will be slight and fugitive, this of caste or fashion, for example; yet come from year to year, and see how permanent that is, in this Boston or New York life of man, where, too, it has not the lease countenance from the law of the land. Not in Egypt or in India a firmer or more impassable line. Here are associations whose ties go over, and under, and through it, a meeting of merchants, a military corps, a college-class, a fire-club, a professional association, a political, a religious convention;--the persons seem to draw inseparably near; yet that assembly once dispersed, its members will not in the year meet again. Each returns to his degree in the scale of good society, porcelain remains porcelain, and earthen earthen. The objects of fashion may be frivolous, or fashion may be objectless, but the nature of this union and selection can be neither frivolous nor accidental. Each man's rank in that perfect graduation depends on some symmetry in his structure, or some agreement in his structure to the symmetry of society. Its doors unbar instantaneously to a natural claim of their own kind. A natural gentleman finds his way in, and will keep the oldest patrician out, who has lost his intrinsic rank. Fashion understands itself; good-breeding and personal superiority of whatever country readily fraternize with those of every other. The chiefs of savage tribes have distinguished themselves in London and Paris, by the purity of their tournure.[409]

9. To say what good of fashion we can,--it rests on reality, and hates nothing so much as pretenders;--to exclude and mystify pretenders, and send them into everlasting "Coventry,"[410] is its delight. We contemn, in turn, every other gift of men of the world; but the habit, even in little and the least matters, of not appealing to any but our own sense of propriety, constitutes the foundation of all chivalry. There is almost no kind of self-reliance, so it be sane and proportioned, which fashion does not occasionally adopt, and give it the freedom of its saloons. A sainted soul is always elegant, and, if it will, passes unchallenged into the most guarded ring. But so will Jock the teamster pass, in some crisis that brings him thither, and find favor, as long as his head is not giddy with the new circumstance, and the iron shoes do not wish to dance in waltzes and cotillions. For there is nothing settled in manners, but the laws of behavior yield to the energy of the individual. The maiden at her first ball, the countryman at a city dinner, believes that there is a ritual according to which every act and compliment must be performed, or the failing party must be cast out of this presence. Later, they learn that good sense and character make their own forms every moment, and speak or abstain, to take wine or refuse it, stay or go, sit in a chair or sprawl with children on the floor, or stand on their head, or what else soever, in a new and aboriginal way: and that strong will is always in fashion, let who will be unfashionable. All that fashion demands is composure, and self-content. A circle of men perfectly well-bred would be a company of sensible persons, in which every man's native manners and character appear. If the fashionist have not this quality, he is nothing. We are such lovers of self-reliance, that we excuse in man

many sins, if he will show us a complete satisfaction in his position, which asks no leave to be of mine, or any man's good opinion. But any deference to some eminent man or woman of the world, forfeits all privilege of nobility. He is an underling: I have nothing to do with him; I will speak with his master. A man should not go where he cannot carry his whole sphere or society with him,--not bodily, the whole circle of his friends, but atmospherically. He should preserve in a new company the same attitude of mind and reality of relation, which his daily associates draw him to, else he is shorn of his best beams, and will be an orphan in the merriest club. "If you could see Vich Ian Vohr with his tail on![411]--" But Vich Ian Vohr must always carry his belongings in some fashion, if not added as honor, then severed as disgrace.

10. There will always be in society certain persons who are mercuries[412] of its approbation, and whose glance will at any time determine for the curious their standing in the world. These are the chamberlains of the lesser gods. Accept their coldness as an omen of grace with the loftier deities, and allow them all their privilege. They are clear in their office, nor could they be thus formidable, without their own merits. But do not measure the importance of this class by their pretension, or imagine that a fop can be the dispenser of honor and shame. They pass also at their just rate; for how can they otherwise, in circles which exist as a sort of herald's office[413] for the sifting of character?

11. As the first thing man requires of man is reality, so that appears in all the forms of society. We pointedly, and by name, introduce the parties to each other. Know you before all heaven and earth, that this is Andrew, and this is Gregory;--they look each other in the eye; they grasp each other's hand, to identify and signalize each other. It is a great satisfaction. A gentleman never dodges; his eyes look straight forward, and he assures the other party, first of all, that he has been met. For what is it that we seek, in so many visits and hospitalities? Is it your draperies, pictures, and decorations? Or, do we not insatiably ask. Was a man in the house? I may easily go into a great household where there is much substance, excellent provision for comfort, luxury, and taste, and yet not encounter there any Amphitryon,[414] who shall subordinate these appendages. I may go into a cottage, and find a farmer who feels that he is the man I have come to see, and fronts me accordingly. It was therefore a very natural point of old feudal etiquette, that a gentleman who received a visit, though it were of his sovereign, should not leave his roof, but should wait his arrival at the door of his house. No house, though it were the Tuileries,[415] or the Escurial,[416] is good for anything without a master. And yet we are not often gratified by this hospitality. Everybody we know surrounds himself with a fine house, fine books, conservatory, gardens, equipage, and all manner of toys, as screens to interpose between himself and his guests. Does it not seem as if man was of a very sly, elusive nature, and dreaded nothing so much as a full renconter front to front with his fellow? It were unmerciful, I know, quite to abolish the use of these screens, which are of eminent convenience, whether the guest is too great, or too little. We call together many friends who keep each other in play, or by luxuries and ornaments we amuse the young people, and guard our retirement. Or if, perchance, a searching realist comes to our gate, before whose eyes we have no care to stand, then again we run to our curtain, and hide ourselves as Adam[417] at the voice of the Lord God in the garden. Cardinal Caprara,[418] the Pope's[419] legate at Paris, defended himself from the glances of Napoleon, by an immense pair of green spectacles. Napoleon remarked them, and speedily managed to rally them off: and yet Napoleon, in his turn, was not great enough, with eight hundred thousand troops at his back, to face a pair of free-born eyes, but fenced himself with etiquette, and within triple barriers of reserve: and, as all the world knows from Madame de Stael,[420] was wont, when he found himself observed, to discharge his face of all expression. But emperors and rich men are by no means the most skillful masters of good manners. No rent roll nor army-list can dignify skulking and dissimulations: and the first point of courtesy must always be truth, as really all forms of good-breeding point that way.

12. I have just been reading, in Mr. Hazlitt's[421] translation, Montaigne's[422] account of his journey into Italy, and am struck with nothing more agreeably than the self-respecting fashions of the time. His arrival in each place, the arrival of a gentleman of France, is an event of some consequence. Wherever he goes, he pays a visit to whatever prince or gentleman of note resides upon his road, as a duty to himself and to civilization. When he leaves any house in which he has lodged for a few weeks, he causes his arms to be painted and hung up as a perpetual sign to the house, as was the custom of gentlemen.

13. The complement of this graceful self-respect, and that of all the points of good breeding I most require and insist upon, is deference. I like that every chair should be a throne, and hold a king. I prefer a tendency to stateliness, to an excess of fellowship. Let the incommunicable objects of nature and the metaphysical isolation of man teach us independence. Let us not be too much acquainted. I would have a man enter his house through a hall filled with heroic and sacred sculptures, that he might not want the hint of tranquillity and self-poise.[423] We should meet each morning, as from foreign countries, and spending the day together, should depart at night, as into foreign countries. In all things I would have the island of a man inviolate. Let us sit apart as the gods, talking from peak to peak all round Olympus. No degree of affection need invade this religion. This is myrrh and rosemary to keep

the other sweet. Lovers should guard their strangeness. If they forgive too much, all slides into confusion and meanness. It is easy to push this deference to a Chinese etiquette;[424] but coolness and absence of heat and haste indicate fine qualities. A gentleman makes no noise: a lady is serene Proportionate is our disgust at those invaders who fill a studious house with blast and running, to secure some paltry convenience. Not less I dislike a low sympathy of each with his neighbors's needs. Must we have a good understanding with one another's palates? as foolish people who have lived long together, know when each wants salt or sugar. I pray my companion, if he wishes for bread, to ask me for bread, and if he wishes for sassafras or arsenic, to ask me for them, and not to hold out his plate, as if I knew already. Every natural function can be dignified by deliberation and privacy. Let us leave hurry to slaves. The compliments and ceremonies of our breeding should recall,[425] however remotely, the grandeur of our destiny.

14. The flower of courtesy does not very well bide handling, but if we dare to open another leaf, and explore what parts go to its conformation, we shall find also an intellectual quality. To the leaders of men, the brain as well as the flesh and the heart must furnish a proportion. Defect in manners is usually the defect of fine perceptions. Men are too coarsely made for the delicacy of beautiful carriage and customs. It is not quite sufficient to good breeding, a union of kindness and independence. We imperatively require a perception of, and a homage to, beauty in our companions. Other virtues are in request in the field and work yard, but a certain degree of taste is not to be spared in those we sit with. I could better eat with one who did not respect the truth or the laws, than with a sloven and unpresentable person. Moral qualities rule the world, but at short distances the senses are despotic. The same discrimination of fit and fair runs out, if with less rigor, into all parts of life. The average spirit of the energetic class is good sense, acting under certain limitations and to certain ends. It entertains every natural gift. Social in its nature, it respects everything which tends to unite men. It delights in measure.[426] The love of beauty is mainly the love of measure or proportion. The person who screams, or uses the superlative degree, or converses with heat, puts whole drawing-rooms to flight. If you wish to be loved, love measure. You must have genius, or a prodigious usefulness, if you will hide the want of measure. This perception comes in to polish and perfect the parts of the social instrument. Society will pardon much to genius and special gifts, but, being in its nature a convention, it loves what is conventional, or what belongs to coming together. That makes the good and bad of manners, namely, what helps or hinders fellowship. For, fashion is not good sense absolute, but relative; not good sense private, but good sense entertaining company. It hates corners and sharp points of character, hates quarrelsome, egotistical, solitary, and gloomy people; hates whatever can interfere with total blending of parties; whilst it values all peculiarities as in the highest degree refreshing, which can consist with good fellowship. And besides the general infusion of wit to heighten civility, the direct splendor of intellectual power is ever welcome in fine society as the costliest addition to its rule and its credit.

15. The dry light must shine in to adorn our festival, but it must be tempered and shaded, or that will also offend. Accuracy is essential to beauty, and quick perceptions to politeness, but not too quick perceptions. One may be too punctual and too precise. He must leave the omniscience of business at the door, when he comes into the palace of beauty. Society loves creole natures,[427] and sleepy, languishing manners, so that they cover sense, grace, and good-will: the air of drowsy strength, which disarms criticism; perhaps, because such a person seems to reserve himself for the best of the game, and not spend himself on surfaces; an ignoring eye, which does not see the annoyances, shifts, and inconveniences, that cloud the brow and smother the voice of the sensitive.

16. Therefore, besides personal force and so much perception as constitutes unerring taste, society demands in its patrician class, another element already intimated, which it significantly terms good-nature, expressing all degrees of generosity, from the lowest willingness and faculty to oblige, up to the heights of magnanimity and love. Insight we must have, or we shall run against one another, and miss the way to our food; but intellect is selfish and barren. The secret of success in society, is a certain heartiness and sympathy. A man who is not happy in the company, cannot find any word in his memory that will fit the occasion. All his information is a little impertinent. A man who is happy there, finds in every turn of the conversation equally lucky occasions for the introduction of that which he has to say. The favorites of society, and what it calls _whole souls_, are able men, and of more spirit than wit, who have no uncomfortable egotism, but who exactly fill the hour and the company, contented and contenting, at a marriage or a funeral, a ball or a jury, a water-party or a shooting-match. England, which is rich in gentlemen, furnished, in the beginning of the present century, a good model of that genius which the world loves, in Mr. Fox,[428] who added to his great abilities the most social disposition, and real love of men. Parliamentary history has few better passages than the debate, in which Burke[429] and Fox separated in the House of Commons; when Fox urged on his old friend the claims of old friendship with such tenderness, that the house was moved to tears. Another anecdote is so close to my matter, that I must hazard the story. A tradesman who had long dunned him for a note of three hundred guineas, found him one day counting gold, and demanded payment. "No," said Fox, "I owe this money to Sheridan[430]: it is a debt of honor: if an accident should happen to me, he has nothing to show." "Then," said the creditor, "I change my debt into a debt of honor," and tore the note in pieces. Fox thanked the

man for his confidence, and paid him, saying, "his debt was of older standing, and Sheridan must wait." Lover of liberty, friend of the Hindoo, friend of the African slave, he possessed a great personal popularity; and Napoleon said of him on the occasion of his visit to Paris, in 1805, "Mr. Fox will always hold the first place in an assembly at the Tuileries."

17. We may easily seem ridiculous in our eulogy of courtesy, whenever we insist on benevolence as its foundation. The painted phantasm Fashion rises to cast a species of derision on what we say. But I will neither be driven from some allowance to Fashion as a symbolic institution, nor from the belief that love is the basis of courtesy. "We must obtain _that_, if we can; but by all means we must affirm _this_. Life owes much of its spirit to these sharp contrasts. Fashion which affects to be honor, is often, in all men's experience, only a ballroom code. Yet, so long as it is the highest circle, in the imagination of the best heads on the planet, there is something necessary and excellent in it; for it is not to be supposed that men have agreed to be the dupes of anything preposterous; and the respect which these mysteries inspire in the most rude and sylvan characters, and the curiosity with which details of high life are read, betray the universality of the love of cultivated manners. I know that a comic disparity would be felt, if we should enter the acknowledged 'first circles,' and apply these terrific standards of justice, beauty, and benefit, to the individuals actually found there. Monarchs and heroes, sages and lovers, these gallants are not. Fashion has many classes and many rules of probation and admission; and not the best alone. There is not only the right of conquest, which genius pretends,--the individual, demonstrating his natural aristocracy best of the best;--but less claims will pass for the time; for Fashion loves lions, and points, like Circe,[431] to her horned company. This gentleman is this afternoon arrived from Denmark; and that is my Lord Ride, who came yesterday from Bagdad; here is Captain Friese, from Cape Turnagain, and Captain Symmes,[432] from the interior of the earth; and Monsieur Jovaire, who came down this morning in a balloon; Mr. Hobnail, the reformer; and Reverend Jul Bat, who has converted the whole torrid zone in his Sunday school; and Signer Torre del Greco, who extinguished Vesuvius by pouring into it the Bay of Naples; Spahr, the Persian ambassador; and Tul Wil Shan, the exiled nabob of Nepaul, whose saddle is the new moon.--But these are monsters of one day, and to-morrow will be dismissed to their holes and dens; for, in these rooms every chair is waited for. The artist, the scholar, and, in general, the clerisy,[433] wins its way up into these places, and gets represented here, somewhat on this footing of conquest. Another mode is to pass through all the degrees, spending a year and a day in St. Michael's Square,[434] being steeped in Cologne water,[435] and perfumed, and dined, and introduced, and properly grounded in all the biography, and politics, and anecdotes of the boudoirs.

18. Yet these fineries may have grace and wit. Let there be grotesque sculpture about the gates and offices of temples. Let the creed and commandments even have the saucy homage of parody. The forms of politeness universally express benevolence in superlative degrees. What if they are in the mouths of selfish men, and used as means of selfishness? What if the false gentleman almost bows the true out of the world? What if the false gentleman contrives so to address his companion, as civilly to exclude all others from his discourse, and also to make them feel excluded? Real service will not lose its nobleness. All generosity is not merely French and sentimental; nor is it to be concealed, that living blood and a passion of kindness does at last distinguish God's gentleman from Fashion's. The epitaph of Sir Jenkin Grout is not wholly unintelligible to the present age. "Here lies Sir Jenkin Grout, who loved his friend, and persuaded his enemy: what his mouth ate, his hand paid for: what his servants robbed, he restored: if a woman gave him pleasure, he supported her in pain: he never forgot his children: and whoso touched his finger, drew after it his whole body." Even the line of heroes is not utterly extinct. There is still ever some admirable person in plain clothes, standing on the wharf, who jumps in to rescue a drowning man; there is still some absurd inventor of charities; some guide and comforter of runaway slaves; some friend of Poland;[436] some Philhellene;[437] some fanatic who plants shade-trees for the second and third generation, and orchards when he is grown old; some well-concealed piety; some just man happy in an ill-fame; some youth ashamed of the favors of fortune, and impatiently casting them on other shoulders. And these are the centers of society, on which it returns for fresh impulses. These are the creators of Fashion, which is an attempt to organize beauty of behavior. The beautiful and the generous are in the theory, the doctors and apostles of this church: Scipio, and the Cid, and Sir Philip Sidney, and Washington, and every pure and valiant heart, who worshiped Beauty by word and by deed. The persons who constitute the natural aristocracy, are not found in the actual aristocracy, or only on its edge; as the chemical energy of the spectrum is found to be greatest just outside of the spectrum. Yet that is the infirmity of the seneschals, who do not know their sovereign, when he appears. The theory of society supposes the existence and sovereignty of these. It divines afar off their coming. It says with the elder gods,--

"As Heaven and Earth are fairer far[438] Than Chaos and blank Darkness, though once chiefs; And as we show beyond that Heaven and Earth, In form and shape compact and beautiful; So, on our heels a fresh perfection treads; A power, more strong in beauty, born of us, And fated to excel us, as we pass In glory that old Darkness: ... for, 'tis the eternal law, That first in beauty shall be first in might."

19. Therefore, within the ethnical circle of good society, there is a narrower and higher circle, concentration of its light, and flower of courtesy, to which there is always a tacit appeal of pride and reference, as to its inner and imperial court, the parliament of love and chivalry. And this is constituted of those persons in whom heroic dispositions are native, with the love of beauty, the delight in society, and the power to embellish the passing day. If the individuals who compose the purest circles of aristocracy in Europe, the guarded blood of centuries, should pass in review, in such manner as that we could, leisurely and critically, inspect their behavior, we might find no gentleman, and no lady; for although excellent specimens of courtesy and high-breeding would gratify us in the assemblage, in the particulars, we should detect offense. Because, elegance comes of no breeding, but of birth. There must be romance of character, or the most fastidious exclusion of impertinencies will not avail. It must be genius which takes that direction: it must be not courteous, but courtesy. High behavior is as rare in fiction as it is in fact. Scott is praised for the fidelity with which he painted the demeanor and conversation of the superior classes. Certainly, kings and queens, nobles and great ladies, had some right to complain of the absurdity that had been put in their mouths, before the days of Waverley;[439] but neither does Scott's dialogue bear criticism. His lords brave each other in smart epigrammatic speeches, but the dialogue is in costume, and does not please on the second reading; it is not warm with life. In Shakespeare alone, the speakers do not strut and bridle, the dialogue is easily great, and he adds to so many titles that of being the best-bred man in England, and in Christendom. Once or twice in a lifetime we are permitted to enjoy the charm of noble manners, in the presence of a man or woman who have no bar in their nature, but whose character emanates freely in their word and gesture. A beautiful form is better than a beautiful face: a beautiful behavior is better than a beautiful form: it gives a higher pleasure than statues or pictures; it is the finest of the fine arts. A man is but a little thing in the midst of the objects of nature, yet, by the moral quality radiating from his countenance, he may abolish all considerations of magnitude, and in his manners equal the majesty of the world. I have seen an individual whose manners though wholly within the conventions of elegant society, were never learned there, but were original and commanding, and held out protection and prosperity; one who did not need the aid of a court-suit, but carried the holiday in his eye; who exhilarated the fancy by flinging wide the doors of new modes of existence; who shook off the captivity of etiquette, with happy, spirited bearing, good-natured and free as Robin Hood;[440] yet with the port of an emperor,--if need be, calm, serious, and fit to stand the gaze of millions.

20. The open air and the fields, the street and public chambers, are the places where Man executes his will; let him yield or divide the scepter at the door of the house. Woman, with her instinct of behavior, instantly detects in man a love of trifles, any coldness or imbecility, or, in short, any want of that large, flowing, and magnanimous deportment, which is indispensable as an exterior in the hall. Our American institutions have been friendly to her, and at this moment I esteem it a chief felicity of this country, that it excels in women. A certain awkward consciousness of inferiority in the men, may give rise to the new chivalry in behalf of Woman's Rights. Certainly, let her be as much better placed in the laws and in social forms, as the most zealous reformer can ask, but I confide so entirely in her inspiring and musical nature, that I believe only herself can show us how she shall be served. The wonderful generosity of her sentiments raises her at times into heroical and godlike regions, and verifies the pictures of Minerva,[441] Juno,[442] or Polymnia;[443] and, by the firmness with which she treads her upward path, she convinces the coarsest calculators that another road exists than that which their feet know. But besides those who make good in our imagination the place of muses and of Delphic Sibyls,[444] are there not women who fill our vase with wine and roses to the brim, so that the wine runs over and fills the house with perfume; who inspire us with courtesy; who unloose our tongues, and we speak; who anoint our eyes, and we see? We say things we never thought to have said; for once, our walls of habitual reserve vanished, and left us at large; we were children playing with children in a wide field of flowers. Steep us, we cried, in these influences, for days, for weeks, and we shall be sunny poets, and will write out in many-colored words the romance that you are. Was it Hafiz[445] or Firdousi[446] that said of his Persian Lilla, "She was an elemental force, and astonished me by her amount of life, when I saw her day after day radiating, every instant, redundant joy and grace on all around her.[447] She was a solvent powerful to reconcile all heterogeneous persons into one society; like air or water, an element of such a great range of affinities, that it combines readily with a thousand substances. Where she is present, all others will be more than they are wont. She was a unit and whole, so that whatsoever she did, became her. She had too much sympathy and desire to please, than that you could say, her manners were marked with dignity, yet no princess could surpass her clear and erect demeanor on each occasion. She did not study the Persian grammar, nor the books of the seven poets, but all the poems of the seven seemed to be written upon her. For, though the bias of her nature was not to thought, but to sympathy, yet was she so perfect in her own nature, as to meet intellectual persons by the fullness of her heart, warming them by her sentiments; believing, as she did, that by dealing nobly with all, all would show themselves noble."

21. I know that this Byzantine[448] pile of chivalry of Fashion, which seems so fair and picturesque to those who look at the contemporary facts for science or for entertainment, is not equally pleasant to all spectators. The constitution of our society makes

it a giant's castle to the ambitious youth who have not found their names enrolled in its Golden Book,[449] and whom it has excluded from its coveted honors and privileges. They have yet to learn that its seeming grandeur is shadowy and relative: it is great by their allowance: its proudest gates will fly open at the approach of their courage and virtue. For the present distress, however, of those who are predisposed to suffer from the tyrannies of this caprice, there are easy remedies. To remove your residence a couple of miles, or at most four, will commonly relieve the most extreme susceptibility. For, the advantages which fashion values are plants which thrive in very confined localities, in a few streets, namely. Out of this precinct, they go for nothing; are of no use in the farm, in the forest, in the market, in war, in the nuptial society, in the literary or scientific circle, at sea, in friendship, in the heaven of thought or virtue.

22. But we have lingered long enough in these painted courts. The worth of the thing signified must vindicate our taste for the emblem. Everything that is called fashion and courtesy humbles itself before the cause and fountain of honor, creator of titles and dignities, namely, the heart of love. This is the royal blood, this the fire, which, in all countries and contingencies, will work after its kind and conquer ind expand all that approaches it. This gives new meanings to every fact. This impoverishes the rich, suffering no grandeur but its own. What _is_ rich? Are you rich enough to help anybody? to succor the unfashionable and the eccentric? rich enough to make the Canadian in his wagon, the itinerant with his consul's paper which commends him "To the charitable," the swarthy Italian with his few broken words of English, the lame pauper hunted by overseers from town to town, even the poor insane or besotted wreck of man or woman, feel the noble exception of your presence and your house, from the general bleakness and stoniness; to make such feel that they were greeted with a voice which made them both remember and hope? What is vulgar, but to refuse the claim on acute and conclusive reasons? What is gentle, but to allow it, and give their heart and yours lone holiday from the national caution? Without the rich heart, wealth is an ugly beggar. The king of Schiraz[450] could not afford to be so bountiful as the poor Osman[451] who dwelt at his gate. Osman had a humanity so broad and deep, that although his speech was so bold and free with the Koran[452] as to disgust all the dervishes, yet was there never a poor outcast, eccentric, or insane man, some fool who had cut off his beard, or who had been mutilated under a vow, or had a pet madness in his brain, but fled at once to him,--that great heart lay there so sunny and hospitable in the center of the country,--that it seemed as if the instinct of all sufferers drew them to his side. And the madness which he harbored, he did not share. Is not this to be rich? this only to be rightly rich?

23. But I shall hear without pain, that I play the courtier very ill, and talk of that which I do not well understand. It is easy to see, that what is called by distinction society and fashion, has good laws as well as bad, has much that is necessary, and much that is absurd. Too good for banning, and too bad for blessing, it reminds us of a tradition of the pagan mythology, in any attempt to settle its character. "I overheard Jove,[453] one day," said Silenus,[454] "talking of destroying the earth; he said, it had failed; they were all rogues and vixens, who went from bad to worse, as fast as the days succeeded each other. Minerva said, she hoped not; they were only ridiculous little creatures, with this odd circumstance, that they had a blur, or indeterminate aspect, seen far or seen near; if you called them bad, they would appear so; if you called them good, they would appear so; and there was no one person or action among them, which would not puzzle her owl,[455] much more all Olympus, to know whether it was fundamentally bad or good."

GIFTS[456]

Gifts of one who loved me-- 'Twas high time they came; When he ceased to love me, Time they stopped for shame.

1. It is said that the world is in a state of bankruptcy, that the world owes the world more than the world can pay, and ought to go into chancery,[457] and be sold. I do not think this general insolvency, which involves in some sort all the population, to be the reason of the difficulty experienced at Christmas and New Year, and other times, in bestowing gifts; since it is always so pleasant to be generous, though very vexatious to pay debts. But the impediment lies in the choosing. If, at any time, it comes into my head that a present is due from me to somebody, I am puzzled what to give, until the opportunity is gone. Flowers and fruits are always fit presents; flowers, because they are a proud assertion that a ray of beauty outvalues all the utilities of the world. These gay natures contrast with the somewhat stern countenance of ordinary nature: they are like music heard out of a work-house. Nature does not cocker us:[458] we are children, not pets: she is not fond: everything is dealt to us without fear or favor, after severe universal laws. Yet these delicate flowers look like the frolic and interference of love and beauty. Men use to tell us that we love flattery, even though we are not deceived by it, because it shows that we are of importance enough to be courted. Something like that pleasure, the flowers give us: what am I to whom these sweet hints are addressed? Fruits are acceptable gifts,[459] because they are the flower of commodities, and admit of fantastic values being attached to them. If a man should send to me to come a hundred miles to visit him, and should set before me a basket of fine summer-fruit, I should think there was some proportion between the labor

and the reward.

2. For common gifts, necessity makes pertinences and beauty every day, and one is glad when an imperative leaves him no option, since if the man at the door have no shoes, you have not to consider whether you could procure him a paint-box. And as it is always pleasing to see a man eat bread or drink water, in the house or out of doors, so it is always a great satisfaction to supply these first wants. Necessity does everything well. In our condition of universal dependence, it seems heroic to let the petitioner[460] be the judge of his necessity, and to give all that is asked, though at great inconvenience. If it be a fantastic desire, it is better to leave to others the office of punishing him. I can think of many parts I should prefer playing to that of the Furies.[461] Next to things of necessity, the rule for a gift, which one of my friends prescribed, is that we might convey to some person that which properly belonged to his character, and was easily associated with him in thought. But our tokens of compliment and love are for the most part barbarous. Rings and other jewels are not gifts, but apologies for gifts. The only gift is a portion of thyself. Thou must bleed for me. Therefore the poet brings his poem; the shepherd, his lamb; the farmer, corn; the miner, a gem; the sailor, coral and shells; the painter, his picture; the girl, a handkerchief of her own sewing. This is right and pleasing, for it restores society in so far to its primary basis, when a man's biography[462] is conveyed in his gift, and every man's wealth is an index of his merit. But it is a cold lifeless business when you go to the shops to buy me something which does not represent your life and talent, but a goldsmith's. That is fit for kings, and rich men who represent kings, and a false state of property, to make presents of gold and silver stuffs, as a kind of symbolical sin-offering,[463] or payment of blackmail.[464]

3. The law of benefits is a difficult channel, which requires careful sailing, or rude boats. It is not the office of a man to receive gifts. How dare you give them? We wish to be self-sustained. We do not quite forgive a forgiver. The hand that feeds us is in some danger of being bitten. We can receive anything from love, for that is a way of receiving it from ourselves; but not from any one who assumes to bestow. We sometimes hate the meat which we eat, because there seems something of degrading dependence in living by it.

"Brother, if Jove[465] to thee a present make, Take heed that from his hands thou nothing take."

We ask the whole. Nothing less will content us. We arraign society, if it do not give us besides earth, and fire, and water, opportunity, love, reverence, and objects of veneration.

4. He is a good man, who can receive a gift well. We are either glad or sorry at a gift, and both emotions are unbecoming. Some violence, I think, is done, some degradation borne, when I rejoice or grieve at a gift. I am sorry when my independence is invaded, or when a gift comes from such as do not know my spirit, and so the act is not supported; and if the gift pleases me overmuch, then I should be ashamed that the donor should read my heart, and see that I love his commodity, and not him. The gift, to be true, must be the flowing of the giver unto me, correspondent to my flowing unto him. When the waters are at level, then my goods pass to him, and his to me. All his are mine, all mine his. I say to him, How can you give me this pot of oil, or this flagon of wine, when all your oil and wine is mine, which belief of mine this gift seems to deny? Hence the fitness of beautiful, not useful things for gifts. This giving is flat usurpation, and therefore when the beneficiary is ungrateful, as all beneficiaries hate all Timons,[466] not at all considering the value of the gift, but looking back to the greater store it was taken from, I rather sympathize with the beneficiary, than with the anger of my lord, Timon. For, the expectation of gratitude is mean, and is continually punished by the total insensibility of the obliged person. It is a great happiness to get off without injury and heart-burning, from one who has had the ill luck to be served by you. It is a very onerous business,[467] this of being served, and the debtor naturally wishes to give you a slap. A golden text for these gentlemen is that which I admire in the Buddhist,[468] who never thanks, and who says, "Do not flatter your benefactors."

5. The reason of these discords I conceive to be, that there is no commensurability between a man and any gift. You cannot give anything to a magnanimous person. After you have served him, he at once puts you in debt by his magnanimity. The service a man renders his friend is trivial and selfish, compared with the service he knows his friend stood in readiness to yield him, alike before he had begun to serve his friend, and now also. Compared with that good-will I bear my friend, the benefit it is in my power to render him seems small. Besides, our action on each other, good as well as evil, is so incidental and at random, that we can seldom hear the acknowledgments of any person who would thank us for a benefit, without some shame and humiliation. We can rarely strike a direct stroke, but must be content with an oblique one; we seldom have the satisfaction of yielding a direct benefit, which is directly received. But rectitude scatters favors on every side without knowing it, and receives with wonder the thanks of all people.

6. I fear to breathe any treason against the majesty of love, which is the genius and god of gifts, and to whom we must not affect to prescribe. Let him give kingdoms or flower-leaves indifferently. There are persons from whom we always expect fairy tokens; let us not cease to expect them. This is prerogative, and not to be limited by our municipal rules. For the rest, I like to see that we cannot be bought and sold. The best of hospitality and of generosity is also not in the will, but in fate. I find that I am not much to you; you do not need me; you do not feel me; then am I thrust out of doors, though you proffer me house and lands. No services are of any value, but only likeness. When I have attempted to join myself to others by services, it proved an intellectual trick--no more. They eat your service like apples, and leave you out. But love them, and they feel for you, and delight in you all the time.

NATURE[469]

The rounded world is fair to see, Nine times folded in mystery: Though baffled seers cannot impart The secret of its laboring heart, Throb thine with Nature's throbbing breast, And all is clear from east to west. Spirit that lurks each form within Beckons to spirit of its kin; Self-kindled every atom glows, And hints the future which it owes.

1. There are days[470] which occur in this climate, at almost any season of the year, wherein the world reaches its perfection, when the air, the heavenly bodies, and the earth, make a harmony, as if nature would indulge her offspring; when, in these bleak upper sides of the planet, nothing is to desire that we have heard of the happiest latitudes, and we bask in the shining hours of Florida and Cuba; when everything that has life gives sign of satisfaction, and the cattle that lie on the ground seem to have great and tranquil thoughts. These halcyons[471] may be looked for with a little more assurance in that pure October weather, which we distinguish by the name of Indian Summer.[472] The day, immeasurably long, sleeps over the broad hills and warm wide fields. To have lived through all its sunny hours, seems longevity enough. The solitary places do not seem quite lonely. At the gates of the forest, the surprised man of the world is forced to leave his city estimates of great and small, wise and foolish. The knapsack of custom falls off his back with the first step he makes into these precincts. Here is sanctity which shames our religions, and reality which discredits our heroes. Here we find nature to be the circumstance which dwarfs every other circumstance, and judges like a god all men that come to her. We have crept out of our close and crowded houses into the night and morning, and we see what majestic beauties daily wrap us in their bosom. How willingly we would escape the barriers which render them comparatively impotent, escape the sophistication and second thought, and suffer nature to entrance us. The tempered light of the woods is like a perpetual morning, and is stimulating and heroic. The anciently reported spells of these places creep on us. The stems of pines, hemlocks, and oaks, almost gleam like iron on the excited eye. The incommunicable trees begin to persuade us to live with them, and quit our life of solemn trifles. Here no history, or church, or state, is interpolated on the divine sky and the immortal year. How easily we might walk onward into opening landscape, absorbed by new pictures, and by thoughts fast succeeding each other, until by degrees the recollection of home was crowded out of the mind, all memory obliterated by the tyranny of the present, and we were led in triumph by nature.

2. These enchantments are medicinal, they sober and heal us. These are plain pleasures, kindly and native to us. We come to our own, and make friends with matter, which the ambitious chatter of the schools would persuade us to despise. We never can part with it; the mind loves its old home: as water to our thirst, so is the rock, the ground, to our eyes, and hands, and feet. It is firm water: it is cold flame: what health, what affinity! Ever an old friend, ever like a dear friend and brother, when we chat affectedly with strangers, comes in this honest face, and takes a grave liberty with us, and shames us out of our nonsense. Cities give not the human senses room enough. We go out daily and nightly to feed the eyes on the horizon, and require so much scope, just as we need water for our bath. There are all degrees of natural influence, from these quarantine powers of nature, up to her dearest and gravest ministrations to the imagination and the soul. There is the bucket of cold water from the spring, the wood-fire to which the chilled traveler rushes for safety,--and there is the sublime moral of autumn and of noon. We nestle in nature, and draw our living as parasites from her roots and grains, and we receive glances from the heavenly bodies, which call us to solitude, and foretell the remotest future. The blue zenith is the point in which romance and reality meet. I think, if we should be rapt away into all that we dream of heaven, and should converse with Gabriel[473] and Uriel,[474] the upper sky would be all that would remain of our furniture.

3. It seems as if the day was not wholly profane, in which we have given heed to some natural object. The fall of snowflakes in a still air, preserving to each crystal its perfect form; the blowing of sleet over a wide sheet of water, and over plains; the waving rye-fields; the mimic waving of acres of houstonia, whose innumerable florets whiten and ripple before the eye; the reflections of trees and flowers in glassy lakes; the musical steaming odorous south wind, which converts all trees to wind-harps;[475] the crackling and spurting of hemlock in the flames; or of pine-logs, which yield glory to the walls and faces in the sitting-room,--these

are the music and pictures of the most ancient religion. My house stands in low land, with limited outlook, and on the skirt of the village.[476] But I go with my friend[477] to the shore of our little river,[478] and with one stroke of the paddle, I leave the village politics and personalities, yes, and the world of villages and personalities behind, and pass into a delicate realm of sunset and moonlight, too bright almost for spotted man to enter without novitiate and probation.[479] We penetrate bodily this incredible beauty: we dip our hands in this painted element: our eyes are bathed in these lights and forms. A holiday, a villeggiatura,[480] a royal revel, the proudest, most heart-rejoicing festival that valor and beauty, power and taste, ever decked and enjoyed, establishes itself on the instant. These sunset clouds, these delicately emerging stars, with their private and ineffable glances, signify it and proffer it. I am taught the poorness of our invention, the ugliness of towns and palaces. Art and luxury have early learned that they must work as enhancement and sequel to this original beauty. I am overinstructed for my return. Henceforth I shall be hard to please. I cannot go back to toys. I am grown expensive and sophisticated. I can no longer live without elegance: but a countryman shall be my master of revels. He who knows the most, he who knows what sweets and virtues are in the ground, the waters, the plants, the heavens, and how to come at these enchantments, is the rich and royal man. Only as far as masters of the world have called in nature to their aid, can they reach the height of magnificence. This is the meaning of their hanging-gardens,[481] villas, garden-houses, islands, parks, and preserves, to back their faulty personality with these strong accessories. I do not wonder that the landed interest should be invincible in the state with these dangerous auxiliaries. These bribe and invite; not kings, not palaces, not men, not women, but these tender and poetic stars, eloquent of secret promises. We heard what the rich man said, we knew of his villa, his grove, his wine, and his company, but the provocation and point of the invitation came out of these beguiling stars. In their soft glances, I see what men strove to realize in some Versailles,[482] or Paphos,[483] or Ctesiphon.[484] Indeed, it is the magical lights of the horizon, and the blue sky for the background, which save all our works of art, which were otherwise baubles. When the rich tax the poor with servility and obsequiousness, they should consider the effect of man reputed to be the possessors of nature, on imaginative minds. Ah! if the rich were rich as the poor fancy riches! A boy hears a military band play on the field at night, and he has kings and queens, and famous chivalry palpably before him. He hears the echoes of a horn in a hill country, in the Notch Mountains,[485] for example, which converts the mountains into an Æolian harp,[486] and this supernatural _tiralira_ restores to him the Dorian[487] mythology, Apollo,[488] Diana,[489] and all divine hunters and huntresses. Can a musical note be so lofty, so haughtily beautiful! To the poor young poet, thus fabulous is his picture of society; he is loyal; he respects the rich; they are rich for the sake of his imagination; how poor his fancy would be, if they were not rich! That they have some high-fenced grove, which they call a park; that they live in larger and better-garnished saloons than he has visited, and go in coaches, keeping only the society of the elegant, to watering-places, and to distant cities, are the groundwork from which he has delineated estates of romance, compared with which their actual possessions are shanties and paddocks. The muse herself betrays her son, and enhances the gift of wealthy and well-born beauty, by a radiation out of the air, and clouds, and forests that skirt the road,--a certain haughty favor, as if from patrician genii to patricians, a kind of aristocracy in nature, a prince of the power of the air.

4. The moral sensibility which makes Edens[490] and Tempes[491] so easily, may not be always found, but the material landscape is never far off. We can find these enchantments without visiting the Como Lake,[492] or the Madeira Islands.[493] We exaggerate the praises of local scenery. In every landscape, the point of astonishment is the meeting of the sky and the earth, and that is seen from the first hillock as well as from the top of the Alleghanies. The stars at night stoop down over the brownest, homeliest common,[494] with all the spiritual magnificence which they shed on the Campagna,[495] or on the marble deserts of Egypt. The uprolled clouds and the colors of morning and evening, will transfigure maples and alders. The difference between landscape and landscape is small, but there is great difference in the beholders. There is nothing so wonderful in any particular landscape, as the necessity of being beautiful under which every landscape lies. Nature cannot be surprised in undress. Beauty breaks in everywhere.

5. But it is very easy to outrun the sympathy of readers on this topic, which school-men called _natura naturata_, or nature passive. One can hardly speak directly of it without excess. It is as easy to broach in mixed companies what is called "the subject of religion." A susceptible person does not like to indulge his tastes in this kind, without the apology of some trivial necessity: he goes to see a wood-lot, or to look at the crops, or to fetch a plant or a mineral from a remote locality, or he carries a fowling-piece, or a fishing-rod. I suppose this shame must have a good reason. A dilettantism[496] in nature is barren and unworthy. The fop of fields is no better than his brother of Broadway. Men are naturally hunters and inquisitive of woodcraft and I suppose that such a gazetteer as wood-cutters and Indians should furnish facts for would take place in the most sumptuous drawing-rooms of all the "Wreaths" and "Flora's chaplets"[497] of the book-shops; yet ordinarily, whether we are too clumsy for so subtle a topic, or from whatever cause, as soon as men begin to write on nature, they fall into euphuism. Frivolity is a most unfit tribute to Pan,[498] who ought to be represented in the mythology as the most continent of gods. I would not be frivolous before the admirable reserve and

prudence of time, yet I cannot renounce the right of returning often to this old topic. The multitude of false churches[499] accredits the true religion. Literature, poetry, science, are the homage of man to this unfathomed secret, concerning which no sane man can affect an indifference or incuriosity. Nature is loved by what is best in us. It is loved as the city of God, although, or rather because there is no citizen. The sunset is unlike anything that is underneath it: it wants men. And the beauty of nature must always seem unreal and mocking, until the landscape has human figures, that are as good as itself. If there were good men, there would never be this rapture in nature. If the king is in the palace nobody looks at the walls. It is when he is gone, and the house is filled with grooms and gazers, that we turn from the people, to find relief in the majestic men that are suggested by the pictures and architecture. The critics who complain of the sickly separation of the beauty of nature from the thing to be done, must consider that our hunting of the picturesque is inseparable from our protest against false society. Man is fallen; nature is erect, and serves as a differential thermometer, detecting the presence or absence of the divine sentiment in man. By fault of our dulness and selfishness, we are looking up to nature, but when we are convalescent, nature will look up to us. We see the foaming brook with compunction; if our own life flowed with the right energy, we should shame the brook. The stream of zeal sparkles with real fire, and not with reflex rays of sun and moon. Nature may be as selfishly studied as trade. Astronomy to the selfish becomes astrology; psychology, mesmerism (with intent to show where our spoons are gone); and anatomy and physiology become phrenology and palmistry.

6. But taking timely warning, and leaving many things unsaid on this topic, but not longer omit our homage to the Efficient Nature, _natura naturans_, the quick cause, before which all forms flee as the driven snows, itself secret, its works driven before it in flocks and multitudes, (as the ancient represented nature by Proteus,[500] a shepherd), and in undescribable variety. It publishes itself in creatures, reaching from particles and spicula, through transformation on transformation to the highest symmetries, arriving at consummate results without a shock or a leap. A little heat, that is, a little motion, is all that differences the bald, dazzling white, and deadly cold poles of the earth from the prolific tropical climates. All changes pass without violence, by reason of the two cardinal conditions of boundless space and boundless time. Geology has initiated us into the secularity of nature, and taught us to disuse our dame-school measures, and exchange our Mosaic[501] and Ptolemaic schemes[502] for her large style. We know nothing rightly, for want of perspective. Now we learn what patient periods must round themselves before the rock is formed, then before the rock is broken, and the first lichen race has disintegrated the thinnest external plate into soil, and opened the door for the remote Flora,[503] Fauna,[504] Ceres,[505] and Pomona,[506] to come in. How far off yet is the trilobite! how far the quadruped! how inconceivably remote is man! All duly arrive,[507] and then race after race of men. It is a long way from granite to the oyster; farther yet to Plato,[508] and the preaching of the immortality of the soul. Yet all must come, as surely as the first atom has two sides.

7. Motion or change, and identity or rest, are the first and second secrets of nature: Motion and Rest. The whole code of her laws may be written on the thumb-nail, or the signet of a ring. The whirling bubble on the surface of a brook, admits us to the secret of the mechanics of the sky. Every shell on the beach is a key to it. A little water made to rotate in a cup explains the formation of the simpler shells; the addition of matter from year to year, arrives at last at the most complex forms; and yet so poor is nature with all her craft, that, from the beginning to the end of the universe, she has but one stuff,--but one stuff with its two ends, to serve up all her dream-like variety. Compound it how she will, star, sand, fire, water, tree, man, it is still one stuff, and betrays the same properties.

8. Nature is always consistent, though she feigns to contravene her own laws. She keeps her laws, and seems to transcend them. She arms and equips an animal to find its place and living in the earth, and, at the same time, she arms and equips another animal to destroy it. Space exists to divide creatures; but by clothing the sides of a bird with a few feathers, she gives him a petty omnipresence. The direction is forever onward, but the artist still goes back for materials, and begins again with the first elements on the most advanced stage: otherwise, all goes to ruin. If we look at her work, we seem to catch a glance of a system in transition. Plants are the young of the world, vessels of health and vigor; but they grope ever upward toward consciousness; the trees are imperfect men, and seem to bemoan their imprisonment, rooted in the ground. The animal is the novice and probationer of a more advanced order. The men, though young, having tasted the first drop from the cup of thought, are already dissipated: the maples and ferns are still uncorrupt; yet no doubt, when they come to consciousness, they too will curse and swear. Flowers so strictly belong to youth, that we adult men soon come to feel, that their beautiful generations concern not us: we have had our day; now let the children have theirs. The flowers jilt us, and we are old bachelors with our ridiculous tenderness.

9. Things are so strictly related, that according to the skill of the eye, from any one object the parts and properties of any other may be predicted. If we had eyes to see it, a bit of stone from the city wall would certify us of the necessity that man must exist, as readily as the city. That identity makes us all one, and reduces to nothing great intervals on our customary scale. We talk of

deviations from natural life, as if artificial life were not also natural. The smoothest curled courtier in the boudoirs of a palace has an animal nature, rude and aboriginal as a white bear, omnipotent to its own ends, and is directly related, there amid essences and billets-doux, to Himalaya mountain-chains[509] and the axis of the globe. If we consider how much we are nature's, we need not be superstitious about towns, as if that terrific or benefic force did not find us there also, and fashion cities. Nature, who made the mason, made the house. We may easily hear too much of rural influences. The cool, disengaged air of natural objects, makes them enviable to us, chafed and irritable creatures with red faces, and we think we shall be as grand as they, if we camp out and eat roots, but let us be men instead of wood-chucks, and the oak and the elm shall gladly serve us, though we sit in chairs of ivory on carpets of silk.

10. This guiding identity runs through all the surprises and contrasts of the piece, and characterizes every law. Man carries the world in his head, the whole astronomy and chemistry suspended in a thought. Because the history of nature is charactered in his brain, therefore is he the prophet and discoverer of her secrets. Every known fact in natural science was divined by the presentiment of somebody, before it was actually verified. A man does not tie his shoe without recognizing laws which bind the farthest regions of nature: moon, plant, gas, crystal, are concrete geometry and numbers. Common sense knows its own, and recognizes the fact at first sight in chemical experiment. The common sense of Franklin,[510] Dalton,[511] Davy[512] and Black,[513] is the same common sense which made the arrangements which now it discovers.

11. If the identity expresses organized rest, the counter action runs also into organization. The astronomers said,[514] "Give us matter, and a little motion, and we will construct the universe. It is not enough that we should have matter, we must also have a single impulse, one shove to launch the mass, and generate the harmony of the centrifugal and centripetal[515] forces. Once heave the ball from the hand, and we can show how all this mighty order grew." "A very unreasonable postulate," said the metaphysicians, "and a plain begging of the question. Could you not prevail to know the genesis of projection, as well as the continuation of it?" Nature, meanwhile, had not waited for the discussion, but, right or wrong, bestowed the impulse, and the balls rolled. It was no great affair, a mere push, but the astronomers were right in making much of it, for there is no end of the consequences of the act. That famous aboriginal push propagates itself through all the balls of the system, and through every atom of every ball, through all the races of creatures, and through the history and performances of every individual. Exaggeration is in the course of things. Nature sends no creature, no man into the world, without adding a small excess of his proper quality. Given the planet, it is still necessary to add the impulse; so, to every creature nature added a little violence of direction in its proper path, a shove to put it on its way; in every instance, a slight generosity, a drop too much. Without electricity the air would rot, and without this violence of direction which men and women have, without a spice of bigot and fanatic, no excitement, no efficiency. We aim above the mark, to hit the mark. Every act hath some falsehood of exaggeration in it. And when now and then comes along some sad, sharp-eyed man, who sees how paltry a game is played, and refuses to play, but blabs the secret;--how then? is the bird flown? O no, the wary Nature sends a new troop of fairer forms, of lordlier youths, with a little more excess of direction to hold them fast to their several aims; makes them a little wrongheaded in that direction in which they are rightest, and on goes the game again with new whirl, for a generation or two more. The child with his sweet pranks, the fool of his senses, commanded by every sight and sound, without any power to compare and rank his sensations, abandoned to a whistle or a painted chip, to a lead dragoon, or a ginger-bread dog, individualizing everything, generalizing nothing, delighted with every new thing, lies down at night overpowered by the fatigue, which this day of continual petty madness has incurred. But Nature has answered her purpose with the curly, dimpled lunatic. She has tasked every faculty, and has secured the symmetrical growth of the bodily frame, by all these attitudes and exertions,--an end of the first importance, which could not be trusted to any care less perfect than her own. This glitter, this opaline luster plays round the top of every toy to his eye, to insure his fidelity, and he is deceived to his good. We are made alive and kept alive by the same arts. Let the Stoics[516] say what they please, we do not eat for the good of living, but because the meat is savory and the appetite is keen. The vegetable life does not content itself with casting from the flower or the tree a single seed, but it fills the air and earth with a prodigality of seeds, that if thousands perish, thousands may plant themselves, that hundreds may come up, that tens may live to maturity, that, at least, one may replace the parent. All things betray the same calculated profusion. The excess of fear with which the animal frame is hedged round, shrinking from cold, starting at sight of a snake, or a sudden noise, protects us, through a multitude of groundless alarms, from some one real danger at last. The lover seeks in marriage his private felicity and perfection, with no prospective end; and nature hides in his happiness her own end, namely, progeny, or the perpetuity of the race.

12. But the craft with which the world is made runs also into the mind and character of men. No man is quite sane; each has a vein of folly in his composition, a slight determination of blood to the head, to make sure of holding him hard to some one point which nature had taken to heart. Great causes are never tried on their merits; but the cause is reduced to particulars to suit the size of the partisans, and the contention is ever hottest on minor matters. Not less remarkable is the overfaith of each man in the importance

of what he has to do or say. The poet, the prophet, has a higher value for what he utters than any hearer, and therefore it gets spoken. The strong, self-complacent Luther[517] declares with an emphasis, not to be mistaken, that "God himself cannot do without wise men." Jacob Behmen[518] and George Fox[519] betray their egotism in the pertinacity of their controversial tracts, and James Naylor[520] once suffered himself to be worshiped as the Christ. Each prophet comes presently to identify himself with his thought, and to esteem his hat and shoes sacred. However this may discredit such persons with the judicious, it helps them with the people, as it gives heat, pungency, and publicity to their words. A similar experience is not infrequent in private life. Each young and ardent person writes a diary, in which, when the hours of prayer and penitence arrive, he inscribes his soul. The pages thus written are, to him, burning and fragrant: he reads them on his knees by midnight and by the morning star; he wets them with his tears: they are sacred; too good for the world, and hardly yet to be shown to the dearest friend. This is the man-child that is born to the soul, and her life still circulates in the babe. The umbilical cord has not yet been cut. After some time has elapsed, he begins to wish to admit his friend to this hallowed experience, and with hesitation, yet with firmness, exposes the pages to his eye. Will they not burn his eyes? The friend coldly turns them over, and passes from the writing to conversation, with easy transition, which strikes the other party with astonishment and vexation. He cannot suspect the writing itself. Days and nights of fervid life, of communion with angels of darkness and of light, have engraved their shadowy characters on that tear-stained book. He suspects the intelligence or the heart of his friend. Is there then no friend? He cannot yet credit that one may have impressive experience, and yet may not know how to put his private fact into literature; and perhaps the discovery that wisdom has other tongues and ministers than we, that though we should hold our peace, the truth would not the less be spoken, might check injuriously the flames of our zeal. A man can only speak, so long as he does not feel his speech to be partial and inadequate. It is partial, but he does not see it to be so, whilst he utters it. As soon as he is released from the instinctive and particular, and sees its partiality, he shuts his mouth in disgust. For, no man can write anything, who does not think that what he writes is for the time the history of the world; or do anything well, who does not esteem his work to be of importance. My work may be of none, but I must not think it is of none, or I shall not do it with impunity.

13. In like manner, there is throughout nature something mocking, something that leads us on and on, but arrives nowhere, keeps no faith with us. All promise outruns the performance. We live in a system of approximations. Every end is prospective of some other end, which is also temporary; a round and final success nowhere. We are encamped in nature, not domesticated. Hunger and thirst lead us on to eat and to drink; but bread and wine, mix and cook them how you will, leave us hungry and thirsty, after the stomach is full. It is the same with all our arts and performances. Our music, our poetry, our language itself are not satisfactions, but suggestions. The hunger for wealth, which reduces the planet to a garden, fools the eager pursuer. What is the end sought? Plainly to secure the ends of good sense and beauty, from the intrusion of deformity or vulgarity of any kind. But what an operose[521] method! What a train of means to secure a little conversation! This palace of brick and stone, these servants, this kitchen, these stables, horses and equipage, this bank-stock, and file of mortgages; trade to all the world, country-house and cottage by the water-side, all for a little conversation, high, clear, and spiritual! Could it not be had as well by beggars on the highway? No, all these things came from successive efforts of these beggars to remove friction from the wheels of life, and give opportunity. Conversation, character, were the avowed ends; wealth was good as it appeased the animal cravings, cured the smoky chimney, silenced the creaking door, brought friends together in a warm and quiet room, and kept the children and the dinner-table in a different apartment. Thought, virtue, beauty, were the ends; but it was known that men of thought and virtue sometimes had the headache, or wet feet, or could lose good time, whilst the room was getting warm in winter days. Unluckily, in the exertions necessary to remove these inconveniences, the main attention has been diverted to this object; the old aims have been lost sight of, and to remove friction has come to be the end. That is the ridicule of rich men, and Boston, London, Vienna, and now the governments generally of the world, are cities and governments of the rich, and the masses are not men, but _poor men_, that is, men who would be rich; this is the ridicule of the class, that they arrive with pains and sweat and fury nowhere; when all is done, it is for nothing. They are like one who has interrupted the conversation of a company to make his speech, and now has forgotten what he went to say. The appearance strikes the eye everywhere of an aimless society, of aimless nations. Were the ends of nature so great and cogent, as to exact this immense sacrifice of men?

14. Quite analogous to the deceits in life, there is, as might be expected, a similar effect on the eye from the face of external nature. There is in woods and waters a certain enticement and flattery, together with a failure to yield a present satisfaction. This disappointment is felt in every landscape. I have seen the softness and beauty of the summer clouds floating feathery overhead, enjoying, as it seemed, their height and privilege of motion, whilst yet they appeared not so much the drapery of this place and hour, as fore-looking to such pavilions and gardens of festivity beyond. It is an odd jealousy; but the poet finds himself not near enough to this object. The pine tree, the river, the bank of flowers before him, does not seem to be nature. Nature is still elsewhere.

This or this is but outskirt and far-off reflection[522] and echo of the triumph that has passed by, and is now at its glancing splendor and heyday, perchance in the neighboring fields, or, if you stand in the field, then in the adjacent woods. The present object shall give you this sense of stillness that follows a pageant which has just gone by. What splendid distance, what recesses of ineffable pomp and loveliness in the sunset! But who can go where they are, or lay his hand or plant his foot thereon? Off they fall from the round world forever and ever. It is the same among men and women as among the silent trees; always a referred existence, an absence, never a presence and satisfaction. Is it, that beauty can never be grasped? in persons and in landscapes is equally inaccessible? The accepted and betrothed lover has lost the wildest charm of his maiden in her acceptance of him. She was heaven whilst he pursued her as a star: she cannot be heaven, if she stoops to such a one as he.

15. What shall we say of this omnipresent appearance of that first projectile impulse, of this flattery and balking of so many well-meaning creatures? Must we not suppose somewhere in the universe a slight treachery and derision? Are we not engaged to a serious resentment of this use that is made of us? Are we tickled trout, and fools of nature? One looks at the face of heaven and earth lays all petulance at rest, and soothes us to wiser convictions. To the intelligent, nature converts itself into a vast promise, and will not be rashly explained. Her secret is untold. Many and many an Oedipus[523] arrives: he has the whole mystery teeming in his brain. Alas! the same sorcery has spoiled his skill; no syllable can he shape on his lips. Her mighty orbit vaults like the fresh rainbow into the deep, but no archangel's wing was yet strong enough to follow it, and report of the return of the curve. But it also appears, that our actions are seconded and disposed to greater conclusions than we designed. We are escorted on every hand through life by spiritual agents, and a beneficent purpose lies in wait for us. We cannot bandy words with nature, or deal with her as we deal with persons. If we measure our individual forces against hers, we may easily feel as if we were the sport of an insuperable destiny. But if, instead of identifying ourselves with the work, we feel that the soul of the workman streams through us, we shall find the peace of the morning dwelling first in our hearts, and the fathomless powers of gravity and chemistry, and, over them, of life preëxisting within us in their highest form.

16. The uneasiness which the thought of our helplessness in the chain of causes occasions us, results from looking too much at one condition of nature, namely, Motion. But the drag is never taken from the wheel. Wherever the impulse exceeds the Rest or Identity insinuates its compensation. All over the wide fields of earth grows the prunella[524] or self-heal. After every foolish day we sleep off the fumes and furies of its hours; and though we are always engaged with particulars, and often enslaved to them, we bring with us to every experiment the innate universal laws. These, while they exist in the mind as ideas, stand around us in nature forever embodied, a present sanity to expose and cure the insanity of men. Our servitude to particulars betrays us into a hundred foolish expectations. We anticipate a new era from the invention of a locomotive, or a balloon; the new engine brings with it the old checks. They say that by electro-magnetism, your salad shall be grown from the seed whilst your fowl is roasting for dinner: it is a symbol of our modern aims and endeavors,--of our condensation and acceleration of objects: but nothing is gained: nature cannot be cheated: man's life is but seventy salads long, grow they swift or grow they slow. In these checks and impossibilities, however, we find our advantage, not less than in impulses. Let the victory fall where it will, we are on that side. And the knowledge that we traverse the whole scale of being, from the center to the poles of nature, and have some stake in every possibility, lends that sublime luster to death, which philosophy and religion have too outwardly and literally striven to express in the popular doctrine of the immortality of the soul. The reality is more excellent than the report. Here is no ruin, no discontinuity, no spent ball. The divine circulations never rest nor linger. Nature is the incarnation of a thought, and turns to a thought again, as ice becomes water and gas. The world is mind precipitated, and the volatile essence is forever escaping again into the state of free thought. Hence the virtue and pungency of the influence on the mind, of natural objects, whether inorganic or organized. Man imprisoned, man crystallized, man vegetative, speaks to man impersonated. That power which does not respect quantity, which makes the whole and the particle its equal channel, delegates its smile to the morning, and distills its essence into every drop of rain. Every moment instructs and every object: for wisdom is infused into every form. It has been poured into us as blood; it convulsed us as pain; it slid into us as pleasure; it enveloped us in dull, melancholy days, or in days of cheerful labor; we did not guess its essence, until after a long time.

SHAKSPEARE;[525] OR, THE POET

[Transcriber's Note: Shakspeare is spelled as "Shakspeare" as well as "Shakespeare" in this book. The original spellings have been retained.]

1. Great men are more distinguished by range and extent, than by originality. If we require the originality which consists in weaving, like a spider, their web from their own bowels; in finding clay, and making bricks, and building the house; no great men are original.

Nor does valuable originality consist in unlikeness to other men. The hero is in the press of knights, and the thick of events; and, seeing what men want, and sharing their desire, he adds the needful length of sight and of arm, to come to the desired point. The greatest genius is the most indebted man. A poet is no rattlebrain, saying what comes uppermost and, because he says everything, saying, at last, something good; but a heart in unison with his time and country. There is nothing whimsical and fantastic in his production, but sweet and sad earnest, freighted with the weightiest convictions, and pointed with the most determined aim which any man or class knows of in his times.

2. The Genius[526] of our life is jealous of individuals and will not have any individual great, except through the general. There is no choice to genius. A great man does not wake up on some fine morning, and say, "I am full of life, I will go to sea, and find an Antarctic continent: to-day I will square the circle: I will ransack botany, and find a new food for man: I have a new architecture in my mind: I foresee a new mechanic power:" no, but he finds himself in the river of the thoughts and events, forced onward by the ideas and necessities of his contemporaries. He stands where all the eyes of men look one way, and their hands all point in the direction in which he should go. The church has reared him amidst rites and pomps, and he carries out the advice which her music gave him, and builds a cathedral needed by her chants and processions. He finds a war raging: it educates him, by trumpet, in barracks, and he betters the instruction. He finds two counties groping to bring coal, or flour, or fish, from the place of production to the place of consumption, and he hits on a railroad. Every master has found his materials collected, and his power lay in his sympathy with his people, and in his love of the materials he wrought in. What an economy of power! and what a compensation for the shortness of life! All is done to his hand. The world has brought him thus far on his way. The human race has gone out before him, sunk the hills, filled the hollows, and bridged the rivers. Men, nations, poets, artisans, women, all have worked for him, and he enters into their labors. Choose any other thing, out of the line of tendency, out of the national feeling and history, and he would have all to do for himself: his powers would be expended in the first preparations. Great genial power, one would almost say, consists in not being original at all; in being altogether receptive; in letting the world do all, and suffering the spirit of the hour to pass unobstructed through the mind.

3. Shakspeare's youth[527] fell in a time when the English people were importunate for dramatic entertainments. The court took offense easily at political allusions, and attempted to suppress them. The Puritans,[528] a growing and energetic party and the religious among the Anglican Church,[529] would suppress them. But the people wanted them. Inn-yards, houses without roofs, and extemporaneous inclosures at country fairs, were the ready theaters of strolling players. The people had tasted this new joy; and, as we could not hope to suppress newspapers now,--no, not by the strongest party,--neither then could king, prelate, or puritan,--alone or united, suppress an organ, which was ballad, epic, newspaper, caucus, lecture, Punch,[530] and library, at the same time. Probably king, prelate, and puritan, all found their own account in it. It had become, by all causes, a national interest,--by no means conspicuous, so that some great scholar would have thought of treating it in an English history,--but not a whit less considerable, because it was cheap, and of no account, like a baker's shop. The best proof of its vitality is the crowd of writers which suddenly broke into this field; Kyd, Marlow, Greene,[531] Jonson, Chapman, Dekker, Webster, Heywood, Middleton, Peele, Ford, Massinger, Beaumont, and Fletcher.

4. The secure possession, by the stage, of the public mind, is of the first importance to the poet who works for it. He loses no time in idle experiments. Here is audience and expectation prepared. In the case of Shakspeare there is much more. At the time when[532] he left Stratford, and went up to London, a great body of stage-plays, of all dates and writers, existed in manuscript, and were in turn produced on the boards. Here is the Tale of Troy,[533] which the audience will bear hearing some part of, every week; the Death of Julius Cæsar,[534] and other stories out of Plutarch,[535] which they never tire of; a shelf full of English history, from the chronicles of Brut[536] and Arthur,[537] down to the royal Henries,[538] which men hear eagerly; and a string of doleful tragedies, merry Italian tales,[539] and Spanish voyages,[540] which all the London prentices know. All the mass has been treated, with more or less skill, by every playwright, and the prompter has the soiled and tattered manuscripts. It is now no longer possible to say who wrote them first. They have been the property of the Theater so long, and so many rising geniuses have enlarged or altered them, inserting a speech, or a whole scene, or adding a song, that no man can any longer claim copyright in this work of numbers. Happily, no man wishes to. They are not yet desired in that way. We have few readers, many spectators and hearers. They had best lie where they are.

5. Shakspeare, in common with his comrades, esteemed the mass of old plays, waste stock, in which any experiment could be freely tried. Had the _prestige_[541] which hedges about a modern tragedy existed, nothing could have been done. The rude warm blood of the living England circulated in the play, as in street-ballads, and gave body which he wanted to his airy and majestic fancy. The poet needs a ground in popular tradition on which he may work, and which, again, may restrain his art within the due

temperance. It holds him to the people, supplies a foundation for his edifice; and, in furnishing so much work done to his hand, leaves him at leisure, and in full strength for the audacities of his imagination. In short, the poet owes to his legend what sculpture owed to the temple. Sculpture in Egypt, and in Greece, grew up in subordination to architecture. It was the ornament of the temple wall: at first, a rude relief carved on pediments, then the relief became bolder, and a head or arm was projected from the wall, the groups being still arranged with reference to the building, which serves also as a frame to hold the figures; and when, at last, the greatest freedom of style and treatment was reached, the prevailing genius of architecture still enforced a certain calmness and continence in the statue. As soon as the statue was begun for itself, and with no reference to the temple or palace, the art began to decline: freak, extravagance, and exhibition, took the place of the old temperance. This balance-wheel, which the sculptor found in architecture, the perilous irritability of poetic talent found in the accumulated dramatic materials to which the people were already wonted, and which had a certain excellence which no single genius,[542] however extraordinary, could hope to create.

6. In point of fact, it appears that Shakspeare did owe debts in all directions, and was able to use whatever he found; and the amount of indebtedness may be inferred from Malone's[543] laborious computations in regard to the First, Second, and Third parts of Henry VI., in which, "out of 6043 lines, 1771 were written by some author preceding Shakspeare; 2373 by him, on the foundation laid by his predecessors; and 1899 were entirely his own." And the proceeding investigation hardly leaves a single drama of his absolute invention. Malone's sentence is an important piece of external history. In Henry VIII, I think I see plainly the cropping out of the original rock on which his own finer stratum was laid. The first play was written by a superior, thoughtful man, with a vicious ear. I can mark his lines, and know well their cadence. See Wolsey's soliloquy,[544] and the following scene from Cromwell,[545] where,--instead of the meter of Shakspeare, whose secret is, that the thought constructs the tune, so that reading for the sense will best bring out the rhythm,--here the lines are constructed on a given tune, and the verse has even a trace of pulpit eloquence. But the play contains, through all its length, unmistakable traits of Shakspeare's hand, and some passages, as the account of the coronation,[546] are like autographs. What is odd, the compliment to Queen Elizabeth[547] is in bad rhythm.[548]

7. Shakspeare knew that tradition supplies a better fable than any invention can. If he lost any credit of design, he augmented his resources; and, at that day, our petulant demand for originality was not so much pressed. There was no literature for the million. The universal reading, the cheap press, were unknown. A great poet, who appears in illiterate times, absorbs into his sphere all the light which is anywhere radiating. Every intellectual jewel, every flower of sentiment, it is his fine office to bring to his people; and he comes to value his memory[549] equally with his invention. He is therefore little solicitous whence his thoughts have been derived; whether through translation, whether through tradition, whether by travel in distant countries, whether by inspiration; from whatever source, they are equally welcome to his uncritical audience. Nay, he borrows very near home. Other men say wise things as well as he; only they say a good many foolish things, and do not know when they have spoken wisely. He knows the sparkle of the true stone, and puts it in high place, wherever he finds it. Such is the happy position of Homer,[550] perhaps; of Chaucer,[551] of Saadi.[552] They felt that all wit was their wit. And they are librarians and historiographers, as well as poets. Each romancer was heir and dispenser of all the hundred tales of the world,--

"Presenting Thebes'[553] and Pelops' line And the tale of Troy divine."

The influence of Chaucer is conspicuous in all our early literature; and, more recently, not only Pope[554] and Dryden[555] have been beholden to him, but, in the whole society of English writers, a large unacknowledged debt is easily traced. One is charmed with the opulence which feeds so many pensioners. But Chaucer is a huge borrower.[556] Chaucer, it seems, drew continually, through Lydgat[557] and Caxton,[558] from Guido di Colonna,[559] whose Latin romance of the Trojan war was in turn a compilation from Dares Phrygius,[560] Ovid,[561] and Statius.[562] Then Petrarch,[563] Boccaccio,[564] and the Provençal poets,[565] and his benefactors: the Romaunt of the Rose[566] is only judicious translation from William of Lorris and John of Meung: Troilus and Creseide,[567] from Lollius of Urbino: The Cock and the Fox,[568] from the _Lais_ of Marie: The House of Fame,[569] from the French or Italian: and poor Gower[570] he uses as if he were only a brick-kiln or stone-quarry, out of which to build his house. He steals by this apology,--that what he takes has no worth where he finds it, and the greatest where he leaves it. It has come to be practically a sort of rule in literature, that a man, having once shown himself capable of original writing, is entitled thenceforth to steal from the writings of others at discretion. Thought is the property of him who can entertain it; and of him who can adequately place it. A certain awkwardness marks the use of borrowed thoughts; but, as soon as we have learned what to do with them, they become our own.

8. Thus, all originality is relative. Every thinker is retrospective. The learned member of the legislature, at Westminister,[571] or at Washington, speaks and votes for thousands. Show us the constituency, and the now invisible channels by which the senator is made aware of their wishes, the crowd of practical and knowing men, who, by correspondence or conversation, are feeding him

with evidence, anecdotes, and estimates, and it will bereave his fine attitude and resistance of something of their impressiveness. As Sir Robert Peel[572] and Mr. Webster[573] vote, so Locke[574] and Rousseau[575] think for thousands; and so there were foundations all around Homer,[576] Menu,[577] Saada,[578] or Milton,[579] from which they drew; friends, lovers, books, traditions, proverbs,--all perished,--which, if seen, would go to reduce the wonder. Did the bard speak with authority? Did he feel himself overmatched by any companion? The appeal is to the consciousness of the writer. Is there at last in his breast a Delphi[580] whereof to ask concerning any thought or thing whether it be verily so, yea or nay? and to have answer, and rely on that? All the debts which such a man could contract to other wit, would never disturb his consciousness of originality: for the ministrations of books, and of other minds, are a whiff of smoke to that most private reality with which he has conversed.

9. It is easy to see that what is best written or done by genius, in the world, was no man's work, but came by wide social labor, when a thousand wrought like one, sharing the same impulse. Our English Bible[581] is a wonderful specimen of the strength and music of the English language. But it was not made by one man, or at one time; but centuries and churches brought it to perfection. There never was a time when there was not some translation existing. The Liturgy,[582] admired for its energy and pathos, is an anthology of the piety of ages and nations, a translation of the prayers and forms of the Catholic church,--these collected, too, in long periods, from the prayers and meditations of every saint and sacred writer all over the world. Grotius[583] makes the like remark in respect to the Lord's Prayer, that the single clauses of which it is composed were already in use, in the time of Christ, in the rabbinical forms.[584] He picked out the grains of gold. The nervous language of the Common Law,[585] the impressive forms of our courts, and the precision and substantial truth of the legal distinctions, are the contribution of all the sharp-sighted, strong-minded men who have lived in the countries where these laws govern. The translation of Plutarch gets its excellence by being translation on translation. There never was a time when there was none. All the truly idiomatic and national phrases are kept, and all others successively picked out, and thrown away. Something like the same process had gone on, long before, with the originals of these books. The world takes liberties with world-books. Vedas,[586] Æsop's Fables,[587] Pilpay,[588] Arabian Nights,[589] Cid,[590] Iliad,[591] Robin Hood,[592] Scottish Minstrelsy,[593] are not the work of single men. In the composition of such works, the time thinks, the market thinks, the mason, the carpenter, the merchant, the farmer, the fop, all think for us. Every book supplies its time with one good word; every municipal law, every trade, every folly of the day, and the generic catholic genius who is not afraid or ashamed to owe his originality to the originality of all, stands with the next age as the recorder and embodiment of his own.

10. We have to thank the researches of antiquaries, and the Shakspeare Society,[594] for ascertaining the steps of the English drama, from the Mysteries[595] celebrated in churches and by churchmen, and the final detachment from the church, and the completion of secular plays, from Ferrex and Porrex,[596] and Gammer Gurton's Needle,[597] down to the possession of the stage by the very pieces which Shakspeare altered, remodelled, and finally made his own. Elated with success, and piqued by the growing interest of the problem, they have left no book-stall unsearched, no chest in a garret unopened, no file of old yellow accounts to decompose in damp and worms, so keen was the hope to discover whether the boy Shakspeare poached[598] or not, whether he held horses at the theater-door, whether he kept school, and why he left in his will only his second-best bed to Ann Hathaway, his wife.

11. There is somewhat touching in the madness with which the passing age mischooses the object on which all candles shine, and all eyes are turned; the care with which it registers every trifle touching Queen Elizabeth,[599] and King James,[600] and the Essexes,[601] Leicesters,[602] Burleighs,[603] and Buckinghams;[604] and lets pass without a single valuable note the founder of another dynasty, which alone will cause the Tudor dynasty[605] to be remembered,--the man who carries the Saxon race in him by the inspiration which feeds him, and on whose thoughts the foremost people of the world are now for some ages to be nourished, and minds to receive this and not another bias. A popular player,--nobody suspected he was the poet of the human race; and the secret was kept as faithfully from poets and intellectual men, as from courtiers and frivolous people. Bacon,[606] who took the inventory of the human understanding for his times, never mentioned his name. Ben Jonson,[607] though we have strained his few words of regard and panegyric, had no suspicion of the elastic fame whose first vibrations he was attempting. He no doubt thought the praise he has conceded to him generous, and esteemed himself, out of all question, the better poet of the two.

12. If it need wit to know wit, according to the proverb, Shakspeare's time should be capable of recognizing it. Sir Henry Wotton[608] was born four years after Shakspeare, and died twenty-three years after him; and I find, among his correspondents and acquaintances, the following persons:[609] Theodore Beza, Isaac Casaubon, Sir Philip Sidney, Earl of Essex, Lord Bacon, Sir Walter Raleigh, John Milton, Sir Henry Vane, Isaac Walton, Dr. Donne, Abraham Cowley, Berlarmine, Charles Cotton, John Pym, John Hales, Kepler, Vieta, Albericus Gentilis, Paul Sarpi, Arminius; with all of whom exists some token of his having communicated,

without enumerating many others, whom doubtless[610] he saw,--Shakspeare, Spenser, Jonson, Beaumont, Massinger, two Herberts, Marlow, Chapman and the rest. Since the constellation of great men who appeared in Greece in the time of Pericles,[611] there was never any such society;--yet their genius failed them to find out the best head in the universe. Our poet's mask was impenetrable. You cannot see the mountain near. It took a century to make it suspected; and not until two centuries had passed, after his death, did any criticism which we think adequate begin to appear. It was not possible to write the history of Shakspeare till now; for he is the father of German literature: it was on the introduction of Shakspeare into German, by Lessing,[612] and the translation of his works by Wieland[613] and Schlegel,[614] that the rapid burst of German literature was most intimately connected. It was not until the nineteenth century, whose speculative genius is a sort of living Hamlet,[615] that the tragedy of Hamlet could find such wondering readers. Now, literature, philosophy, and thought, are Shakspearized. His mind is the horizon beyond which, at present, we do not see. Our ears are educated to music by his rhythm. Coleridge[616] and Goethe[617] are the only critics who have expressed our convictions with any adequate fidelity; but there is in all cultivated minds a silent appreciation of his superlative power and beauty, which, like Christianity, qualifies the period.

[Transcriber's Note: Number runs from 12 to 14. Number 13 omitted]

14. The Shakspeare Society have inquired in all directions, advertised the missing facts, offered money for any information that will lead to proof; and with what result? Beside some important illustration of the history of the English stage, to which I have adverted, they have gleaned a few facts touching the property, and dealings in regard to property, of the poet. It appears that, from year to year, he owned a larger share in the Blackfriars' Theater:[618] its wardrobe and other appurtenances were his: and he bought an estate in his native village, with his earnings, as writer and shareholder; that he lived in the best house in Stratford;[619] was intrusted by his neighbors with their commissions in London, as of borrowing money, and the like; and he was a veritable farmer. About the time when he was writing Macbeth,[620] he sues Philip Rogers, in the borough-court of Stratford, for thirty-five shillings, ten pence, for corn delivered to him at different times; and, in all respects, appears as a good husband with no reputation for eccentricity or excess. He was a good-natured sort of man, an actor and shareholder in the theater, not in any striking manner distinguished from other actors and managers. I admit the importance of this information. It is well worth the pains that have been taken to procure it.

15. But whatever scraps of information concerning his condition these researches may have rescued, they can shed no light upon that infinite invention which is the concealed magnet of his attraction for us. We are very clumsy writers of history. We tell the chronicle of parentage, birth, birth-place, schooling, schoolmates, earning of money, marriage, publication of books, celebrity, death; and when we have come to an end of this gossip no ray of relation appears between it and the goddess-born; and it seems as if, had we dipped at random into the "Modern Plutarch," and read any other life there, it would have fitted the poems as well. It is the essence of poetry to spring, like the rainbow daughter of Wonder, from the invisible, to abolish the past, and refuse all history. Malone, Warburton, Dyce, and Collier,[621] have wasted their oil. The famed theaters, Covent Garden, Drury Lane, the Park, and Tremont,[622] have vainly assisted. Betterton, Garrick, Kemble, Kean, and Macready,[623] dedicate their lives to this genius; him they crown, elucidate, obey, and express. The genius knows them not. The recitation begins; one golden word leaps out immortal from all this painted pedantry, and sweetly torments us with invitations to its own inaccessible homes. I remember, I went once to see the Hamlet of a famed performer,[624] the pride of the English stage; and all I then heard, and all I now remember, of the tragedian, was that in which the tragedian had no part; simply, Hamlet's question to the ghost,--

"What may this mean,[625] That thou, dead corse, again in complete steel Revisit'st thus the glimpses of the moon?"

That imagination which dilates the closet he writes in to the world's dimension, crowds it with agents in rank and order, as quickly reduces the big reality to be the glimpses of the moon. These tricks of his magic spoil for us the illusions of the green-room. Can any biography shed light on the localities into which the Midsummer Night's Dream[626] admits me? Did Shakspeare confide to any notary or parish recorder, sacristan, or surrogate, in Stratford, the genesis of that delicate creation? The forest of Arden,[627] the nimble air of Scone Castle,[628] the moonlight of Portia's villa,[629] "the antres vast[630] and desarts idle," of Othello's captivity,--where is the third cousin, or grand-nephew, the chancellor's file of accounts, or private letter, that has kept one word of those transcendent secrets? In fine, in this drama, as in all great works of art,--in the Cyclopean architecture[631] of Egypt and India; in the Phidian sculpture;[632] the Gothic ministers;[633] the Italian painting;[634] the Ballads of Spain and Scotland,[635]--the Genius draws up the ladder after him, when the creative age goes up to heaven, and gives way to a new, which sees the works, and ask in vain for a history.

16. Shakspeare is the only biographer of Shakspeare; and even he can tell nothing, except to the Shakspeare in us; that is, to our most apprehensive and sympathetic hour. He cannot step from off his tripod,[636] and give us anecdotes of his inspirations. Read the antique documents extricated, analyzed, and compared, by the assiduous Dyce and Collier; and now read one of those skyey sentences,--aerolites,--which seem to have fallen out of heaven, and which, not your experience, but the man within the breast, has accepted, as words of fate; and tell me if they match; if the former account in any manner for the latter; or, which gives the most historical insight into the man.

17. Hence, though our external history is so meager, yet, with Shakspeare for biographer, instead of Aubrey[637] and Rowe,[638] we have really the information which is material, that which describes character and fortune, that which, if we were about to meet the man and deal with him, would most import us to know. We have his recorded convictions on those questions which knock for answer at every heart,--on life and death, on love, on wealth and poverty, on the prizes of life, and the ways whereby we come at them; on the characters of men, and the influences, occult and open, which affect their fortunes; and on those mysterious and demoniacal powers which defy our science, and which yet interweave their malice and their gift in our brightest hours. Who ever read the volume of the Sonnets, without finding that the poet had there revealed, under masks that are no masks to the intelligent, the lore of friendship and of love; the confusion of sentiments in the most susceptible, and, at the same time, the most intellectual of men? What trait of his private mind has he hidden in his dramas? One can discern, in his ample pictures of the gentleman and the king, what forms and humanities pleased him; his delight in troops of friends, in large hospitality, in cheerful giving. Let Timon,[639] let Warwick,[640] let Antonio[641] the merchant, answer for his great heart. So far from Shakspeare's being the least known, he is the one person, in all modern history, known to us. What point of morals, of manners, of economy, of philosophy, of religion, of taste, of the conduct of life, has he not settled? What mystery has he not signified his knowledge of? What office, or function, or district of man's work, has he not remembered? What king has he not taught state, as Talma[642] taught Napoleon? What maiden has not found him finer than her delicacy? What lover has he not out-loved? What sage has he not outseen? What gentleman has he not instructed in the rudeness of his behavior?

18. Some able and appreciating critics think no criticism on Shakspeare valuable, that does not rest purely on the dramatic merit; that he is falsely judged as poet and philosopher. I think as highly as these critics of his dramatic merit, who still think it secondary. He was a full man, who liked to talk; a brain exhaling thoughts and images, which, seeking vent, found the drama next at hand. Had he been less, we should have had to consider how well he filled his place, how good a dramatist he was,--and he is the best in the world. But it turns out, that what he has to say is of that weight, as to withdraw some attention from the vehicle; and he is like some saint whose history is to be rendered into all languages, into verse and prose, into songs and pictures, and cut up into proverbs; so that the occasion which gave the saint's meaning the form of a conversation, or of a prayer, or of a code of laws, is immaterial, compared with the universality of its application. So it fares with the wise Shakspeare and his book of life. He wrote the airs for all our modern music: he wrote the text of modern life; the text of manners: he drew the man of England and Europe; the father of the man in America: he drew the man, and described the day, and what is done in it: he read the hearts of men and women, their probity, and their second thought, and wiles; the wiles of innocence, and the transitions by which virtues and vices slide into their contraries: he could divide the mother's part from the father's part in the face of the child, or draw the fine demarcations of freedom and of fate: he knew the laws of repression which make the police of nature: and all the sweets and all the terrors of human lot lay in his mind as truly but as softly as the landscape lies on the eye. And the importance of this wisdom of life sinks the form, as of Drama or Epic, out of notice. 'Tis like making a question concerning the paper on which a king's message is written.

19. Shakspeare is as much out of the category of eminent authors, as he is out of the crowd. He is inconceivably wise; the others, conceivably. A good reader can, in a sort, nestle into Plato's brain, and think from thence; but not into Shakspeare's. We are still out of doors. For executive faculty, for creation, Shakspeare is unique. No man can imagine it better. He was the farthest reach of subtlety compatible with an individual self,--the subtilest of authors, and only just within the possibility of authorship. With this wisdom of life, is the equal endowment of imaginative and of lyric power. He clothed the creatures of his legend with form and sentiments, as if they were people who had lived under his roof; and few real men have left such distinct characters as these fictions. And they spoke in language as sweet as it was fit. Yet his talents never seduced him into an ostentation, nor did he harp on one string. An omnipresent humanity[643] coördinates all his faculties. Give a man of talents a story to tell, and his partiality will presently appear. He has certain observations, opinions, topics, which have some accidental prominence, and which he disposes all to exhibit. He crams this part, and starves that other part, consulting not the fitness of the thing, but his fitness and strength. But Shakspeare has no peculiarity, no importunate topic; but all is duly given; no veins, no curiosities: no cow-painter, no bird-fancier, no mannerist is he: he has no discoverable egotism: the great he tells greatly; the small, subordinately. He is wise without emphasis or assertion; he is strong, as nature is strong, who lifts the land into mountain slopes without effort, and by the same rule

as she floats a bubble in the air, and likes as well to do the one as the other. This makes that equality of power in farce, tragedy, narrative, and love-songs; a merit so incessant, that each reader is incredulous of the perception of other readers.

20. This power of expression, or of transferring the inmost truth of things into music and verse, makes him the type of the poet, and has added a new problem to metaphysics. This is that which throws him into natural history, as a main production of the globe, and as announcing new eras and ameliorations. Things were mirrored in his poetry without loss or blur; he could paint the fine with precision, the great with compass: the tragic and the comic indifferently, and without any distortion or favor. He carried his powerful execution into minute details, to a hair point; finishes an eyelash or a dimple as firmly as he draws a mountain; and yet these, like nature's, will bear the scrutiny of the solar microscope.

21. In short, he is the chief example to prove that more or less of production, more or fewer pictures, is a thing indifferent. He had the power to make one picture. Daguerre[644] learned how to let one flower etch its image on his plate of iodine; and then proceeds at leisure to etch a million. There are always objects; but there was never representation. Here is perfect representation, at last; and now let the world of figures sit for their portraits. No recipe can be given for the making of a Shakspeare; but the possibility of the translation of things into song is demonstrated.

22. His lyric power lies in the genius of the piece. The sonnets, though their excellence is lost in the splendor of the dramas, are as inimitable as they: and it is not a merit of lines, but a total merit of the piece; like the tone of voice of some incomparable person, so is this a speech of poetic beings, and any clause as unproducible now as a whole poem.

23. Though the speeches in the plays, and single lines, have a beauty which tempts the ear to pause on them for their euphuism,[645] yet the sentence is so loaded with meaning, and so linked with its foregoers and followers, that the logician is satisfied. His means are as admirable as his ends; every subordinate invention, by which he helps himself to connect some irreconcilable opposites, is a poem too. He is not reduced to dismount and walk, because his horses are running off with him in some distant direction; he always rides.

24. The finest poetry was first experienced: but the thought has suffered a transformation since it was an experience. Cultivated men often attain a good degree of skill in writing verses; but it is easy to read, through their poems, their personal history: any one acquainted with parties can name every figure: this is Andrew, and that is Rachael. The sense thus remains prosaic. It is a caterpillar with wings, and not yet a butterfly. In the poet's mind, the fact has gone quite over into the new element of thought, and has lost all that is exuvial. This generosity bides with Shakspeare. We say, from the truth and closeness of his pictures, that he knows the lesson by heart. Yet there is not a trace of egotism.

25. One more royal trait properly belongs to the poet. I mean his cheerfulness, without which no man can be a poet,--for beauty is his aim. He loves virtue, not for its obligation, but for its grace: he delights in the world, in man, in woman, for the lovely light that sparkles from them. Beauty, the spirit of joy and hilarity, he sheds over the universe. Epicurus[646] relates, that poetry hath such charms that a lover might forsake his mistress to partake of them. And the true bards have been noted for their firm and cheerful temper. Homer lies in sunshine; Chaucer is glad and erect; and Saadi says, "It was rumored abroad that I was penitent; but what had I to do with repentance?" Not less sovereign and cheerful,--much more sovereign and cheerful, is the tone of Shakspeare. His name suggests joy and emancipation to the heart of men. If he should appear in any company of human souls, who would not march in his troop? He touches nothing that does not borrow health and longevity from his festal style.

26. And now, how stands the account of man with this bard and benefactor, when in solitude, shutting our ears to the reverberations of his fame, we seek to strike the balance? Solitude has austere lessons; it can teach us to spare both heroes and poets; and it weighs Shakspeare also, and finds him to share the halfness and imperfection of humanity.

27. Shakspeare, Homer, Dante,[647] Chaucer, saw the splendor of meaning that plays over the visible world; knew that a tree had another use than for apples, and corn another than for meal, and the ball of the earth, than for tillage and roads: that these things bore a second and finer harvest to the mind, being emblems of its thoughts, and conveying in all their natural history a certain mute commentary on human life. Shakspeare employed them as colors to compose his picture. He rested in their beauty; and never took the step which seemed inevitable to such genius, namely, to explore the virtue which resides in these symbols, and imparts this power,--what is that which they themselves say? He converted the elements, which waited on his command, into entertainments. He was master of the revels[648] to mankind. Is it not as if one should have, through majestic powers of science, the comets given into his hand, or the planets and their moons, and should draw them from their orbits to glare with the municipal fireworks on a holiday night, and advertise in all towns, "very superior pyrotechny this evening!" Are the agents of nature, and the power to

understand them, worth no more than a street serenade, or the breath of a cigar? One remembers again the trumpet-text in the Koran,[649]--"The heavens and the earth, and all that is between them, think ye we have created them in jest?" As long as the question is of talent and mental power, the world of men has not his equal to show. But when the question is to life, and its materials, and its auxiliaries, how does he profit me? What does it signify? It is but a Twelfth Night,[650] or Midsummer Night's Dream, or a Winter Evening's Tale: what signifies another picture more or less? The Egyptian verdict[651] of the Shakspeare Societies comes to mind, that he was a jovial actor and manager. I cannot marry this fact to his verse. Other admirable men have led lives in some sort of keeping with their thought; but this man, in wide contrast. Had he been less, had he reached only the common measure of great authors, of Bacon, Milton, Tasso,[652] Cervantes,[653] we might leave the fact in the twilight of human fate: but, that this man of men, he who gave to the science of mind a new and larger subject than had ever existed, and planted the standard of humanity some furlongs forward into Chaos,--that he should not be wise for himself,--it must even go into the world's history, that the best poet led an obscure and profane life, using his genius for the public amusement.

28. Well, other men, priest and prophet, Israelite,[654] German,[655] and Swede,[656] beheld the same objects: they also saw through them that which was contained. And to what purpose? The beauty straightway vanished; they read commandments, all-excluding mountainous duty; an obligation, a sadness, as of piled mountains, fell on them, and life became ghastly, joyless, a pilgrim's progress,[657] a probation, beleaguered round with doleful histories, of Adam's fall[658] and curse, behind us; with doomsdays and purgatorial[659] and penal fires before us; and the heart of the seer and the heart of the listener sank in them.

29. It must be conceded that these are half-views of half-men. The world still wants its poet-priest, a reconciler, who shall not trifle with Shakspeare the player, nor shall grope in graves with Swedenborg the mourner; but who shall see, speak, and act, with equal inspiration. For knowledge will brighten the sunshine; right is more beautiful than private affection; and love is compatible with universal wisdom.

PRUDENCE.[660]

What right have I to write on Prudence, whereof I have little, and that of the negative sort? My prudence consists in avoiding and going without, not in the inventing of means and methods, not in adroit steering, not in gentle repairing. I have no skill to make money spend well, no genius in my economy, and whoever sees my garden discovers that I must have some other garden. Yet I love facts, and hate lubricity[661] and people without perception. Then I have the same title to write on prudence that I have to write on poetry or holiness. We write from aspiration and antagonism, as well as from experience. We paint those qualities which we do not possess. The poet admires the man of energy and tactics; the merchant breeds his son for the church or the bar; and where a man is not vain and egotistic you shall find what he has not by his praise. Moreover it would be hardly honest in me not to balance these fine lyric words of Love and Friendship[662] with words of coarser sound, and whilst my debt to my senses is real and constant, not to own it in passing.

Prudence is the virtue of the senses. It is the science of appearances. It is the outmost action of the inward life. It is God taking thought for oxen. It moves matter after the laws of matter. It is content to seek health of body by complying with physical conditions, and health of mind by the laws of the intellect.

The world of the senses is a world of shows; it does not exist for itself, but has a symbolic character; and a true prudence or law of shows recognizes the co-presence of other laws and knows that its own office is subaltern; knows that it is surface and not centre where it works. Prudence is false when detached. It is legitimate when it is the Natural History of the soul incarnate, when it unfolds the beauty of laws within the narrow scope of the senses.

There are all degrees of proficiency in knowledge of the world. It is sufficient to our present purpose to indicate three. One class lives to the utility of the symbol, esteeming health and wealth a final good. Another class live above this mark of the beauty of the symbol, as the poet and artist and the naturalist and man of science. A third class live above the beauty of the symbol to the beauty of the thing signified; these are wise men. The first class have common sense; the second, taste; and the third, spiritual perception. Once in a long time, a man traverses the whole scale, and sees and enjoys the symbol solidly, then also has a clear eye for its beauty, and lastly, whilst he pitches his tent on this sacred volcanic isle of nature, does not offer to build houses and barns thereon reverencing the splendor of the God which he sees bursting through each chink and cranny.

The world is filled with the proverbs[663] and acts and winkings of a base prudence, which is a devotion to matter, as if we possessed no other faculties than the palate, the nose, the touch, the eye and ear; a prudence which adores the Rule of Three,

which never subscribes, which gives never, which seldom lends, and asks but one question of any project,--Will it bake bread? This is a disease like a thickening of the skin until the vital organs are destroyed. But culture, revealing the high origin of the apparent world and aiming at the perfection of the man as the end, degrades everything else, as health and bodily life, into means. It sees prudence not to be a several faculty, but a name for wisdom and virtue conversing with the body and its wants. Cultivated men always feel and speak so as if a great fortune, the achievement of a civil or social measure, great personal influence, a graceful and commanding address, had their value as proofs of the energy of the spirit. If a man lose his balance and immerse himself in any trades or pleasures for their own sake, he may be a good wheel or pin,[664] but he is not a cultivated man.

The spurious prudence, making the senses final, is the god of sots and cowards, and is the subject of all comedy. It is nature's joke, and therefore literature's. The true prudence limits this sensualism by admitting the knowledge of an internal and real world. This recognition once made,--the order of the world and the distribution of affairs and times being studied with the co-perception of their subordinate place, will reward any degree of attention. For, our existence, thus apparently attached in nature to the sun and the returning moon and the periods which they mark; so susceptible to climate and to country, so alive to social good and evil, so fond of splendor and so tender to hunger and cold and debt,--reads all its primary lessons out of these books.

Prudence does not go behind nature and ask whence it is? It takes the laws of the world whereby man's being is conditioned, as they are, and keeps these laws that it may enjoy their proper good. It respects space and time, climate, want, sleep, the law of polarity,[665] growth and death. There revolve, to give bound and period to his being on all sides, the sun and moon, the great formalists in the sky: here lies stubborn matter, and will not swerve from its chemical routine. Here is a planted globe, pierced and belted with natural laws and fenced and distributed externally with civil partitions and properties which impose new restraints on the young inhabitant.

We eat of the bread which grows in the field. We live by the air which blows around us and we are poisoned by the air that is too cold or too hot, too dry or too wet. Time, which shows so vacant, indivisible and divine in its coming, is slit and peddled into trifles and tatters. A door is to be painted, a lock to be repaired. I want wood or oil, or meal, or salt; the house smokes, or I have a headache; then the tax; and an affair to be transacted with a man without heart or brains, and the stinging recollection of an injurious or very awkward word,--these eat up the hours. Do what we can, summer will have its flies.[666] If we walk in the woods we must feed mosquitoes. If we go a-fishing we must expect a wet coat. Then climate is a great impediment to idle persons. We often resolve to give up the care of the weather, but still we regard the clouds and the rain.

We are instructed by these petty experiences which usurp the hours and years. The hard soil and four months of snow make the inhabitant of the northern temperate zone wiser and abler than his fellow who enjoys the fixed smile of the tropics. The islander may ramble all day at will. At night he may sleep on a mat under the moon, and wherever a wild date-tree grows, nature has, without a prayer even, spread a table for his morning meal. The northerner is perforce a householder. He must brew, bake, salt and preserve his food. He must pile wood and coal. But as it happens that not one stroke can labor lay to without some new acquaintance with nature; and as nature is inexhaustibly significant, the inhabitants of these climates[667] have always excelled the southerner in force. Such is the value of these matters that a man who knows other things can never know too much of these. Let him have accurate perceptions. Let him, if he have hands, handle; if eyes, measure and discriminate; let him accept and hive every fact of chemistry, natural history and economics; the more he has, the less is he willing to spare any one. Time is always bringing the occasions that disclose their value. Some wisdom comes out of every natural and innocent action. The domestic man, who loves no music so well as his kitchen clock and the airs which the logs sing to him as they burn on the hearth, has solaces which others never dream of. The application of means to ends ensures victory and the songs of victory not less in a farm or a shop than in the tactics of party or of war. The good husband finds method as efficient in the packing of fire-wood in a shed or in the harvesting of fruits in the cellar, as in Peninsular campaigns[668] or the files of the Department of State. In the rainy day he builds a work-bench, or gets his tool-box set in the corner of the barn-chamber, and stored with nails, gimlet, pincers, screwdriver and chisel. Herein he tastes an old joy of youth and childhood, the cat-like love of garrets, presses and corn-chambers, and of the conveniences of long housekeeping. His garden or his poultry-yard--very paltry places it may be--tells him many pleasant anecdotes. One might find argument for optimism in the abundant flow of this saccharine element of pleasure in every suburb and extremity of the good world. Let a man keep the law--any law,--and his way will be strown with satisfactions. There is more difference in the quality of our pleasures than in the amount.

On the other hand, nature punishes any neglect of prudence. If you think the senses final, obey their law. If you believe in the soul, do not clutch at sensual sweetness before it is ripe on the slow tree of cause and effect. It is vinegar to the eyes to deal with men of loose and imperfect perception. Dr. Johnson is reported to have said,[669]--"If the child says he looked out of this window, when he

looked out of that,--whip him." Our American character is marked by a more than average delight in accurate perception, which is shown by the currency of the by-word, "No mistake."

But the discomfort of unpunctuality, of confusion of thought about facts, inattention to the wants of to-morrow, is of no nation. The beautiful laws of time and space, once dislocated by our inaptitude, are holes and dens. If the hive be disturbed by rash and stupid hands, instead of honey it will yield us bees. Our words and actions to be fair must be timely. A gay and pleasant sound is the whetting of the scythe in the mornings of June; yet what is more lonesome and sad than the sound of a whetstone or mower's rifle[670] when it is too late in the season to make hay? Scatter brained and "afternoon men" spoil much more than their own affairs in spoiling the temper of those who deal with them. I have seen a criticism on some paintings, of which I am reminded when I see the shiftless and unhappy men who are not true to their senses. The last Grand Duke of Weimar,[671] a man of superior understanding, said: "I have sometimes remarked in the presence of great works of art, and just now especially in Dresden, how much a certain property contributes to the effect which gives life to the figures, and to the life an irresistible truth. This property is the hitting, in all the figures we draw, the right centre of gravity. I mean the placing the figures firm upon their feet, making the hands grasp, and fastening the eyes on the spot where they should look. Even lifeless figures, as vessels and stools--let them be drawn ever so correctly--lose all effect so soon as they lack the resting upon their centre of gravity, and have a certain swimming and oscillating appearance. The Raphael in the Dresden gallery[672] (the only great affecting picture which I have seen) is the quietest and most passionless piece you can imagine; a couple of saints who worship the Virgin and child. Nevertheless it awakens a deeper impression than the contortions of ten crucified martyrs. For, beside all the resistless beauty of form, it possesses in the highest degree the property of the perpendicularity of all the figures." This perpendicularity we demand of all the figures in this picture of life. Let them stand on their feet, and not float and swing. Let us know where to find them. Let them discriminate between what they remember and what they dreamed. Let them call a spade a spade.[673] Let them give us facts, and honor their own senses with trust.

But what man shall dare task another with imprudence? Who is prudent? The men we call greatest are least in this kingdom. There is a certain fatal dislocation in our relation to nature, distorting all our modes of living and making every law our enemy, which seems at last to have aroused all the wit and virtue in the world to ponder the question of Reform. We must call the highest prudence to counsel, and ask why health and beauty and genius should now be the exception rather than the rule of human nature? We do not know the properties of plants and animals and the laws of nature, through our sympathy with the same; but this remains the dream of poets. Poetry and prudence should be coincident. Poets should be lawgivers; that is, the boldest lyric inspiration should not chide and insult, but should announce and lead the civil code and the day's work. But now the two things seem irreconcilably parted. We have violated law upon law until we stand amidst ruins, and when by chance we espy a coincidence between reason and the phenomena, we are surprised. Beauty should be the dowry of every man and woman, as invariably as sensation; but it is rare. Health or sound organization should be universal. Genius should be the child of genius, and every child should be inspired; but now it is not to be predicted of any child, and nowhere is it pure. We call partial half lights, by courtesy, genius; talent which converts itself to money; talent which glitters to-day that it may dine and sleep well to-morrow; and society is officered by _men of parts_,[674] as they are properly called, and not by divine men. These use their gifts to refine luxury, not to abolish it. Genius is always ascetic; and piety, and love. Appetite shows to the finer souls as a disease, and they find beauty in rites and bounds that resist it.

We have found out[675] fine names to cover our sensuality withal, but no gifts can raise intemperance. The man of talent affects to call his transgressions of the laws of the senses trivial and to count them nothing considered with his devotion to his art. His art rebukes him. That never taught him lewdness, nor the love of wine, nor the wish to reap where he had not sowed. His art is less for every deduction from his holiness, and less for every defect of common sense. On him who scorned the world, as he said, the scorned world wreaks its revenge. He that despiseth small things will perish by little and little. Goethe's Tasso[676] is very likely to be a pretty fair historical portrait, and that is true tragedy. It does not seem to me so genuine grief when some tyrannous Richard III.[677] oppresses and slays a score of innocent persons, as when Antonio and Tasso, both apparently right, wrong each other. One living after the maxims of this world and consistent and true to them, the other fired with all divine sentiments, yet grasping also at the pleasures of sense, without submitting to their law. That is a grief we all feel, a knot we cannot untie. Tasso's is no infrequent case in modern biography. A man of genius, of an ardent temperament, reckless of physical laws, self-indulgent, becomes presently unfortunate, querulous, a "discomfortable cousin," a thorn to himself and to others.

The scholar shames us by his bifold[678] life. Whilst something higher than prudence is active, he is admirable; when common sense is wanted, he is an encumbrance. Yesterday, Cæsar[679] was not so great; to-day, Job[680] not so miserable. Yesterday,

radiant with the light of an ideal world in which he lives, the first of men, and now oppressed by wants and by sickness, for which he must thank himself, none is so poor to do him reverence. He resembles the opium eaters whom travellers describe as frequenting the bazaars of Constantinople, who skulk about all day, the most pitiful drivellers, yellow, emaciated, ragged, sneaking; then at evening, when the bazaars are open, they slink to the opium-shop, swallow their morsel and become tranquil, glorious and great. And who has not seen the tragedy of imprudent genius struggling for years with paltry pecuniary difficulties, at last sinking, chilled, exhausted and fruitless, like a giant slaughtered by pins?

Is it not better that a man should accept the first pains and mortifications of this sort, which nature is not slack in sending him, as hints that he must expect no other good than the just fruit of his own labor and self-denial? Health, bread, climate, social position, have their importance, and he will give them their due. Let him esteem Nature a perpetual counsellor, and her perfections the exact measure of our deviations. Let him make the night night, and the day day. Let him control the habit of expense. Let him see that as much wisdom may be expended on a private economy as on an empire, and as much wisdom may be drawn from it. The laws of the world are written out for him on every piece of money in his hand. There is nothing he will not be the better for knowing, were it only the wisdom of Poor Richard,[681] or the State-street[682] prudence of buying by the acre to sell by the foot; or the thrift of the agriculturist, to stick[683] in a tree between whiles, because it will grow whilst he sleeps; or the prudence which consists in husbanding little strokes of the tool, little portions of time, particles of stock and small gains. The eye of prudence may never shut. Iron, if kept at the ironmonger's, will rust; beer, if not brewed in the right state of the atmosphere, will sour; timber of ships will rot at sea, or if laid up high and dry, will strain, warp and dry-rot. Money, if kept by us, yields no rent and is liable to loss; if invested, is liable to depreciation of the particular kind of stock. Strike, says the smith, the iron is white. Keep the rake, says the haymaker, as nigh the scythe as you can, and the cart as nigh the rake. Our Yankee trade is reputed to be very much on the extreme of this prudence. It saves itself by its activity. It takes bank notes,--good, bad, clean, ragged, and saves itself by the speed with which it passes them off. Iron cannot rust, nor beer sour, nor timber rot, nor calicoes go out of fashion, nor money stocks depreciate, in the few swift moments in which the Yankee suffers any one of them to remain in his possession. In skating over thin ice our safety is in our speed.

Let him learn a prudence of a higher strain. Let him learn that everything in nature, even motes and feathers, go by law and not by luck, and that what he sows he reaps. By diligence and self-command let him put the bread he eats at his own disposal, and not at that of others, that he may not stand in bitter and false relations to other men; for the best good of wealth is freedom. Let him practise the minor virtues.[684] How much of human life is lost in waiting! Let him not make his fellow creatures wait. How many words and promises are promises of conversation! Let his be words of fate. When he sees a folded and sealed scrap of paper float around the globe in a pine ship and come safe to the eye for which it was written, amidst a swarming population, let him likewise feel the admonition to integrate his being across all these distracting forces, and keep a slender human word among the storms, distances and accidents that drive us hither and thither, and, by persistency, make the paltry force of one man reappear to redeem its pledge after months and years in the most distant climates.

We must not try to write the laws of any one virtue, looking at that only. Human nature loves no contradictions, but is symmetrical. The prudence which secures an outward well-being is not to be studied by one set of men, whilst heroism and holiness are studied by another, but they are reconcilable. Prudence concerns the present time, persons, property and existing forms. But as every fact hath its roots in the soul, and, if the soul were changed, would cease to be, or would become some other thing, therefore the proper administration of outward things will always rest on a just apprehension of their cause and origin; that is, the good man will be the wise man, and the single-hearted the politic man. Every violation of truth is not only a sort of suicide in the liar, but is a stab at the health of human society. On the most profitable lie the course of events presently lays a destructive tax; whilst frankness proves to be the best tactics, for it invites frankness, puts the parties on a convenient footing and makes their business a friendship. Trust men and they will be true to you; treat them greatly and they will show themselves great, though they make an exception in your favor to all their rules of trade.

So, in regard to disagreeable and formidable things, prudence does not consist in evasion or in flight, but in courage. He who wishes to walk in the most peaceful parts of life with any serenity must screw himself up to resolution. Let him front the object of his worst apprehension, and his stoutness will commonly make his fears groundless. The Latin proverb says,[685] "in battles the eye is first overcome." The eye is daunted and greatly exaggerates the perils of the hour. Entire self-possession may make a battle very little more dangerous to life than a match at foils or at football. Examples are cited by soldiers of men who have seen the cannon pointed and the fire given to it, and who have stepped aside from the path of the ball. The terrors of the storm are chiefly confined to the parlor and the cabin. The drover, the sailor, buffets it all day, and his health renews itself at as vigorous a pulse under the sleet

as under the sun of June.

In the occurrence of unpleasant things among neighbors, fear comes readily to heart and magnifies the consequence of the other party; but it is a bad counsellor. Every man is actually weak and apparently strong. To himself he seems weak; to others formidable. You are afraid of Grim; but Grim also is afraid of you. You are solicitous of the good will of the meanest person, uneasy at his ill will. But the sturdiest offender of your peace and of the neighborhood, if you rip up _his_ claims, is as thin and timid as any; and the peace of society is often kept, because, as children say, one is afraid and the other dares not. Far off, men swell, bully and threaten: bring them hand to hand, and they are a feeble folk.

It is a proverb that "courtesy costs nothing"; but calculation might come to value love for its profit. Love is fabled to be blind, but kindness is necessary to perception; love is not a hood, but an eye-water. If you meet a sectary or a hostile partisan, never recognize the dividing lines, but meet on what common ground remains,--if only that the sun shines and the rain rains for both,--the area will widen very fast, and ere you know it, the boundary mountains on which the eye had fastened have melted into air. If he set out to contend,[686] almost St. Paul will lie, almost St. John will hate. What low, poor, paltry, hypocritical people an argument on religion will make of the pure and chosen souls. Shuffle they will and crow, crook and hide, feign to confess here, only that they may brag and conquer there, and not a thought has enriched either party, and not an emotion of bravery, modesty, or hope. So neither should you put yourself in a false position to your contemporaries by indulging a vein of hostility and bitterness. Though your views are in straight antagonism[687] to theirs, assume an identity of sentiment, assume that you are saying precisely that which all think, and in the flow of wit and love roll out your paradoxes in solid column, with not the infirmity of a doubt. So at least shall you get an adequate deliverance. The natural emotions of the soul are so much better than the voluntary ones that you will never do yourself justice in dispute. The thought is not then taken hold of by the right handle, does not show itself proportioned and in its true bearings, but bears extorted, hoarse, and half witness. But assume a consent and it shall presently be granted, since really and underneath their all external diversities, all men are of one heart and mind.

Wisdom will never let us stand with any man or men on an unfriendly footing. We refuse sympathy and intimacy with people, as if we waited for some better sympathy and intimacy to come. But whence and when? To-morrow will be like to-day. Life wastes itself whilst we are preparing to live. Our friends and fellow-workers die off from us. Scarcely can we say we see new men, new women, approaching us. We are too old to regard fashion, too old to expect patronage of any greater or more powerful. Let us suck the sweetness of those affections and consuetudes[688] that grow near us. These old shoes are easy to the feet. Undoubtedly we can easily pick faults in our company, can easily whisper names prouder and that tickle the fancy more. Every man's imagination hath its friends; and pleasant would life be with such companions. But if you cannot have them on good mutual terms, you cannot have them. If not the Deity but our ambition hews and shapes the new relations, their virtue escapes, as strawberries lose their flavor in garden beds.

Thus truth, frankness, courage, love, humility, and all the virtues range themselves on the side of prudence, or the art of securing a present well-being. I do not know if all matter will be found to be made of one element, as oxygen or hydrogen, at last, but the world of manners and actions is wrought of one stuff, and begin where we will[689] we are pretty sure in a short space to be mumbling our ten commandments.

CIRCLES.[690]

The eye is the first circle; the horizon which it forms is the second; and throughout nature this primary picture is repeated without end. It is the highest emblem in the cipher of the world. St. Augustine[691] described the nature of God as a circle whose centre was everywhere and its circumference nowhere. We are all our lifetime reading the copious sense of this first of forms. One moral we have already deduced in considering the circular or compensatory character of every human action. Another analogy we shall now trace, that every action admits of being outdone. Our life is an apprenticeship to the truth that around every circle another can be drawn; that there is no end in nature, but every end is a beginning; that there is always another dawn risen on mid-noon,[692] and under every deep a lower deep opens.

This fact, as far as it symbolizes the moral fact of the Unattainable, the flying Perfect, around which the hands of man can never meet, at once the inspirer and the condemner of every success, may conveniently serve us to connect many illustrations of human power in every department.

There are no fixtures in nature. The universe is fluid and volatile. Permanence is but a word of degrees. Our globe seen by God is a transparent law, not a mass of facts. The law dissolves the fact and holds its fluid. Our culture is the predominance of an idea which draws after it all this train of cities and institutions. Let us rise into another idea; they will disappear. The Greek sculpture[693] is all melted away, as if it had been statues of ice: here and there a solitary figure or fragment remaining, as we see flecks and scraps of snow left in cold dells and mountain clefts in June and July. For the genius that created it creates now somewhat else. The Greek letters[694] last a little longer, but are already passing under the same sentence and tumbling into the inevitable pit which the creation of new thought opens for all that is old. The new continents are built out of the ruins of an old planet; the new races fed out of the decomposition of the foregoing. New arts destroy the old.[695] See the investment of capital in aqueducts, made useless by hydraulics; fortifications, by gunpowder; roads and canals, by railways; sails, by steam; steam, by electricity.

You admire this tower of granite, weathering the hurts of so many ages. Yet a little waving hand built this huge wall, and that which builds is better than that which is built. The hand that built can topple it down much faster. Better than the hand and nimbler was the invisible thought which wrought through it; and thus ever, behind the coarse effect, is a fine cause, which, being narrowly seen, is itself the effect of a finer cause. Everything looks permanent until its secret is known. A rich estate appears to women and children a firm and lasting fact; to a merchant, one easily created out of any materials, and easily lost. An orchard, good tillage, good grounds, seem a fixture, like a gold mine, or a river, to a citizen; but to a large farmer, not much more fixed than the state of the crop. Nature looks provokingly stable and secular, but it has a cause like all the rest; and when once I comprehend that, will these fields stretch so immovably wide, these leaves hang so individually considerable? Permanence is a word of degrees. Every thing is medial. Moons are no more bounds to spiritual power than bat-balls.

The key to every man is his thought. Sturdy and defying though he look, he has a helm which he obeys, which is the idea after which all his facts are classified. He can only be reformed by showing him a new idea which commands his own. The life of man is a self-evolving circle,[696] which, from a ring imperceptibly small, rushes on all sides outwards to new and larger circles, and that without end. The extent to which this generation of circles, wheel without wheel, will go, depends on the force or truth of the individual soul. For it is the inert effort of each thought, having formed itself into a circular wave of circumstance, as for instance an empire, rules of an art, a local usage, a religious rite, to heap itself on that ridge and to solidify and hem in the life. But if the soul is quick and strong it bursts over that boundary on all sides and expands another orbit on the great deep, which also runs up into a high wave, with attempt again to stop and to bind. But the heart refuses to be imprisoned;[697] in its first and narrowest pulses it already tends outward with a vast force and to immense and innumerable expansions.

Every ultimate fact is only the first of a new series. Every general law only a particular fact of some more general law presently to disclose itself. There is no outside, no inclosing wall, no circumference to us. The man finishes his story,--how good! how final! how it puts a new face on all things! He fills the sky. Lo, on the other side rises also a man and draws a circle around the circle we had just pronounced the outline of the sphere. Then already is our first speaker not man, but only a first speaker. His only redress is forthwith to draw a circle outside of his antagonist. And so men do by themselves. The result of to-day, which haunts the mind and cannot be escaped will presently be abridged into a word, and the principle that seemed to explain nature will itself be included as one example of a bolder generalization. In the thought of to-morrow there is a power to upheave all thy creed, all the creeds, all the literatures of the nations, and marshal thee to a heaven which no epic dream has yet depicted. Every man is not so much a workman in the world as he is a suggestion of that he should be. Men walk as prophecies of the next age.

Step by step we scale this mysterious ladder; the steps are actions, the new prospect is power. Every several result is threatened and judged by that which follows. Every one seems to be contradicted by the new; it is only limited by the new. The new statement is always hated by the old, and, to those dwelling in the old, comes like an abyss of scepticism. But the eye soon gets wonted to it, for the eye and it are effects of one cause; then its innocency and benefit appear, and presently, all its energy spent, it pales and dwindles before the revelation of the new hour.

Fear not the new generalization. Does the fact look crass[698] and material, threatening to degrade thy theory of spirit? Resist it not; it goes to refine and raise thy theory of matter just as much.

There are no fixtures to men, if we appeal to consciousness. Every man supposes himself not to be fully understood; and if there is any truth in him, if he rests at last on the divine soul, I see not how it can be otherwise. The last chamber, the last closet, he must feel was never opened; there is always a residuum unknown, unanalyzable. That is, every man believes that he has a greater possibility.

Our moods do not believe in each other. To-day I am full of thoughts and can write what I please. I see no reason why I should not have the same thought, the same power of expression, to-morrow. What I write, whilst I write it, seems the most natural thing in the world: but yesterday I saw a dreary vacuity in this direction in which now I see so much; and a month hence, I doubt not, I shall wonder who he was that wrote so many continuous pages. Alas for this infirm faith, this will not strenuous, this vast ebb of a vast flow! I am God in nature; I am a weed by the wall.

The continual effort to raise himself above himself,[699] to work a pitch above his last height, betrays itself in a man's relations. We thirst for approbation, yet cannot forgive the approver. The sweet of nature is love; yet if I have a friend I am tormented by my imperfections. The love of me accuses the other party. If he were high enough[700] to slight me, then could I love him, and rise by my affection to new heights. A man's growth is seen in the successive choirs of his friends. For every friend whom he loses for truth, he gains a better. I thought as I walked in the woods and mused on any friends, why should I play with them this game of idolatry? I know and see too well, when not voluntarily blind, the speedy limits of persons called high and worthy. Rich, noble and great they are by the liberality of our speech, but truth is sad. O blessed Spirit, whom I forsake for these, they are not thee! Every personal consideration that we allow costs us heavenly state. We sell the thrones of angels for a short and turbulent pleasure.

How often must we learn this lesson? Men cease to interest us when we find their limitations. The only sin is limitation. As soon as you once come up with a man's limitations, it is all over with him. Has he talents? has he enterprises? has he knowledge? It boots not. Infinitely alluring and attractive was he to you yesterday, a great hope, a sea to swim in; now, you have found his shores, found it a pond, and you care not if you never see it again.

Each new step we take in thought reconciles twenty seemingly discordant facts, as expressions of one law. Aristotle and Plato[701] are reckoned the respective heads of two schools. A wise man will see that Aristotle platonizes. By going one step farther back in thought, discordant opinions are reconciled by being seen to be two extremes of one principle, and we can never go so far back as to preclude a still higher vision.

Beware when the great God lets loose a thinker on this planet. Then all things are at risk. It is as when a conflagration has broken out in a great city, and no man knows what is safe, or where it will end. There is not a piece of science but its flank may be turned to-morrow; there is not any literary reputation, not the so-called eternal names of fame, that may not be revised and condemned. The very hopes of man, the thoughts of his heart, the religion of nations, the manners and morals of mankind are all at the mercy of a new generalization. Generalization is always a new influx of the divinity into the mind. Hence the thrill that attends it.

Valor consists in the power of self-recovery, so that a man cannot have his flank turned, cannot be out-generalled, but put him where you will, he stands. This can only be by his preferring truth to his past apprehension of truth, and his alert acceptance of it from whatever quarter; the intrepid conviction that his laws, his relations to society, his Christianity, his world, may at any time be superseded and decease.

There are degrees in idealism. We learn first to play with it academically, as the magnet was once a toy. Then we see in the heyday of youth and poetry that it may be true, that it is true in gleams and fragments. Then, its countenance waxes stern and grand, and we see that it must be true. It now shows itself ethical and practical. We learn that God is; that he is in me; and that all things are shadows of him. The idealism of Berkeley[702] is only a crude statement of the idealism of Jesus, and that again is a crude statement of the fact that all nature is the rapid efflux of goodness executing and organizing itself. Much more obviously is history and the state of the world at any one time directly dependent on the intellectual classification then existing in the minds of men. The things which are dear to men at this hour are so on account of the ideas which have emerged on their mental horizon, and which cause the present order of things, as a tree bears its apples. A new degree of culture would instantly revolutionize the entire system of human pursuits.

Conversation is a game of circles. In conversation we pluck up the _termini_[703] which bound the common of silence on every side. The parties are not to be judged by the spirit they partake and even express under this Pentecost.[704] To-morrow they will have receded from this high-water mark. To-morrow you shall find them stooping under the old pack-saddles. Yet let us enjoy the cloven flame whilst it glows on our walls. When each new speaker strikes a new light, emancipates us from the oppression of the last speaker to oppress us with the greatness and exclusiveness of his own thought, then yields us to another redeemer, we seem to recover our rights, to become men. O, what truths profound and executable only in ages and orbs, are supposed in the announcement of every truth! In common hours, society sits cold and statuesque. We all stand waiting, empty,--knowing, possibly, that we can be full, surrounded by mighty symbols which are not symbols to us, but prose and trivial toys. Then cometh the god and

converts the statues into fiery men, and by a flash of his eye burns up the veil which shrouded all things, and the meaning of the very furniture, of cup and saucer, of chair and clock and tester, is manifest. The facts which loomed so large in the fogs of yesterday,--property, climate, breeding, personal beauty and the like, have strangely changed their proportions. All that we reckoned settled shakes and rattles; and literatures, cities, climates, religions, leave their foundations and dance before our eyes. And yet here again see the swift circumscription! Good as is discourse, silence is better, and shames it. The length of the discourse indicates the distance of thought betwixt the speaker and the hearer. If they were at a perfect understanding in any part, no words would be necessary thereon. If at one in all parts, no words would be suffered.

Literature is a point outside of our hodiernal[705] circle through which a new one may be described. The use of literature is to afford us a platform whence we may command a view of our present life, a purchase by which we may move it. We fill ourselves with ancient learning, install ourselves the best we can in Greek, in Punic,[706] in Roman houses, only that we may wiselier see French, English and American houses and modes of living. In like manner[707] we see literature best from the midst of wild nature, or from the din of affairs, or from a high religion. The field cannot be well seen from within the field. The astronomer must have his diameter of the earth's orbit as a base to find the parallax of any star.

Therefore we value the poet. All the argument and all the wisdom is not in the encyclopædia, or the treatise on metaphysics, or the Body of Divinity, but in the sonnet or the play. In my daily work I incline to repeat my old steps, and do not believe in remedial force, in the power of change and reform. But some Petrarch[708] or Ariosto,[709] filled with the new wine of his imagination, writes me an ode or a brisk romance, full of daring thought and action. He smites and arouses me with his shrill tones, breaks up my whole chain of habits, and I open my eye on my own possibilities. He claps wings to the sides of all the solid old lumber of the world, and I am capable once more of choosing a straight path in theory and practice.

We have the same need to command a view of the religion of the world. We can never see Christianity from the catechism:--from the pastures, from a boat in the pond, from amidst the songs of wood-birds we possibly may. Cleansed by the elemental light and wind, steeped in the sea of beautiful forms which the field offers us, we may chance to cast a right glance back upon biography. Christianity is rightly dear to the best of mankind; yet was there never a young philosopher whose breeding had fallen into the Christian church by whom that brave text of Paul's was not specially prized, "Then shall also the Son be subject unto Him who put all things under him, that God may be all in all."[710] Let the claims and virtues of persons be never so great and welcome, the instinct of man presses eagerly onward to the impersonal and illimitable, and gladly arms itself against the dogmatism of bigots with this generous word out of the book itself.

The natural world may be conceived of as a system of concentric circles, and we now and then detect in nature slight dislocations which apprize us that this surface on which we now stand is not fixed, but sliding. These manifold tenacious qualities,[711] this chemistry and vegetation, these metals and animals, which seem to stand there for their own sake, are means and methods only, are words of God, and as fugitive as other words. Has the naturalist or chemist learned his craft, who has explored the gravity of atoms and the elective affinities, who has not yet discerned the deeper law whereof this is only a partial or approximate statement, namely that like draws to like, and that the goods which belong to you gravitate to you and need not be pursued with pains and cost? Yet is that statement approximate also, and not final. Omnipresence is a higher fact. Not through subtle subterranean channels need friend and fact be drawn to their counterpart, but, rightly considered, these things proceed from the eternal generation of the soul. Cause and effect are two sides of one fact.

The same law of eternal procession ranges all that we call the virtues, and extinguishes each in the light of a better. The great man will not be prudent in the popular sense; all his prudence will be so much deduction from his grandeur. But it behooves each to see, when he sacrifices prudence, to what god he devotes it; if to ease and pleasure, he had better be prudent still; if to a great trust, he can well spare his mule and panniers who has a winged chariot instead. Geoffrey draws on his boots to go through the woods, that his feet may be safer from the bite of snakes; Aaron never thinks of such a peril. In many years neither is harmed by such an accident. Yet it seems to me that with every precaution you take against such an evil you put yourself into the power of the evil. I suppose that the highest prudence is the lowest prudence. Is this too sudden a rushing from the centre to the verge of our orbit? Think how many times we shall fall back into pitiful calculations before we take up our rest in the great sentiment, or make the verge of to-day the new centre. Besides, your bravest sentiment is familiar to the humblest men. The poor and the low have their way of expressing the last facts of philosophy as well as you. "Blessed be nothing" and "The worse things are, the better they are" are proverbs which express the transcendentalism of common life.

One man's justice is another's injustice; one man's beauty another's ugliness; one man's wisdom another's folly; as one beholds the same objects from a higher point of view. One man thinks justice consists in paying debts, and has no measure in his abhorrence of another who is very remiss in this duty and makes the creditor wait tediously. But that second man has his own way of looking at things; asks himself which debt must I pay first, the debt to the rich, or the debt to the poor? the debt of money, or the debt of thought to mankind, of genius to nature? For you, O broker, there is no other principle but arithmetic. For me, commerce is of trivial import; love, faith, truth of character, the aspiration of man, these are sacred; nor can I detach one duty, like you, from all other duties, and concentrate my forces mechanically on the payment of moneys. Let me live onward; you shall find that, though slower, the progress of my character will liquidate all these debts without injustice to higher claims. If a man should dedicate himself to the payment of notes, would not this be injustice? Owes he no debt but money? And are all claims on him to be postponed to a landlord's or a banker's?

There is no virtue which is final; all are initial. The virtues of society are vices of the saint. The terror of reform is the discovery that we must cast away our virtues, or what we have always esteemed such, into the same pit that has consumed our grosser vices.

Forgive his crimes, forgive his virtues too, Those smaller faults, half converts to the right.[712]

It is the highest power of divine moments that they abolish our contritions also. I accuse myself of sloth and unprofitableness day by day; but when these waves of God flow into me I no longer reckon lost time. I no longer poorly compute my possible achievement by what remains to me of the month or the year; for these moments confer a sort of omnipresence and omnipotence which asks nothing of duration, but sees that the energy of the mind is commensurate with the work to be done, without time.

And thus, O circular philosopher, I hear some reader exclaim, you have arrived at a fine pyrrhonism,[713] at an equivalence and indifferency of all actions, and would fain teach us that _if we are true_, forsooth, our crimes may be lively stones out of which we shall construct the temple of the true God.

I am not careful to justify myself. I own I am gladdened[714] by seeing the predominance of the saccharine principle throughout vegetable nature, and not less by beholding in morals that unrestrained inundation of the principle of good into every chink and hole that selfishness has left open, yea into selfishness and sin itself; so that no evil is pure, nor hell itself without its extreme satisfactions. But lest I should mislead any when I have my own head and obey my whims, let me remind the reader that I am only an experimenter. Do not set the least value on what I do, or the least discredit on what I do not, as if I pretended to settle anything as true or false. I unsettle all things. No facts are to me sacred; none are profane; I simply experiment, an endless seeker with no Past at my back.

Yet this incessant movement and progression which all things partake could never become sensible to us but by contrast to some principle of fixture or stability in the soul. Whilst the eternal generation of circles proceeds, the eternal generator abides. That central life is somewhat superior to creation, superior to knowledge and thought, and contains all its circles. For ever it labors to create a life and thought as large and excellent as itself; but in vain; for that which is made instructs how to make a better.

Thus there is no sleep, no pause, no preservation, but all things renew, germinate and spring. Why should we import rags and relics into the new hour? Nature abhors the old, and old age seems the only disease: all others run into this one. We call it by many names,--fever, intemperance, insanity, stupidity and crime: they are all forms of old age: they are rest, conservatism, appropriation, inertia; not newness, not the way onward. We grizzle every day. I see no need of it. Whilst we converse with what is above us, we do not grow old, but grow young. Infancy, youth, receptive, aspiring, with religious eye looking upward, counts itself nothing and abandons itself to the instruction flowing from all sides. But the man and woman of seventy assume to know all; throw up their hope; renounce aspiration; accept the actual for the necessary and talk down to the young. Let them then become organs of the Holy Ghost; let them be lovers; let them behold truth; and their eyes are uplifted, their wrinkles smoothed, they are perfumed again with hope and power. This old age ought not to creep on a human mind. In nature every moment is new; the past is always swallowed and forgotten; the coming only is sacred. Nothing is secure but life, transition, the energizing spirit. No love can be bound by oath or covenant to secure it against a higher love. No truth so sublime but it may be trivial to-morrow in the light of new thoughts. People wish to be settled: only as far as they are unsettled is there any hope for them.

Life is a series of surprises. We do not guess to-day the mood, the pleasure, the power of to-morrow, when we are building up our being. Of lower states,--of acts of routine and sense, we can tell somewhat, but the masterpieces of God, the total growths and universal movements of the soul, he hideth; they are incalculable. I can know that truth is divine and helpful; but how it shall help me I can have no guess, for _so to be_ is the sole inlet of _so to know_. The new position of the advancing man has all the powers

of the old, yet has them all new. It carries in its bosom all the energies of the past, yet is itself an exhalation of the morning. I cast away in this new moment all my once hoarded knowledge, as vacant and vain. Now for the first time seem I to know any thing rightly. The simplest words,--we do not know what they mean except when we love and aspire.

The difference between talents and character is adroitness to keep the old and trodden round, and power and courage to make a new road to new and better goals. Character makes an overpowering present, a cheerful, determined hour, which fortifies all the company by making them see that much is possible and excellent that was not thought of. Character dulls the impression of particular events. When we see the conqueror we do not think much of any one battle or success. We see that we had exaggerated the difficulty. It was easy to him. The great man is not convulsible or tormentable. He is so much that events pass over him without much impression. People say sometimes, "See what I have overcome; see how cheerful I am; see how completely I have triumphed over these black events." Not if they still remind me of the black event,--they have not yet conquered. Is it conquest to be a gay and decorated sepulchre, or a half-crazed widow, hysterically laughing? True conquest is the causing the black event to fade and disappear as an early cloud of insignificant result in a history so large and advancing.

The one thing which we seek with insatiable desire is to forget ourselves, to be surprised out of our propriety, to lose our sempiternal[715] memory and to do something without knowing how or why; in short to draw a new circle. Nothing great was ever achieved without enthusiasm. The way of life is wonderful. It is by abandonment. The great moments of history are the facilities of performance through the strength of ideas, as the works of genius and religion. "A man," said Oliver Cromwell,[716] "never rises so high as when he knows not whither he is going." Dreams and drunkenness, the use of opium and alcohol are the semblance and counterfeit of this oracular genius, and hence their dangerous attraction for men. For the like reason they ask the aid of wild passions, as in the gaming and war, ape in some manner these flames and generosities of the heart.

NOTES

THE AMERICAN SCHOLAR

[Footnote 1: Games of strength. The public games of Greece were athletic and intellectual contests of various kinds. There were four of importance: the Olympic, held every four years; the Pythian, held every third Olympic year; and the Nemean and Isthmian, held alternate years between the Olympic periods. These great national festivals exercised a strong influence in Greece. They were a secure bond of union between the numerous independent states and did much to help the nation to repel its foreign invaders. In Greece the accomplished athlete was reverenced almost as a god, and cases have been recorded where altars were erected and sacrifices made in his honor. The extreme care and cultivation of the body induced by this national spirit is one of the most significant features of Greek culture, and one which might wisely be imitated in the modern world.]

[Footnote 2: Troubadours. In southern France during the eleventh century, wandering poets went from castle to castle reciting or singing love-songs, composed in the old Provençal dialect, a sort of vulgarized Latin. The life in the great feudal chateaux was so dull that the lords and ladies seized with avidity any amusement which promised to while away an idle hour. The troubadours were made much of and became a strong element in the development of the Southern spirit. So-called Courts of Love were formed where questions of an amorous nature were discussed in all their bearings; learned opinions were expressed on the most trivial matters, and offenses were tried.

Some of the Provençal poetry is of the highest artistic significance, though the mass of it is worthless high-flown trash.]

[Footnote 3: At the time this oration was delivered (1837), many of the authors who have since given America a place in the world's literature were young men writing their first books. "We were," says James Russell Lowell, "still socially and intellectually moored to English thought, till Emerson cut the cable and gave us a chance at the dangers and glories of blue water."]

[Footnote 4: Pole-star. Polaris is now the nearest conspicuous star to the north pole of the celestial equator. Owing to the motion of the pole of the celestial equator around that of the ecliptic, this star will in course of time recede from its proud position, and the brilliant star Vega in the constellation Harp will become the pole-star.]

[Footnote 5: It is now a well-recognized fact in the development of animal life that as any part of the body falls into disuse it in time disappears. Good examples of this are the disappearance of powerful fangs from the mouth of man, the loss of power in the wings of barnyard fowls; and, _vice versa_, as new uses for a member arise, its structure changes to meet the new needs. An example of this is the transformation from the hoof of a horse through the cloven hoofs of the cow to the eventual development of highly expert

fingers in the monkey and man. Emerson assumed the doctrine of evolution to be sufficiently established by the anatomical evidence of gradual development. In his own words: "Man is no up-start in the creation. His limbs are only a more exquisite organization--say rather the finish--of the rudimental forms that have been already sweeping the sea and creeping in the mud. The brother of his hand is even now cleaving the arctic sea in the fin of the whale, and innumerable ages since was pawing the marsh in the flipper of the saurian." A view afterwards condensed into his memorable couplet:

"Striving to be man, the worm Mounts through all the spires of form."]

[Footnote 6: Stint. A prescribed or allotted task, a share of labor.]

[Footnote 7: Ridden. Here used in the sense of dominated.]

[Footnote 8: Monitory pictures. Instructive warning pictures.]

[Footnote 9: The Greek stoic philosopher Epictetus is the author of this saying, not "the old oracle." It occurs in the Encheiridion, or manual, a work put together by a pupil of Epictetus. The original saying of Epictetus is as follows: "Every thing has two handles, the one by which it may be borne, the other by which it may not. If your brother acts unjustly, do not lay hold of the act by that handle wherein he acts unjustly, for this is the handle which cannot be borne: but lay hold of the other, that he is your brother, that he was nurtured with you, and you will lay hold of the thing by that handle by which it can be borne."]

[Footnote 10: Every day, the sun (shines).]

[Footnote 11: Beholden. Emerson here uses this past participle with its original meaning instead of in its present sense of "indebted."]

[Footnote 12: Here we have a reminder of Emerson's pantheism. He means the inexplicable continuity "of what I call God, and fools nature," as Browning expressed it.]

[Footnote 13: His expanding knowledge will become a creator.]

[Footnote 14: Know thyself. Plutarch ascribes this saying to Plato. It is also ascribed to Pythagoras, Chilo, Thales, Cleobulus, Bias, and Socrates; also to Phemonië, a mythical Greek poetess of the ante-Homeric period. Juvenal (Satire XI. 27) says that this precept descended from heaven. "Know thyself" and "Nothing too much" were inscribed upon the Delphic oracle.

"Know then thyself, presume not God to scan; The proper study of mankind is man."

]

[Footnote 15: Observe the brisk movement of these sentences. How they catch and hold the attention, giving a new impulse to the reader's interest!]

[Footnote 16: Nature abhors a vacuum.]

[Footnote 17: Noxious. Harmful.]

[Footnote 18: John Locke (1632-1704), an English philosopher whose work was of especial significance in the development of modern philosophy. The work he is best known by is the exhaustive "Essay on the Human Understanding," in which he combated the theory of Descartes, that every man has certain "innate ideas." The innate-idea theory was first proved by the philosopher Descartes in this way. Descartes began his speculations from a standpoint of absolute doubt. Then he said, "I think, therefore I am," and from this formula he built up a number of ideas innate to the human mind, ideas which we cannot but hold. Locke's "Essay on the Human Understanding" did much to discredit Descartes' innate ideas, which had been very generally accepted in Europe before.]

[Footnote 19: Francis Bacon, Baron Verulam, Viscount Saint Alban's (1561-1626), a famous English statesman and philosopher. He occupied high public offices, but in 1621 was convicted of taking bribes in his office of Lord Chancellor. He pleaded guilty and was sentenced to imprisonment and a fine of forty thousand pounds. Both these sentences were remitted, however. In the seventeenth century, judicial corruption was so common that Bacon's offence was not considered so gross as it would now be. As a philosopher Bacon's rank has been much disputed. While some claim that to his improved method of studying nature are chiefly to be attributed the prodigious strides taken by modern science, others deny him all merit in this respect. His best known works are:

"The Novum Organum," a philosophical treatise; "The Advancement of Learning," a remarkable argument in favor of scholarship; and the short essays on subjects of common interest, usually printed under the simple title "Bacon's Essays."]

[Footnote 20: Third Estate. The thirteenth century was the age when the national assemblies of most European countries were putting on their definite shape. In most of them the system of _estates_ prevailed. These in most countries were three--nobles, clergy, and commons, the commons being the third estate. During the French Revolution the Third Estate, or Tiers Etat, asserted its rights and became a powerful factor in French politics, choosing its own leaders and effecting the downfall of its oppressors.]

[Footnote 21: Restorers of readings. Men who spend their lives trying to improve and correct the texts of classical authors, by comparing the old editions with each other and picking out the version which seem most in accordance with the authors' original work.]

[Footnote 22: Emendators. The same as restorers of readings.]

[Footnote 23: Bibliomaniacs. Men with a mania for collecting rare and beautiful books. Not a bad sort of mania, though Emerson never had any sympathy for it.]

[Footnote 24: To many readers Emerson's own works richly fulfill this obligation. He himself lived continually in such a lofty mental atmosphere that no one can come within the circle of his influence without being stimulated and elevated.]

[Footnote 25: Genius, the possession of a thoroughly active soul, ought not to be the special privilege of favorites of fortune, but the right of every sound man.]

[Footnote 26: They stunt my mental growth. A man should not accept another man's conclusions, but merely use them as steps on his upward path.]

[Footnote 27: If you do not employ such talent as you have in original labor, in bearing the mental fruit of which you are capable, then you do not vindicate your claim to a share in the divine nature.]

[Footnote 28: Disservice. Injury.]

[Footnote 29: In original composition of any sort our efforts naturally flow in the channels worn for us by the first dominating streams of early genius. The conventional is the continual foe of all true art.]

[Footnote 30: Emerson is continually stimulating us to look at things in new ways. Here, for instance, at once the thought comes: "Is it not perhaps possible that the transcendent genius of Shakespeare has been rather noxious than beneficent in its influence on the mind of the world? Has not the all-pervading Shakespearian influence flooded and drowned out a great deal of original genius?"]

[Footnote 31: That is,--when in his clear, seeing moments he can distil some drops of truth from the world about him, let him not waste his time in studying other men's records of what they have seen.]

[Footnote 32: While Emerson's verse is frequently unmusical, in his prose we often find passages like this instinct with the fairest poetry.]

[Footnote 33: Geoffrey Chaucer (1340-1400). The father of English poetry. Chaucer's chief work is the "Canterbury Tales," a series of stories told by pilgrims traveling in company to Canterbury. Coleridge, the poet, wrote of Chaucer: "I take unceasing delight in Chaucer; his manly cheerfulness is especially delicious to me in my old age. How exquisitely tender he is, yet how free from the least touch of sickly melancholy or morbid drooping." Chaucer's poetry is above all things fresh. It breathes of the morning of literature. Like Homer he had at his command all the riches of a new language undefiled by usage from which to choose.

"Dan Chaucer, well of English undefyled, On Fame's eternall beadroll worthie to be fyled."

]

[Footnote 34: Andrew Marvell (1620-1678). An eminent English patriot and satirist. As a writer he is chiefly known by his "Rehearsal Transposed," written in answer to a fanatical defender of absolute power. When a young man he was assistant to the poet Milton, who was then Latin secretary to Oliver Cromwell. Marvell's wit and distinguished abilities rendered him formidable to the corrupt administration of Charles II., who attempted without success to buy his friendship. Emerson's literary perspective is a bit unusual when he speaks of Marvell as "one of the great English poets." Marvell hardly ranks with Chaucer, Shakespeare, and Milton.]

[Footnote 35: John Dryden (1631-1700). A celebrated English poet. Early in life he wrote almost entirely for the stage and achieved great success. In the latter part of his life, however, according to Macaulay, he "turned his powers in a new direction with success the most splendid and decisive. The first rank in poetry was beyond his reach, but he secured the most honorable place in the second.... With him died the secret of the old poetical diction of England,--the art of producing rich effects by familiar words."]

[Footnote 36: Plato (429-347 B.C.). One of the most illustrious philosophers of all time. Probably no other philosopher has contributed so much as Plato to the moral and intellectual training of the human race. This pre-eminence is due not solely to his transcendent intellect, but also in no small measure to his poetic power and to that unrivaled grace of style which led the ancients to say that if Jove should speak Greek he would speak like Plato. He was a remarkable example of that universal culture of body and mind which characterized the last period of ancient Greece. He was proficient in every branch of art and learning and was such a brilliant athlete that he contended in the Isthmian and Pythian games.]

[Footnote 37: Gowns. The black gown worn occasionally in America and always in England at the universities; the distinctive academic dress is a cap and gown.]

[Footnote 38: Pecuniary foundations. Gifts of money for the support of institutions of learning.]

[Footnote 39: Wit is here used in its early sense of intellect, good understanding.]

[Footnote 40: Valetudinarian. A person of a weak, sickly constitution.]

[Footnote 41: Mincing. Affected.]

[Footnote 42: Preamble. A preface or introduction.]

[Footnote 43: Dumb abyss. That vast immensity of the universe about us which we can never understand.]

[Footnote 44: I comprehend its laws; I lose my fear of it.]

[Footnote 45: Silkworms feed on mulberry-leaves. Emerson describes what science calls "unconscious cerebration."]

[Footnote 46: Ripe fruit. Emerson's ripe fruit found its way into his diary, where it lay until he needed it in the preparation of some lecture or essay.]

[Footnote 47: I. Corinthians xv. 53.]

[Footnote 48: Empyrean. The region of pure light and fire; the ninth heaven of ancient astronomy.

"The deep-domed empyrean Rings to the roar of an angel onset."

]

[Footnote 49: Ferules. According to the methods of education fifty years ago, it was quite customary for the teacher to punish a school-child with his ferule or ruler.]

[Footnote 50: Oliver Wendell Holmes cites this last sentence as the most extreme development of the distinctively Emersonian style. Such things must be read not too literally but rapidly, with alert attention to what the previous train of thought has been.]

[Footnote 51: Savoyards. The people of Savoy, south of Lake Geneva in Switzerland.]

[Footnote 52: Emerson's style is characterized by the frequent use of pithy epigrams like this.]

[Footnote 53: Sir Isaac Newton (1642-1727). A great English philosopher and mathematician. He is famous as having discovered the law of gravitation.]

[Footnote 54: Unhandselled. Uncultivated, without natural advantages. A handsel is a gift.]

[Footnote 55: Druids. The ancient priesthood of the Britons in Cæsar's time. They had immense power among these primitive peoples. They were the judges as well as the priests and decided all questions. It is believed that they made human sacrifices to their gods in the depths of the primeval forest, but not much is known of their rites.]

[Footnote 56: Berserkers. Berserker was a redoubtable hero in Scandinavian mythology, the grandson of the eight-handed Starkodder and the beautiful Alfhilde. He had twelve sons who inherited the wild-battle frenzy, or berserker rage. The sagas, the great Scandinavian epics, are full of stories of heroes who are seized with this fierce longing for battle, murder, and sudden death. The name means bear-shirt and has been connected with the old _were-wolf_ tradition, the myth that certain people were able to change into man-devouring wolves with a wolfish mad desire to rend and kill.]

[Footnote 57: Alfred, surnamed the Great (848-901), king of the West Saxons in England. When he ascended the throne his country was in a deplorable condition from the repeated inroads of northern invaders. He eventually drove them out and established a secure government. England owes much to the efforts of Alfred. He not only fought his country's battles, but also founded schools, translated Latin books into his native tongue, and did much for the intellectual improvement of his people.]

[Footnote 58: The hoe and the spade. "In spite of Emerson's habit of introducing the names of agricultural objects into his writing ('Hay, corn, roots, hemp, flax, apples, wool, and wood' is a line from one of his poems), his familiarity therewith is evidently not so great as he would lead one to imagine. 'Take care, papa,' cried his little son, seeing him at work with a spade, 'you will dig your leg.'"]

[Footnote 59: John Flamsteed (1646-1719). An eminent English astronomer. He appears to have been the first to understand the theory of the equation of time. He passed his life in patient observation and determined the position of 2884 stars.]

[Footnote 60: Sir William Herschel (1738-1822). One of the greatest astronomers that any age or nation has produced. Brought up to the profession of music, it was not until he was thirty years old that he turned his attention to astronomy. By rigid economy he obtained a telescope, and in 1781 discovered the planet Uranus. This great discovery gave him great fame and other substantial advantages. He was made private astronomer to the king and received a pension. His discoveries were so far in advance of his time, they had so little relation with those of his predecessors, that he may almost be said to have created a new science by revealing the immensity of the scale on which the universe is constructed.]

[Footnote 61: Nebulous. In astronomy a nebula is a luminous patch in the heavens far beyond the solar system, composed of a mass of stars or condensed gases.]

[Footnote 62: Fetich. The word seems to have been applied by Portuguese sailors and traders on the west coast of Africa to objects worshiped by the natives, which were regarded as charms or talismans. Of course the word here means an object of blind admiration and devotion.]

[Footnote 63: Cry up, to praise, extol.]

[Footnote 64: Ancient and honorable. Isaiah ix. 15.]

[Footnote 65: Complement. What is needed to complete or fill up some quantity or thing.]

[Footnote 66: Signet. Seal. Emerson is not always felicitous in his choice of metaphors.]

[Footnote 67: Macdonald. In Cervantes' "Don Quixote," Sancho Panza, the squire to the "knight of the metaphysical countenance," tells a story of a gentleman who had asked a countryman to dine with him. The farmer was pressed to take his seat at the head of the table, and when he refused out of politeness to his host, the latter became impatient and cried: "Sit there, clod-pate, for let me sit wherever I will, that will still be the upper end, and the place of worship to thee." This saying is commonly attributed to Rob Roy, but Emerson with his usual inaccuracy in such matters places it in the mouth of Macdonald,--which Macdonald is uncertain.]

[Footnote 68: Carolus Linnæus (1707-1778). A great Swedish botanist. He did much to make botany the orderly science it now is.]

[Footnote 69: Sir Humphry Davy (1778-1829). The most famous of English chemists. The most important to mankind of his many discoveries was the safety-lamp to be used in mines where there is danger of explosion from fire-damp.]

[Footnote 70: Baron George Cuvier (1769-1832). An illustrious French philosopher, statesman, and writer who made many discoveries in the realm of natural history, geology and philosophy.]

[Footnote 71: The moon. The tides are caused by the attraction of the moon and the sun. The attraction of the moon for the water nearest the moon is somewhat greater than the attraction of the earth's center. This causes a slight bulging of the water toward the moon and a consequent high tide.]

[Footnote 72: Emerson frequently omits the principal verb of his sentences as here: "In a century _there may exist_ one or two men."]

[Footnote 73: This obscurely constructed sentence means: "For their acquiescence in a political and social inferiority the poor and low find some compensation in the immense moral capacity thereby gained."]

[Footnote 74: "They" refers to the hero or poet mentioned some twenty lines back.]

[Footnote 75: Comprehendeth. Here used in the original sense _to include_. The perfect man should be so thoroughly developed at every point that he will possess a share in the nature of every man.]

[Footnote 76: By the Classic age is generally meant the age of Greece and Rome; and by the Romantic is meant the middle ages.]

[Footnote 77: Introversion. Introspection is the more usual word to express the analytic self-searching so common in these days.]

[Footnote 78: Second thoughts. Emerson uses the word here in the same sense as the French _arrière-pensée_, a mental reservation.]

[Footnote 79:

"And thus the native hue of resolution Is sicklied o'er with the pale cast of thought." _Hamlet_, Act III, Sc. 1.

]

[Footnote 80: Movement. The French Revolution.]

[Footnote 81: Let every common object be credited with the diviner attributes which will class it among others of the same importance.]

[Footnote 82: Oliver Goldsmith (1728-1774). An eminent English poet and writer. He is best known by the comedy "She Stoops to Conquer," the poem "The Deserted Village," and the "Vicar of Wakefield." "Of all romances in miniature," says Schlegel, the great German critic, "the 'Vicar of Wakefield' is the most exquisite." It is probably the most popular English work of fiction in Germany.]

[Footnote 83: Robert Burns (1759-1796). A celebrated Scottish poet. The most striking characteristics of Burns' poetry are simplicity and intensity, in which he is scarcely, if at all, inferior to any of the greatest poets that have ever lived.]

[Footnote 84: William Cowper (1731-1800). One of the most popular of English poets. His poem "The Task" was probably more read in his day than any poem of equal length in the language. Cowper also made an excellent translation of Homer.]

[Footnote 85: Johann Wolfgang von Goethe (1749-1832). The most illustrious name in German literature; a great poet, dramatist, novelist, philosopher, and critic. The Germans regard Goethe with the same veneration we accord to Shakespeare. The colossal drama "Faust" is the most splendid product of his genius, though he wrote a large number of other plays and poems.]

[Footnote 86: William Wordsworth (1770-1850). By many considered the greatest of modern English poets. His descriptions of the ever-varying moods of nature are the most exquisite in the language. Matthew Arnold in his essay on Emerson says: "As Wordsworth's poetry is, in my judgment, the most important work done in verse in our language during the present century, so Emerson's 'Essays' are, I think, the most important work done in prose."]

[Footnote 87: Thomas Carlyle (1795-1881). A famous English essayist, historian, and speculative philosopher. It is scarcely too much to say that no other author of this century has exerted a greater influence not merely upon the literature but upon the mind of the English nation than Carlyle. Emerson was an intimate friend of Carlyle, and during the greater part of his life maintained a correspondence with the great Englishman. An interesting description of their meeting will be found among the "Critical Opinions" at the beginning of the work.]

[Footnote 88: Alexander Pope (1688-1744). The author of the "Essay on Criticism," "Rape of the Lock," the "Essay on Man," and other famous poems. Pope possessed little originality or creative imagination, but he had a vivid sense of the beautiful and an exquisite taste. He owed much of his popularity to the easy harmony of his verse and the keenness of his satire.]

[Footnote 89: Samuel Johnson (1709-1784). One of the eminent writers of the eighteenth century. He wrote "Lives of the Poets," poems, and probably the most remarkable work of the kind ever produced by a single person, an English dictionary.]

[Footnote 90: Edward Gibbon (1737-1794). One of the most distinguished of English historians. His great work is the "Decline and Fall of the Roman Empire." Carlyle called Gibbon, "the splendid bridge from the old world to the new."]

[Footnote 91: Emanuel Swedenborg (1688-1772). A great Swedish theologian, naturalist, and mathematician, and the founder of a religious sect which has since his death become prominent among the philosophical schools of Christianity.]

[Footnote 92: Johann Heinrich Pestalozzi (1746-1827). A Swiss teacher and educational reformer of great influence in his time.]

COMPENSATION

[Footnote 93: These lines are printed under the title of _Compensation_ in Emerson's collected poems. He has also another poem of eight lines with the same title.]

[Footnote 94: Documents, data, facts.]

[Footnote 95: This doctrine, which a little observation would confute, is still taught by some.]

[Footnote 96: Doubloons, Spanish and South American gold coins of the value of about $15.60 each.]

[Footnote 97: Polarity, that quality or condition of a body by virtue of which it exhibits opposite or contrasted properties in opposite or contrasted directions.]

[Footnote 98: Systole and diastole, the contraction and dilation of the heart and arteries.]

[Footnote 99: They are increased and consequently want more.]

[Footnote 100: Intenerate, soften.]

[Footnote 101: White House, the popular name of the presidential mansion at Washington.]

[Footnote 102: Explain the phrase _eat dust_.]

[Footnote 103: Overlook, oversee, superintend.]

[Footnote 104: Res nolunt, etc. Translated in the previous sentence.]

[Footnote 105: The world ... dew. Explain the thought. What gives the earth its shape?]

[Footnote 106: The microscope ... little. This statement is not in accordance with the facts, if we are to understand _perfect_ in the sense which the next sentence would suggest.]

[Footnote 107: Emerson has been considered a pantheist.]

[Footnote 108: _[Greek: Hoi kyboi]_, etc. The translation follows in the text. This old proverb is quoted by Sophocles, (Fragm. LXXIV.2) in the form:

[Greek: Aei gar eu piptousin oi Dios kyboi],

Emerson uses it in _Nature_ in the form "Nature's dice are always loaded."]

[Footnote 109: Amain, with full force, vigorously.]

[Footnote 110: The proverb is quoted by Horace, Epistles, I, X.24:

"Naturam expelles furca, tamen usque recurret."

A similar thought is expressed by Juvenal, Seneca, Cicero, and Aristophanes.]

[Footnote 111: Augustine, Confessions, B. I.]

[Footnote 112: Jupiter, the supreme god of the Romans, the Zeus of the Greeks.]

[Footnote 113: Tying up the hands. The expression is used figuratively, of course.]

[Footnote 114: The supreme power in England is vested in Parliament.]

[Footnote 115: Prometheus stole fire from heaven to benefit the race of men. In punishment for this Jupiter chained him to a rock and set an eagle to prey upon his liver. Some unknown and terrible danger threatened Jupiter, the secret of averting which only Prometheus knew. For this secret Jupiter offered him his freedom.]

[Footnote 116: Minerva, goddess of wisdom, who sprang full-armed from the brain of Jupiter. The secret which she held is told in the following lines.]

[Footnote 117: Aurora, goddess of the dawn. Enamored of Tithonus, she persuaded Jupiter to grant him immortality, but forgot to ask for him immortal youth. Read Tennyson's poem on _Tithonus_.]

[Footnote 118: Achilles, the hero of Homer's _Iliad_. His mother Thetis, to render him invulnerable, plunged him into the waters of the Styx. The heel by which she held him was not washed by the waters and remained vulnerable. Here he received a mortal wound.]

[Footnote 119: Siegfried, hero of the Nibelungenlied, the old German epic poem. Having slain a dragon, he bathed in its blood and became covered with an invulnerable horny hide, only one small spot between his shoulders which was covered by a leaf remaining vulnerable. Into this spot the treacherous Hagen plunged his lance.]

[Footnote 120: Nemesis, a Greek female deity, goddess of retribution, who visited the righteous anger of the gods upon mortals.]

[Footnote 121: The Furies or Eumenides, stern and inexorable ministers of the vengeance of the gods.]

[Footnote 122: Ajax and Hector, Greek and Trojan heroes in the Trojan War. See Homer's _Iliad_. Achilles slew Hector and, lashing him to his chariot with the belt which Ajax had given Hector, dragged him round the walls of Troy. Ajax committed suicide with the sword which Hector had presented to him.]

[Footnote 123: Thasians, inhabitants of the island of Thasus. The story here told of the rival of the athlete Theagenes is found in Pausanias' _Description of Greece_, Book VI. chap. XI.]

[Footnote 124: Shakespeare, the greatest of English writers, seems to have succeeded entirely or almost entirely in removing the personal element from his writings.]

[Footnote 125: Hellenic, Greek.]

[Footnote 126: Tit for tat, etc. This paragraph is composed of a series of proverbs.]

[Footnote 127: Edmund Burke (1729?-1797), illustrious Irish statesman, orator, and author.]

[Footnote 128: Pawns, the pieces of lowest rank in chess.]

[Footnote 129: What is the meaning of _obscene_ here? Compare the Latin.]

[Footnote 130: Polycrates, a tyrant of Samos, who was visited with such remarkable prosperity that he was advised by a friend to break the course of it by depriving himself of some valued possession. In accordance with this advice he cast into the sea an emerald ring which he considered his rarest treasure. A few days later a fisherman presented the monarch with a large fish inside of which the ring was found. Soon after this Polycrates fell into the power of an enemy and was nailed to a cross.]

[Footnote 131: Scot and lot, "formerly, a parish assessment laid on subjects according to their ability. Now, a phrase for obligations of every kind regarded collectively." (Webster.)]

[Footnote 132: Read Emerson's essay on _Gifts_.]

[Footnote 133: Worm worms, breed worms.]

[Footnote 134: Compare the old proverb "Murder will out." See Chaucer, _N.P.T._, 232 and 237, and _Pr. T._, 124.]

[Footnote 135:

"Et semel emissum volat irrevocabile verbum." HORACE, _EPIST._, I. XVIII. 65.

]

[Footnote 136: Stag in the fable. See _Æsop_, LXVI. 184, _Cerva et Leo_; Phædrus I. 12. _Cervus ad fontem_; La Fontaine, vi. 9, _Le Cerf se Voyant dans l'eau_.]

[Footnote 137: See the quotation from St. Bernard farther on.]

[Footnote 138: Withholden, old participle of _withhold_, now _withheld_.]

[Footnote 139: What is the etymology of the word _mob_?]

[Footnote 140: Optimism and Pessimism. The meanings of these two opposites are readily made out from the Latin words from which they come.]

[Footnote 141: St. Bernard de Clairvaux (1091-1153), French ecclesiastic.]

[Footnote 142: Jesus. Holmes writes of Emerson: "Jesus was for him a divine manifestation, but only as other great human souls have been in all ages and are to-day. He was willing to be called a Christian just as he was willing to be called a Platonist.... If he did not worship the 'man Christ Jesus' as the churches of Christendom have done, he followed his footsteps so nearly that our good Methodist, Father Taylor, spoke of him as more like Christ than any man he had known."]

[Footnote 143: The first _his_ refers to Jesus, the second to Shakespeare.]

[Footnote 144: Banyan. What is the characteristic of this tree that makes it appropriate for this figure?]

SELF-RELIANCE

[Footnote 145: Ne te, etc. "Do not seek for anything outside of thyself." From Persius, _Sat._ I. 7. Compare Macrobius, _Com. in Somn. Scip._, I. ix. 3, and Boethius, _De Consol. Phil._, IV. 4.]

[Footnote 146: _Epilogue to Beaumont and Fletcher's Honest Man's Fortune_.]

[Footnote 147: These lines appear in Emerson's _Quatrains_ under the title _Power_.]

[Footnote 148: Genius. See the paragraph on genius in Emerson's lecture on _The Method of Nature_, one sentence of which runs: "Genius is its own end, and draws its means and the style of its architecture from within, going abroad only for audience, and spectator."]

[Footnote 149: "The man that stands by himself, the universe stands by him also."--EMERSON, _Behavior_.]

[Footnote 150: Plato (429-347 B.C.), (See note 36.)]

[Footnote 151: Milton (1608-1674), the great English epic poet, author of _Paradise Lost._

"O mighty-mouth'd inventor of harmonies, O skill'd to sing of Time or Eternity, God-gifted organ-voice of England, Milton, a name to resound for ages."--TENNYSON.

]

[Footnote 152: "The great poet makes feel our own wealth."--EMERSON, _The Over-Soul_.]

[Footnote 153: Then most when, most at the time when.]

[Footnote 154: "The imitator dooms himself to hopeless mediocrity."--EMERSON, _Address to the Senior Class in Divinity College, Cambridge_.]

[Footnote 155:

"For words, like Nature, half reveal And half conceal the soul within." TENNYSON, _In Memoriam_, V. I.

]

[Footnote 156: Trust thyself. This is the theme of the present essay, and is a lesson which Emerson is never tired of teaching. In _The American Scholar_ he says:

"In self-trust all the virtues are comprehended." In the essay on _Greatness_:

"Self-respect is the early form in which greatness appears.... Stick to your own.... Follow the path your genius traces like the galaxy of heaven for you to walk in."

Carlyle says:

"The fearful unbelief is unbelief in yourself."

]

[Footnote 157: Chaos ([Greek: Chaos]), the confused, unorganized condition in which the world was supposed to have existed before it was reduced to harmony and order; hence, utter confusion and disorder.]

[Footnote 158: These, _i.e._, children, babes, and brutes.]

[Footnote 159: Four or five. Supply the noun.]

[Footnote 160: Nonchalance, a French word meaning _indifference_, _coolness_.]

[Footnote 161: Pit in the playhouse, formerly, the seats on the floor below the level of the stage. These cheap seats were occupied by a class who did not hesitate to express their opinions of the performances.]

[Footnote 162: Eclat, a French word meaning _brilliancy of success_, _striking effect_.]

[Footnote 163: "Lethe, the river of oblivion."--_Paradise Lost_. Oblivion, forgetfulness.]

[Footnote 164: Who. What is the construction?]

[Footnote 165: Nonconformist, one who does not conform to established usages or opinions. Emerson considers conformity and consistency as the two terrors that scare us from self-trust. (See note 182.)]

[Footnote 166: Explore if it be goodness, investigate for himself and see if it be really goodness.

"Prove all things; hold fast that which is good." PAUL, _I. Thes._ v. 21.

]

[Footnote 167: Suffrage, approval.

"What stronger breastplate than a heart untainted? Thrice is he arm'd that hath his quarrel just; And he but naked, though lock'd up in steel, Whose conscience with injustice is corrupted." SHAKESPEARE, _II. Henry VI._, III. 2.

]

[Footnote 168: "There is nothing either good or bad, but thinking makes it so." _Hamlet_, II. 2.]

[Footnote 169: Barbadoes, an island in the Atlantic Ocean, one of the Lesser Antilles. The negroes, composing by far the larger part of the population, were formerly slaves.]

[Footnote 170: He had rather have his actions ascribed to whim and caprice than to spend the day in explaining them.]

[Footnote 171: Diet and bleeding, special diet and medical care, used figuratively, of course.]

[Footnote 172: Read Emerson's essay on _Greatness_.]

[Footnote 173: The precise man, precisely what kind of man.]

[Footnote 174: "By their fruits ye shall know them."--_Matthew_, vii. 16 and 20.]

[Footnote 175: With, notwithstanding, in spite of.]

[Footnote 176: Of the bench, of an impartial judge.]

[Footnote 177: Bound their eyes with ... handkerchief, in this game of blindman's-buff.]

[Footnote 178: "Pin thy faith to no man's sleeve; hast thou not two eyes of thy own?"--CARLYLE.]

[Footnote 179: Give examples of men who have been made to feel the displeasure of the world for their nonconformity.]

[Footnote 180: "Nihil tam incertum nec tam inæstimabile est quam animi multitudinis."--LIVY, xxxi. 34.

"Mobile mutatur semper cum principe vulgus." CLAUDIANUS, _De IV. Consul. Honorii_, 302.

]

[Footnote 181: _The other terror._ The first, conformity, has just been treated.]

[Footnote 182: Consistency. Compare, on the other hand, the well-known saying, "Consistency, thou art a jewel."]

[Footnote 183: Orbit, course in life.]

[Footnote 184: Somewhat, something.]

[Footnote 185: See _Genesis_, xxxix. 12.]

[Footnote 186: Pythagoras (fl. about 520 B.C.), a Greek philosopher. His society was scattered and persecuted by the fury of the populace.]

[Footnote 187: Socrates (470?-399 B.C.), the great Athenian philosopher, whose teachings are the subject of most of Plato's writings, was accused of corrupting the youth, and condemned to drink hemlock.]

[Footnote 188: Martin Luther (1483-1546) preached against certain abuses of the Roman Catholic Church and was excommunicated by the Pope. He became the leader of the Protestant Reformation.]

[Footnote 189: Copernicus (1473-1543) discovered the error of the old Ptolemaic system of astronomy and showed that the sun is the centre of our planetary system. Fearing the persecution of the church, he hesitated long to publish his discovery, and it was many years after his death before the world accepted his theory.]

[Footnote 190: Galileo (1564-1642), the famous Italian astronomer and physicist, discoverer of the satellites of Jupiter and the rings of Saturn, was thrown into prison by the Inquisition.]

[Footnote 191: Sir Isaac Newton. (See note 53.)]

[Footnote 192: Andes, the great mountain system of South America.]

[Footnote 193: Himmaleh, Himalaya, the great mountain system of Asia.]

[Footnote 194: Alexandrian stanza. The Alexandrian line consists of twelve syllables (iambic hexameter). Neither the acrostic nor the Alexandrine has the property assigned to it here. A palindrame reads the same forward as backward, as:

"Madam, I'm Adam"; "Signa te signa; temere me tangis et angis";

or the inscription on the church of St. Sophia, Constantinople:

[Greek: "Nipson anomêmata mê monan opsin,"]

]

[Footnote 195: The reference is to sailing vessels, of course.]

[Footnote 196: Scorn eyes, scorn observers.]

[Footnote 197: Chatham, William Pitt, Earl of Chatham (1708-1778), this distinguished statesman and orator. He became very popular as a statesman and was known as "The Great Commoner."]

[Footnote 198: Adams. The reference is presumably to Samuel Adams (1722-1803), a popular leader and orator in the cause of American freedom. He was a member of the Continental Congress and a signer of the Declaration of Independence. Emerson may have in mind, however, John Adams (1735-1826), second president of the United States.]

[Footnote 199: Spartan. The ancient Spartans were noted for their courage and fortitude.]

[Footnote 200: Julius Cæsar (100-44 B.C.), the great Roman general, statesman, orator, and author.]

[Footnote 201: St. Anthony (251-356), Egyptian founder of monachism, the system of monastic seclusion.]

[Footnote 202: George Fox (1624-1691), English founder of the Society of Friends or Quakers.]

[Footnote 203: John Wesley (1703-1791), English founder of the religious sect known as Methodists.]

[Footnote 204: Thomas Clarkson (1760-1846), English philanthropist and abolitionist.]

[Footnote 205: Scipio (235-184 B.C.), the great Roman general who defeated Hannibal and decided the fate of Carthage. The quotation is from _Paradise Lost_, Book IX., line 610.]

[Footnote 206: In the story of _Abou Hassan_ or _The Sleeper Awakened_ in the _Arabian Nights_ Abou Hassan awakes and finds himself treated in every respect as the Caliph Haroun Al-raschid. Shakespeare has made use of a similar trick in _Taming of the Shrew_, where Christopher Sly is put to bed drunk in the lord's room and on awaking is treated as a lord.]

[Footnote 207: Alfred the Great (849-901), King of the West Saxons. He was a wise king, a great scholar, and a patron of learning.]

[Footnote 208: Scanderbeg, George Castriota (1404-1467), an Albanian chief who embraced Christianity and carried on a successful war against the Turks.]

[Footnote 209: Gustavus Adolphus (1594-1632), King of Sweden, the hero of Protestantism in the Thirty Years' War.]

[Footnote 210: Hieroglyphic, a character in the picture-writing of the ancient Egyptian priests; hence, hidden sign.]

[Footnote 211: Parallax, an angle used in astronomy in calculating the distance of a heavenly body. The parallax decreases as the distance of the body increases.]

[Footnote 212: The child has the advantage of the experience of all his ancestors. Compare Tennyson's line in _Locksley Hall_:

"I the heir of all the ages, in the foremost files of time."

]

[Footnote 213: "Why should we grope among the dry bones of the past, or put the living generation into masquerade out of its faded wardrobe? The sun shines to-day also."--EMERSON, _Introd. to Nature, Addresses, etc._]

[Footnote 214: Explain the thought in this sentence.]

[Footnote 215: Judas Iscariot, who betrayed Jesus.]

[Footnote 216: Agent, active, acting.]

[Footnote 217: An allusion to the Mohammedan custom of removing the shoes before entering a mosque.]

[Footnote 218: Of a truth, men are mystically united; a mystic bond of brotherhood makes all men one.]

[Footnote 219: Thor and Woden. Woden or Odin was the chief god of Scandinavian mythology. Thor, his elder son, was the god of thunder. From these names come the names of the days Wednesday and Thursday.]

[Footnote 220: Explain the meaning of this sentence.]

[Footnote 221: You, or you, addressing different persons.]

[Footnote 222: "The truth shall make you free."--_John_, viii. 32.]

[Footnote 223: Antinomianism, the doctrine that the moral law is not binding under the gospel dispensation, faith alone being necessary to salvation.]

[Footnote 224: "There is no sorrow I have thought more about than that--to love what is great, and try to reach it, and yet to fail." GEORGE ELIOT, _Middlemarch_, lxxvi.]

[Footnote 225: Explain the use of _it_ in these expressions.]

[Footnote 226: Stoic, a disciple of the Greek philosopher Zeno, who taught that men should be free from passion, unmoved by joy and grief, and should submit without complaint to the inevitable.]

[Footnote 227: Word made flesh, see _John_, i. 14.]

[Footnote 228: Healing to the nations, see _Revelation_, xxii. 2.]

[Footnote 229: In what prayers do men allow themselves to indulge?]

[Footnote 230:

"Prayer is the soul's sincere desire, Uttered or unexpressed, The motion of a hidden fire That trembles in the breast." MONTGOMERY, _What is Prayer?_]

[Footnote 231: Caratach (Caractacus) is a historical character in Fletcher's (1576-1625) tragedy of _Bonduca_(Boadicea).]

[Footnote 232: Zoroaster, a Persian philosopher, founder of the ancient Persian religion. He flourished long before the Christian era.]

[Footnote 233: "Speak thou with us, and we will hear: but let not God speak with us, lest we die."--_Exodus_, xx. 19. Compare also the parallel passage in _Deuteronomy_, v. 25-27.]

[Footnote 234: John Locke. (See note 18.)]

[Footnote 235: Lavoisier (1743-1794), celebrated French chemical philosopher, discoverer of the composition of water.]

[Footnote 236: James Hutton (1726-1797), great Scotch geologist, author of the _Theory of the Earth_.]

[Footnote 237: Jeremy Bentham (1748-1832), English philosopher, jurist, and legislative reformer.]

[Footnote 238: Fourier (1772-1837), French socialist, founder of the system of Fourierism.]

[Footnote 239: Calvinism, the doctrines of John Calvin (1509-1564). French theologian and Protestant reformer. A cardinal doctrine of Calvinism is predestination.]

[Footnote 240: Quakerism, the doctrines of the Quakers or Friends, a society founded by George Fox (1624-1691).]

[Footnote 241: Emanuel Swedenborg (1688-1772), Swedish theosophist, founder of the New Jerusalem Church. He is taken by Emerson in his _Representative Men_ as the type of the mystic, and is often mentioned in his other works.]

[Footnote 242: "Though we travel the world over to find the beautiful, we must carry it with us, or we find it not."--EMERSON, _Art_.]

[Footnote 243: Thebes, a celebrated ruined city of Upper Egypt.]

[Footnote 244: Palmyra, a ruined city of Asia situated in an oasis of the Syrian desert, supposed to be the Tadmor built by Solomon in the wilderness (_II. Chr._, viii. 4).]

[Footnote 245:

"Vain, very vain, my weary search to find That bliss which only centers in the mind.... Still to ourselves in every place consign'd, Our own felicity we make or find." GOLDSMITH (and JOHNSON), _The Traveler_, 423-32.

"He that has light within his own clear breast May sit i' th' center, and enjoy bright day; But he that hides a dark soul, and foul thoughts, Benighted walks under the mid-day sun; Himself in his own dungeon." MILTON, _Comus_, 381-5.

Compare also _Paradise Lost_, I, 255-7.]

[Footnote 246: Vatican, the palace of the pope in Rome, with its celebrated library, museum, and art gallery.]

[Footnote 247: Doric, the oldest, strongest, and simplest of the three styles of Grecian architecture.]

[Footnote 248: Gothic, a pointed style of architecture, prevalent in western Europe in the latter part of the middle ages.]

[Footnote 249: Never imitate. Emerson insists on this doctrine.]

[Footnote 250: Shakespeare (1564-1616), the great English poet and dramatist. He is mentioned in Emerson's writings more than any other character in history, and is taken as the type of the poet in his _Representative Men_.

"O mighty poet! Thy works are not as those of other men, simply and merely great works of art; but are also like the phenomena of nature, like the sun and the sea, the stars and the flowers,--like frost and snow, rain and dew, hailstorm and thunder, which are to be studied with entire submission of our own faculties, and in the perfect faith that in them there can be no too much or too little, nothing useless or inert,--but that, the further we press in our discoveries, the more we shall see proofs of design and self-supporting arrangement where the careless eye had seen nothing but accident!"--DE QUINCY.]

[Footnote 251: Benjamin Franklin (1706-1790), American philosopher, statesman, diplomatist, and author. He discovered the identity of lightning with electricity, invented the lightning-rod, went on several diplomatic missions to Europe, was one of the committee that drew up the Declaration of Independence, signed the treaty of Paris, and compiled _Poor Richard's Almanac_.]

[Footnote 252: Francis Bacon (1561-1626), a famous English philosopher and statesman. He became Lord Chancellor under Elizabeth. He is best known by his _Essays_; he wrote also the _Novum Organum_ and the _Advancement of Learning_.]

[Footnote 253: Sir Isaac Newton. (See note 53.)]

[Footnote 254: Scipio. (See note 205.)]

[Footnote 255: Phidias (500?-432? B.C.), famous Greek sculptor.]

[Footnote 256: Egyptians. He has in mind the pyramids.]

[Footnote 257: The Pentateuch is attributed to Moses.]

[Footnote 258: Dante (1265-1321), the greatest of Italian poets, author of the _Divina Commedia_.]

[Footnote 259: Foreworld, a former ideal state of the world.]

[Footnote 260: New Zealander, inhabitant of New Zealand, a group of two islands lying southeast of Australia.]

[Footnote 261: Geneva, a city of Switzerland, situated at the southwestern extremity of Lake Geneva.]

[Footnote 262: Greenwich nautical almanac. The meridian of the Royal Observatory at Greenwich, near London, is the prime meridian for reckoning the longitude of the world. The nautical almanac is a publication containing astronomical data for the use of navigators and astronomers. What is the name of the corresponding publication of the U.S. Observatory at Washington?]

[Footnote 263: Get the meaning of these astronomical terms.]

[Footnote 264: Plutarch. (50?-120? A.D.), Greek philosopher and biographer, author of _Parallel Lives_, a series of Greek and Roman biographies. Next after Shakespeare and Plato he is the author most frequently mentioned by Emerson. Read the essay of Emerson on Plutarch.]

[Footnote 265: Phocion (402-317 B.C.), Athenian statesman and general. (See note 364.)]

[Footnote 266: Anaxagoras (500-426 B.C.), Greek philosopher of distinction.]

[Footnote 267: Diogenes (400?-323?), Greek cynic philosopher who affected great contempt for riches and honors and the comforts of civilized life, and is said to have taken up his residence in a tub.]

[Footnote 268: Henry Hudson (---- - 1611), English navigator and explorer, discoverer of the bay and river which bear his name.]

[Footnote 269: Bering or Behring (1680-1741), Danish navigator, discoverer of Behring Strait.]

[Footnote 270: Sir William Edward Parry (1790-1855), English navigator and Arctic explorer.]

[Footnote 271: Sir John Franklin (1786-1846?), celebrated English navigator and Arctic explorer, lost in the Arctic seas.]

[Footnote 272: Christopher Columbus (1445?-1506), Genoese navigator and discoverer of America. His ship, the Santa Maria, appears small and insignificant in comparison with the modern ocean ship.]

[Footnote 273: Napoleon Bonaparte (1769-1821), Emperor of France, one of the greatest military geniuses the world has ever seen. He was defeated in the battle of Waterloo by the Duke of Wellington, and died in exile on the isle of St. Helena. Emerson takes him as a type of the man of the world in his _Representative Men_: "I call Napoleon the agent or attorney of the middle class of modern society.... He was the agitator, the destroyer of prescription, the internal improver, the liberal, the radical, the inventor of means, the opener of doors and markets, the subverter of monopoly and abuse.... He had the virtues of the masses of his constituents: he had also their vices. I am sorry that the brilliant picture has its reverse."]

[Footnote 274: Comte de las Cases (not Casas) (1766-1842), author of _Mémorial de Sainte-Hélène_.]

[Footnote 275: Ali, Arabian caliph, surnamed the "Lion of God," cousin and son-in-law of Mohammed. He was assassinated about 661.]

[Footnote 276: The county of Essex in England has several namesakes in America.]

[Footnote 277: Fortune. In Roman mythology Fortune, the goddess of fortune or chance, is represented as standing on a ball or wheel.

"Nec metuis dubio Fortunæ stantis in orbe Numen, et exosæ verba superba deæ?" OVID, _Tristia_, v., 8, 8.

]

FRIENDSHIP

[Footnote 278: Most of Emerson's _Essays_ were first delivered as lectures, in practically the form in which they afterwards appeared in print. The form and style, it is true, were always carefully revised before publication; this Emerson called 'giving his thoughts a Greek dress.' His essay on _Friendship_, published in the First Series of _Essays_ in 1841 was not, so far as we know, delivered as a lecture; parts of it, however, were taken from lectures which Emerson delivered on _Society_, _The Heart_, and _Private Life_.

In connection with his essay on _Friendship_, the student should read the two other notable addresses on the same subject, one the speech by Cicero, the famous Roman orator, and the other the essay by Lord Bacon, the great English author.]

[Footnote 279: Relume. Is this a common word? Define it.]

[Footnote 280: Pass my gate. The walk opposite Emerson's house on the 'Great Road' to Boston was a favorite winter walk for Concord people. Along it passed the philosophic Alcott and the imaginative Hawthorne, as well as famous townsmen, and school children.]

[Footnote 281: My friends have come to me, etc.: Compare with Emerson's views here expressed the noble passage in his essay on _The Over-Soul_: "Every friend whom not thy fantastic will but the great and tender heart in thee craveth, shall lock thee in his embrace. And this because the heart in thee is the heart of all; not a valve, not a wall, not an intersection is there anywhere in nature, but one blood rolls uninterruptedly in endless circulation through all men, as the water of the globe is all one sea, and, truly seen, its tide is one."]

[Footnote 282: Bard. Poet: originally one who composed and sang to the music of a harp verses in honor of heroes and heroic deeds.]

[Footnote 283: Hymn, ode, and epic. Define each of these three kinds of poetry.]

[Footnote 284: Apollo. In classic mythology, the sun god who presided over music, poetry, and art; he was the guardian and leader of the Muses.]

[Footnote 285: Muses. In classic mythology, the nine sisters who presided over music, poetry, art, and science. They were Clio the muse of history, Euterpe of music, especially the flute, Thalia of comedy, Melpomene of tragedy, Terpsichore of dancing, Erato of erotic poetry, mistress of the lyre, Polyhymnia of sacred poetry, Urania of astronomy, Calliope of eloquence and epic poetry.]

[Footnote 286: Genius. According to an old belief, a spirit that watched over a person to control, guide and aid him.]

[Footnote 287: "Crush the sweet poison," etc. This is a quotation from _Comus_, a poem by Milton.]

[Footnote 288: Systole and diastole. (See note 98.)]

[Footnote 289: Friendship, like the immortality, etc. See on what a high plane Emerson places this relation of friendship. In 1840 he wrote in a letter: "I am a worshiper of friendship, and cannot find any other good equal to it. As soon as any man pronounces the words which approve him fit for that great office, I make no haste; he is holy; let me be holy also; our relations are eternal; why should we count days and weeks?"]

[Footnote 290: Elysian temple. Temple of bliss. In Greek mythology, Elysium was the abode of the blessed after death.]

[Footnote 291: An Egyptian skull. Plutarch says that at an Egyptian feast a skull was displayed, either as a hint to make the most of the pleasure which can be enjoyed but for a brief space, or as a warning not to set one's heart upon transitory things.]

[Footnote 292: Conscious of a universal success, etc. Emerson wrote in his journal: "My entire success, such as it is, is composed wholly of particular failures."]

[Footnote 293: Extends the old leaf. Compare Emerson's lines:

"When half-gods go The gods arrive."

]

[Footnote 294: A texture of wine and dreams. What does Emerson mean by this phrase? Explain the whole sentence.]

[Footnote 295: "The valiant warrior," etc. The quotation is from Shakespeare's _Sonnet_, XXV.]

[Footnote 296: Naturlangsamkeit. A German word meaning slowness. The slowness of natural development.]

[Footnote 297: Olympian. One who took part in the great Greek games held every four years on the plain of Olympia. The racing, wrestling and other contests of strength and skill were accompanied by sacrifices to the gods, processions, and banquets. There was a sense of dignity and almost of worship about the games. The Olympic games have been recently revived, and athletes from all countries of the world contest for the prizes--simple garlands of wild olive.]

[Footnote 298: I knew a man who, etc. The allusion is to Jonas Very, a mystic and poet, who lived at Salem, Massachusetts.]

[Footnote 299: Paradox. Define this word. Explain its application to a friend.]

[Footnote 300: My author says, etc. The quotation is from _A Consideration upon Cicero_, by the French author, Montaigne. Montaigne was one of Emerson's favorite authors from his boyhood: of the essays he says, "I felt as if I myself, had written this book in some former life, so sincerely it spoke my thoughts."]

[Footnote 301: Cherub. What is the difference between a cherub and a seraph?]

[Footnote 302: Curricle. A two-wheeled carriage, especially popular in the eighteenth century.]

[Footnote 303: This law of one to one. Emerson felt that this same law applied to nature. He wrote in his journal: "Nature says to man, 'one to one, my dear.'"]

[Footnote 304: Crimen quos, etc. The Latin saying is translated in the preceding sentence.]

[Footnote 305: Nonage. We use more commonly the word, "minority."]

[Footnote 306: Janus-faced. The word here means simply two-faced, without the idea of deceit usually attached to it. In Roman mythology, Janus, the doorkeeper of heaven was the protector of doors and gateways and the patron of the beginning and end of undertakings. He was the god of the rising and setting of the sun, and was represented with two faces, one looking to the east and

the other to the west. His temple at Rome was kept open in time of war and closed in time of peace.]

[Footnote 307: Harbinger. A forerunner; originally an officer who rode in advance of a royal person to secure proper lodgings and accommodations.]

[Footnote 308: Empyrean. Highest and purest heaven; according to the ancients, the region of pure light and fire.]

HEROISM

[Footnote 309: Title. Probably this essay is, essentially at least, the lecture on _Heroism_ delivered in Boston in the winter of 1837, in the course of lectures on _Human Culture_.]

[Footnote 310: Motto. This saying of Mahomet's was the only motto prefixed to the essay in the first edition. In later editions, Emerson prefixed, according to his custom, some original lines;

"Ruby wine is drunk by knaves, Sugar spends to fatten slaves, Rose and vine-leaf deck buffoons, Thunder clouds are Jove's festoons, Drooping oft in wreaths of dread Lightning-knotted round his head: The hero is not fed on sweets, Daily his own heart he eats; Chambers of the great are jails, And head-winds right for royal sails."

]

[Footnote 311: Elder English dramatists. The dramatists who preceded Shakespeare. In his essay on _Shakespeare; or, the Poet_, Emerson enumerates the foremost of these,--"Kyd, Marlowe, Greene, Jonson, Chapman, Dekker, Webster, Heywood, Middleton, Peele, Ford, Massinger, Beaumont and Fletcher."]

[Footnote 312: Beaumont and Fletcher. Francis Beaumont and John Fletcher were two dramatists of the Elizabethan age. They wrote together and their styles were so similar that critics are unable to identify the share of each in their numerous plays.]

[Footnote 313: Rodrigo, Pedro, or Valerio. Favorite names for heroes among the dramatists. Rodrigo Diaz de Bivar, known usually by the title of the Cid, was the national hero of Spain, famous for his exploits against the Moors. Don Pedro was the Prince of Arragon in Shakespeare's play, _Much Ado About Nothing_.]

[Footnote 314: Bonduca, Sophocles, the Mad Lover, and Double Marriage. The first, third and fourth are names of plays by Beaumont and Fletcher. In the case of the second, Emerson, by a lapse of memory, gives the name of one of the chief characters instead of the name of the play--_The Triumph of Honor_ in a piece called _Four Plays in One_. It is from this play by Beaumont and Fletcher that the passage in the essay is quoted.]

[Footnote 315: Adriadne's crown. According to Greek mythology, the crown of Adriadne was, for her beauty and her sufferings, put among the stars. She was the daughter of Minos, King of Crete; she gave Theseus the clue by means of which he escaped from the labyrinth and she was afterwards abandoned by him.]

[Footnote 316: Romulus. The reputed founder of the city of Rome.]

[Footnote 317: Laodamia, Dion. Read these two poems by Wordsworth, the great English poet, and tell why you think Emerson mentioned them here.]

[Footnote 318: Scott. Sir Walter Scott, a famous Scotch author.]

[Footnote 319: Lord Evandale, Balfour of Burley. These are characters in Scott's novel, _Old Mortality_. The passage referred to by Emerson is in the forty-second chapter.]

[Footnote 320: Thomas Carlyle. Carlyle was a great admirer of heroes, asserting that history is the biography of great men. One of his most popular books is _Heroes and Hero-Worship_, on a plan similar to that of Emerson's _Representative Men_.]

[Footnote 321: Robert Burns. A Scotch lyric poet. Emerson was probably thinking of the patriotic song, _Scots wha hae wi' Wallace bled_.]

[Footnote 322: Harleian Miscellanies. A collection of manuscripts published in the eighteenth century, and named for Robert Harley, the English statesman who collected them.]

[Footnote 323: Lutzen. A small town in Prussia. The battle referred to was fought in 1632 and in it the Swedes under Gustavus Adolphus gained a great victory over vastly superior numbers. Nearly two hundred years later another battle was fought at Lutzen, in which Napoleon gained a victory over the allied Russians and Prussians.]

[Footnote 324: Simon Ockley. An English scholar of the seventeenth century whose chief work was a _History of the Saracens_.]

[Footnote 325: Oxford. One of the two great English universities.]

[Footnote 326: Plutarch. (See note 264.)]

[Footnote 327: Brasidas. This hero, described by Plutarch, was a Spartan general who lived about four hundred years before Christ.]

[Footnote 328: Dion. A Greek philosopher who ruled the city of Syracuse in the fourth century before Christ.]

[Footnote 329: Epaminondas. A Greek general and statesman of the fourth century before Christ.]

[Footnote 330: Scipio. (See note 205.)]

[Footnote 331: Stoicism. The stern and severe philosophy taught by the Greek philosopher Zeno; he taught that men should always seek virtue and be indifferent to pleasure and happiness. This belief, carried to the extreme of severity, exercised a great influence on many noble Greeks and Romans.]

[Footnote 332: Heroism is an obedience, etc. In one of his poems Emerson says:

"So nigh is grandeur to our dust, So near is God to man, When Duty whispers low, 'Thou must,' The youth replies, 'I can.'"

]

[Footnote 333: Plotinus. An Egyptian philosopher who taught in Rome during the third century. It was said that he so exalted the mind that he was ashamed of his body.]

[Footnote 334: Indeed these humble considerations, etc. The passage, like many which Emerson quotes, is rendered inexactly. The Prince says to Poins: "Indeed these humble considerations make me out of love with my greatness. What a disgrace it is to me to remember thy name! or to know thy face to-morrow! or to take note how many pairs of silk stockings thou hast, that is, these and those that were thy peach-colored ones! or to bear the inventory of thy shirts, as, one for superfluity and another for use!" Shakespeare's _Henry IV._, Part II. 2, 2.]

[Footnote 335: Ibn Hankal. Ibn Hankul, an Arabian geographer and traveler of the tenth century. He wrote an account of his twenty years' travels in Mohammedan countries; in 1800 this was translated into English by Sir William Jones under the title of _The Oriental Geography of Ibn Hankal_. In that volume this anecdote is told in slightly different words.]

[Footnote 336: Bokhara. Where is Bokhara? It corresponds to the ancient Sogdiana.]

[Footnote 337: Bannocks. Thick cakes, made usually of oatmeal. What does Emerson mean by this sentence? Probably no person ever met his visitors, many of whom were "exacting and wearisome," and must have been unwelcome, with more perfect courtesy and graciousness than Emerson.]

[Footnote 338: John Eliot. Give as full an account as you can of the life and works of this noble Apostle to the Indians of the seventeenth century.]

[Footnote 339: King David, etc. See First Chronicles, 11, 15-19.]

[Footnote 340: Brutus. Marcus Junius Brutus, a Roman patriot of the first century before Christ, who took part in the assassination of Julius Cæsar.]

[Footnote 341: Philippi. A city of Macedonia near which in the year 42 B.C. were fought two battles in which the republican army under Brutus and Cassius was defeated by Octavius and Antony, friends of Cæsar.]

[Footnote 342: Euripides. A Greek tragic poet of the fifth century before Christ.]

[Footnote 343: Scipio. (See note 205.) Plutarch in his _Morals_ gives another version of the story: "When Paetilius and Quintus accused him of many crimes before the people; 'on this very day,' he said, 'I conquered Hannibal and Carthage. I for my part am going with my crown on to the Capitol to sacrifice; and let him that pleaseth stay and pass his vote upon me.' Having thus said, he went his way; and the people followed him, leaving his accusers declaiming to themselves."]

[Footnote 344: Socrates. (See note 187.)]

[Footnote 345: Prytaneum. A public hall at Athens.]

[Footnote 346: Sir Thomas More. An English statesman and author who was beheaded in 1535 on a charge of high treason. The incident to which Emerson refers is one which showed his "pleasant wit" undisturbed by the prospect of death. As the executioner was about to strike, More moved his head carefully out of reach of the ax. "Pity that should be cut," he said, "that has never committed treason."]

[Footnote 347: Blue Laws. Any rigid Sunday laws or religious regulations. The term is usually applied to the early laws of New Haven and Connecticut which regulated personal and religious conduct.]

[Footnote 348: Epaminondas. (See note 329.)]

[Footnote 349: Olympus. A mountain of Greece, the summit of which, according to Greek mythology, was the home of the gods.]

[Footnote 350: Jerseys. Consult a history of the United States for a full account of Washington's campaign in New Jersey.]

[Footnote 351: Milton. (See note 151.)]

[Footnote 352: Pericles. A famous Greek statesman of the fifth century before Christ, in whose age Athens was preëminent in naval and military affairs and in letters and art.]

[Footnote 353: Xenophon. A Greek historian of the fourth century before Christ.]

[Footnote 354: Columbus. Give an account of his life.]

[Footnote 355: Bayard. Chevalier de Bayard was a French gentleman of the fifteenth century. He is the French national hero, and is called "The Knight without fear and without reproach."]

[Footnote 356: Sidney. Probably Sir Philip Sidney, an English gentleman and scholar of the sixteenth century who is the English national hero as Bayard is the French; another brave Englishman was Algernon Sidney, a politician and patriot of the seventeenth century.]

[Footnote 357: Hampden. John Hampden was an English statesman and patriot who was killed in the civil war of the seventeenth century.]

[Footnote 358: Colossus. The Colossus of Rhodes was a gigantic statue--over a hundred feet in height--of the Rhodian sun god. It was one of the seven wonders of the world; it was destroyed by an earthquake about two hundred years before Christ.]

[Footnote 359: Sappho. A Greek poet of the seventh century before Christ. Her fame remains, though most of her poems have been lost.]

[Footnote 360: Sevigné. Marquise de Sevigné was a French author of the seventeenth century.]

[Footnote 361: De Staël. Madame de Staël was a French writer whose books and political opinions were condemned by Napoleon.]

[Footnote 362: Themis. A Greek goddess. The personification of law, order, and justice.]

[Footnote 363: A high counsel, etc. Such was the advice given to the Emerson boys by their aunt, Miss. Mary Moody Emerson: "Scorn trifles, lift your aims; do what you are afraid to do; sublimity of character must come from sublimity of motive." Upon her monument are inscribed Emerson's words about her: "She gave high counsels. It was the privilege of certain boys to have this immeasurably high standard indicated to their childhood, a blessing which nothing else in education could supply."]

[Footnote 364: Phocion. A Greek general and statesman of the fourth century before Christ who advised the Athenians to make peace with Philip of Macedon. He was put to death on a charge of treason.]

[Footnote 365: Lovejoy. Rev. Elijah Lovejoy, a Presbyterian clergyman of Maine who published a periodical against slavery. In 1837 an Illinois mob demanded his printing press, which he refused to give up. The building containing it was set on fire and when Lovejoy came out he was shot.]

[Footnote 366: Let them rave, etc. These lines are misquoted, being evidently given from memory, from Tennyson's _Dirge_. In the poem occur these lines:

"Let them rave. Thou wilt never raise thine head From the green that folds thy grave-- Let them rave."

]

MANNERS

[Footnote 367: The essay on _Manners_ is from the Second Series of _Essays_, published in 1844, three years after the First Series. The essays in this volume, like those in the first, were, for the most part, made up of Emerson's lectures, rearranged and corrected. The lecture on _Manners_ had been delivered in the winter of 1841. He had given another lecture on the same subject about four years before, and several years later he treated of the same subject in his essay on _Behavior_ in _The Conduct of Life_. You will find it interesting to read _Behavior_ in connection with this essay.]

[Footnote 368: Feejee islanders. Since this essay was written, the people of the Feejee, or Fiji, Islands have become Christianized, and, to a large extent, civilized.]

[Footnote 369: Gournou. This description is found in _A Narrative of the Operations and Recent Discoveries within the Pyramids_, by Belzoni, an Italian traveler and explorer.]

[Footnote 370: Borgoo. A province of Africa.]

[Footnote 371: Tibboos, Bornoos. Tribes of Central Africa, mentioned in Heeren's _Historical Researches_.]

[Footnote 372: Honors himself with architecture. Architecture was a subject in which Emerson was deeply interested. Read his poem, _The Problem_.]

[Footnote 373: Chivalry. Chivalry may be considered "as embodying the Middle Age conception of the ideal life of ... the Knights"; the word is often used to express "the ideal qualifications of a knight, as courtesy, generosity, valor, and dexterity in arms." Fully to understand the order of Knighthood and the ideals of chivalry, you must read the history of Europe in the Middle Ages.]

[Footnote 374: Sir Philip Sidney. (See note 356.)]

[Footnote 375: Sir Walter Scott. (1771-1832). His historical novels dealing with the Middle Ages have some fine pictures of the chivalrous characters in which he delighted.]

[Footnote 376: Masonic sign. A sign of secret brotherhood, like the sign given by one Mason to another.]

[Footnote 377: Correlative abstract. Corresponding abstract name. Sir Philip Sidney, himself the ideal gentleman, used the word "gentlemanliness." He said: "Gentlemanliness is high-erected thoughts seated in a heart of courtesy."]

[Footnote 378: Gentilesse. Gentle birth and breeding. Emerson was very fond of the passage on "gentilesse" in Chaucer's _Wife of Bath's Tale_.]

[Footnote 379: Feudal Ages. The Middle Ages in Europe during which the feudal system prevailed. According to this, land was held by its owners on condition of certain duties, especially military service, performed for a superior lord.]

[Footnote 380: God knows, etc. Why is this particularly true of a republic such as the United States?]

[Footnote 381: The incomparable advantage of animal spirits. Why does Emerson regard this as of such importance? In his journals he frequently comments on his own lack of animal spirits, and says that it unfits him for general society and for action.]

[Footnote 382: The sense of power. "I like people who can do things," wrote Emerson in his journal.]

[Footnote 383: Lundy's Lane. Give a full account of this battle in the War of 1812.]

[Footnote 384: Men of the right Cæsarian pattern. Men versatile as was Julius Cæsar, the Roman, famous as a general, statesman, orator, and writer.]

[Footnote 385: Timid maxim. Why does Emerson term this saying "timid"?]

[Footnote 386: Lord Falkland. Lucius Cary, Viscount Falkland, was an English politician who espoused the royalist side; he was killed in battle in the Civil War.]

[Footnote 387: Saladin. A famous sultan of Egypt and Syria who lived in the twelfth century. Scott describes him as possessing an ideal knightly character and introduces him, disguised as a physician and also as a wandering soldier in his historical romance, _The Talisman_.]

[Footnote 388: Sapor. A Persian monarch of the fourth century who defeated the Romans in battle.]

[Footnote 389: The Cid. See "Rodrigo," in _Heroism_, 313.]

[Footnote 390: Julius Cæsar. See note on "Cæsarian," 384.]

[Footnote 391: Scipio. (See note 205.)]

[Footnote 392: Alexander. Alexander, King of Macedon, surnamed the Great. In the fourth century before Christ he made himself master of the known world.]

[Footnote 393: Pericles. See note on _Heroism_, 352.]

[Footnote 394: Diogenes. (See note 267.)]

[Footnote 395: Socrates. (See note 187.)]

[Footnote 396: Epaminondas. (See note 329.)]

[Footnote 397: My contemporaries. Emerson probably had in mind, among others, his friend, the gentle philosopher, Thoreau.]

[Footnote 398: Fine manners. "I think there is as much merit in beautiful manners as in hard work," said Emerson in his journal.]

[Footnote 399: Napoleon. (See note 273.)]

[Footnote 400: Noblesse. Nobility. Why does Emerson use here the French word?]

[Footnote 401: Faubourg St. Germain. A once fashionable quarter of Paris, on the south bank of the Seine; it was long the headquarters of the French royalists.]

[Footnote 402: Cortez. Consult a history of the United States for an account of this Spanish soldier, the conqueror of Mexico.]

[Footnote 403: Nelson. Horatio Nelson, an English admiral, who won many great naval victories and was killed in the battle of Trafalgar in 1805.]

[Footnote 404: Mexico. The scene of Cortez's victories.]

[Footnote 405: Marengo. The scene of a battle in Italy in 1800, in which Napoleon defeated the Austrians with a larger army and made himself master of northern Italy.]

[Footnote 406: Trafalgar. A cape on the southern coast of Spain, the scene of Nelson's last great victory, in which the allied French and Spanish fleets were defeated.]

[Footnote 407: Mexico, Marengo, and Trafalgar. Is this the order in which you would expect these words to occur? Why not?]

[Footnote 408: Estates of the realm. Orders or classes of people with regard to political rights and powers. In modern times, the nobility, the clergy, and the people are called "the three estates."]

[Footnote 409: Tournure. Figure; turn of dress,--and so of mind.]

[Footnote 410: Coventry. It is said that the people of Coventry, a city in England, at one time so disliked soldiers that to send a military man there meant to exclude him from social intercourse; hence the expression "to send to Coventry" means to exclude from society.]

[Footnote 411: "If you could see Vich Ian Vohr with his tail on." Vich Ian Vohr is a Scotch chieftain in Scott's novel, _Waverley_. One of his dependents says to Waverley, the young English officer: "If you Saxon duinhé-wassal [English gentleman] saw but the Chief with his tail on." "With his tail on?" echoed Edward in some surprise. "Yes--that is, with all his usual followers when he visits those of the same rank." See _Waverley_, chapter 16.]

[Footnote 412: Mercuries. The word here means simply messengers. According to Greek mythology, Mercury was the messenger of the gods.]

[Footnote 413: Herald's office. In England the Herald's College, or College of Arms, is a royal corporation the chief business of which is to grant armorial bearings, or coats of arms, and to trace and preserve genealogies. What does Emerson mean by comparing certain circles of society to this corporation?]

[Footnote 414: Amphitryon. Host; it came to have this meaning from an incident in the story of Amphitryon, a character in Greek legend. At one time Jupiter assumed the form of Amphitryon and gave a banquet. The real Amphitryon came in and asserted that he was master of the house. In the French play, founded on this story, the question is settled by the assertion of the servants and guests that "he who gives the feast is the host."]

[Footnote 415: Tuileries. An old royal residence in Paris which was burned in 1871.]

[Footnote 416: Escurial, or escorial. A celebrated royal edifice near Madrid in Spain.]

[Footnote 417: Hide ourselves as Adam, etc. See Genesis iii. 8.]

[Footnote 418: Cardinal Caprara. An Italian cardinal, Bishop of Milan, who negotiated the famous concordat of 1801, an agreement between the Church and State regulating the relations between civil and ecclesiastical powers.]

[Footnote 419: The pope. Pope Pius VII.]

[Footnote 420: Madame de Staël. (See note 361.)]

[Footnote 421: Mr. Hazlitt. William Hazlitt, an English writer.]

[Footnote 422: Montaigne. A French essayist of the sixteenth century.]

[Footnote 423: The hint of tranquillity and self-poise. It is suggested that Emerson had here in mind a favorite passage of the German author, Richter, in which Richter says of the Greek statues: "The repose not of weariness but of perfection looks from their eyes and rests upon their lips."]

[Footnote 424: A Chinese etiquette. What does Emerson mean by this expression?]

[Footnote 425: Recall. In the first edition, Emerson had here the word "signify." Which is the better word and why?]

[Footnote 426: Measure. What meaning has this word here? Is this the sense in which we generally use it?]

[Footnote 427: Creole natures. What is a creole? What does Emerson mean by "Creole natures"?]

[Footnote 428: Mr. Fox. Charles James Fox, an English statesman and orator of the eighteenth century.]

[Footnote 429: Burke. Both Fox and Burke opposed the taxation of the American colonies and sympathized with their resistance; it was on the subject of the French Revolution that the two friends clashed.]

[Footnote 430: Sheridan. Richard Brinsley Sheridan, an Irish dramatist, member of the famous Literary Club to which both Fox and Burke belonged.]

[Footnote 431: Circe. According to Greek legend, Circe was a beautiful enchantress. Men who partook of the draught she offered, were turned to swine.]

[Footnote 432: Captain Symmes. The only real personage of this group. He asserted that there was an opening to the interior of the earth which was stocked with plants and animals.]

[Footnote 433: Clerisy. What word would we be more apt to use here?]

[Footnote 434: St. Michael's (Square). St. Michael's was an order instituted by Louis XI. of France.]

[Footnote 435: Cologne water. A perfumed water first made at the city of Cologne in Germany, from which it took its name.]

[Footnote 436: Poland. This kingdom of Europe was, in the eighteenth century, taken possession of and divided among its powerful neighbors, Russia, Prussia, and Austria.]

[Footnote 437: Philhellene. Friend of Greece.]

[Footnote 438: As Heaven and Earth are fairer far, etc. This passage is quoted from Book II. of Keats' _Hyperion_.]

[Footnote 439: Waverley. The Waverley novels, a name applied to all of Scott's novels from _Waverley_, the title of the first one.]

[Footnote 440: Robin Hood. An English outlaw and popular hero, the subject of many ballads.]

[Footnote 441: Minerva. In Roman mythology, the goddess of wisdom corresponding to the Greek Pallas-Athene.]

[Footnote 442: Juno. In Roman mythology, the wife of the supreme god Jupiter.]

[Footnote 443: Polymnia. In Greek mythology, one of the nine muses who presided over sacred poetry; the name is more usually written Polyhymia.]

[Footnote 444: Delphic Sibyl. In ancient mythology, the Sibyls were certain women who possessed the power of prophecy. One of these who made her abode at Delphi in Greece was called the Delphian, or Delphic, sibyl.]

[Footnote 445: Hafiz. A Persian poet of the fourteenth century.]

[Footnote 446: Firdousi. A Persian poet of the tenth century.]

[Footnote 447: She was an elemental force, etc. Of this passage Oliver Wendell Holmes said that Emerson "speaks of woman in language that seems to pant for rhythm and rhyme."]

[Footnote 448: Byzantine. An ornate style of architecture developed in the fourth and fifth centuries, marked especially by its use of gold and color.]

[Footnote 449: Golden Book. In a book, called "the Golden Book," were recorded the names of all the children of Venetian noblemen.]

[Footnote 450: Schiraz. A province of Persia famous especially for its roses, wine, and nightingales, and described by the poets as a place of ideal beauty.]

[Footnote 451: Osman. The name given by Emerson in his journal and essays to his ideal man, one subject to the same conditions as himself.]

[Footnote 452: Koran. The sacred book of the Mohammedans.]

[Footnote 453: Jove. Jupiter, the supreme god of Roman mythology.]

[Footnote 454: Silenus. In Greek mythology, the leader of the satyrs. This fable, which Emerson credits to tradition, was original.]

[Footnote 455: Her owl. The owl was the bird sacred to Minerva, the goddess of wisdom.]

GIFTS

[Footnote 456: This essay was first printed in the periodical called _The Dial_.

It was a part of Emerson's philosophic faith that there is no such thing as giving,--everything that belongs to a man or that he ought to have, will come to him. But in the ordinarily accepted sense of the word, Emerson was a gracious giver and receiver. In his family

the old New England custom of New Year's presents was kept up to his last days. His presents were accompanied with verses to be read before the gift was opened.]

[Footnote 457: Into chancery. The phrase "in chancery," means in litigation, as an estate, in a court of equity.]

[Footnote 458: Cocker. Spoil, indulge,--a word now little used.]

[Footnote 459: Fruits are acceptable gifts. Emerson took especial pleasure in the beauty of fruits and the thought of how they had been evolved from useless, insipid seed cases.]

[Footnote 460: To let the petitioner, etc. We can hardly imagine Emerson's asking a gift or favor. He often quoted the words of Landor, an English writer: "The highest price you can pay for a thing is to ask for it."]

[Footnote 461: Furies. In Roman mythology, three goddesses who sought out and punished evil-doers.]

[Footnote 462: A man's biography, etc. Emerson wrote in his journal: "Long ago I wrote of _gifts_ and neglected a capital example. John Thoreau, Jr. [who, like his brother Henry, was a lover of nature] one day put a bluebird's box on my barn,--fifteen years ago it must be,--and there it still is, with every summer a melodious family in it adorning the place and singing its praises. There's a gift for you which cost the giver no money, but nothing which he bought could have been as good."]

[Footnote 463: Sin offering. Under the Hebrew law, a sacrifice or offering for sin. See Leviticus xxiii. 19. Explain what Emerson means here by the word.]

[Footnote 464: Blackmail. What is "blackmail"? How may Christmas gifts, for instance, become a species of blackmail?]

[Footnote 465: Brother, if Jove, etc. In the Greek legend, Epimetheus gives this advice to his brother Prometheus. The lines are taken from a translation of _Works and Days_, by the Greek poet, Hesiod.]

[Footnote 466: Timons. Here used in the sense of wealthy givers. Timon, the hero of Shakespeare's play, _Timon of Athens_, wasted his fortune in lavish gifts and entertainments, and in his poverty was exposed to the ingratitude of those whom he had served. He became morose and died in miserable retirement.]

[Footnote 467: It is a very onerous business, etc. One of Emerson's favorite passages in the essays of Montaigne, a French writer, was this: "Oh, how am I obliged to Almighty God, who has been pleased that I should immediately receive all I have from his bounty, and particularly reserved all my obligation to himself! How instantly do I beg of his holy compassion that I may never owe a real thanks to anyone. O happy liberty in which I have thus far lived! May it continue with me to the last. I endeavor to have no need of any one."

When Emerson, in his old age, had his house injured by fire, his friends contributed funds to repair it and to send him to England. The gift was proffered graciously and accepted gratefully.]

[Footnote 468: Buddhist. A follower of Buddha, a Hindoo religious teacher of the fifth century before Christ.]

NATURE

[Footnote 469: Nature. Emerson's first published volume was a little book of essays, entitled _Nature_, which appeared in 1836. In the years which followed, he thought more deeply on the subject and, according to his custom, made notes about it and entries in his journals. In the winter of 1843 he delivered a lecture on _Relation to Nature_, and it is probable that this essay is built up from that. The plan of it, however, had been long in his mind: In 1840 he wrote in his journal: "I think I must do these eyes of mine the justice to write a new chapter on Nature. This delight we all take in every show of night or day or field or forest or sea or city, down to the lowest particulars, is not without sequel, though we be as yet only wishers and gazers, not at all knowing what we want. We are predominated here as elsewhere by an upper wisdom, and resemble those great discoverers who are haunted for years, sometimes from infancy, with a passion for the fact, or class of facts in which the secret lies which they are destined to unlock, and they let it not go until the blessing is won. So these sunsets and starlights, these swamps and rocks, these bird notes and animal forms off which we cannot get our eyes and ears, but hover still, as moths round a lamp, are no doubt a Sanscrit cipher covering the whole religious history of the universe, and presently we shall read it off into action and character. The pastures are full of ghosts for me, the morning woods full of angels."]

[Footnote 470: There are days, etc. The passage in Emerson's journal is hardly less beautiful. Under date of October 30, 1841, he wrote: "On this wonderful day when heaven and earth seem to glow with magnificence, and all the wealth of all the elements is put under contribution to make the world fine, as if Nature would indulge her offspring, it seemed ungrateful to hide in the house. Are there not dull days enough in the year for you to write and read in, that you should waste this glittering season when Florida and Cuba seem to have left their glittering seats and come to visit us with all their shining hours, and almost we expect to see the jasmine and cactus burst from the ground instead of these last gentians and asters which have loitered to attend this latter glory of the year? All insects are out, all birds come forth, the very cattle that lie on the ground seem to have great thoughts, and Egypt and India look from their eyes."]

[Footnote 471: Halcyons. Halcyon days, ones of peace and tranquillity; anciently, days of calm weather in mid-winter, when the halcyon, or kingfisher, was supposed to brood. It was fabled that this bird laid its eggs in a nest that floated on the sea, and that it charmed the winds and waves to make them calm while it brooded.]

[Footnote 472: Indian Summer. Calm, dry, hazy weather which comes in the autumn in America. The Century Dictionary says it was called Indian Summer because the season was most marked in the sections of the upper eastern Mississippi valley inhabited by Indians about the time the term became current.]

[Footnote 473: Gabriel. One of the seven archangels. The Hebrew name means "God is my strong one."]

[Footnote 474: Uriel. Another of the seven archangels; the name means "Light of God."]

[Footnote 475: Converts all trees to wind-harps. Compare with this passage the lines in Emerson's poem, _Woodnotes_:

"And the countless leaves of the pines are strings Tuned to the lay the wood-god sings."

]

[Footnote 476: The village. Concord, Massachusetts. Emerson's home the greater part of the time from 1832 till his death.]

[Footnote 477: I go with my friend, etc. With Henry Thoreau, the lover of Nature.]

[Footnote 478: Our little river. The Concord river.]

[Footnote 479: Novitiate and probation. Explain the meaning of these words, in the Roman Catholic Church. What does Emerson mean by them here?]

[Footnote 480: Villegiatura. The Italian name for a season spent in country pleasures.]

[Footnote 481: Hanging gardens. The hanging gardens of Babylon were one of the seven wonders of the world.]

[Footnote 482: Versailles. A royal residence near Paris, with beautiful formal gardens.]

[Footnote 483: Paphos. A beautiful city on the island of Cyprus, where was situated a temple of Astarte, or Venus.]

[Footnote 484: Ctesiphon. One of the chief cities of ancient Persia, the site of a magnificent royal palace.]

[Footnote 485: Notch Mountains. Probably the White Mountains near Crawford Notch, a deep, narrow valley which is often called "The Notch."]

[Footnote 486: Æolian harp. A stringed instrument from which sound is drawn by the passing of the wind over its strings. It was named for Æolus, the god of the winds, in Greek mythology.]

[Footnote 487: Dorian. Dorus was one of the four divisions of Greece: the word is here used in a general sense for Grecian.]

[Footnote 488: Apollo. In Greek and Roman mythology, the sun god, who presided over music, poetry, and healing.]

[Footnote 489: Diana. In Roman mythology, the goddess of the moon devoted to the chase.]

[Footnote 490: Edens. Beautiful, sinless places,--like the garden of Eden.]

[Footnote 491: Tempes. Places like the lovely valley of Tempe in Thessaly, Greece.]

[Footnote 492: Como Lake. A lake of northern Italy, celebrated for its beauty.]

[Footnote 493: Madeira Islands. Where are these islands, famous for picturesque beauty and balmy atmosphere?]

[Footnote 494: Common. What is a common?]

[Footnote 495: Campagna. The plain near Rome.]

[Footnote 496: Dilettantism. Define this word and explain its use here.]

[Footnote 497: "Wreaths" and "Flora's Chaplets." About the time that Emerson was writing his essays, volumes of formal, artificial verses were very fashionable, more as parlor ornaments than as literature. Two such volumes were _A Wreath of Wild Flowers from New England_ and _The Floral Offering_ by Mrs. Frances Osgood, a New England writer.]

[Footnote 498: Pan. In Greek mythology, the god of woods, fields, flocks, and shepherds.]

[Footnote 499: The multitude of false cherubs, etc. Explain the meaning of this sentence. If true money were valueless, would people make false money?]

[Footnote 500: Proteus. In Greek mythology, a sea god who had the power of assuming different shapes. If caught and held fast, however, he was forced to assume his own shape and answer the questions put to him.]

[Footnote 501: Mosaic ... Schemes. The conception of the world as given in Genesis on which the law of Moses, the great Hebrew lawgiver, was founded.]

[Footnote 502: Ptolemaic schemes. The system of geography and astronomy taught in the second century by Ptolemy of Alexandria; it was accepted till the sixteenth century, when the Copernican system was established. Ptolemy believed that the sun, planets, and stars revolve around the earth; Copernicus taught that the planets revolve around the sun.]

[Footnote 503: Flora. In Roman mythology, the goddess of the spring and of flowers.]

[Footnote 504: Fauna. In Roman mythology, the goddess of fields and shepherds; she represents the fruitfulness of the earth.]

[Footnote 505: Ceres. The Roman goddess of grain and harvest, corresponding to the Greek goddess, Demeter.]

[Footnote 506: Pomona. The Roman goddess of fruit trees and gardens.]

[Footnote 507: All duly arrive. Emerson deducts from nature the doctrine of evolution. What is its teaching?]

[Footnote 508: Plato. (See note 36.)]

[Footnote 509: Himalaya Mountain chains. (See note 193.)]

[Footnote 510: Franklin. Give an account of Benjamin Franklin, the famous American scientist and patriot. What did he prove about lightening?]

[Footnote 511: Dalton. John Dalton was an English chemist who, about the beginning of the nineteenth century, perfected the atomic theory, that is, the theory that all chemical combinations take place in certain ways between the atoms, or ultimate particles, of bodies.]

[Footnote 512: Davy. (See note 69.)]

[Footnote 513: Black. Joseph Black, a Scotch chemist who made valuable discoveries about latent heat and carbon dioxide, or carbonic acid gas.]

[Footnote 514: The astronomers said, etc. Beginning with this passage, several pages of this essay was published in 1844, under the title of _Tantalus_, in the next to the last number of _The Dial_, which Emerson edited.]

[Footnote 515: Centrifugal, centripetal. Define these words.]

[Footnote 516: Stoics. See "Stoicism," 331.]

[Footnote 517: Luther. (See note 188.)]

[Footnote 518: Jacob Behmen. A German mystic of the sixteenth century; his name is usually written Boehme.]

[Footnote 519: George Fox. (See note 202.)]

[Footnote 520: James Naylor. An English religious enthusiast of the seventeenth century; he was first a Puritan and later a Quaker.]

[Footnote 521: Operose. Laborious.]

[Footnote 522: Outskirt and far-off reflection, etc. Compare with this passage Emerson's poem, _The Forerunners_.]

[Footnote 523: Oedipus. In Greek mythology, the King of Thebes who solved the riddle of the Sphinx, a fabled monster.]

[Footnote 524: Prunella. A widely scattered plant, called self-heal, because a decoction of its leaves and stems was, and to some extent is, valued as an application to wounds. An editor comments on the fact that during the last years of Emerson's life "the little blue self-heal crept into the grass before his study window."]

SHAKESPEARE; OR, THE POET

[Footnote 525: Shakespeare; or the Poet is one of seven essays on great men in various walks of life, published in 1850 under the title of _Representative Men_. These essays were first delivered as lectures in Boston in the winter of 1845, and were repeated two years later before English audiences. They must have been especially interesting to those Englishmen who had, seven years before, heard Emerson's friend, Carlyle, deliver his six lectures on great men whom he selected as representative ones. These lectures were published under the title of _Heroes and Hero-Worship_. You should read the latter part of Carlyle's lecture on _The Hero as Poet_ and compare what he says about Shakespeare with Emerson's words. Both Emerson and Carlyle reverenced the great English poet as "the master of mankind." Even in serious New England, the plays of Shakespeare were found upon the bookshelf beside religious tracts and doctrinal treatises. There the boy Emerson found them and learned to love them, and the man Emerson loved them but the more. It was as a record of personal experiences that he wrote in his journal: "Shakespeare fills us with wonder the first time we approach him. We go away, and work and think, for years, and come again,--he astonishes us anew. Then, having drank deeply and saturated us with his genius, we lose sight of him for another period of years. By and by we return, and there he stands immeasurable as at first. We have grown wiser, but only that we should see him wiser than ever. He resembles a high mountain which the traveler sees in the morning and thinks he shall quickly near it and pass it and leave it behind. But he journeys all day till noon, till night. There still is the dim mountain close by him, having scarce altered its bearings since the morning light."]

[Footnote 526: Genius. Here instead of speaking as in _Friendship_, see note 286, of the genius or spirit supposed to preside over each man's life, Emerson mentions the guardian spirit of human kind.]

[Footnote 527: Shakespeare's youth, etc. It is impossible to appreciate or enjoy this essay without having some clear general information about the condition of the English people and English literature in the glorious Elizabethan age in which Shakespeare lived. Consult, for this information, some brief history of England and a comprehensive English literature.]

[Footnote 528: Puritans. Strict Protestants who became so powerful in England that in the time of the Commonwealth they controlled the political and religious affairs of the country.]

[Footnote 529: Anglican Church. The Established Church of England; the Episcopal church.]

[Footnote 530: Punch. The chief character in a puppet show, hence the puppet show itself.]

[Footnote 531: Kyd, Marlowe, Greene, etc. For an account of these dramatists consult a text book on English literature. The English drama seems to have begun in the Middle Ages with what were called Miracle plays, which were scenes from Bible history; about the same time were performed the Mystery plays, which dramatized the lives of saints. These were followed by the Moralities, plays in which were personified abstract virtues and vices. The first step in the creation of the regular drama was taken by Heywood, who composed some farcical plays called Interludes. The people of the sixteenth century were fond of pageants, shows in which classical personages were introduced, and Masques, which gradually developed from pageants into dramas accompanied with music. About the middle of the sixteenth century, rose the English drama,--comedy, tragedy, and historical plays. The chief among the group of dramatists who attained fame before Shakespeare began to write were Kyd, Marlowe, Greene, and Peele. Ben Jonson and Beaumont and Fletcher rank next to Shakespeare among his contemporaries, and among the other dramatists of the period

were Chapman, Dekker, Webster, Heywood, Middleton, Ford, and Massinger.]

[Footnote 532: At the time when, etc. Probably about 1585.]

[Footnote 533: Tale of Troy. Drama founded on the Trojan war. The subject of famous poems by Latin and Greek poets.]

[Footnote 534: Death of Julius Cæsar. An account of the plots which ended in the assassination of the great Roman general.]

[Footnote 535: Plutarch. See note on _Heroism_(264). Shakespeare, like the earlier dramatists, drew freely on Plutarch's _Lives_ for material.]

[Footnote 536: Brut. A poetical version of the legendary history of Britain, by Layamon. Its hero is Brutus, a mythical King of Britain.]

[Footnote 537: Arthur. A British King of the sixth century, around whose life and deeds so many legends have grown up that some historians say he, too, was a myth. He is the center of the great cycle of romances told in prose in Mallory's _Morte d'Arthur_ and in poetry in Tennyson's _Idylls of the King_.]

[Footnote 538: The royal Henries. Among the dramas popular in Shakespeare's day which he retouched or rewrote are the historical plays. Henry IV., First and Second Parts; Henry V; Henry VI., First, Second, and Third Parts; and Henry VIII.]

[Footnote 539: Italian tales. Italian literature was very popular in Shakespeare's day, and authors drew freely from it for material, especially from the _Decameron_, a famous collection of a hundred tales, by Boccaccio, a poet of the fourteenth century.]

[Footnote 540: Spanish voyages. In the sixteenth century, Spain was still a power upon the high seas, and the tales of her conquests and treasures in the New World were like tales of romance.]

[Footnote 541: Prestige. Can you give an English equivalent for this French word?]

[Footnote 542: Which no single genius, etc. In the same way, some critics assure us, the poems credited to the Greek poet, Homer, were built up by a number of poets.]

[Footnote 543: Malone. An Irish critic and scholar of the eighteenth century, best known by his edition of Shakespeare's plays.]

[Footnote 544: Wolsey's Soliloquy. See Shakespeare's _Henry VIII._ III, 2. Cardinal Wolsey was prime minister of England in the reign of Henry VIII.]

[Footnote 545: Scene with Cromwell. See _Henry VIII._ III, 2. Thomas Cromwell was the son of an English blacksmith; he rose to be lord high chamberlain of England in the reign of Henry VIII., but, incurring the King's displeasure, was executed on a charge of treason.]

[Footnote 546: Account of the coronation. See _Henry VIII._ IV, 1.]

[Footnote 547: Compliment to Queen Elizabeth. See _Henry VIII._ V, 5.]

[Footnote 548: Bad rhythm. Too much importance must not be attached to these matters in deciding authorship, as critics disagree about them.]

[Footnote 549: Value his memory, etc. The Greeks, in appreciation of the value of memory to the poet, represented the Muses as the daughters of Mnemosyne, the goddess of memory.]

[Footnote 550: Homer. A Greek poet to whom is assigned the authorship of the two greatest Greek poems, the _Iliad_ and the _Odyssey_; he is said to have lived about a thousand years before Christ.]

[Footnote 551: Chaucer. (See note 33.)]

[Footnote 552: Saadi. A Persian poet, supposed to have lived in the thirteenth century. His best known poems are his odes.]

[Footnote 553: Presenting Thebes, etc. This quotation is from Milton's poem, _Il Penseroso_. Milton here names the three most popular subjects of Greek tragedy,--the story of Oedipus, the ill-fated King of Thebes who slew his father; the tale of the descendants of Pelops, King of Pisa, who seemed born to woe--Agamemnon was one of his grandsons; the third subject was the tale of Troy and the heroes of the Trojan war,--called "divine" because the Greeks represented even the gods as taking part in the

contest.]

[Footnote 554: Pope. (See note 88.)]

[Footnote 555: Dryden. (See note 35.)]

[Footnote 556: Chaucer is a huge borrower. Taine, the French critic, says on this subject: "Chaucer was capable of seeking out in the old common forest of the Middle Ages, stories and legends, to replant them in his own soil and make them send out new shoots.... He has the right and power of copying and translating because by dint of retouching he impresses ... his original work. He recreates what he imitates."]

[Footnote 557: Lydgate. John Lydgate was an English poet who lived a generation later than Chaucer; in his _Troy Book_ and other poems he probably borrowed from the sources used by Chaucer; he called himself "Chaucer's disciple."]

[Footnote 558: Caxton. William Caxton, the English author, more famous as the first English printer, was not born until after Chaucer's death. The work from which Emerson supposes the poet to have borrowed Caxton's translation of _Recueil des Histoires de Troye_, the first printed English book, appeared about 1474.]

[Footnote 559: Guido di Colonna. A Sicilian poet and historian of the thirteenth century. Chaucer in his _House of Fame_ placed in his vision "on a pillar higher than the rest, Homer and Livy, Dares the Phrygian, Guido Colonna, Geoffrey of Monmouth, and the other historians of the war of Troy."]

[Footnote 560: Dares Phrygius. A Latin account of the fall of Troy, written about the fifth century, which pretends to be a translation of a lost work on the fall of Troy by Dares, a Trojan priest mentioned in Homer's _Iliad_.]

[Footnote 561: Ovid. A Roman poet who lived about the time of Christ, whose best-known work is the _Metamorphoses_, founded on classical legends.]

[Footnote 562: Statius. A Roman poet of the first century after Christ.]

[Footnote 563: Petrarch. An Italian poet of the fourteenth century.]

[Footnote 564: Boccaccio. An Italian novelist and poet of the fourteenth century. See note on "Italian tales," 539. It is supposed that the plan of the _Decameron_ suggested the similar but far superior plan of Chaucer's _Canterbury Tales_.]

[Footnote 565: Provençal poets. The poets of Provençe, a province of the southeastern part of France. In the Middle Ages it was celebrated for its lyric poets, called troubadours.]

[Footnote 566: Romaunt of the Rose, etc. Chaucer's _Romaunt of the Rose_, written during the period of French influence, is an incomplete and abbreviated translation of a French poem of the thirteenth century, _Roman de la Rose_, the first part of which was written by William of Loris and the latter by John of Meung, or Jean de Meung.]

[Footnote 567: Troilus and Creseide, etc. Chaucer ascribes the Italian poem which he followed in his _Troilus and Creseide_ to an unknown "Lollius of Urbino"; the source of the poem, however, is _Il Filostrato_, by Boccaccio, the Italian poet already mentioned. Chaucer's poem is far more than a translation; more than half is entirely original, and it is a powerful poem, showing profound knowledge of the Italian poets, whose influence with him superseded the French poets.]

[Footnote 568: The Cock and the Fox. _The Nun's Priest's Tale_ in the _Canterbury Tales_ was an original treatment of the _Roman de Renart_, of Marie of France, a French poet of the twelfth century.]

[Footnote 569: House of Fame, etc. The plan of the _House of Fame_, written during the period of Chaucer's Italian influence, shows the influence of Dante; the general idea of the poem is from Ovid, the Roman poet.]

[Footnote 570: Gower. John Gower was an English poet, Chaucer's contemporary and friend; the two poets went to the same sources for poetic materials, but Chaucer made no such use of Gower's works as we would infer from this passage. Emerson relied on his memory for facts, and hence made mistakes, as here in the instances of Lydgate, Caxton, and Gower.]

[Footnote 571: Westminster, Washington. What legislative body assembles at Westminster Palace, London? What at Washington?]

[Footnote 572: Sir Robert Peel. An English statesman who died in 1850, not long after _Representative Men_ was published.]

[Footnote 573: Webster. Daniel Webster, an American statesman and orator who was living when this essay was written.]

[Footnote 574: Locke. John Locke. (See note 18.)]

[Footnote 575: Rousseau. Jean Jacques Rousseau, a French philosopher of the eighteenth century.]

[Footnote 576: Homer. (See note 550.)]

[Footnote 577: Menn. Menn, or Mann, was in Sanscrit one of fourteen legendary beings; the one referred to by Emerson, Mann Vaivasvata was supposed to be the author of the laws of Mann, a collection made about the second century.]

[Footnote 578: Saadi or Sadi. (See note 552.)]

[Footnote 579: Milton. Of this great English poet and prose writer of the seventeenth century, Emerson says: "No man can be named whose mind still acts on the cultivated intellect of England and America with an energy comparable to that of Milton. As a poet Shakespeare undoubtedly transcends and far surpasses him in his popularity with foreign nations: but Shakespeare is a voice merely: who and what he was that sang, that sings, we know not."]

[Footnote 580: Delphi. Here, source of prophecy. Delphi was a city in Greece, where was the oracle of Apollo, the most famous of the oracles of antiquity.]

[Footnote 581: Our English Bible. The version made in the reign of King James I. by forty-seven learned divines is a monument of noble English.]

[Footnote 582: Liturgy. An appointed form of worship used in a Christian church,--here, specifically, the service of the Episcopal church. Emerson's mother had been brought up in that church, and though she attended her husband's church, she always loved and read her Episcopal prayer book.]

[Footnote 583: Grotius. Hugo Grotius was a Dutch jurist, statesman, theologian, and poet of the seventeenth century.]

[Footnote 584: Rabbinical forms. The forms used by the rabbis, Jewish doctors or expounders of the law.]

[Footnote 585: Common law. In a general sense, the system of law derived from England, in general use among English-speaking people.]

[Footnote 586: Vedas. The sacred books of the Brahmins.]

[Footnote 587: Æsop's Fables. Fables ascribed to Æsop, a Greek slave who lived in the sixth century before Christ.]

[Footnote 588: Pilpay, or Bidpai. Indian sage to whom were ascribed some fables. From an Arabic translation, these passed into European languages and were used by La Fontaine, the French fabulist.]

[Footnote 589: Arabian Nights. _The Arabian Nights' Entertainment or A Thousand and One Nights_ is a collection of Oriental tales, the plan and name of which are very ancient.]

[Footnote 590: Cid. _The Romances of the Cid_, the story of the Spanish national hero, mentioned in note on _Heroism_139:5, was written about the thirteenth century by an unknown author; it supplied much of the material for two Spanish chronicles and Spanish and French tragedies written later on the same subject.]

[Footnote 591: Iliad. The poem in which the Greek, poet, Homer, describes the siege and fall of Troy. Emerson here expresses the view adopted by many scholars that it was the work, not of one, but of many men.]

[Footnote 592: Robin Hood. The ballads about Robin Hood, an English outlaw and popular hero of the twelfth century.]

[Footnote 593: Scottish Minstrelsy. _The Minstrelsy of the Scottish Border_, a collection of original and collected poems, published by Sir Walter Scott in 1802.]

[Footnote 594: Shakespeare Society. The Shakespeare Society, founded in 1841, was dissolved in 1853. In 1874 The New Shakespeare Society was founded.]

[Footnote 595: Mysteries. See "Kyd, Marlowe, etc." 531.]

[Footnote 596: Ferrex and Porrex, or Gorboduc. The first regular English tragedy, by Thomas Norton and Thomas Sackville, printed in 1565.]

[Footnote 597: Gammer Gurtor's Needle. One of the first English comedies, written by Bishop Still and printed in 1575.]

[Footnote 598: Whether the boy Shakespeare poached, etc. For a fuller account of the facts of Shakespeare's life, of which some traditions and facts are mentioned here, consult some good biography of the poet.]

[Footnote 599: Queen Elizabeth. Dining her reign, 1558-1603, the English drama rose and attained its height, and there was produced a prose literature hardly inferior to the poetic.]

[Footnote 600: King James. King James VI. of Scotland and I. of England who was Elizabeth's kinsman and successor; he reigned in England from 1603 to 1625.]

[Footnote 601: Essexes. Walter Devereux was a brave English gentleman whom Elizabeth made Earl of Essex in 1572. His son Robert, the second Earl of Essex, was a favorite of Queen Elizabeth's.]

[Footnote 602: Leicester. The Earl of Leicester, famous in Shakespeare's time, was Robert Dudley, an English courtier, politician, and general, the favorite of Queen Elizabeth.]

[Footnote 603: Burleighs or Burghleys: William Cecil, baron of Burghley, was an English statesman, who, for forty years, was Elizabeth's chief minister.]

[Footnote 604: Buckinghams. George Villiers, the first duke of Buckingham, was an English courtier and politician, a favorite of James I. and Charles I.]

[Footnote 605: Tudor dynasty. The English dynasty of sovereigns descended on the male side from Owen Tudor. It began with Henry VII. and ended with Elizabeth.]

[Footnote 606: Bacon. Consult English literature and history for an account of the great statesman and author, Francis Bacon, "the wisest, brightest, meanest of mankind."]

[Footnote 607: Ben Jonson, etc. In his _Timber or Discoveries_, Ben Jonson, a famous classical dramatist contemporary with Shakespeare, says: "I loved the man and do honor his memory on this side idolatry as much as any. He was indeed honest and of an open and free nature: had an excellent fancy; brave notions and gentle expressions: wherein he flowed with that facility that sometimes it was necessary he should be stopped.... His wit was in his own power; would the rule of it had been so, too. Many times he fell into those things could not escape laughter.... But he redeemed his vices with his virtues. There was ever more in him to be praised than to be pardoned."]

[Footnote 608: Sir Henry Wotton. An English diplomatist and author of wide culture.]

[Footnote 609: The following persons, etc. The persons enumerated were all people of note of the seventeenth century. Sir Philip Sidney, Earl of Essex, Lord Bacon, Sir Walter Raleigh, John Milton, Sir Henry Vane, Isaac Walton, Dr. John Donne, Abraham Cowley, Charles Cotton, John Pym, and John Hales were Englishmen, scholars, statesmen, and authors. Theodore Beza was a French theologian; Isaac Casaubon was a French-Swiss scholar; Roberto Berlarmine was an Italian cardinal; Johann Kepler was a German astronomer; Francis Vieta was a French mathematician; Albericus Gentilis was an Italian jurist; Paul Sarpi was an Italian historian; Arminius was a Dutch theologian.]

[Footnote 610: Many others whom doubtless, etc. Emerson here enumerates some famous English authors of the same period, not mentioned in the preceeding list.]

[Footnote 611: Pericles. See note on _Heroism_, 352.]

[Footnote 612: Lessing. Gotthold Ephraim Lessing, a German critic and poet of the eighteenth century.]

[Footnote 613: Wieland. Christopher Martin Wieland was a German contemporary of Lessing's, who made a prose translation into German of Shakespeare's plays.]

[Footnote 614: Schlegel. August Wilhelm von Schlegel, a German critic and poet, who about the first of the nineteenth century translated some of Shakespeare's plays into classical German.]

[Footnote 615: Hamlet. The hero of Shakespeare's play of the same name.]

[Footnote 616: Coleridge. Samuel Taylor Coleridge, an English poet, author of critical lectures and notes on Shakespeare.]

[Footnote 617: Goethe. (See note 85.)]

[Footnote 618: Blackfriar's Theater. A famous London theater in which nearly all the great dramas of the Elizabethan age were performed.]

[Footnote 619: Stratford. Stratford-on-Avon, a little town in Warwickshire, England, where Shakespeare was born and where he spent his last years.]

[Footnote 620: Macbeth. One of Shakespeare's greatest tragedies, written about 1606.]

[Footnote 621: Malone, Warburton, Dyce, and Collier. English scholars of the eighteenth and nineteenth centuries who edited the works of Shakespeare.]

[Footnote 622: Covent Garden, Drury Lane, the Park, and Tremont: The leading London theaters in the eighteenth and nineteenth centuries.]

[Footnote 623: Betterton, Garrick, Kemble, Kean, and Macready, famous British actors of the Shakespearian parts.]

[Footnote 624: The Hamlet of a famed performer, etc. Macready. Emerson said to a friend: "I see you are one of the happy mortals who are capable of being carried away by an actor of Shakespeare. Now, whenever I visit the theater to witness the performance of one of his dramas, I am carried away by the poet."]

[Footnote 625: What may this mean, etc. _Hamlet_, I. 4.]

[Footnote 626: Midsummer Night's Dream. One of Shakespeare's plays.]

[Footnote 627: The forest of Arden. In which is laid, the scene of Shakespeare's play, _As You Like It_.]

[Footnote 628: The nimble air of Scone Castle. It was of the air of Inverness, not of Scone, that "the air nimbly and sweetly recommends itself unto our gentle senses."--_Macbeth_, I. 6.]

[Footnote 629: Portia's villa. See the moonlight scene, _Merchant of Venice_, V. 1.]

[Footnote 630: The antres vost, etc. See _Othello_, I. 3. "Antres" is an old word, meaning caves, caverns.]

[Footnote 631: Cyclopean architecture. In Greek mythology, the Cyclops were a race of giants. The term 'Cyclopean' is applied here to the architecture of Egypt and India, because of the majestic size of the buildings, and the immense size of the stones used, as if it would require giants to perform such works.]

[Footnote 632: Phidian sculpture. Phidias was a famous Greek sculptor who lived in the age of Pericles and beautified Athens with his works.]

[Footnote 633: Gothic minsters. Churches or cathedrals, built in the Gothic, or pointed, style of architecture which prevailed during the Middle Ages; it owed nothing to the Goths, and this term was originally used in reproach, in the sense of "barbarous."]

[Footnote 634: The Italian painting. In Italy during the fifteenth and sixteenth centuries pictorial art was carried to a degree of perfection unknown in any other time or country.]

[Footnote 635: Ballads of Spain and Scotland. The old ballads of these countries are noted for beauty and spirit.]

[Footnote 636: Tripod. Define this word, and explain its appropriateness here.]

[Footnote 637: Aubrey. John Aubrey, an English antiquarian of the seventeenth century.]

[Footnote 638: Rowe. Nicholas Rowe, an English author of the seventeenth century, who wrote a biography of Shakespeare.]

[Footnote 639: Timon. See note on _Gifts_, 466.]

[Footnote 640: Warwick. An English politician and commander of the fifteenth century, called "the King Maker." He appears in Shakespeare's plays, _Henry IV._, _V._, and _VI._]

[Footnote 641: Antonio. The Venetian Merchant in Shakespeare's play, _The Merchant of Venice_.]

[Footnote 642: Talma. François Joseph Talma was a French tragic actor, to whom Napoleon showed favor.]

[Footnote 643: An omnipresent humanity, etc. See what Carlyle has to say on this subject in his _Hero as Poet_.]

[Footnote 644: Daguerre. Louis Jacques Daguerre, a French painter, one of the inventors of the daguerreotype process, by means of which an image is fixed on a metal plate by the chemical action of light.]

[Footnote 645: Euphuism. The word here has rather the force of euphemism, an entirely different word. Euphuism was an affected ornate style of expression, so called from _Euphues_, by John Lyly, a sixteenth century master of that style.]

[Footnote 646: Epicurus. A Greek philosopher of the third century before Christ. He was the founder of the Epicurean school of philosophy which taught that pleasure should be man's chief aim and that the highest pleasure is freedom.]

[Footnote 647: Dante. (See note 258.)]

[Footnote 648: Master of the revels, etc. Emerson always expressed thankfulness for "the spirit of joy which Shakespeare had shed over the universe." See what Carlyle says in _The Hero as Poet_, about Shakespeare's "mirthfulness and love of laughter."]

[Footnote 649: Koran. The Sacred book of the Mohammedans.]

[Footnote 650: Twelfth Night, etc. The names of three bright, merry, or serene plays by Shakespeare.]

[Footnote 651: Egyptian verdict. Emerson used Egyptian probably in the sense of "gipsy." He compares such opinions to the fortunes told by the gipsies.]

[Footnote 652: Tasso. An Italian poet of the sixteenth century.]

[Footnote 653: Cervantes. A Spanish poet and romancer of the sixteenth century, the author of _Don Quixote_.]

[Footnote 654: Israelite. Such Hebrew prophets as Isaiah and Jeremiah.]

[Footnote 655: German. Such as Luther.]

[Footnote 656: Swede. Such as Swedenborg, the mystic philosopher of the eighteenth century of whom Emerson had already written in _Representative Men_.]

[Footnote 657: A pilgrim's progress. As described by John Bunyan, the English writer, in his famous _Pilgrim's Progress_.]

[Footnote 658: Doleful histories of Adam's fall, etc. The subject of _Paradise Lost,_ the great poem by John Milton.]

[Footnote 659: With doomsdays and purgatorial, etc. As described by Dante in his _Divine Commedia_, an epic about hell, purgatory, and paradise.]

PRUDENCE

[Footnote 660: The essay on _Prudence_ was given as a lecture in the course on _Human Culture_, in the winter of 1837-8. It was published in the first series of _Essays_, which appeared in 1841.]

[Footnote 661: Lubricity. The word means literally the state or quality of being slippery; Emerson uses it several times, in its derived sense of "instability."]

[Footnote 662: Love and Friendship. The subjects of the two essays preceding _Prudence_, in the volume of 1841.]

[Footnote 663: The world is filled with the proverbs, etc. Compare with this passage Emerson's words in _Compensation_ on "the flights of proverbs, whose teaching is as true and as omnipresent as that of birds and flies."]

[Footnote 664: A good wheel or pin. That is, a part of a machine.]

[Footnote 665: The law of polarity. Having two opposite poles, the properties of the one of which are the opposite of the other.]

[Footnote 666: Summer will have its flies. Emerson discoursed with philosophic calm about the impediments and disagreeableness which beset every path; he also accepted them with serenity when he encountered them in his daily life.]

[Footnote 667: The inhabitants of the climates, etc. As a northerner, Emerson naturally felt that the advantage and superiority were with his own section. He expressed in his poems _Voluntaries_ and _Mayday_ views similar to those declared here.]

[Footnote 668: Peninsular campaign. Emerson here refers to the military operations carried on from 1808 to 1814 in Portugal, Spain, and southern France against the French, by the British, Spanish, and Portuguese forces commanded by Wellington. What was the "Peninsular campaign" in American history?]

[Footnote 669: Dr. Johnson is reported to have said, etc. Dr. Samuel Johnson was an eminent English scholar of the eighteenth century. In this, as in many other instances, Emerson quotes from his memory instead of from the book. The words of Dr. Johnson, as reported by his biographer Boswell, are: "Accustom your children constantly to this; if a thing happened at one window, and they, when relating it, say it happened at another, do not let it pass, but instantly check them; you do not know where deviation from truth will end."]

[Footnote 670: Rifle. A local name in England and New England for an instrument, on the order of a whetstone, used for sharpening scythes; it is made of wood, covered with fine sand or emery.]

[Footnote 671: Last grand duke of Weimar. Saxe-Weimar-Eisenach is a grand duchy of Germany. The grand duke referred to was Charles Augustus, who died in 1828. He was the friend and patron of the great German authors, Goethe, Schiller, Herder, and Wieland.]

[Footnote 672: The Raphael in the Dresden gallery. The Sistine Madonna, the most famous picture of the great Italian artist, Raphael.]

[Footnote 673: Call a spade a spade. Plutarch, the Greek historian, said, "These Macedonians ... call a spade a spade."]

[Footnote 674: Parts. A favorite eighteenth century term for abilities, talents.]

[Footnote 675: We have found out, etc. Emerson always insisted that morals and intellect should be united. He urged that power and insight are lessened by shortcomings in morals.]

[Footnote 676: Goethe's Tasso. A play by the German poet Goethe, founded on the belief that the imprisonment of Tasso was due to his aspiration to the hand of Leonora d'Este, sister of the duke of Ferrara. Tasso was a famous Italian poet of the seventeenth century.]

[Footnote 677: Richard III. An English king, the last of the Plantagenet line, the hero--or villain--of Shakespeare's historical play, Richard III.]

[Footnote 678: Bifold. Give a simpler word that means the same.]

[Footnote 679: Cæsar. Why is Cæsar the great Roman ruler, given as a type of greatness?]

[Footnote 680: Job. Why is Job, the hero of the Old Testament book of the same name, given as a type of misery?]

[Footnote 681: Poor Richard. _Poor Richard's Almanac_, published (1732-1757) by Benjamin Franklin was a collection of maxims inculcating prudence and thrift. These were given as the sayings of "Poor Richard."]

[Footnote 682: State Street. A street in Boston, Massachusetts, noted as a financial center.]

[Footnote 683: Stick in a tree between whiles, etc. "Jock, when ye hae naething else to do, ye may be aye sticking in a tree; it will be growing, Jock, when ye're sleeping."--Scott's _Heart of Midlothian_. It is said that these were the words of a dying Scotchman to his son.]

[Footnote 684: Minor virtues. Emerson suggests that punctuality and regard for a promise are two of these. Can you name others?]

[Footnote 685: The Latin proverb says, etc. This is quoted from Tacitus, the famous Roman historian.]

[Footnote 686: If he set out to contend, etc. In contention, Emerson holds, the best men would lose their characteristic virtues, --the fearless apostle Paul, his devotion to truth; the gentle disciple John, his loving charity.]

[Footnote 687: Though your views are in straight antagonism, &c. This was Emerson's own method, and by it he won a courteous hearing from those to whom his views were most objectionable.]

[Footnote 688: Consuetudes. Give a simpler word that has the same meaning.]

[Footnote 689: Begin where we will, etc. Explain what Emerson means by this expression.]

CIRCLES

[Footnote 690: This essay first appeared in the first series of _Essays_, published in 1841. Unlike most of the other essays in the volume, no earlier form of it exists, and it was probably not delivered first as a lecture.

Dr. Richard Garnett says in his _Life of Emerson_: "The object of this fine essay quaintly entitled _Circles_ is to reconcile this rigidity of unalterable law with the fact of human progress. Compensation illustrates one property of a circle, which always returns to the point where it began, but it is no less true that around every circle another can be drawn.... Emerson followed his own counsel; he always keeps a reserve of power. His theory of _Circles_ reappears without the least verbal indebtedness to himself in the splendid essay on _Love_."]

[Footnote 691: St. Augustine. A celebrated father of the Latin church, who flourished in the fourth century. His most famous work is his _Confessions_, an autobiographical volume of religious meditations.]

[Footnote 692: Another dawn risen on mid-noon. "Another morn has risen on mid-noon." Milton, _Paradise Lost_, Book V.]

[Footnote 693: Greek sculpture. The greatest development of the art of sculpture that the world has ever known was that which took place in Greece, with Athens as the center, in the fifth century before Christ. The masterpieces which remain are the models on which modern art formed itself.]

[Footnote 694: Greek letters. In literature--in drama, philosophy and history--Greece attained an excellence as signal as in art. Emerson as a scholar, felt that the literature of Greece was more permanent than its art. Would an artist be apt to take this view?]

[Footnote 695: New arts destroy the old, etc. Tell the ways in which the improvements and inventions mentioned by Emerson have been superseded by others; give the reasons. Mention other similar cases of more recent date.]

[Footnote 696: The life of man is a self-evolving circle, etc. "Throw a stone into the stream, and the circles that propagate themselves are the beautiful type of all influence."--EMERSON, in _Nature_.]

[Footnote 697: The heart refuses to be imprisoned. It is a superstition current in many countries that an evil spirit cannot escape from a circle drawn round it.]

[Footnote 698: Crass. Gross; coarse.]

[Footnote 699: The continual effort to raise himself above himself, etc.

"Unless above himself he can Erect himself, how poor a thing is man!" SAMUEL DANIEL.

]

[Footnote 700: If he were high enough, etc.

Have I a lover Who is noble and free?-- I would he were nobler Than to love me.--EMERSON, _The Sphinx._

]

[Footnote 701: Aristotle and Plato. Plato was a famous Greek philosopher who flourished in the fourth century before Christ. He was the disciple of Socrates, the teacher of Aristotle, and the founder of the academic school of philosophy. His exposition of idealism was founded on the teachings of Socrates. Aristotle, another famous Greek philosopher, was for twenty years the pupil of Plato. He founded the peripatetic school of philosophy, and his writing dealt with all the then known branches of science.]

[Footnote 702: Berkeley. George Berkeley was a British clergyman of the eighteenth century. He was the author of works on philosophy which are marked by extreme subjective idealism.]

[Footnote 703: Termini. Boundaries or marks to indicate boundaries. In Roman mythology, Terminus was the god who presided over boundaries or landmarks. He is represented with a human head, but without feet or arms,--to indicate that he never moved from his place.]

[Footnote 704: Pentecost. One of three great Jewish festivals. On the day of Pentecost, the Holy Spirit descended upon the infant Christian church, with the gift of tongues. See Acts ii. 1-20.]

[Footnote 705: Hodiernal. Belonging to our present day.]

[Footnote 706: Punic. Of Carthage, a famous ancient city, and state of northern Africa. Carthage was the rival of Rome, but was, after long warfare, overcome in the second century before Christ.]

[Footnote 707: In like manner, etc. Emerson always urged that in order to get the best from all, one must pass from affairs to thought, society to solitude, books to nature.

"See thou bring not to field or stone The fancies found in books; Leave authors' eyes, and fetch your own, To brave the landscape's look."--EMERSON, _Waldeinsamkeit_.

]

[Footnote 708: Petrarch. (See note 563.)]

[Footnote 709: Ariosto. A famous Italian author of the sixteenth century, who wrote comedies, satires, and a metrical romance, _Orlando Furioso_.]

[Footnote 710: "Then shall also the Son", etc. See 1 Corinthians xv. 28: Does Emerson quote the passage verbatim?]

[Footnote 711: These manifold tenacious qualities, etc. It is remarked of Emerson that the idea of the symbolism of nature which he received from Plato, was the source of much of his pleasure in Swedenborg, the Swedish mystic philosopher. Emerson says in his volume on _Nature_: "The noblest ministry of nature is to stand as an apparition of God."]

[Footnote 712: "Forgive his crimes," etc. This is quoted from _Night Thoughts_ by the English didactic poet, Edward Young.]

[Footnote 713: Pyrrhonism. A doctrine held by a follower of Pyrrho, a Greek philosopher of the third century before Christ, who founded the sceptical school. He taught that it is impossible to attain truth, and that men should be indifferent to all external circumstances.]

[Footnote 714: I own I am gladdened, etc. Emerson always held fast to the consoling thought that there was no evil without good, none out of which Good did not or could not come.]

[Footnote 715: Sempiternal. Everlasting; eternal.]

[Footnote 716: Oliver Cromwell. An Englishman of the middle classes who became the military and civil leader of the English Revolution of the seventeenth century. He refused the title of king; but as Lord Protector of the English commonwealth, he exercised royal power.]

DOMESTIC COOKERY, USEFUL RECEIPTS, AND HINTS TO YOUNG HOUSEKEEPERS.

BY ELIZABETH E. LEA

"The Source of Liberal Deeds is Wise Economy."

ADVERTISEMENT TO THIRD EDITION.

This Work having passed through two editions, and having met with a very favorable reception, the Authoress has been induced to thoroughly revise and re-arrange the whole work. Numerous additions have also been made, particularly under the heads Miscellaneous Receipts and Hints to Young Housekeepers, which she hopes will be found to have enhanced its value.

INTRODUCTORY ADDRESS.

The compiler of "Useful Receipts and Hints to Young Housekeepers" having entered early in life upon a train of duties, was frequently embarrassed by her ignorance of domestic affairs. For, whilst receipt books for elegant preparations were often seen, those connected with the ordinary, but far more useful part of household duties, were not easily procured; thus situated, she applied to persons of experience, and embodied the information collected in a book, to which, since years have matured her judgment, she has added much that is the result of her own experiments.

Familiar, then, with the difficulties a young housekeeper encounters, when she finds herself in reality the mistress of an establishment, the Authoress offers to her young countrywomen this Work, with the belief that, by attention to its contents, many of the cares attendant on a country or city life, may be materially lessened; and hoping that the directions are such as to be understood by the most inexperienced, it is respectfully dedicated to those who feel an interest in domestic affairs.

MEATS AND POULTRY.

To Boil Fresh Meat.

In boiling fresh meat, care is necessary to have the water boiling all the time it is in the pot; if the pot is not well scummed, the appearance of the meat will be spoiled.

Mutton and beef are preferred, by some, a little rare; but pork and veal should always be well done. A round of beef that is stuffed, will take more than three hours to boil, and if not stuffed, two hours or more, according to the size; slow boiling is the best. A leg of mutton requires from two to three hours boiling, according to the size; a fore-quarter from an hour to an hour and a half; a quarter of lamb, unless, very large, will boil in an hour. Veal and pork will take rather longer to boil than mutton.

All boiled fresh meat should have drawn butter poured over it, after it is dished, and be garnished with parsley.

The liquor that fresh meat, or poultry, is boiled in, should be saved, as an addition of vegetables, herbs, and dumplings make a nourishing soup of it.

A large turkey will take three hours to boil--a small one half that time; secure the legs to keep them from bursting out; turkeys should be blanched in warm milk and water; stuff them and rub their breasts with butter, flour a cloth and pin them in. A large chicken that is stuffed should boil an hour, and small ones half that time. The water should always boil before you put in your meat or poultry. When meat is frozen, soak it in cold water for several hours, and allow more time in the cooking.

To Boil a Turkey.

Have the turkey well cleaned and prepared for cooking, let it lay in salt and water a few minutes; fill it with bread and butter, seasoned with pepper, salt, parsley and thyme; secure the legs and wings, pin it up in a towel, have the water boiling, and put it in, put a little salt in the water; when half done, put in a little milk. A small turkey will boil in an hour and a quarter, a middle sized in two hours, and a large one in two and a half or three hours; they should boil moderately all the time; if fowls boil too fast, they break to pieces--half an hour will cook the liver and gizzard, which should be put round the turkey; when it is dished, have drawn butter, with an egg chopped and put in it, and a little parsley; oyster sauce, and celery sauce are good, with boiled turkey or chicken.

To Boil Beef Tongue, Corned Beef &c.

If the tongue is dry, let it soak for several hours, put it to boil in cold water, and keep it boiling slowly for two hours; but if it is just out of the pickle, the water should boil when it goes in.

Corned or pickled beef, or pork, require longer boiling than that which is dry; you can tell when it is done by the bones coming out easily. Pour drawn butter over it when dished.

To Boil a Ham.

A large ham should boil three or four hours very slowly; it should be put in cold water, and be kept covered during the whole process; a small ham will boil in two hours. All bacon requires much the same management,--and if you boil cabbage or greens with it, skim all the grease off the pot before you put them in. Ham or dried beef, if very salt, should be soaked several hours before cooking, and should be boiled in plenty of water.

To Boil Calf's Head.

Cut the upper from the lower jaw, take out the brains and eyes, and clean the head well; let it soak in salt and water an hour or two; then put it in a gallon of boiling water, take off the scum as it rises, and when it is done, take out the bones; dish it, and pour over a sauce, made of butter and flour, stirred into half a pint of the water it was boiled in; put in a chopped egg, a little salt, pepper, and fine parsley, when it is nearly done. You can have soup of the liquor, with dumplings, if you wish.

To Boil Veal.

Have a piece of the fore quarter nicely washed and rubbed with Hour; let it boil fast; a piece of five pounds will boil in an hour and a half; dish it up with drawn butter. Oyster sauce is an improvement to boiled veal.

Roasting Meat.

Roasting either meat or poultry requires more attention than boiling or stewing; it is very important to baste it frequently, and if the meat has been frozen, it should have time to thaw before cooking. Beef, veal, or mutton, that is roasted in a stove or oven requires more flour dredged on it than when cooked before the fire in a tin kitchen. There should be but little water in the dripping pan, as that steams the meat and prevents its browning; it is best to add more as the water evaporates, and where there is plenty of flour on the meat it incorporates with the gravy and it requires no thickening; add a little seasoning before you take up the gravy. Meat that has been hanging up some time should be roasted in preference to boiling, as the fire extracts any taste it may have acquired. To rub fresh meat with salt and pepper will prevent the flies from troubling it, and will make it keep longer.

To Roast a Turkey--to make Gravy, &c.

A very large turkey will take three hours to roast, and is best done before the fire in a tin oven. Wash the turkey very clean, and let it lay in salt and water twenty minutes, but not longer, or it changes the color; rub the inside with salt and pepper; have ready a stuffing of bread and butter, seasoned with salt, pepper, parsley, thyme, an onion, if agreeable, and an egg; if the bread is dry, moisten it with boiling water; mix all well together, and fill the turkey; if you have fresh sausage, put some in the craw; have a pint of water in the bottom of the dripping pan or oven, with some salt and a spoonful of lard, or butter; rub salt, pepper and butter over the breast; baste it often, and turn it so that each part will be next the fire.

Gravy may be made from the drippings in the oven by boiling it in a skillet, with thickening and seasoning. Hash gravy should be made by boiling the giblets and neck in a quart of water, which chop fine, then season and thicken; have both the gravies on the table in separate tureens.

Cranberry and damson sauce are suitable to eat with roast poultry.

To Roast a Goose.

Make a stuffing of bread, butter, salt, pepper, sage, thyme and onions; it requires but little butter, as geese are generally fat; wash it well in salt and water, wipe it, and rub the inside with salt and pepper. A common sized goose will roast in an hour, and a small one in less time; pour off nearly all the fat that drips from the goose, as it will make the gravy too rich. Make hash gravy of the giblets the same as for turkey.

Ducks.

Wild ducks are generally cooked without stuffing, and for those that like them rare, fifteen or twenty minutes will be long enough; for common ducks, a stuffing should be made the same as for a goose; they will roast in half an hour. Currant jelly and apple sauce should be eaten with ducks and geese.

Chickens.

A large fowl will roast in an hour, and a small one in half an hour; boil the livers and gizzards in a skillet with a pint of water; thicken and season for gravy. The breasts of the chickens should be rubbed with butter or lard to keep them from breaking. Tie the legs in, to keep them from bursting out. When butter is scarce, it is a good way to make rich short cake to stuff poultry with; it will require nothing added but pepper, parsley, &c.

To Roast Beef.

Season the beef with pepper and salt, and put it in the tin kitchen, well skewered to the spit, with a pint of water in the bottom: baste and turn it frequently, so that every part may have the fire. A very large piece of beef will take three hours to roast; when it is done, pour the gravy out into a skillet, let it boil, and thicken it with flour mixed with water; if it be too fat, skim off the top, which will be useful for other purposes.

To Roast Veal and Lamb.

Veal should be well seasoned, and rubbed with lard; when it begins to brown, baste it with salt and water; a large loin will take from two to three hours to roast, the thin part of the fore-quarter an hour; it should be well done; boil up and thicken the gravy. A leg of veal or mutton may be stuffed before baking. Lamb and mutton do not require to be rubbed with lard, as they are generally fatter than veal; make the gravy as for veal. A quarter of lamb will roast in an hour; a loin of mutton in two hours.

To Roast a Pig--Hash Gravy, &c.

Have a pig of a suitable size, clean it well, and rub the inside with pepper and salt. Make a stuffing of bread, butter, parsley, sage and thyme; if the bread is stale, pour a little boiling water on it; mix altogether; fill the pig, and sew it up with strong thread; put in the skewers and spit, and tie the feet with twine; have a pint and a half of water in the bottom of the tin kitchen, with a spoonful of lard and a little salt, with this baste it and turn it, so as each part will have the benefit of the fire. It should be basted until the skin begins to get stiff with the heat of the fire; then grease it all over with butter or lard, and continue to turn it before the fire, but baste no more, or the skin will blister. A pig will take from two to three hours to roast, according to the size; when it is done, pour the water out in a skillet; season it and thicken it with flour and water. To make hash gravy, put the liver and heart to boil in three pints of water; after they have boiled an hour, chop them very fine, put them back in the pot and stir in a thickening of flour and water, with salt, pepper, parsley and thyme. Have the gravies in separate tureens on either side of the pig. Apple sauce and cold slaw are almost indispensable with pig.

To Roast Pork.

After washing the pork, cut the skin in squares or stripes; season it with salt and pepper, and baste it with salt and water; thicken, and boil up the gravy.

To Bake a Stuffed Leg of Veal.

Cut off the shank, and make holes round the hone for stuffing, which should be of bread and butter, the yelk of an egg, and seasoning; fill the holes with this, and spread it over the top, with little pieces of the fat of ham; dust salt and pepper over, put it in the dutch-oven, or dripping pan, and bake it brown; put a pint of water in the bottom, and if it should dry up, put in more; when it is done, dust in some flour for the gravy. If done carefully, meat is almost as good roasted in the stove as before the fire. If you let the gravy boil over in the stove, it makes an unpleasant smell through the house, and spoils the flavor of the meat. The ham of fresh pork is good, done in the same way.

To Bake a Pig's Head.

Have the head nicely cleaned, with the eyes taken out, and the ears cut off; season it with salt and pepper; rub crumbs of bread over, with a spoonful of lard; put it in the dutch-oven, or dripping pan, with a pint of water; bake it an hour; thicken and season the gravy.

To Cook Pigeons.

Pigeons should be roasted about fifteen minutes before a quick fire; as the meat is dry, they should have a rich stuffing, and be basted with butter.

You may bake them in a dutch-oven or stew them in a pot, with water enough to cover them, and some crumbs of bread or flour dusted over them; let them cook slowly half an hour; mix together flour and water, with salt, pepper, and parsley to season, and a lump of butter; stir this in and let it boil up; put them in a deep dish and pour the gravy over. Pigeons make a very nice pie in the same way as chickens.

To Bake a Ham.

Make a dressing of bread, seasoned with pepper and herbs, moisten it with about five eggs, instead of water. Take a ham that has been cut at the table, either fresh or salt, fill up the place where it has been cut, and cover the top with the dressing, bake it half an hour, and garnish it with parsley before sending it to the table.

To Bake Beef's Heart.

After washing the heart, make a rich stuffing with bread and suet, highly seasoned; fill it with this, and put it in a dutch-oven, or the dripping pan of a stove, with half a pint of water; let it bake an hour and a half; the gravy will not need any thickening, as some of the stuffing will fall out. Put the gravy in the dish.

Beef A la mode.

Take part of a round of beef, bone it, and make holes for stuffing, which is made of bread, suet, thyme, parsley, chopped onions, mace, cloves, pepper, salt and a raw egg; stuff the meat, bind it with tape, and put it in a dutch-oven, with a plate in the bottom to keep it from burning; just cover it with water, and let it stew from three to four hours according to the size.

Make gravy with some of the water it was stewed in, seasoned with claret and butter, and thickened with flour. If you wish it to taste of any other sort of wine, add a glass to the gravy.

Beef Steak.

Choose the tenderest part of beef, cut it an inch thick, broil it gently over good coals, covered with a plate; have butter, salt, pepper, and a little water in a dish; and when you turn the beef, dip it in this; be careful to have as much of the juice as you can. When done, put it in a warm dish, and pour the basting over, with some more butter.

Mutton Chops.

Cut some pieces of mutton, either with or without bone, about an inch thick; have the gridiron hot, first rubbing it with a little suet; put on the chops, turning them frequently, and butter and season them with pepper and salt as you cook them; then dish them on a hot dish and add more butter.

Rabbits and Squirrels.

Rabbits and squirrels, or birds, may be fried as chickens, or stewed in a pot with a little water. If you make a pie of rabbits or squirrels, they should be stewed first to make them tender, and then made in the same way as chicken pie. Rabbits ace very good cooked with chopped onions, in a pot with a little water, and thickening of milk and flour stirred in when they are nearly done. Squirrels make very good soup.

To Fry Ham.

Slice the ham and if it is very salt, pour boiling water on it, and let it soak a while; then fry it with a small piece of lard; when done, dish it; mix together flour, milk, parsley and pepper, let it boil, and pour it over the ham.

To Fry Beef with Kidney.

Cut the kidney in small pieces; take out all the strings and let it soak several hours in salt and water; wash and drain it; season some pieces of beef and kidney, and put them in a frying pan, with hot lard or drippings of any kind; dust a little flour over; when it is fried on both sides, take it up in a dish; mix a spoonful of flour in some water with salt and pepper, and pour in; when it has boiled, pour it over the beef.

To Fry Liver.

Liver should be cut across the grain in slices about half an inch thick; pour boiling water over it, drain and season it with pepper and salt; flour each piece and drop it in a frying-pan of hot bacon drippings; do not fry it any longer than it is done, or it will he hard; take it up in a dish, make gravy as for beef, and pour over it.

Veal Cutlets.

Cut the veal in slices near an inch thick; wash, drain, and season it; beat up an egg, and have ready some pounded crackers or bread crumbs; dip the slices first in the egg, and then in the bread, and fry them in hot lard; mix a gravy of flour and water, with salt, pepper and parsley; when the veal is taken up, pour it in; let it boil a few minutes and pour it over the dish, and grate a little nutmeg over.

To Fry Veal, Lamb or Pork.

Cut up the meat in thin slices, and season it; dip it in flour and drop it in a pan of hot lard; when brown, take it up, and make gravy with flour, milk, parsley, pepper and salt, which stir in.

To Stew Veal, Lamb or Pork.

Cut the meat small, season it, and put it in a pot with water enough to cover it; let it cook for half an hour; then pour in thickening of flour and milk, with parsley and thyme, and a piece of butter, (if the meat is not fat;) take it up in a deep dish.

Brains and Tongue.

Pour boiling water on the brains, and skin them; tie them tight in a cloth, and boil them and the tongue with the head; when done put them on a plate, chop three leaves of green sage fine, and beat up with the brains, spread them round a small dish, and after skinning the tongue, place it in the middle.

Veal Hash.

Take the lights, heart, and some of the liver, boil them in a pint of water, when done, take them out and chop them fine, season it with salt, pepper and a little sweet marjoram, put it hack in the pot, and thicken it with butter and flour. Let it boil a few minutes, and dish it in a small tureen.

Brain Cakes.

When the head is cloven, take out the brains and clear them of strings, beat them up with the yelks of two eggs, some crumbs of bread, pepper, salt, fine parsley, a spoonful of cream, and a spoonful of flour; when they are well mixed, drop them with a spoon into a frying-pan with a little hot butter, and fry them of a light-brown color.

Force Meat Balls.

Take a pound of veal, half a pound of suet, two slices of ham, and some crumbs of bread, chop them very fine, and put in the yelks of two eggs, season it with parsley, thyme, mace, pepper and salt, roll it into small balls, and fry them brown. They are nice to garnish hashes, roast veal or cutlets, and to put in soup.

To Fry Veal's Liver.

Cut the liver and heart across the grain, wash it well, pour boiling water on, and let it stand a few minutes, then drain and season it with salt and pepper, flour it and drop it in hot lard; when it is brown on both sides, dish it, dust a little flour in the pan, and pour in some water, let it boil a minute, stirring in a seasoning of parsley, thyme, or sweet marjoram; pour the gravy over the liver. This is a good breakfast dish.

To Fry Veal Sweet Breads.

Dip them in the yelk of an egg beaten, then in a mixture of grated bread, or flour and salt and pepper, fry them a nice brown.

To Stew Sweet Breads.

Stew them in a little water, with butter, flour, and a little cream; season with salt, pepper, parsley and thyme.

To Brown A Calf's Head With The Skin On.

After scalding and washing the head clean, take out the eyes, cut off the ears, and let it boil half an hour, when cold, cleave the upper from the lower jaw, take out the tongue, strike off the nose, score the part which has the skin on, rub it over with beaten egg, sprinkle it over with salt, parsley, cayenne and black pepper, lay pieces of butter over it, and put it in a dutch-oven to brown, basting it often, cut down the lower part in slices, skin the tongue and palate, and cut them up, put them in a pot with a little water, when done, thicken it with brown flour and butter, season it with pepper, salt, some pickled oysters, wine or brandy (if you like it,) and let it stew fifteen minutes. Lay the baked head in a dish and put the hash around it, and lay force meat balls or brain cakes round the edge of the dish.

Bacon Fraise.

Cut streaked bacon in small thin slices, make a batter of a pint of milk, two eggs, and two large spoonsful of flour; some salt and pepper; put some lard or dripping in a frying-pan, and when it is hot pour in half of the batter, and strew the bacon over it; then pour on the remainder of the batter; let it fry gently, and be careful in turning, that the bacon does not come to the pan.

Irish Stew.

Take five thick mutton chops, or two pounds of the neck or loin, two pounds of potatoes, peel them and cut them in halves, six onions or half a pound of onions, peel and slice them also. First put a layer of potatoes at the bottom of your stew-pan, then a couple of chops and some onions, then again potatoes, and so on till the pan is quite full; season with pepper and salt, and three gills of broth or gravy, and two tea-spoonsful of mushroom catsup; cover it very close to prevent the escape of steam, and stew on a slow fire for an hour and a half; a slice of ham is an addition. Great care should be taken not to let it brown.

To Brown Flour for Gravy, &c.

Put some flour in a dutch-oven and set it over some hot coals; keep stirring it until it is of a light-brown color; in this way several pounds can be done at once, and kept in a jar covered; and is very convenient to thicken brown soups and gravies with.

Drawn Butter.

Put half a pint of water in a skillet; rub a quarter of a pound of butter in a large spoonful of flour; when the water boils, stir it in and let it boil a few minutes, season it with parsley, chopped fine.

Stuffing or Dressing.

Stuffing for poultry is made of bread and butter, an egg, salt, pepper, chopped parsley or thyme, mixed together; if the bread is dry, it should have a little boiling water poured on it.

Egg Sauce.

This is made as drawn butter, with one or two eggs boiled hard and chopped into it, and a little salt.

Celery Sauce.

Take a large bunch of celery, cut it fine, and boil it till soft, in a pint of water; thicken it with butter and flour, and season it with salt, pepper, and mace.

Bacon Dumplings.

Cut slices of cooked bacon, and pepper them; roll out crust as for apple dumplings; slice some potatoes very thin, and put them in the crust with the meat; close them up, and let them boil fast an hour; when done, take them out carefully with a ladle.

Drop Dumplings.

These are good for almost any kind of soup, and may be made of a quart of flour, two eggs, a spoonful of butter, some salt and pepper, wet with milk and water; drop them in while it is boiling, and let them boil ten or fifteen minutes.

Vermicelli.

Beat three fresh eggs very light, make them into a stiff paste, with flour and water; knead it well, and roll it very thin, cut it in narrow strips, give them a twist, and dry them quickly, on tin sheets or dishes, in the sun or a moderate oven; soak them a few minutes in cold water, and put them in chicken soup. They are very good and convenient.

Hash made of Fowls.

Take the bones and pieces that have been left of roast or boiled fowls, either turkeys or chickens, crack the bones, cut off the meat, and chop it fine, put it in a small iron pot, or stew pan, cover it with water, put in the gravy that may be left from the fowls, season with pepper and salt, put in some chopped celery, crumbs of bread, a lump of butter, and if it requires it, dust in a little flour, if you like it you may slice in an onion.

Beef Steak Pudding.

Take two pounds of beef from the round or sirloin, and after taking out the bone, season it according to fancy; some prefer a seasoning of pepper, salt, onions, thyme, marjoram or sage; others the pepper and salt alone. Then prepare a plain stiff crust, either with or without butter or lard; spread the crust over a deep dish or bowl, put in the beef, and if you like it, add some butter; cover it close with a crust which must be closely turned in to prevent the water from penetrating; tie it up tight in a cloth, put it in a pot of boiling water and let it boil quickly for an hour. The cloth should be dipped in hot water, and floured, as for other boiled puddings.

Beef Steak Pie.

Take some fine beef steaks, beat them well with a rolling pin, and season them with pepper and salt according to taste. Make a good crust; lay some in a deep dish or tin pan; lay in the beef, and fill the dish half full of water; put in a table-spoonful of butter and some chopped thyme and parsley, and cover the top with crust; bake it from one to two hours, according to the size of the pie, and eat it while hot.

Baked Beef Pudding.

Par-boil some tender pieces of beef, in water enough to barely cover it; grease a pan with lard, season the beef and lay it in; make a batter of eggs, milk and flour, with a little salt, and pour it over; bake it an hour in a stove or dutch-oven, and when done keep it hot till it is eaten. Save the water the beef was boiled in, add a little butter, flour, pepper, salt and chopped parsley, thyme or sweet marjoram, and boil it up; when you dish up the pudding pour this over, or put it in a gravy dish to be served hot at the table.

Pork Stew Pie.

Take small bones and pieces of pork that will not do for sausage; roll out some crust with but little shortening; lay in the meat and small pieces of crust alternately; sprinkle in flour and seasoning, cover it with water, and put on a crust.

Spiced Beef in the Irish Style.

To a round weighing from twenty to twenty-five pounds, take a pint of salt, one ounce of saltpetre, two ounces of pepper, two ounces of cloves, one ounce of allspice, four ounces of brown sugar, all well pulverized, and mixed together; rub the round well with it, and lay it in a small tub or vessel by itself. Turn and rub it once a day for ten days. It will not injure if it remain a week longer in the spices, if it should not be convenient to bake it. When you wish to have it cooked, strew over the top of the round a small handful of suet. Be particular to bind it tight round with a cord, or narrow strip of muslin, which must be wrapped several times round to keep it in shape; put it in a dutch-oven, and add three pints of water when it is first put down; keep water boiling in the tea-kettle, and add a little as it seems necessary, observing not to add too much. It will require a slow heat, and take four hours to bake.

This is a very fine standing dish, and will be good for three weeks after cooking. Keep the gravy that is left to pour over it to keep it moist.

To Bake Fowls.

Season and stuff them the same as for roasting; put them in a dutch-oven or stove, with a pint of water; when they are half done, put in the giblets; when these are done, chop them with a knife, and put in thickening and a lump of butter.

If chickens are young, split them down the back, and put them in a dutch-oven, with a plate in the bottom, and a pint of water; when they are done, stir in a spoonful of flour, mixed in half a pint of milk, a piece of butter, salt, pepper and parsley; let it boil up and dish them.

To Fry Chickens.

After cutting up the chickens, wash and drain them; season them with salt and pepper; rub each piece in flour, and drop them separately in a frying-pan or dutch-oven of hot lard; when brown, turn the other side to fry; make a thickening of rich milk, flour, a piece of butter, salt, and chopped parsley; take up the chicken on a dish; pour a little water in the pan to keep the gravy from being too thick; put in the thickening, stir it, and let it boil a few minutes; then pour it over the chicken.

Chickens Fried in Batter.

Make a batter of two eggs, a tea-cup of milk, a little salt, and thickened with flour; have the chickens cut up, washed and seasoned; dip the pieces in the batter separately, and fry them in hot lard; when brown on both sides, take them up on a dish, and make a gravy as for fried chickens.

Lard fries much nicer than butter, which is apt to burn.

Chickens in Paste.

Make a crust as for pies, and roll it out in cakes, large enough to cover a chicken. The chickens should be very nicely picked and washed, and the inside wiped dry; put in each a small lump of butter, a little salt, pepper, and parsley; have the pot boiling, close the chickens in the dough, pin them up in separate cloths, and boil them three-quarters of an hour; dish them, and pour drawn butter over. Pigeons can be cooked in the same manner.

To Fricassee Chickens.

Cut up the chickens, and put them in a pot with just water enough to cover them; let it boil half an hour; have ready some thickening made of milk, flour, and butter, seasoned with parsley, thyme, pepper, and salt; let it boil a few minutes longer, and when it is dished, grate a little nutmeg over, if you like it. This is one of the easiest, cheapest and best ways of cooking chickens.

Chicken Pie.

Cut up the chickens, and if they are old, boil them fifteen minutes in a little water, which save to put in the pie; make a paste like common pie crust, and put it round your pan, or dish; lay in the chicken, dust flour over, and put in hotter, pepper, and salt; cover them with water, roll out the top crust quite thick, and close the pie round the edge; make an opening in the middle with a knife; let it bake rather more than an hour. If you warm a pie over for the next day, pour off the gravy and warm it separately, and add it to the pie.

Pot Pie.

Cut up two large chickens; grease your pot, or dutch-oven, with lard; roll out crust enough in two parts, to go round it, but not to cover the bottom, or it will burn before the pie is done. As you put in the pieces of chicken, strew in flour, salt, and pepper, some, pieces of the crust rolled thin, and a few potatoes; cover this with water, and put on a covering of paste, with a slit cut in the middle; let it cook slowly for about two hours; have hot water in a tea kettle, and if it should dry up too much, pour some in; just before you dish it, add a little parsley and thyme.

Veal, lamb and pork pies, may be made in the same way. If you like more top crust, cook it in a dutch-oven, and when the first crust is done, take it off in a pan and set it near the fire, and cover the pie again with dough.

Giblet Pie and Soup.

If you can get livers and gizzards from market, you can have a very nice pie made, the same as chicken pie, or soup with dumplings made of milk, egg and flour, beaten together, and dropped in when the soup is nearly done, and season it with parsley, pepper, and salt.

Chicken Stewed with New Corn.

Cut up the chickens as for pies; season them well; have green corn cut off the cob; put a layer of chicken in the bottom of a stew pan, and a layer of corn, and so till you fill all in; sprinkle in salt, pepper and parsley, and put a piece of butter in; cover it with water, and put on a crust, with slits cut in it; let it boil an hour; when done, lay the crust in a deep dish; dip out the chicken and corn, and put it on the crust; stir in the gravy a thickening of milk and flour; when this boils up, pour it in with the corn and chicken. Chicken and corn boiled together in a pot, make very nice soup, with dumplings.

To Broil Chickens.

Split the chickens down the back; season them, and put them on the gridiron over clear coals; cover them over with a plate, (which will make them cook faster,) baste with melted butter: be careful not to let them burn. Make gravy of the giblets, boiled in water and chopped fine; put in butter, thicken and season it; pour this in a dish, and put the chickens on the top.

Chicken Pudding.

Make a batter of six eggs, milk, flour and a little salt; par-boil the chickens; have each joint cut, grease a pan with lard, and lay the pieces in; put in some lumps of butter, and season it well with pepper and salt; then pour the batter over, and bake it an hour, in a stove or dutch-oven. Veal or beef makes a very nice pudding, done in the same way; but the batter need not be as rich as for chicken, and it requires no butter. Or it makes a good dish, if you cut slices of ham, after it will not do to appear on the table; make a batter, as for other pudding; put in a little butter and pepper, and bake it in a pan.

Cold Chicken With Vinegar.

Cut up the chicken in small pieces, and crack the bones; season it with salt and pepper, and put it in a deep baking plate, with a lump of butter and a table-spoonful of vinegar; cover it with hot water, put a plate over, and let it stew on a stove or hot embers.

Chicken Salad.

Cut up the white parts of a cold chicken, season it with oil, or drawn butter, mustard, pepper, salt, and celery, chopped very fine, and a little vinegar. Turkey salad is made in the same manner as above.

Stewed Chickens With Rice.

The rice must first be soaked in water, and very nicely washed, or it will not be white; two tea-cupsful of rice are sufficient to serve with one chicken, and must be boiled in a quart of water, which should be boiling when you put the rice in; add a dessert-spoonful of salt; generally half an hour is long enough to boil rice, and it must not be too long in the water after it is done, or it is less wholesome. Drain the water off, if the rice has not absorbed it, and place it in the bottom of the dish; the chicken must be in preparation at the same time with the rice, and should be cut up at the joints, as for fried or fricasseed chicken, and salted and seasoned; boil it in a little more water than sufficient to cover it; and when it is done, take it out, and lay it over the rice on the dish; then rub a small piece of butter with sufficient flour to thicken it, and stir both together in the liquor, which must remain over the fire for about two minutes; and just before it is taken up, add the yelk of an egg well beaten, and some chopped parsley; it must then be immediately poured over the chicken. In preparing this dish, take care that it does not get smoked.

SOUPS.

In making soup, allow yourself plenty of time. Dumplings should be put in about half an hour before the soup is done, and herbs a quarter of an hour--vegetables, about an hour,--rice, twenty minutes. If herbs are put in too soon, the flavor will fly off and be lost.

Chicken Soup.

Cut up the chicken; cut each joint, and let it boil an hour; make dumplings of a pint of milk, an egg, a little salt and flour, stirred in till quite stiff; drop this in, a spoonful at a time, while it is boiling; stir in a little thickening, with enough pepper, salt and parsley, to season the whole; let it boil a few minutes longer, and take it up in a tureen. Chopped celery is a great improvement to chicken soup; and new corn, cut off the cob, and put in when it is half done, gives it a very nice flavor.

Brown Calf's Head Soup.

Scald and clean the head, and put it to boil with two gallons of water, a shank of veal, three onions, two carrots, a little bacon, and a bunch of sweet herbs. When they have boiled half an hour, take out the head and shank of veal, and cut all the meat off the bones into pieces of two inches square; let the soup boil half an hour longer, when strain it, and put in the meat; season it with salt, cayenne and black pepper, and cloves, if you like; thicken it with butter and browned flour, and let it boil nearly an hour; put some fried force meat balls in the tureen, and just before you pour out the soup, stir into it a table-spoonful of sugar, browned in a frying pan, and half a pint of wine. This resembles turtle soup.

Beef Shin Soup, Mutton Soup, &c.

Crack the shin in several pieces, and wash it through three waters; put it in a pot of water four hours before dinner; when it begins to boil, take off the scum as it risen, and keep it covered; an hour before it is done, skim off all the fat, and put in potatoes, onions, turnips, carrots, and cut cabbage, if you like it; either beat up dumplings with eggs and milk, or roll them out of dough made as pie crust; a few minutes before it is done, stir in thickening with parsley, thyme, pepper and salt, and tomatoes, if they are in season; then dish it for dinner.

A shin will make a good dinner for a large family, and will do to warm up, if any is left. To eat pickles with it, or pour a little vinegar in your plate, is an improvement.

Soup made of mutton, veal and lamb, does not require many vegetables; carrots and potatoes are the most suitable. A shank of veal or mutton will make a small pot of very good soup. Celery, cut fine, is very nice seasoning.

Gumbo Soup.

Take two pounds fresh beef; put this in a dinner-pot, with two gallons of water; after boiling two hours, throw in a quarter of a peck of ocra, cut into small slices, and about a quart of ripe tomatoes, peeled and cut up; slice four or five large onions; fry them brown, and dust in while they are frying from your dredge box, several spoonsful of flour; add these, with pepper, salt and parsley, or other herbs, to your taste, about an hour before the soup is finished; it will require six hours moderate boiling.

Another Way.

Cut up a large fat chicken; boil it in two gallons of water, adding at the time you put in the chicken the same quantity of ocra, two large onions cut fine; season with pepper, salt, thyme and parsley; and when nearly done, drop in dumplings made of one egg, half

a pint of rich milk, and flour sufficient to make them so that they will drop from a spoon. This soup requires from four to five hours moderate boiling. Just before serving, take up the chicken, and after taking out all the bones, return the chicken into the soup, and dish it up.

Pea Soup.

Leave a pint of peas in the pot, with the water they were boiled in; make a thickening of flour, milk and butter, seasoned with salt, pepper, parsley and thyme; toast two or three slices of bread; cut it up in the tureen; and when the soup has boiled about ten minutes, pour it over.

Children are mostly fond of pea soup, and it seldom disagrees with them. A few slices of fat ham will supply the place of butter.

Soup of Dried White Beans, &c.

Dried beans or peas should be soaked before boiling; they make very good soup with a small piece of bacon or salt pork boiled with them; put them to boil in plenty of water, and after they have boiled an hour, pour it off, and put in cold water--and the meat or bones, and let them boil an hour longer; stir in a little thickening, with pepper, salt, parsley and thyme; mix up some dumplings, and drop in half an hour before the soup is done. Where you have a large family, you should always be provided with dried beans for winter use.

A Vegetable Soup.

Take an onion, a turnip, two pared potatoes, a carrot, a head of celery; boil them in three pints of water till the vegetables are cooked; add a little salt; have a slice of bread toasted and buttered, put it into a bowl, and pour the soup over it. Tomatoes when in season form an agreeable addition.

FISH, OYSTERS, &c.

To Bake a Rock Fish.

Rub the fish with salt, black pepper, and a dust of cayenne, inside and out; prepare a stuffing of bread and butter, seasoned with pepper, salt, parsley and thyme; mix an egg in it, fill the fish with this, and sew it up or tie a string round it; put it in a deep pan, or oval oven and bake it as you would a fowl. To a large fish add half a pint of water; you can add more for the gravy if necessary; dust flour over and baste it with butter. Any other fresh fish can be baked in the same way. A large one will bake slowly in an hour and a half, small ones in half an hour.

To Stew a Rock Fish.

Rub the fish with salt and pepper, and a little cayenne on the inside; put it in an oval stew-pan. To a fish that weighs six pounds, put a pint of water; when it is about half done; season it well with salt and pepper, and a little mace or cloves; rub a quarter of a pound of butter in a half a tea-cup of flour, with a little parsley and thyme; stir this in with a pint of oysters. Serve it with the gravy in the dish. A large fish should be allowed an hour, small ones half an hour.

To Broil Shad.

Soak a salt shad a day or night previous to cooking, it is best to drain an hour before you put it to the fire; if it hangs long exposed to the air, it loses its flavor: grease the gridiron to keep it from sticking; have good coals, and put the inside down first. Fresh shad is better to be sprinkled with salt, an hour before it is put to broil; put a plate over the top to keep the heat in. In broiling shad or other fresh fish you should dust them with corn meal before you put them down.

To Bake a Fresh Shad.

Make a stuffing of bread, butter, salt, pepper and parsley; fill a large shad with this, and bake it in a stove or oven.

To Fry Fresh Fish.

Have the fish well scalded, washed and drained; cut slits in the sides of each; season them with salt and pepper, and roll them in corn flour; have in your frying-pan hot lard or bacon drippings; if the fish have been kept several days, dip them in egg before rolling them in corn flour, to keep them from breaking; fry them light brown on both sides.

To Fry Clams.

After opening them as oysters, wash them in their own liquor and drain then; make a batter of an egg, flour and pepper; dip them in this, and fry them in butter.

To Stew Clams.

Strain the liquor and stew them in it for about twenty minutes; make a thickening of flour, water and pepper; stir this in and let it boil up; have some bread toasted and buttered in a deep dish, and pour the clams over.

Clam soup may be made by putting an equal quantity of water with the liquor, and putting in toasted bread, crackers or dumplings.

To Pot Fresh Herring.

Scale and wash them well; cut off the heads and fins, and season them with salt, pepper and cloves; pack them neatly in a large jar, and pour on enough cold vinegar to cover them; put a plate over the top of the jar, and set it in a moderately warm oven, or on the top of a stove, in a pan of hot water, for five or six hours; they will keep in a cool place several weeks, and are an excellent relish. The jar or pan should be of stone ware, or fire-proof yellow ware.

To Boil Salt Cod.

Put your fish to soak over night; change the water in the morning, and let it stay till you put it on, which should be two hours before dinner; keep it at scalding heat all the time, but do not let it boil, or it will get hard; eat it with egg sauce or drawn butter. If you have any cod fish left from dinner, mix it with mashed potatoes, and enough flour to stick them together; season with pepper; make it into little cakes, and fry them in ham drippings.

To Boil Salt Shad, Mackerel Or Herring.

Wash the fish from the pickle; put it in a frying-pan; cover it with water, and let it boil fifteen minutes; take it up and drain it between two plates; put a little butter over and send it hot to the table: or, after boiling, you can flour, and fry it in drippings of any kind.

To Boil Salt Salmon.

Let salmon soak over night, and boil it slowly for two hours; eat it with drawn butter. To pickle salmon after it has been boiled, heat vinegar scalding hot, with whole peppers and cloves; cut the fish in small square pieces; put it in a jar, and pour the vinegar over. Shad may be done in the same way.

To Boil Fresh Fish.

After being well cleaned, rub the fish with salt, and pin it in a towel; put it in a pot of boiling water, and keep it boiling fast;--a large fish will take from half to three-quarters of an hour--a small one, from fifteen to twenty minutes. A fat shad is very nice boiled, although rock and bass are preferred generally; when done, take it up on a fish dish, and cover it with egg sauce or drawn butter and parsley. Pickled mushrooms and walnuts, and mushroom catsup, are good with boiled fish.

To Stew Terrapins.

Wash four terrapins in warm water; then throw them in a pot of boiling water, which will kill them instantly; let them boil till the shells crack; then take them out, and take off the bottom shell; cut each quarter separate; take the gall from the liver; take out the eggs; put the pieces in a stew-pan, pour in all the liquor, and cover them with water; put in salt, cayenne, and black pepper, and a little mace; put in a lump of butter the size of an egg, and let them stew for half an hour; make a thickening of flour and water, which stir in a few minutes before you take it up, with two glasses of wine; serve it in a deep covered dish; put in the eggs just as you dish it.

Oyster Soup.

Strain the liquor from the oysters, and put it on to boil, with an equal quantity of water; take off the scum as it rises; put in pepper, salt, parsley, thyme and butter; stir in a thickening of flour and water; throw in the oysters, and let them scald. If you have cream, put in half a pint just before you take them up.

Another Way.

Strain the liquor from a gallon of oysters, and add to it an equal quantity of water; put it on the fire, and boil and skim it before you add the seasoning; then put in six large blades of mace, a little cayenne, and black or white pepper; (the latter, on account of the color, is preferable, as it is desirable to have the soup as white as possible;) afterwards, permit all to boil together about five minutes; then pour in the oysters and a quarter of a pound of butter, into which a dessert-spoonful of wheat flour has been rubbed fine; keep this at boiling heat until the oysters begin to look plump--when it is ready for the table, and must be served up very hot. If you can procure a pint of good cream, half the amount of butter will answer,--if you believe the cream to be rather old, even if it seems to be sweet, add before it goes into the soup, half a small tea-spoonful of soda, well mixed with it; after you put in the cream, permit it to remain on the fire long enough to arrive at boiling heat again, when it must be taken up, or it may curdle; throw into the tureen a little finely cut parsley.

Scolloped Oysters.

Toast several slices of bread quite brown, and butter them on both sides; take a baking dish, and put the toast around the sides, instead of a crust.

Pour your oysters into the dish, and season, to your taste, with butter, pepper and salt, adding mace or cloves.

Crumb bread on the top of the oysters, and bake it with a quick heat about fifteen minutes.

To Fry Oysters.

Pick out the largest oysters and drain them; sprinkle them with pepper and salt; beat up an egg, and dip them first in it, and then in pounded crackers, and fry them in butter. It is a plainer way to dip them in corn meal.

Oyster Fritters.

Make a thick batter with two eggs, some crumbs of bread and flour, and a little milk; season this well with pepper and salt; have in a frying-pan equal parts of lard and butter; drop in a spoonful of the batter and put into it one large oyster, or two small ones, let them brown slowly, so as not to burn; turn them carefully. This is a good way to have oysters at breakfast.

To Stew Oysters.

Open them and throw them in a stew-pan, with a lump of butter; make a thickening of flour and water, salt and pepper, and stir it in just as the oysters boil; when they are done, take them up in a deep covered dish, with buttered toast in the bottom.

A Rich Oyster Pie.

Strain off the liquor from the oysters, and put it on to boil, with some butter, mace, nutmeg, pepper and salt; just as it boils, stir in a thickening of milk and flour; put in the oysters, and stir them till they are sufficiently stewed; then take them off, and put in the yelks of two eggs, well beaten; do not put this in while it is boiling, or it will curdle. Line a dish, not very deep, with puff paste; fill it with white paper, or a clean napkin, to keep the top paste from falling in; put on a lid of paste, and bake it. When done, take off the lid carefully; take out the paper or napkin, and pour in the oysters. Send it hot to table.

A Baltimore Oyster Pie.

Make a crust after the directions given for puff paste; grease the bottom of a deep dish, cover it with paste; then season two quarts of raw oysters, (without the liquor,) with spices to your taste, (some preferring nutmeg, mace, cayenne pepper,--others, black pepper alone,) add butter and a heaped tea-cup of grated bread; put all together in the dish; then cover it with your paste, cut in strips, and crossed, or ornamented as your fancy dictates; a pound of butter to two quarts of oysters makes a rich pie; if the oysters are fine, less butter will answer.

A pie of this size will bake in three-quarters of an hour, if the oven is in good order; if the heat is not quick allow it an hour.

If in baking, the crust is likely to become too brown, put a piece of paper doubled over it, and the light color will be retained; when taken from the oven, if it should look dry, pour some of the liquor that was drained from the oysters in the dish, having previously strained and boiled it.

As paste always looks more beautiful when just from the oven, arrange your dinner so that the pie may be placed on the table immediately it is done.

Plain Oyster Pie.

Take from the shell as many oysters as you want to put in the pie; strain the liquor, put it with them over the fire and give them one boil; take off the scum, put in, if you wish to make a small pie, a quarter of a pound of butter, as much flour mixed in water as will thicken it when boiled, and mace, pepper, and salt to your taste; lay a paste in a deep dish, put in the oysters and cover them with paste; cut a hole in the middle, ornament it any way you please, and bake it. A shallow pie will bake in three-quarters of an hour.

Oyster Sauce.

Plump the oysters for a few minutes over the fire; take them out and stir into the liquor some flour and butter mixed together, with a little mace and whole pepper, and salt to your taste; when it has boiled long enough, throw in the oysters, and add a glass of white wine, just as you take it up. This is a suitable sauce for boiled fowls.

To Pickle 100 Oysters.

Drain off the liquor from the oysters, wash them and put to them a table-spoonful of salt, and a tea-cup of vinegar; let them simmer over the fire about ten minutes, taking off the scum as it rises; then take out the oysters, and put to their own liquor a table-spoonful of whole black pepper, and a tea-spoonful of mace and cloves; let it boil five minutes, skim, and pour it over the oysters in a jar.

Oysters Pickled another way.

Wash and drain the oysters, and put them in salt and water, that will bear an egg; let them scald till plump, and put them in a glass jar, with some cloves and whole peppers, and when cold cover them with vinegar.

To Brown Oysters in their own Juice.

Take a quart of large oysters, wash them in their own juice, drain and dip them in the yelk of eggs; heat butter in a frying-pan, and after seasoning them with pepper and salt, put them in separately; when they are brown on both sides, draw them to one side of the pan; strain the liquor, and put it in with a piece of butter and flour enough to thicken it.

A Dish of Poached Eggs.

Have ready a kettle of boiling water, pour it in a pan or speeder, which is set on coals; have the eggs at hand; put a little salt in the water, and break them in, one at a time, till you get all in; let them remain till the white is set, and take them out with an egg-spoon, and put on a dish that has buttered toast on it.

Fried Eggs.

Slice and fry any kind of bacon, dish it; have the eggs ready in a dish, and pour them into the gravy; when done, take them up and lay them on the meat.

Fried Eggs another way.

Have your lard or butter boiling hot; break in one egg at a time; throw the hot fat over them with an egg slice, until white on the top; slip the slice under and take them out whole, and lay them on the dish or meat without breaking; season with salt.

Omelet.

Beat six or eight eggs, with some chopped parsley and a little salt; have the pan or speeder nicely washed; put in a quarter of a pound of butter, when it is hot, pour in the eggs; stir it with a spoon till it begins to form; when it is of a light-brown on the under side

it is done; turn it out on a plate, and send to table immediately. Grated bread, soaked in cream, put in the omelet, some think an improvement. The dripping of a nice ham, some persons use for omelet instead of butter.

To Boil Eggs.

Have the water boiling, and look at your watch as you put them in; two minutes and a half will cook them to please most persons; if you want them very soft, two minutes will be sufficient, or if less soft three minutes. If you wish them hard, as for lettuce, let them boil ten minutes. Spoons that have been used in eating eggs should be put in water immediately, as the egg tarnishes them.

VEGETABLES.

To Boil Green Corn.

Pick out ears near the same size, and have the water boiling when you put them in; half an hour is long enough for young corn; that which is old and hard will take an hour or more; if young corn is boiled too long, it becomes hard and indigestible.

To Fricassee Corn.

Cut green corn off the cob; put it in a pot, and just cover it with water; let it boil half an hour; mix a spoonful of flour with half a pint of rich milk, pepper, salt, parsley, thyme and a piece of butter; let it boil a few minutes, and take it up in a deep dish. Corn will do to cook in this way when too old to boil on the cob.

To Keep Corn for Winter.

When boiled, cut the corn off the cob, and spread it on dishes; set these in the oven to dry after the bread comes out. If you have no oven, it can be dried in a stove of moderate heat, or round a fire. When perfectly dry, tie it up in muslin bags, and hang them in a dry place; when you use it, boil it till soft in water; mix flour, milk, butter, pepper and salt together, and stir in.

Corn Fritters.

Cut the corn through the grain, and with a knife scrape the pulp from the cob, or grate it with a coarse grater, and to about a quart of the pulp, add two eggs beaten, two table-spoonsful of flour, a little salt and pepper, and a small portion of thin cream, or new milk; beat the whole together; have the butter or lard hot in the pan, and put a large spoonful in at a time, and fry brown, turning each fritter separately; this makes an agreeable relish for breakfast, or a good side dish at dinner.

Hominy.

Large hominy, after it is washed; must be put to soak over night; if you wish to have it for dinner, put it to boil early in the morning, or it will not be done in time; eat it as a vegetable.

Small hominy will boil in an hour; it is very good at breakfast or supper to eat with milk or butter, or to fry for dinner.

Both large and small hominy will keep good in a cool place several days. Be careful that the vessel it is cooked in, is perfectly clean, or it will darken the hominy.

To Fry Hominy.

Put a little lard in your frying-pan, and make it hot; mash and salt the hominy; put it in, and cover it over with a plate; let it cook slowly for half an hour, or longer if you like it very brown; when done, turn it out in a plate. If you do not like it fried, mash it well, with a little water, salt, and butter, and warm it in a frying-pan.

To Boil Potatoes.

When the potatoes are old, pare them, put them in plenty of boiling water, and boil them till you can run a fork through easily; if you wish to have them whole, pour off all the water, throw in some salt, and let them stand a few minutes over coals, to let the steam go off; they will then be white and mealy.

It is a mistaken notion, to boil potatoes in but little water, as they are sure to turn dark and taste strong. In cold weather they may be kept pared several days in a pan of water, by changing the water every day, and will be whiter. If you like mashed potatoes, take them up when barely done, sprinkle them with salt and mash them; put in a spoonful of cream and a small lump of butter; keep them hot till they are taken to table.

In the summer when potatoes are young, put them in a small tub, with a little water, and rub them with a piece of brick, to break the skin; you can then peel enough for dinner with a knife in a few minutes. When they are older, boil them with the skins on, and squeeze them separately in a cloth, to make them mealy. New potatoes are nice with cream and butter over them.

In boiling old potatoes, some persons cut them round without paring, which allows the moisture to escape; this is an improvement: you can then either peel them or send them to table without peeling.

To Stew Potatoes.

Chop or slice cold potatoes; season with pepper and salt; stew them, with a little butter and milk, and a dust of flour; when nearly done, stir in a yelk of egg with some chopped parsley--they will cook in a few minutes, and may be sliced over night if you wish an early breakfast.

Sweet Potatoes.

To boil sweet potatoes, put them in a pot with plenty of water; let them boil fast till you can run a fork through the largest; then pour off the water, and leave them in the pot a quarter of an hour; you can then peel the skin off or leave it on. Some prefer them baked in a dutch-oven; they should have a quick heat; large potatoes will take an hour to bake. It has been found a good way to boil them, till nearly done; then peel and bake them--they are drier and nicer.

To Fry Potatoes.

Cold potatoes are very good fried for breakfast with scraps of bacon; if they have been mashed, make them out in cakes with a little flour, and fry them brown, or slice them.

Tomatoes.

If you wish to bake tomatoes in the oven with bread, pour boiling water on, and skin them; cut them in small pieces; season with salt and pepper, and put them in a pan with crumbs of bread and butter; cover the pan with a plate, and bake three-quarters of an hour; when done, mash them and take them out on a dish.

To Fry Tomatoes.

Slice them, season with pepper and salt, and fry in hot butter; if they are green, dip them in flour after being seasoned.

Tomato Omelet.

Pour boiling water on the tomatoes, skin and cut them fine; to one quart of this, put two chopped onions and a lump of butter the size of an egg; let them boil half an hour, then mash them; put in grated bread, pepper, salt, and the yelks of two eggs.

To Stew Tomatoes.

Wash and pour boiling water over them; peel off the skins, and cut them up; season them with pepper and salt; put in a lump of butter, and boil them in their own juice for half an hour; stir in enough crumbs of bread to thicken them; let them cook slowly ten minutes longer; be careful that the bread does not burn.

To Bake Tomatoes.

Take out the inside of large tomatoes, make a stuffing of bread, butter, pepper, salt and an egg; fill them with this, and set them in a deep pie-plate; let them bake slowly half an hour.

Tomato Jelly, to eat with Roast Meat.

Wash the tomatoes, and put them in a bell-metal kettle, with a little water; let them boil thirty minutes; take them out and strain them through a sieve, till you get all the pulp; let it settle and pour off the top; put the thick part in deep plates, and set them in the oven after the bread is drawn; season it with pepper and salt to your taste, and put it away in a jar. It can either be eaten cold, or warmed up with crumbs of bread and butter. Some persons slice tomatoes, and dry them on dishes in an oven.

To Fricassee Tomatoes.

Wash and cut them in two, if large; if small, leave them whole, but do not peel them or they go too much to pieces; have a broad speeder or stove-pan; put in a half spoonful of butter; season the tomatoes with pepper and salt, and flour them; cover them with a plate; they will cook in ten minutes, stirring them once; pour in half a tea-cup of cream just as they are done; let them boil up and dish them while hot: this dish is much liked either for breakfast, dinner or tea.

To Broil Tomatoes for Breakfast.

Take large round tomatoes, wash and wipe them, and put them on the gridiron over lively coals--the stem side down; when this is brown, turn them and let them cook till quite hot through; place them on a hot dish and send them quickly to table, where each one may season for himself with pepper, salt and butter.

To Bake Tomatoes for Breakfast.

Season them with pepper and salt; flour and bake them in a stove, in a deep plate with a little butter over them.

Tomatoes sliced with Onions.

Pick the best tomatoes; let them stand a little while in cold water, then peel and slice them. To about six tomatoes, you may add two red onions, also sliced; season with pepper, plenty of salt, and a small portion of vinegar.

To put up Tomatoes for Winter.

Gather a quantity of tomatoes, wash, scald, skin and cut them up; season them highly with pepper and salt, and put them in a large stone jar; set this in the oven with your bread, and leave it till it is cold; stir them, and set them in the oven every time you bake for several weeks; when the juice is nearly dried up, put a piece of white paper over the jar, melt some lard and pour on it. When you use them, stew them with bread, butter and water.

Baked Egg Plant.

Boil them ten minutes; then cut them in half and take out the seeds, fill them with a stuffing of crumbs of bread, seasoned with butter, pepper, salt, the yelk of an egg, and if you choose, the juice of a tomato; close them and tie each one with a string; put a little water in the dutch-oven, and lay them in with some of the stuffing on the top; let them cook slowly half an hour, basting them with butter; take them out, thicken the gravy, and pour it over them on the dish.

To Fry Egg Plant.

Cut them in slices half an inch thick; sprinkle them with salt, and let them stand a few minutes to extract the bitter taste; wash them in cold water, and wipe them dry; season with salt and pepper; dip them in flour, and fry them in butter.

Another way of cooking them is to cut them in thin slices, and bake them on a bake-iron that is hot enough to bake cakes.

Salsify, or Oyster Plant.

Scrape the roots, and boil them till soft; mash them, and put in butter, pepper, salt, and egg and flour enough to stick them together; make this in cakes as large as an oyster, and fry them in butter; or after boiling, you can cut them in slices and stew them in water; then butter and season, and thicken with a little flour and cream.

To Stew or Fry Mushrooms.

Be careful in gathering mushrooms that you have the right kind; they are pink underneath, and white on the top, and the skin will peel off easily, but it sticks to the poisonous ones.

After you have peeled them, sprinkle them with salt and pepper, and put them in a stew pan, with a little water, and a lump of butter; let them boil fast ten minutes, and stir in a thickening of flour and cream. They may be fried in butter, or broiled on a gridiron. They are sometimes very abundant in the fall, on ground that has not been ploughed for several years; they appear after a warm rain; they may be peeled, salted, and allowed to stand some hours before cooking.

Cucumbers, to Fry or Slice.

To fry cucumbers, take off the rinds in long pieces, a quarter of an inch thick; season them with pepper and salt; dip them in flour, and fry them in butter.

Many persons think cucumbers unwholesome, and they certainly are if kept for several days before they are eaten; but if sliced thin, with onions, pepper, salt and good vinegar, they may generally be eaten without danger.

Lettuce.

Persons that are fond of lettuce may have it nearly all the year, by sowing the different kinds, and keeping it covered through the winter; the most approved way of dressing it is to cut it fine, and season with oil, mustard, pepper, salt, vinegar, and a hard egg chopped. The essence of ham is also very good to season lettuce.

Where there is a large family, it is a good and economical way to cut the fat of ham in small pieces, fry it, and make a gravy with flour, water and pepper, to eat with lettuce. To cook lettuce you must fry a little ham; put a spoonful of vinegar into the gravy; cut the lettuce, put it in the pan; give it a stir, and then dish it.

Cold Slaw.

Cut hard white cabbage across the leaves, and put it in a deep plate, scald two large spoonsful of vinegar with a piece of butter, some pepper and salt; pour this over the slaw; have an egg boiled hard; chop it fine, and spread it over the top. Some persons like it heated in a pan with vinegar and water, and the yelk of a raw egg mixed through it.

Cauliflowers, &c.

Have a pot with half milk, and the rest water; when this boils, put in the cauliflowers, and let them boil till tender; put in some salt just before you take them up; have ready drawn butter with parsley, to pour over them, or a sauce of cream and butter. Good heads of yellow Savoy cabbage, cooked in this way, resemble cauliflowers. Brocolli is a delightful vegetable, and may be cooked in the same manner.

To Boil Cabbage.

In summer, you should allow a large head of cabbage an hour to boil, but when it has been tendered by the frost, it will boil in half that time. Most persons prefer cabbage boiled with ham; the pot should be well skimmed before it goes in or the grease will penetrate the cabbage, and make it unwholesome; take it up before it boils to pieces. It is very good boiled with corned beef or pork, or with milk and water, with a little salt added. Some like it with a little salaeratus thrown in while boiling, as that tenders it and makes it of a more lively green.

To Boil Greens and Poke.

After skimming the pot that the bacon has been boiled in, put in cabbage sprouts, and let them boil till the stalks are tender; all greens are best boiled in a net. Spinach cooks in a few minutes; some persons prefer it when boiled in salt and water; you should have drawn butter or hard eggs to eat with it when done in this way. There are several kinds of wild greens to be found in the country in the spring, as wild mustard, poke and lambs-quarter, which are very good cooked as cabbage sprouts. Pour boiling water on poke, after tying it in bunches, as asparagus, let it stand a few minutes; pour off the water; boil it with a little salt in the water, and if you choose a little salaeratus; dress it with butter, and dish it as asparagus.

String Beans.

String beans, if boiled in salt and water, will require fully two hours; but if boiled in a net, in a pot with bacon, they will not take so long; if they are cooked in the same pot with cabbage, it will injure the flavor. It is a good way to boil a very small piece of pork or

bacon, or a ham-bone in the pot with beans; when they are done, season them with cream, butter, salt and pepper.

Lima Beans.

Shell them, and wash them in cold water; let them boil about an hour; when done, dip them from the water, and season with salt, pepper, cream or butter; keep them hot till they are sent to table.

Dried Lima beans should be soaked over night, and boiled two hours or longer, if they are not soft.

Peas.

Early peas require about half an hour to boil, and the later kinds rather longer; the water should boil when they are put in; when they are tough and yellow, they may be made tender and green, by putting in a little pearl-ash, or ashes tied up in a rag, just before they are taken up; this will tender all green but do not put too much--when done, dip them out: drain and season them with butter, pepper and salt; put a bunch of parsley in the middle of the dish.

To Keep Green Beans for Winter.

Boil salt and water to make a strong pickle; string the beans, and put them in a tight wooden firkin; sprinkle them with salt as they go in; when the pickle is cold, pour it on, and put on a weight to keep the beans under; they will keep in the cellar till the next spring. They should soak several hours in cold water before they are boiled.

Asparagus.

All persons that have a garden should have an asparagus-bed; it is valuable as being one of the first vegetables in the spring. Put the stalks of the same length, in bunches together, and tie them with strings; boil it three-quarters of an hour in clear water; (if you put salt in, it turns it dark;) have buttered toast in the bottom of a deep dish; untie the strings, and put the asparagus in; sprinkle it over with pepper and salt, and put butter on. Asparagus is also agreeable in chicken soup.

Cymlings, or Squashes.

In cultivating this vegetable, the small bunch cymling is the best, as it takes so little room in the garden, and comes soon to maturity; if they are so hard that a pin will not run in easily, they are unfit for use. Boil the cymlings till soft; cut them open, and take out the seeds; put them in a colander, and mash them; when the water is drained off, put them in a small pot, and stew them with cream and butter for ten minutes; just as you dish them, season with pepper and salt. If boiled with salt meat, they require but little seasoning.

Pumpkins.

Young pumpkins resemble cymlings, when cooked in the same way. When they are ripe, they should be pared and cut up, and boiled till soft in a good deal of water; take them up as soon as they are done, or they will soak up the water; mash them and season them with salt, pepper and butter. They are good to eat with roast or boiled beef.

To Bake Pumpkins.

The long striped pumpkin, with a thick long neck, called by some potato pumpkin, is the best for baking; cut it up in slices, leaving on the rind; put it in a dutch-oven or dripping-pan, and let it bake an hour with a quick heat. Where sweet potatoes cannot be had, pumpkins make a very good substitute. If you put ripe pumpkins that have not been frosted; in a dry place, they will keep to make puddings till spring.

To Dry Pumpkins.

Pare them, and cut them in thin slices; have a strong thread, and string them on it with a needle; hang them out in the sun till dry, taking them in at night; tie them up in a muslin bag, and hang them in a dry place. Soak them before they are stewed, and they are nearly as good for puddings as when in season. Some dry them, as apples, by spreading on boards.

Parsnips.

Scrape and split them, and boil until quite soft, either in salt and water, or with meat; they are very good served up in this way, with plenty of butter. They may, when boiled, either be baked with a few slices of salt meat, and require no seasoning but pepper, or made into small round cakes, seasoned with butter, pepper and salt, and fried.

Carrots. Carrots should be scraped, and boiled till soft, in plenty of water; when they are done, take them up, and slice them thin; season them with salt, pepper and butter. They are suitable to eat with boiled meat or fowls.

Turnips.

Pare and quarter the turnips, and put them in a pot of clear water, or with fresh meat; boil them half an hour; drain, and season them with butter, pepper and salt; mash them.

Onions.

After they are peeled, boil them in milk and water; if small, they will cook in half an hour; when they are done, pour off the water; put in cream, butter and salt, and let them stew a few minutes. Small onions are much better for cooking, as they are not so strong.

Beets.

Wash the beets; cut the tops off, and put them in boiling water; the early turnip beet is best for summer, and will boil in less than an hour; the long winter beet should be boiled two hours,--when they are done, drop them in cold water for a minute; peel and slice them; season with butter, pepper and salt; send them hot to table.

To pickle beets, put them in a jar after they have been boiled; fill it up with weak vinegar; put in salt, cayenne and black pepper.

To Boil Rice.

Pick a pint of rice, wash it clean--put it in three pints of boiling water: it should boil fast, and by the time the water evaporates, the rice will be sufficiently cooked; set it where it will keep hot, until you are ready to dish it.

To Keep Vegetables in Winter.

Beets, parsnips, carrots and salsify should he dug up before the frost is severe; those wanted for use in the winter should be put in barrels, and covered with sand; what you do not want till spring should be buried in the garden, with sods on the top. Celery may be dug in November, and set in a large box covered with sand, in the cellar, with the roots down; it will keep till the frost is out of the ground. Or it may be left in the ground all winter, and dug as you want it for use.

BREAD, &c.

As bread is the most important article of food, great care is necessary in making it, and much judgment, as the weather changes so often.

In warm weather, the rising should be mixed with water nearly cold; if there should be a spell of damp weather in the summer, have it slightly warm and set it to rise on a table in the kitchen.

In winter it should be mixed with warm water, and left on the warm hearth all night. If the yeast is fresh, a small quantity will do; if several weeks old, it will take more. If you use dry yeast, let it soak fifteen minutes, and put in a tea-spoonful of salaeratus to prevent it from getting sour.

Light Bread, Baking in a Stove, &c.

For two loaves of bread, thicken a quart of water with flour, till it will just pour easily; put in a table-spoonful of salt and half a tea-cup of yeast; this should be done in the evening. If the weather is cold, set it where it will be warm all night; but, if warm, it will rise on a table in the kitchen. (If it should not be light in the morning, and the water settles on the top, stir in a little more yeast, and set it in a pan of hot water for a few minutes;) knead in flour till it is nearly as stiff as pie crust, and let it rise again. Have your baking pans greased, and when it is light, mould out the bread, and put it in them; set it by the fire, covered with a cloth, till it begins to crack on the top--when it is light enough to bake. To bake in a stove requires care to turn it frequently; if it browns too fast at first, leave the

door open a little while; a thick loaf will bake in an hour, and a small one in less time. In trying the heat of a stove, drop a few drops of water on the top, if it boils gently it is in good order, and the heat should be kept at this point.

To Bake a Dutch-oven Loaf.

If you wish to make a large loaf, it will take three pints of water, more than half a tea-cup of yeast, and two spoonsful of salt; when the rising is light, knead it up, have the dutch-oven greased; put it in, and set it near the fire, but not so near that it will scald. When it rises so as to crack on the top, set the oven on coals; have the lid hot, cut the loaf slightly across the top, dividing it in four; stick it with a fork and put the lid on, when it is on a few minutes, see that it does not bake too fast, it should have but little heat at the bottom, and the coals on the top should be renewed frequently, turn the oven round occasionally.

If baked slowly, it will take an hour and a half when done, wrap it in a large cloth till it gets cold.

To Bake in a Brick Oven.

If you have a large family, or board the laborers of a farm, it is necessary to have a brick oven, so as to bake but twice a week; and to persons that understand the management of them, it is much the easiest way. If you arrange every thing with judgment, half a dozen loaves of bread, as many pies or puddings, rusk, rolls or biscuit may be baked at the same time. Some persons knead up their bread over night in winter, to do this, the sponge should be made up at four o'clock in the afternoon. If you wish to put corn flour in your bread, scald one quart of it to six loaves, and work it in the flour that you are going to stir in the rising, to make six loaves of bread, you should have three quarts of water and a tea-cup of yeast.

Scalded corn flour, or boiled mashed potatoes, assists bread to rise very much in cold weather. Have a quart of potatoes well boiled and rolled fine with a rolling-pin on your cake board; mix them well in the rising after it is light; if the oven is not ready, move the bread to a cool place. If the bread is sour before you mould it out, mix a heaped tea-spoonful of salaeratus in a little water, spread out the bread on the board, dust a little flour on it, and spread the salaeratus and water over, and work it well through. This quite takes away the sour taste, but if the bread is made of good lively yeast, it seldom requires it; let it rise in the pans about half an hour. Many persons that make their own bread, are in the constant practice of using salaeratus, putting in the rising for six loaves a heaped tea-spoonful, dissolved in a little warm water; in this there is no disadvantage, and it insures sweet bread, and will also answer in making rolls or light cakes.

Common sized loaves will bake in an hour in the brick oven. If they slip easily in the pans, and, upon breaking a little piece from the side, it rises from the pressure of the finger, it is done; but if it should not rise, put it back again; when the bread is taken out of the oven, wrap it in a cloth till quite cold.

You should have a large tin vessel with holes in the top, to keep bread in; in this way, it will be moist at the end of the week in cool weather.

Coarse brown flour or middlings makes very sweet light bread, by putting in scalded corn meal, say, to two loaves, half a pint, and is also good to use for breakfast made as buckwheat cakes.

Directions for Heating a Brick Oven, &c.

It is very important to have good oven wood split fine, and the oven filled with it as soon as the baking is out; by this precaution it is always ready and dry. Early in the morning, take out half of the wood, and spread the remainder over the oven, in such a way as it will take fire easily; light a few sticks in the fire, and put them in; when it burns well, turn the wood about, and occasionally add more till it is all in; when it is burnt to coals, stir them about well with a long-handled shovel made for the purpose.

When it looks bright on the top and sides, it is hot enough; let the coals lay all over the bottom till near the time of putting in the bread, when draw them to the mouth, as it is apt to get cool the quickest. If you have biscuit to bake, put some of the coals on one side near the front, as they require a quick heat, and should be put in immediately after the coals are taken out; they will bake in fifteen or twenty minutes.

When all the coals are taken out, if the bottom of the oven sparkles, it is very hot, and should wait a few minutes; but if not, you may put in the bread first, and then the pies; if you have a plain rice pudding to bake, it should be put in the middle of the front, and have two or three shovels of coals put round it, if the oven is rather cool. Close the oven with a wooden stopper made to fit it; after they have been in a few minutes, see that they do not brown too fast; if so, keep the stopper down a little while. Pies made of green fruit

will bake in three-quarters of an hour; but if the fruit has been stewed, half an hour will be long enough.

Rusk, or rolls, take about half an hour to bake in a brick oven; if you should have to open the oven very often before the bread is done, put in a few shovels of coals and shut it up.

When all is taken out, fill the oven with wood ready for the next baking.

There is nothing in any department of cooking that gives more satisfaction to a young housekeeper than to have accomplished what is called a good baking.

Graham Bread.

Take six quarts of unbolted flour, one tea-cup of good yeast, and six spoonsful of molasses; mix them with a pint of milk, warm water, and a tea-spoonful of salaeratus; make a hole in the flour and stir this mixture in it, till it is like batter; then proceed as with fine flour. Mould it, when light, into four loaves Have your oven hotter than for other bread, and bake it fully one hour and a half. It is an excellent article of diet for dyspeptic and sedentary persons.

Dyspepsy Bread.

This is three-fourths unbolted flour, and the remaining fourth common flour, and is risen and made as other light bread, but should be baked rather more.

Yeast.

It is important to those that make their own bread, to make their own yeast, or they cannot judge of its strength. The best is the old-fashioned hop yeast, which will keep for six weeks in winter.

Put a pint of hops in a pot, with a quart of water; cover it tightly, and let it boil slowly for half an hour; strain it while boiling hot on a pint of flour, and a heaped table-spoonful of salt; stir it well, and let it stand till nearly cool; when put in a tea-cupful of good yeast; if it is not sweet, put in a little salaeratus, just as you stir it in; keep it in a warm place till it rises, when put it in a stone jug, and cork it tightly. Keep it in a cool place in summer, but do not let it freeze in winter; shake it before you use any.

When your yeast jug is empty, fill it with water, and let it soak; wash it well, and if it should smell sour, rinse it with salaeratus water. If you have a garden, raise your own hops by all means; pick them by the first of September, or they will lose their strength; dry them on sheets spread on the garret floor.

If you buy hops, choose light green ones, with the yellow dust about them. Brown hops have generally stayed too long on the vines.

Another Method.

Put two handsful of hops into three pints of water; let it boil to one quart; when cold, strain it on to a pint of best flour, a table-spoonful of salt, half a pint of sugar-house molasses, and a tea-cup of good yeast: as it rises, skim off the top several times, when the yeast looks white bottle it up tight and it will keep for several weeks.

Corn Flour Dry yeast.

Put a large handful of good hops in a quart of water; cover it close, and let it boil nearly half away, when strain it over corn flour; it must all be wet, but not so soft as for bread; put in a large spoonful of salt, and mix it well; when about milk warm, put in two table-spoonsful of yeast, (observe that the yeast is lively,) rub it through with your hands; it must be so stiff as just to stick together; set it in a warm place to rise, which it should do in a few hours. When light, rub in more corn flour, and scatter it in dishes, very thin, (or put it on a cloth on a large waiter, spread thinly.) It should be dried quickly, or it may turn sour, either in the sun, (which is best,) or a warm stove room; stir it over frequently; when perfectly dry, cover it close, either in a jar or wooden box, and keep it in a dry closet. Select a sunny day, and begin early in the morning, as by this method you may have your yeast dry by night. Half a tea-cupful is enough for two loaves of wheat bread, (it should be soaked in water some minutes before using it,) and it is generally best to put in half a tea-spoonful of salaeratus, as dry yeast is more apt to turn sour than the liquid yeast.

Some good housekeepers use this yeast where hops are scarce, and it answers very well. It will keep good six weeks or two months.

Potato Yeast.

Boil four large potatoes with a tea-cupful of hops tied loosely in a bag; mash the potatoes in a pan, with a spoonful of salt, and four of flour; pour the hop-water on it, and mix all together; when nearly cold, put in two table-spoonsful of yeast; put it in a quart jar, and let it rise; it will do to use in five or six hours. This yeast is much weaker than the first receipt; but it has this advantage,--that with a pint of it you may knead up four loaves of bread at night without making rising. It is best to make this yeast once a week, always being careful to have the jar sweet before you put it in.

Potato Yeast with Sugar.

To about a quart of potatoes, boiled and made thin enough with warm water to pass through a sieve, add, when cold, a tea-cupful of sugar, a table-spoonful of salt, and a gill of common yeast. This is a quick yeast, but will not keep so long as those before mentioned.

Dry Yeast.

Put a pint of hops in half a gallon of water; cover it close and boil it down to one half; strain it over flour enough to make a thick batter; when nearly cold, put in a tea-cup of yeast, and three table-spoonsful of salt; when well risen, work in as much corn meal as will make it as stiff as biscuit dough; add a spoonful of sugar and one of ginger; when it rises again, make it out into little cakes, which must be dried in the shade, and turned twice a day. If made in dry weather, this yeast will keep for several months, and is useful when hops are scarce; it should be kept in a tight box, or a bag hung up in a dry place.

Milk Yeast.

If you have no yeast, you may make some with milk, to rise with. Take a pint of new milk and stir in it two tea-spoonsful of salt, and half a tea-cup of flour; keep it moderately warm by the fire, and it will lighten in about an hour; stir in flour enough to make a large loaf of bread, with more milk or water. This yeast should be used immediately, and will do to lighten hop yeast. To thicken half a gallon of water with a quarter of a pound of sugar, a little salt and flour, makes very good yeast when you cannot get hops. It will do to use in a day.

Superior Boiled Milk Rolls.

Boil a quart of new milk; pour it on a quart of flour, while boiling hot, and stir it well; when nearly cold, add two tea-spoonsful of salt, two table-spoonsful of lard, and half a tea-cup of good yeast; set it in a warm place to rise for about two hours; when light, work flour in it on the cake-board, and, when quite smooth, mould it out into rolls, and put them in a baking-pan, which has been rubbed with lard or butter; set them in a warm place to rise again;--if the weather is warm, on a table in the kitchen, but if cold, set them by the fire. When light, put them in a cool place till you are ready to bake; they should have a moderate heat, and will bake in half an hour. In winter they may be moulded out and placed in the bake pan over night for breakfast, or some hours before wanted for tea, and kept in a cool place till half an hour before baking, when set them near the stove to rise up. With the addition of nutmeg and sugar, you may make nice rusk.

Egg Rolls.

Boil a quart of new milk with a quarter of a pound of butter, the same of lard, and a little salt; beat up two eggs, and pour the boiling milk on them, stirring all the time; when nearly cold, add a tea-cup of yeast and as much wheat flour as will make it a thick batter, when quite light knead it up as bread, and let it lighten before moulding out; grease the pans, and bake them with a moderate heat. A little sugar and water rubbed on just before baking rolls makes them glossy.

Soft Rolls.

Rub two ounces of butter into two pounds of flour; stir in as much boiling milk as will make a soft dough, when cold enough, add half a tea-cup of yeast, and a little salt; beat it well with a spoon, and let it rise as long as bread; mould them out in pans, and bake as other rolls.

Water Rolls.

Make a rising of a quart of warm water, a little salt, a tea-cup of yeast, two spoonsful of butter and flour; let this rise, and knead it with as much flour as will make a soft dough, and work it well; when it has risen again, mould it out, and bake half an hour.

A nice griddle cake may be made by rolling this out, and baking it on the griddle or dripping-pan of a stove.

Potato Rolls.

Boil potatoes enough to make a quart when mashed, which should be done with a rolling-pin on a cake-board; mix these with a gallon of flour, a spoonful of butter, one of lard, and some salt; stir in water sufficient to make dough, not quite so stiff as for light bread, and a tea-cup of yeast; knead it for half an hour, and set it to rise; when it is light, set it away in a cold place, and as you require it, cut off a piece; mould it in little cakes, and let them rise an hour before baking. These rolls will keep several days in cold weather. If the dough should get sour, mix in some salaeratus.

Another Way.

Boil a quart of pared potatoes--pour off the water, mash them, add half a pint of sweet milk, warmed, and a small table-spoonful of salt; stir well, and pour it scalding hot into a quart of flour; add cold milk enough to make it the right consistence for rising; stir in half a tea cup of yeast, and set it by to rise, it will soon be light, and is then to be made into dough, with shortened flour, as other rolls, and made out into cakes; and after standing in a warm place to become light again, which should not take long, bake with rather a quick heat. These rolls may be eaten warmed over.

Mush Rolls, without Milk or Eggs.

When milk is scarce, (or for a change,) you can make good rolls with mush. Take a pint of corn meal, pour on it three pints of boiling water--stirring it as you pour; put in three ounces of lard, a table-spoonful of salt, and when milk warm, put in two table-spoonsful of yeast, then mix in wheat flour, and make it a soft dough; cover the pan close, set it in a warm place till it begins to rise; as soon as light, set it in a cold place; mould them out an hour before you bake them, and allow them to rise in the dripping-pan. It will do to bake in a large cake rolled out.

Twist Rolls.

Boil a pint of milk, put in a small lump of butter and a little salt; beat up an egg and put in, when nearly cold, with a spoonful of yeast and some flour; when light, knead in more flour to make it quite stiff; work it well, and let it rise again; grease a dutch-oven or spider, flour your hands, and roll it out in rings, or round several times, a little higher in the middle. They will be nearly all crust, and suit delicate persons that cannot eat other warm bread.

French Rolls.

To one quart of sweet milk, boiled and cooled, half a pound of butter, half a tea cup of yeast, a little salt, and flour enough to make a soft dough, beat up the milk, butter and yeast in the middle of the flour, let it stand till light, in a warm place; then work it up with the whites of two eggs, beaten light; let it rise again, then mould out into long rolls; let them stand on the board or table, to lighten, an hour or two, then grease your pans and bake in a oven or stove.

Bread Rolls.

In the morning, when your bread is light, take as much as would make one loaf; pour boiling water on half a pint of corn meal--stir it well--add a little salt, spread open the dough and work in the mush, with the addition of a table-spoonful of lard or butter, and a little flour, work well and mould out, placing them in your pans, and set them in a moderately warm place to lighten for tea; bake in a stove, if the weather is cold. This dough will keep two days, and may be baked as you need them.

Maryland Biscuit.

Rub half a pound of lard into three pounds of flour; put in a spoonful of salt, a tea cup of cream, and water sufficient to make it into a stiff dough; divide it into two parts, and work each well till it will break off short, and is smooth; (some pound it with an iron hammer, or axe;) cut it up in small pieces, and work them into little round cakes; give them a slight roll with the rolling-pin, and stick them, bake them in a dutch-oven, brick-oven, or dripping-pan of a stove, with a quick heat. These biscuits are very nice for tea, either hot or cold.

Light Biscuit.

Boil a quart of milk, and when nearly cold, stir it in the middle of your pan of flour, with two spoonsful of yeast, and one of butter and salt; let it lighten for two or three hours; knead the flour in it, and let it rise again: a little while before you bake, roll it out, and cut it with the top of your dredging-box. Let them rise a few minutes in the dripping-pan.

Salaeratus Biscuit.

Warm a quart of sweet milk, and put in it half a tea-spoonful of salaeratus, and a heaped spoonful of lard or butter, and half a spoonful of salt; pour this in as much flour as will make a stiff dough; work it a quarter of an hour; mould and bake them as other biscuit.

Quick Biscuit.

Rub a small table-spoonful of lard into a quart of flour, and mix in two tea-spoonsful of finely powdered cream of tartar, with a tea-spoonful of salt; put a tea-spoonful of super carbonate of soda in a pint of warm milk,--work it in and make the paste of ordinary consistence for biscuit or pie crust, adding flour or milk, if either is needed; make it out in biscuit form, or roll it about half an inch thick, and cut in shapes,--bake them about twenty minutes.

Tea Biscuit.

Melt half a pound of butter in a quart of warm milk; add a spoonful of salt, sift two pounds of flour, make a hole in the centre, put in three table-spoonsful of yeast, add the milk and butter; make a stiff paste; when quite light, knead it well, roll it out an inch thick, cut it with a tumbler, prick them with a fork, bake in buttered pans, with a quick heat; split and butter before sending them to table.

Dyspepsy Biscuit.

Make them as Maryland biscuit, except that, instead of either lard or butter, you must use a portion of rich cream, beat or work them well, and roll them moderately thin.

Salaeratus Cake.

Warm a pint of butter-milk, put in it a tea-spoonful of powdered salaeratus, and a piece of lard the size of an egg; stir it into flour till it is a soft dough; roll it out, and bake it on the griddle, or in the dripping-pan of a stove. If you have no sour milk, put a table-spoonful of vinegar in sweet milk.

Wafer Cakes.

Rub half a pound of lard into two pounds and a half of flour, add a little salt and water sufficient to make a stiff dough: work it well for half an hour, make it in small round lumps, and roll these until they are as thin as possible; bake them with a slow heat and they will look almost white. These are nice cakes for tea either hot or cold.

Short Cake.

To three quarts of flour take three-quarters of a pound of lard, and a spoonful of salt; rub the lard in the flour, and put in cold water, sufficient to make a stiff dough; roll it out without working in thin cakes; have the bake-iron hot, flour it, and bake with a quick heat; when one side is brown, turn and bake the other; when baked in the dripping-pan of a stove, they do without turning;--you may cut them in round cakes, if you choose. Some use half milk and half water; in that case, less lard is required.

Cold Water Muffins.

Sift a quart of flour, add to it a little salt, a large spoonful of yeast, beat the white of a fresh egg to a froth; after mixing the flour up with cold water into a soft dough, add the egg; set it in a moderately warm place. Next morning beat it well with a spoon, put it on the bake-iron in round cakes; when one side is nicely brown, turn them; keep them hot till sent to table, split and butter them. If you wish to have muffins for tea, they should be made up early in the Morning.

Smith Muffins.

Boil a quart of new milk, have three pounds of flour, three eggs well beaten, a quarter of a pound of lard, a table-spoonful of salt; rub the lard in the flour and while the milk is still warm, (but not hot,) stir it in the flour, put in the eggs, and a tea-cup of good yeast: beat all well, and set them in a warm place to rise, when light they should be set in a cool place till you are ready to bake them, which should be in rings, or round cakes on the bake-iron, in a dutch-oven, or the dripping-pan of a stove, butter just as you send them to table. If the batter is kept in a cold place it will keep good for two days in winter. Before baking muffins, or any kind of light cakes, taste the batter, and if at all sour, put in a small portion of salaeratus, (previously dissolved in hot water.)--In this way superior muffins may be made.

Mansfield Muffins.

Take a quart of milk, three eggs, quarter of a pound of butter or lard, a tea-cup of yeast, and flour to make a soft dough; heat the whites of the eggs alone, the yelks with the milk; melt the butter and stir it in after all is mixed; bake them in rings, or in round cakes on the griddle: split and butter before sending them to table.

Rice Muffins.

Pour a quart of milk on four heaped spoonsful of rice flour, stir it well, and put in a little salt and wheat flour, to make it a proper thickness, two eggs and two spoonsful of yeast, allow it four hours to rise, and bake in rings, or thin it and bake as batter cakes.

Muffins.

Warm a pint of milk, and stir into it a pound and a quarter of flour, (a quart of flour is about equal to a pound and a quarter,) and two eggs, the yelks beaten with the batter, the whites alone, mix with these two spoonsful of lively yeast and a little salt, let them rise, and when you are nearly ready to bake them, stir in a large spoonful of melted butter, butter the rings and bake on a griddle, or in the dripping-pan of a stove. Split and butter before sending them to table.

Mush Muffins.

Make a quart of mush, put into it a lump of butter or lard, the size of two eggs, and a little salt, previously to making the mush, have ready a pint of light rising, stir into it a pint of new milk, and the mush, with as much wheat flour as will make it a very thick batter, let it rise four or five hours, and when light, set it in a cold place, till you are ready to bake, dip a spoon in water each time, and put the batter on the griddle in small cakes, or bake in rings. You may make it a little stiffer, and roll it out to bake in large cakes. If it should sour, put in a little salaeratus. If you have no milk, water will do instead. They will be nice toasted.

A Loaf of Muffin Batter.

Stir into a pint of mush a small lump of butter, a little salt, a pint of milk, and wheat flour to make a thick batter; stir into it half a tea cup of yeast, and let it rise, when it is light, butter a pan, pour it in and bake, eat it hot, at breakfast or supper. It will bake in a shallow pan in half an hour, if in a deep vessel, allow more time.

Boiled Milk Muffins.

Boil a quart of new milk, and pour it boiling hot, on as much flour as will make a thick batter, put in a table-spoonful of butter, and the same of lard, two tea-spoonsful of salt, half a tea cup of yeast, one egg beaten; allow time to rise from six to eight hours; when perfectly light, set them in a cool place, till you are ready to bake, when you may use rings, or not, as you please--but be sure to butter the rings.

Cream Muffins.

Take a quart of sour cream, and two eggs well beaten, a tea-spoonful of salt; stir the eggs into the cream, gradually; add sifted flour enough to make a thick batter, dissolve a tea-spoonful of salaeratus in as much vinegar as will cover it, and stir it in at the last; bake in small cakes on the griddle, or in muffin rings in the dripping-pan of a stove.

Waffles.

Make a batter of a pound and a half of flour, quarter of a pound of melted butter, and two large spoonsful of yeast; put in three eggs, the whites and yelks beaten separately; mix it with a quart of milk, and put in the butter just before you bake, allow it four hours to

rise; grease the waffle-irons, fill them with the batter--bake them on a bed of coals. When they have been on the fire two or three minutes, turn the waffle-irons over,--when brown on both sides, they are sufficiently baked. The waffle-irons should be well greased with lard, and very hot before each one is put in. The waffles should be buttered as soon as cooked. Serve them up with powdered white sugar and cinnamon.

Quick Waffles.

Take a pint of milk, and beat into it three eggs, and enough wheat flour to make a thick batter; add a table-spoonful of melted butter, and a little salt; bake them immediately. Some persons add two table-spoonsful of sugar, and a little cinnamon; others dust loaf sugar and cinnamon, or nutmeg over each waffle, as it is baked.

Rice Waffles.

To six spoonsful of soft boiled rice, add two tea-cups of water or milk, and some salt, stir in three tea-cups of ground rice, and bake as other waffles.

Flannel Cakes.

Warm a quart of milk, put in a spoonful of butter, a little salt, and two eggs well beaten, stir in flour till it is a thin batter, and two spoonsful of yeast; beat all well together, adding the eggs at the last; allow it five hours to rise, and bake it on the griddle in cakes, the size of a breakfast plate. Do not butter them till you send them to the table.

Mush Flannel Cakes.

Mix a pint of corn mush with two of wheat flour, a spoonful of butter or lard, two eggs and half a tea-cup of yeast; make it in a batter with water or milk, and bake like buckwheat cakes.

Bread Batter Cakes.

Soak slices of stale bread in cold sweet milk for half an hour, then put it over the fire, and let it come to a boil; and mash it well, when nearly cool, add wheat flour enough to make a stiff batter, beat this together with two eggs, a tea-spoonful of salt, and a table-spoonful of good yeast, let it rise and bake as buckwheat cakes, if light before you are ready, set them in a cold place.

Butter-milk Cakes.

You may make a very good batter cake without eggs. To a quart of butter-milk, put a piece of lard, the size of an egg; warm them together, and stir in a tea-spoonful of salaeratus; make it in a thin batter with flour; beat it a few minutes, and bake it as other cakes.

Buckwheat Cakes.

Take quart of buckwheat flour, half a pint of wheat flour, and a spoonful of salt; make them into a thick batter, with milk-warm water, put in a half tea-cup of yeast, and beat it well, set it by the fire to rise, and if it should be light before you are ready to bake, put a tea-cup of cold water on the top, to prevent it from running over, if it should get sour, pour in a tea-spoonful of salaeratus, dissolved in hot water, just before you bake.

It is best to make them up quite thick, and thin them with a little warm water before you bake; butter them just as you send them to table. If you can get brewers' yeast, it is much better for buckwheat cakes. In very cold weather, they may be kept made up for several days, and baked as required.

Sally Lunn.

Warm a quart of milk with a quarter of a pound of butter, and a heaped spoonful of sugar, beat up three eggs, and put in, with a little salt, and flour enough to make it stiffer than pound cake, beat it well, put in a tea cup of yeast, and let it rise, butter a fluted pan and pour it in, bake it in a quick oven, slice and butter it. If you wish tea at six o'clock, set it to rise at ten in the morning. Bake it an hour.

Butter-milk Batter Cakes.

Soak pieces of dry stale bread in a quart of butter-milk, until soft, break in two eggs, add a little butter or lard, and salt and flour enough to make it stick together, beat it well, add a tea-spoonful of salaeratus, dissolved in warm water; thin it with a little sweet milk, and bake as other batter cakes. They may be prepared in a short time.

Toast.

Cut your bread (which is better to be stale) in tolerably thick slices, brown it slowly before the fire on each side; you may either butter it dry, or mix butter in water, with a little salt added, and after making it boiling hot, pour over each slice as you send it to table.

A Dish of Milk Toast for Breakfast.

Boil a quart of rich milk, take it off, and stir in half a pound of fresh butter, mixed with a small spoonful of flour, let it again come to a boil; have ready a dish of toast, pour it from a spoon over each piece, and what remains, pour over the whole, keep it covered and hot, till you send to table.

General Remarks on making Bread of Indian Corn Meal.

A wooden spoon with a long handle, is the best for stirring and mixing the bread or cakes. It requires more salt than other bread, and should be well mixed or beaten. If it is mixed over night, it should generally be done with cold water, and set in the cellar or some cool place in summer, in winter it requires rather a warmer place to stand. It sours more easily than bread made of other flour. In the morning, if you find that it is at all acid, dissolve half a tea-spoonful of salaeratus in warm water, and stir it just before it is put to bake. Where milk is used, it should be baked immediately, and the richer the milk, the more palatable it is. Whatever you bake this bread in, should be well greased first, as it is more apt to adhere to the oven than some other kinds of flour. It should bake with a quick heat.

When you buy salaeratus, pound it fine, put it in a wide-mouthed bottle, and cork it tight. Some persons keep it dissolved in water, but you cannot judge of the strength of it so well.

Corn Meal Porridge.

Put on to boil in a sauce-pan a quart of milk, mix a small tea-cup of corn meal with half a pint of cold water, (let it settle, and pour off what swims on the top,) then stir it in well to keep it from being lumpy; let it boil only a few minutes; add salt to the taste. This makes a good breakfast for children, and is a light diet for an invalid. It can be seasoned with sugar.

Mush, Mush Cakes, and Fried Mush.

Mush will keep for several days in cool weather; the best way of making it is to have a pot of boiling water, and stir in corn meal, mixed with water, and salt enough to season the whole; let it boil, and if it is not thick enough you can add more meal; keep stirring all the time to prevent it from being lumpy. It should boil an hour.

To make the cakes, take a quart of cold mush, mix in it half a pint of wheat flour, and a little butter or lard, make it out in little cakes with your hands, flour them and bake them on a griddle or in a dripping pan. Fried mush is a good plain dessert, eaten with sugar and cream. Cut the cold mush in slices, half an inch thick, or make them into small cakes, dip them in flour, and fry them in hot lard.

Journey Cake.

Pour boiling water on a quart of meal, put in a little lard and salt, and mix it well, have an oak board with a rim of iron at the bottom, and an iron handle fastened to it that will prop it up to the fire; put some of the dough, on it, dip your hand in cold water and smooth it over; score it with a knife, and set it before coals to bake.

Corn Batter Cakes.

Take a quart of good milk, three eggs, a little salt, and as much sifted corn meal as will make a thin batter; beat all well together, with a spoonful of wheat flour to keep them from breaking, bake in small cakes, keep them hot, and butter just as you send to table. Another way to make corn batter cakes, is to take a quart of corn meal, two eggs, a small lump of butter or lard, and mix it up with milk, or half water, if milk is scarce, and bake them either thin or thick.

Rice Cakes.

Take a pint of soft boiled rice, a pint of milk, a little salt, and as much corn meal as will make a thin batter with two eggs; beat all together, and bake as corn batter cakes, or make it thicker and bake it in a pan.

Corn Bannock.

To one quart of sour milk, put a tea-spoonful of salaeratus, dissolved in water; warm the milk slightly, beat up an egg, and put in corn meal enough to make it as thick as pudding batter, and some salt; grease a pan and bake it, or you may put it in six or eight saucers.

Virginia Pone.

Beat three eggs, and stir them in a quart of milk, with a little salt, a spoonful of melted butter, and as much sifted corn meal as will make it as thick as corn batter cakes; grease the pans and bake quick.

Lightened Pone.

Take half a gallon of corn meal, and pour boiling water on one-third of it; mix it together with warm water till it is a thick batter; put in two table-spoonsful of lively yeast, and one of salt; stir it well and set it by the fire to rise; when it begins to open on the top, grease the dutch-oven and put it to bake, or bake it in a pan in a stove.

Cold Water Pone.

Make a stiff batter with a quart of Indian meal, cold water and a little salt; work it well with the hand; grease a pan or oven, and bake it three-quarters of an hour. Eat it hot at dinner, or with milk at supper.

Indian Bread with Butter-milk.

To one quart of butter-milk, slightly warmed, put a tea-spoonful of salaeratus, dissolved in water, two eggs, well beaten, a table-spoonful of melted butter or lard, a little salt; stir in with a spoon as much Indian meal as will make a thick batter; beat it for a few minutes, grease your pans, and bake quickly. If you bake this quantity in two pans, a half hour will be sufficient, or if in one, it will take an hour. Look at it often while baking, as it is liable to burn. An excellent recipe.

Little Indian Cakes.

Put a spoonful of lard in a quart of meal, and two tea-spoonsful of salt, pour boiling water on half the meal, stir it; then add as much cold water as will enable you to make it out in cakes of a convenient size, bake on the bake-iron over the fire.

Maryland Corn Cakes.

Mix a pint of corn meal with rich milk, a little salt, and an egg, it should be well beaten with a spoon, and made thin enough to pour on the iron; take in cakes the size of a breakfast plate; butter and send them hot to table.

A Virginia Hoe Cake.

Pour warm water on a quart of Indian meal, stir in a spoonful of lard or butter, some salt, make it stiff, and work it for ten minutes, have a board about the size of a barrel head, (or the middle piece of the head will answer,) wet the board with water, and spread on the dough with your hand, place it before the fire, prop it aslant with a flat-iron, bake it slowly, when one side is nicely brown, take it up and turn it, by running a thread between the cake and the board, then put it back, and let the other side brown. These cakes used to be baked in Virginia on a large iron hoe, from whence they derive their name.

Batter Bread with Yeast.

Rub a piece of butter the size of an egg, into a quart of com meal, add a little salt, make it in a batter with two eggs and some new milk, add a spoonful of yeast, set it by the fire an hour to rise, butter little pans, and bake with a quick heat.

Carolina Corn Rolls.

Take a pint of corn meal; pour over it sufficient boiling water to make a very stiff dough, then add a table-spoonful of salt, and permit it to stand until about milk-warm; work it well with the hand, then make out the rolls, of an oblong shape, and bake them from half to three-quarters of an hour, according to their size. The addition of a small lump of butter or lard is an improvement. If they are rightly made, they will split on the top in baking, and can be eaten by those who cannot partake of other preparations made of corn flour.

Mixed Bread.

Put a little salt, and a spoonful of yeast, into a quart of flour; make it sufficiently soft with corn meal gruel; let it rise; bake in a mould.

New England Hasty Pudding, or Stir-about.

Boil three quarts of water in an iron pot; mix a pint of Indian meal in cold water, and make it thin enough to pour easily; when the water boils, pour it in; stir well with a wooden stick kept for the purpose; it takes about an hour to boil; salt to your taste; stir in dry meal to make it thick enough, beating it all the time. Eat it with milk or molasses, or butter and sugar. This is said to be a wholesome diet for dyspeptic patients, and makes a good meal for children.

Corn Muffins.

Warm three pints of milk, and stir into it as much corn meal as will make it as thick as pudding batter, add two handsful of wheat flour, two tea-spoonsful of salt, three eggs, and a tea-cup of yeast. Beat the whole well together, and let it rise about six hours, when bake as other muffins.

Soaked Crackers for Tea.

Pour boiling water on crackers, put in some butter and a little salt; cover them close and keep them warm till tea is ready; if you have milk, boil it, and pour over instead of water. This is easily prepared.

PIES, PUDDINGS, CAKES, &c.

To Make Common Pies.

One pound of lard to a gallon of flour will make very good common pies. Work the lard in the flour, put in some salt, and wet it with water, make it so that it can just be rolled out, when you have put in the fruit, wet the crust with water, put on the top and close it up, stick it with a fork on the top.

To Stew Fruit for Pies.

All fruits that are not fully ripe should be stewed and sweetened. To boil a gallon of molasses at a time, and keep it to sweeten pies, is cheaper than sugar, and answers a very good purpose, where there is a large family. When fruit is fully ripe it does very well to bake in pies, without being stewed.

After washing the dried fruit, put it on to stew in a bell-metal kettle over the fire, or in a tin pan in a stove, let it have plenty of water, as it swells very much, and if it seems dry, put in more water. Apples take longer to stew than peaches, and should have more water. Fruit stewed in this way is very good to put on the table to eat with meat. Do not stir the fruit while it is stewing, or it will burn. Dried cherries and damsons may be stewed in the same manner, adding the sugar before they are quite done.

Pie Crust.

Sift a pound and a half of flour, and take out a quarter for rolling; cut in it a quarter of a pound of lard, mix it with water, and roll it out; cut half a pound of butter, and put it in at two rollings with the flour that was left out.

For making the bottom crust of pies, cut half a pound of lard into a pound of flour, with a little salt; mix it stiff, and grease the plates before you make pies; always make your paste in a cold place, and bake it soon.

Some persons prefer mixing crust with milk instead of water.

Paste for Puddings.

Sift a pound of flour, have half a pound of butter and quarter of a pound of lard, save out a quarter of the flour for rolling, cut the lard into the remainder, and mix it with water; roll it out, and flake in half of the butter; dust over it some of the flour, close it up; roll it again, and put in the rest of the butter. This quantity will make crust for five or six puddings.

Another Way.

To three and a half pounds of sifted flour, put two pounds of lard, and a piece of volatile salts (as large as a full sized nutmeg) dissolved in a little water;--make a pretty stiff paste; then roll in three-quarters of a pound of butter. This will make about eight pies and twelve shells.

Puff Paste.

Sift a pound of flour, and take out a quarter for rolling, divide a pound of butter into four parts, cut one part of the butter into the flour with a knife, make it a stiff dough with water, roll it out, and flake it with part of the butler, do this three times till it is all in, handle it as little as possible, and keep it in a cool place. This quantity will make crust sufficient for three puddings and ten puffs. They should bake with a quick beat, but do not let them burn, they will take from ten to fifteen minutes to bake, according to the number of layers of paste. Do not put on the preserves till a short time before they are eaten.

Rich Mince Pies.

Take four pounds of beef, boiled and chopped fine, pick and chop three pounds of suet, wash two pounds of currants, and one of raisins; grate the peel of two lemons, and put in the juice, pound a spoonful of dried orange peel, slice an ounce of citron, and chop twelve large apples, mix these together with three pounds of sugar, half a pint of wine, and the same of brandy--and sweet cider to make it a proper thickness, put in mace and nutmeg to your taste. If the cider is not sweet, you must put in more sugar before the pies are baked, cut several places in the top of each with a pair of scissors.

Mince Pies not so Rich.

Take four pounds of beef after it has been boiled and chopped, one of suet, two of sugar, two of raisins, and four of chopped apples, mix these together with a pint of wine and cider, to make it thin enough, season to your taste with mace, nutmeg and orange peel; if it is not sweet enough, put in more sugar. Warm the pies before they are eaten. Where persons are not fond of suet, put butter instead, and stew the apples instead of so much cider.

Farmers' Mince Pies.

When you kill a beef, save the head for pies; it is some trouble to prepare it, but it is very nice for the purpose. Split the head, take out the brains and eyes, wash it well in cold water, and soak it all night with two hog's heads that have been cleaned; in the morning, boil them till you can take out the bones easily; skim off the froth as it rises, or it will stick to the meat; pick out the bones, and chop it fine, with three pounds of suet. This should be done the day before you want to bake.

Mix to this quantity of meat, two gallons of chopped apples, four pounds of raisins, half a gallon of boiled molasses, a pint of currant wine, a tea-cup of rose brandy, an ounce of cinnamon, orange peel and mace, from two to four nutmegs, and sweet cider enough to make it the right thickness; if the cider is not sweet, put in more molasses; when all is mixed, it is best to bake a small pie, as you can alter the seasoning, if it is not to your taste. If you have not raisins, dried cherries or small grapes, that have been preserved in molasses, are very good, or stewed dried apples, instead of green; and where you have no cider, stew the apples in plenty of water, so as to have them very soft; a little good vinegar, sweetened and mixed with water, also does instead of cider, but is not so good.

This will make about forty pies, and if you have a convenient way of keeping them, you may bake all at once, as they will keep for two months very readily when the weather is cold. If you do not bake all at once, put what is left in a jar, cover the top with melted suet, and over this put a piece of white paper, with a tea-cup of spirits poured on the top; tie it up and keep it where it will not freeze. Where persons have a large family, and workmen on a farm, these pies are very useful.

Rhubarb Pie.

Peel the stalks, cut them in small pieces, and stew them till very soft in a little water; when done, mash and sweeten with sugar; set it away to cool; make a puff paste, and bake as other pies. Some prefer it without stewing, cutting the stems in small pieces, and strewing sugar over them before the crust is put on. These pies will lose their fine flavor after the first day. They take less sugar than gooseberries.

Peach Pie.

Take mellow clingstone peaches, pare, but do not cut them; put them in a deep pie plate lined with crust, sugar them well, put in a table-spoonful of water, and sprinkle a little flour over the peaches; cover with a thick crust, in which make a cut in the centre, and bake from three-quarters to one hour.

Sweet Potato Pie.

Boil the potatoes, skin and slice them; put a layer of potatoes and a layer of good apples sliced thin in a deep dish; put potatoes and apples alternately till the dish is filled, mix together wine, water, sugar, butter and nutmeg, and pour over, cover it with crust, and bake as oyster pie.

Pork Mince Pies.

Take pieces of fresh pork that have been left from sausage meat, or any trimmings of the hams or shoulders; boil them, then chop. Have two heads nicely washed and cleaned, boil, pick out the bones and chop them; mix with the other meat, and season as you do other mince pies, they do not require any suet. The lower crust of mince pies need not be so rich as the top; always cut several places in the top crust with scissors, to keep the juice from wasting. When you warm mince pies, do it gradually, and do not have the crust scorched. Some prefer them cold. When the pies are very plain, a little preserve syrup, and a glass of wine added is an improvement.

Currant Pie.

After stemming green currants, scald them, and allow them to stand awhile; pour off the water; have the crust in your plates; put in the currants, sweeten them well; put in a little water, a dust of flour and a little orange peel. Gooseberries are prepared in the same way, but require more sugar. Cherries should not be scalded.

Pumpkin Pudding.

Choose a yellow pumpkin, with a fine grain, pare and cut it in small pieces, boil it in plenty of water, and take it up as soon as it is done, or it will soak up the water; to a gallon of pumpkin, stewed and mashed, put two quarts of milk, eight eggs, half a pound of butter, half a tea-cup of lemon or rose brandy; nutmeg and sugar to your taste; bake it in deep plates, with a bottom crust.

Apple Pudding.

Take three pints of stewed apples, well mashed, melt a pound of butter, beat ten eggs with two pounds of sugar, and mix all together with a glass of brandy and wine; pat in nutmeg to your taste, and bake in puff paste.

Quince Pudding

Take six quinces, pare them, cut them in quarters, and stew them, in a little water with lemon peel; cover them and let them cook gently till soft, when mash, or rub them through a sieve; mix them with sugar till very sweet, season with mace and nutmeg; beat up four eggs and stir in with a pint of cream; bake it in paste.

Potato Pudding.

Take a pound and a half of well mashed potatoes; while they are warm put in three-quarters of a pound of butter; beat six eggs with three-quarters of a pound of sugar, rolled fine, mix all well together, and put in a glass of brandy; season with nutmeg, mace or essence of lemon, and bake in paste.

Cocoanut Pudding.

Take three-quarters of a pound of grated cocoanut, with the brown skin taken off, half a pound of sugar, the same of butter, the whites of six eggs, beaten light, half a pint of cream, a glass of brandy, or rose-water, and a quarter of a pound of crackers, pounded fine, beat them together and bake in paste. If you wish the pudding rich, take a pound of butter, the same quantity of cocoanut, of sugar and whites of eggs, omitting the crackers and cream. Season as above. This quantity will fill six dessert plates of large size.

Sweet Potato Pudding.

Boil the potatoes, take off the skin, mash and strain them while warm; to a pound of potatoes put half a pound of butter; beat six eggs with half a pound of loaf-sugar, add a little mace or nutmeg; mix all together, and bake with or without paste.

Lemon Pudding.

Grate the rind of six fresh lemons, squeeze the juice from three, and strain it; beat the yelks of sixteen eggs very light, put to them sixteen table-spoonsful of powdered sugar, not heaped, with four crackers finely powdered; beat it till light; put a puff paste in your dish and bake in a moderate oven.

Another Way.

Take one pound of potatoes strained through a sieve, half a pound of butter, the same of rolled sugar, the juice of two lemons and the peel of one; beat five eggs, and mix all together with a glass of wine and a nutmeg.

A Preserve Pudding.

Take a deep dish, butter it well and spread a layer of preserves, without syrup--either quinces, citron, apples or peaches; rub together a pound of fresh butter, and the same of powdered loaf-sugar, and add the yelks of sixteen eggs well beaten; pour this on the preserves, bake it in a quick oven for half an hour; it may be set by till the next day; beat the whites of the eggs as for island, seasoning with currant jelly, and spread it over the pudding cold, just as it goes to table. This makes a rich dish and is eaten without sauce. This quantity will bake in four ordinary pie plates.

Arrow Root Pudding.

Take four table spoonsful of arrow root, mixed in a little cold milk; pour on this a quart of boiling milk, beat six eggs with three table spoonsful of sugar, and stir all together with a spoonful of butter, bake it twenty minutes in paste.

Rice Pudding.

Pour a quart of boiling milk on a pint of rice flour, stir it well, and put in six spoonsful of sugar, one of butter, and four eggs, beat all together, and bake in deep plates, with or without crust.

Another Way.

Boil half a pound of rice till soft, when nearly cold stir in half a pound of white sugar, a quarter of a pound of butter, and three eggs well beaten; grate in half a nutmeg, stir in a pint of rich milk; pour all in a yellow dish and bake half an hour; then, put a thick coating of loaf sugar on the top, and eat hot, with or without cream.

Pudding Of Whole Rice.

Boil a pint of washed rice in milk or water, till soft, put in a lump of butter, five eggs, and sugar to your taste, season with essence of lemon, or lemon peel, and mix in cream to make it thin enough to pour, bake it in paste, in deep plates.

A Pudding Of Corn Meal.

Pour three pints of boiling milk on nearly half a pint of sifted corn meal, stir in half a pound of butter, add four eggs, a little nutmeg, rose brandy, and the grated peel of a lemon, sweeten it, and bake it in paste.

Corn Pudding in Paste.

To two pounds of mush moderately warm, put three-quarters of a pound of butter, the yelks of six eggs, the rind of one lemon, and juice of two; sugar and nutmeg to your taste, and bake in paste as potato puddings. This is much admired.

Richmond Pudding.

Take one pound of raisins, stoned and chopped, half a pound of currants rubbed in flour, a pound and a half of grated bread, a pound of suet shred fine, eight eggs, two glasses of brandy, and two of wine; beat them all together, adding the eggs at the last; dip your bag or cloth in boiling water and flour it well; pour in the pudding and tie it up, leaving room for it to swell; allow it four hours to boil; eat it with white sauce.

Suet Pudding.

Take half a pound of suet chopped fine, four tea-cups of flour, and five eggs; beat these together with a quart of milk, and half a spoonful of salt; put in three tea-cups of raisins just before you tie it up; they should be rubbed in flour to prevent them from sinking; dried cherries, or pared dried peaches, are very good instead of raisins; scald the cloth and flour it; leave room for the pudding to swell. If you put one-fourth corn meal, you can do with fewer eggs.

Cheese Cakes.

Take one quart of curd, after the whey has been strained off, mix with it half a pound of fresh butter, an ounce of pounded blanched almonds, the whites of three eggs, a tea-cup of currants; season with sugar and rose water to your taste, and bake in plates with paste.

Baked Apples.

Wash and core your apples, and in the vacancy left by the core, put brown sugar, and bake them in a stove or oven.

Batter Pudding with Green Fruit.

Make a batter as for suet pudding. If you have small fruit, put it in whole; if apples, chop them fine; boil it three hours.

Custard Bread and Butter Pudding.

Fill a pan with slices of buttered bread, with raisins, grated nutmeg and sugar over each slice; beat six eggs with a tea-cup of sugar; add two quarts of rich milk, and pour it over the bread and butter; bake it in a stove or oven.

Balloon Puddings.

Mix a pint of rich milk with a pound and a quarter of flour; break nine eggs; beat the yelks with the batter, the whites alone; when they are mixed, stir in three-quarters of a pound of melted butter; grease cups or bowls with butter; pour in the batter, and bake them half an hour; if in a dutch-oven, put some water in the bottom; eat them with white sauce.

Plain Rice Pudding.

Put two quarts of good milk in a tin pan, with a tea-cup of whole rice, the same of stemmed raisins, and a little nutmeg or cinnamon, and sugar to your taste. If you bake it in a dutch-oven, it is best to put a little water in the bottom before you set it in; bake it till the rice is soft, and there is a brown crust on the top.

A Rice Dish with Fruit.

Put a tea-cup of rice in a quart of milk, and boil it very slowly to keep it from burning; when done, add a little salt, a tea-cup of cream, and sugar enough to sweeten it; have ready, in a deep dish, any fruit that is in season,--cherries, blackberries or apricots, apples, or peaches, cut up and well sweetened, but uncooked; spread the rice roughly over, and bake it slowly two hours. It may be eaten with cream, and nutmeg, and is quite as good cold as warm.

Bread Pudding.

Bread pudding is made out of bread that is too dry to use; cut it fine, boil it in milk, and mash it well; beat four eggs and put in, with half a pound of raisins; boil it an hour and a half, or bake it.

Bread and Apple Pudding.

To be eaten with Sauce.

Put a layer of buttered bread in the bottom of a well buttered dish, with chopped apples, sugar, grated bread and butter, and a little pounded cinnamon; fill up the dish with alternate layers of these articles, observing that it is better to have the inner layer of bread thinner than that of the top and bottom. This is a nice dish for those who cannot partake of pastry.

Custard Hasty Pudding.

Put a quart of new milk on to boil; then mix a tea-cup of rice flour with a little milk, two eggs, and three spoonsful of sugar; beat it, and when your milk boils, stir it in; let it boil five minutes--when pour it out on some buttered toast, in a bowl or dish, and grate nutmeg over it.

Elkridge Huckleberry Pudding.

One pound of flour, one of light-brown sugar, eight eggs--beat as sponge cake, and add one quart of berries, nicely picked, washed, and allowed to dry, bake as sponge cake. This maybe served with sauce; either Lot or cold.

Huckleberry Pudding.

Make a batter of five eggs to a quart of milk, and a little butter; pick, wash, and rub in flour a pint or more of huckleberries, put them in, and bake as long as other puddings, or boil it in a bag.

Green Corn Pudding.

Cut the green corn through the grain, and scrape it off the cob with the back of a knife; prepare a batter made of a quart of rich milk, two eggs, and wheat flour, and a little salt; then add the corn, and beat it well for a few minutes: it should be of a consistence to pour easily; grease the pan, and pour it in; bake with quick heat in a stove or spider, about half an hour. Six ears of corn will be enough for a quart of milk, or you may double the quantity; eat it with butter, sugar and cream, molasses, or any sauce that is convenient.

Baked Pudding.

Boil a quart of milk, and stir into it half a pint of corn meal and a tea-spoonful of salt--mix this well together; beat two eggs, stir in when nearly cold; add a tea-cup of chopped suet, two table-spoonsful of sugar, a little spice--grease a pan, and pour it in; bake three-quarters of an hour. Eat it with sugar and cream, or molasses sauce.

A Boiled Indian Pudding.

Boil a quart of milk, and stir in meal to make it a thick batter; put in a tea-spoonful of salt, a tea-cup of suet, a spoonful of sugar; mix; these well together, add two eggs, well beaten. If you have dried peaches, soak them; sprinkle them with dry flour, and put them in, or put in raisins, previously rubbed with wheat flour-beat it well; have your pot boiling, scald the bag, flour it, and put in the pudding,--it will boil in two hours. Eat with sugar and cream, molasses, or any kind of pudding sauce.

Boiled Bread Pudding.

Take a loaf of stale light bread, tie it in a cloth, boil it an hour, and eat it with sauce.

A Bird's Nest Pudding.

Pare and core some apples, enough to fill a deep dish, they should be ripe, and such as will cook easily. Make a custard of five eggs, to a quart of milk, and sugar and nutmeg to taste; pour this over, and bake half an hour.

Little Puddings in Pans.

Beat four eggs very light; make a batter of two tea-cups of flour, three of milk, and one of cream; pour in the eggs, and beat all well together; put in a spoonful of melted butter; grease your shallow pins or cups, and bake from twenty to thirty minutes; eat them with sauce, or sugar, cream and nutmeg.

Switzerland Pudding.

Make a hatter of five eggs, a quart of milk and flour; pare and core enough good apples to cover the bottom of your pan, fill the holes where the cores came out with sugar, grease the pan, lay them in, and pour the batter over, bake it an hour and a half, and make wine sauce to eat with it.

Boiling Puddings.

In boiling puddings, you must observe to have plenty of water in the pot; the pudding should be turned frequently, have the water boiling when it goes in, and do not let it stop. Have a tea-kettle of water by the fire to pour in as it evaporates. When the pudding is done, it should be dipped in a pan of cold water, to prevent its adhering to the cloth.

Screw Dumplings.

Roll out some paste thin, in a long strip, lay in preserves of any kind, or stewed fruit, well sweetened, roll it up and close it tight, pin it up in a towel, and boil it an hour, eat it with butter, sugar and cream, or sauce.

Large Dumplings.

Take green fruit of any kind--peaches, apples, cherries, blackberries, or huckleberries, make crust as for pies, roll it out, put in the fruit, and pin it in a cloth, boil it two hours.

Peach and Apple Dumplings.

Make crust as for plain pies, cut it in as many pieces as you want dumplings, pare and core the apples, roll out the crust, and close them up, have the water boiling when they go in, and let them boil three-quarters of an hour. Peaches pared and stoned make very good dumplings, eat them with sauce of any kind, or sugar, cream and butter.

Light Bread Dumplings

Take as much lightened dough as will make a loaf of bread, work into it half a pound of stemmed raisins, tie it up in a cloth, and boil it an hour and a half.

Rice Dumplings

Wash and pick a pint of rice, boil it in water till it is soft; have some apples pared and cored whole, fill the holes with sugar, cover them over with the rice, and tie each one separately in a cloth; boil them till the apples are done.

Indian Suet Dumplings

Chop beef suet fine, and to a pint of Indian meal, take a table-spoonful of the suet and a little salt; pour on boiling water enough to make a stiff dough, work it well, make into round cakes, and boil in clear water. These are good when vegetables are scarce, to eat with meat, or as a dessert with sugar or molasses.

Corn Dumplings.

When you boil corned beef, new bacon, or pork, you can make dumplings, by taking some grease out of the pot, with some of the water, and pouring it hot on a quart of Indian meal, mix and work it well, (it will not require salt,) make it into little round cakes; (they should be stiff, or they will boil to pieces;) take out the meat when it is done, and boil the dumplings in the same water for half an hour. They may be eaten with molasses, and make a good common dessert.

Pan Cakes.

Take five eggs to a quart of milk, make a thin batter with flour, have a little hot lard in the frying-pan, and pour in enough batter to cover the bottom; turn and fry the other side; if eggs are scarce, a tea-spoonful of salaeratus will supply the place of two. Eat them with wine and sugar.

Water Pan Cakes--a cheap Dessert.

Stir a quart of warm water in sufficient flour to make a batter of moderate thickness; dissolve a tea-spoonful of salaeratus, with a little salt, into a tea-cupful of butter-milk, or sour cream; beat it well; put a little lard in a frying-pan, and when it is hot, fry them. They are much better to be eaten hot, with sauce, sugar and cream, or any thing you may fancy. This is a very cheap dessert, and has been thought nearly equal to pan cakes made with milk and eggs.

Apple Fritters.

Allow four eggs to a quart of milk; make a thick batter with flour, and beat it well; stir in a quart of apples, chopped fine: have a frying-pan with hot lard, and drop a spoonful in a place; fry them light brown on both sides, and eat with sugar and wine, or sweet cider.

Rice Fritters.

To a pint of rice flour add a tea-spoonful of salt and a pint of boiling water; beat four eggs and stir them in, have hot lard in a frying-pan, and fry them as other fritters.

Indian Meal Fritters.

Take a quart of butter-milk, (in which dissolve a tea-spoonful of salaeratus,) stir in meal to make a batter of suitable thickness, a tea-spoonful of salt and two eggs; beat all well together, and fry in hot lard, as other fritters. If you like, you can put in chopped apples. Eat with sugar or molasses.

Snow Fritters.

Take of light new fallen snow, three table-spoonsful for every egg you would otherwise use--that is, if you would wish the quantity that three eggs would make in the usual way, take nine table-spoonsful of snow, and stir in a quart of rich milk that has been setting in a very cold place, so that it will not melt the snow, and destroy its lightness; put in a tea-spoonful of salt, and enough wheat flour to make a stiff batter; have ready a frying-pan with boiling lard, and drop a spoonful in a place as with other fritters, and set the remainder in a cold place till the first are done. Eat them with wine sauce, or sugar, butter and cream, or any thing you fancy.

Rice Flummery.

Rice that is ground coarse, in a hand-mill, is much better for making flummery than the flour you buy: put three pints of milk to boil, mix with water two tea-cups of ground rice, and stir it in the milk when it boils; while the milk is cold, put in it two dozen peach kernels, blanched, and rolled with a bottle; wet your moulds with cold cream or water; keep stirring the rice till it is thick, when pour it out in the moulds; just before dinner turn them out on dishes, have cream, sugar and nutmeg mixed, to eat with it.

Rice Milk.

Take a tea-cupful of rice, boil it till about half done, and let all the water be evaporated; then add the milk, and beat an egg with some flour, and stir in; let it boil n few minutes, and season with sugar and nutmeg.

Wine Sauce for Puddings.

Mix a spoonful of flour in a tea-cup of water, with two spoonsful of sugar and one of butter; stir this in half a pint of boiling water; let it boil a few minutes, when add a glass of wine and some nutmeg.

White Sauce.

Take half a pound of powdered white sugar, and quarter of a pound of butter, beat them well together with a glass of wine, and grate in half a nutmeg. A little currant jelly is preferred by some in this sauce instead of wine.

Cream Sauce.

Boil half a pint of cream, thicken it a very little, and put in a lump of butter; sweeten it to your taste, and after it gets cold add a glass of white wine; this is good to eat with boiled rice, plain pudding, or apple dumplings.

Molasses Sauce.

Put half a pint of molasses to boil in a skillet, with a piece of butter the size of an egg; when it has boiled a few minutes, pour in a tea-cup of cream, and grate in half a nutmeg; this is the most economical way of making sauce.

Egg Sauce.

Take the whites of three eggs and the yelks of two, beat them till very light, and add a large table-spoonful of butter ready creamed, with sugar and nutmeg to your taste; boil three glasses of wine, and pour over the other ingredients, put it over the fire, and let it boil two minutes, stirring all the time. This is nice sauce for any kind of pudding.

Cherry Toast.

Stone and stew a quart of ripe cherries, sweeten them, place some slices of buttered toast in a deep dish, and put the stewed cherries over them. A little powdered cinnamon or grated nutmeg may be put on the toast.

Apple Custard.

Lay a crust in your pie plates, slice apples thin and half fill the plates, pour over a custard made of four eggs to a quart of milk, sweeten and season it; bake it slowly.

Custard baked in Cups.

Beat up five eggs with two heaped spoonsful of sugar, mix these with a quart of rich milk and a little nutmeg; fill the cups, pour water in the bottom of a dutch-oven or dripping-pan, and set them in and bake them till thick.

Boiled Custard.

Put on to boil a quart of new milk; have ready a dozen peach kernels, scalded, peeled, and rubbed fine with a bottle, beat five or six eggs, with some sugar, and when the milk boils stir them in with the kernels; keep stirring till it thickens, but do not let it boil, or it will curdle; then take it off the fire, pour it in a pitcher, and continue to stir till it is nearly cold, when pour it into your cups, and grate nutmeg over the top of each. If you wish to have it flavored with lemon, boil some peel with the milk. This custard may be put in a glass bowl, and an island on the top.

Cold Custard.

Sweeten half a gallon of milk, put into it a table-spoonful of rennet wine, and let it stand in a warm place till it begins to come, when it should be set in cold water till dinner time; just as you take it to table, pour some cream on it, and grate nutmeg over the top.

Cream Custard.

To a pint of thin cream, take one egg, and beat and season as other custard; bake it in a plate with paste; this quantity is sufficient for one large plate, and is more delicate than custard made in the usual way.

Ice Custard with Vanilla.

Boil three pints of rich milk with as much vanilla as will give it a good flavor; sweeten it to your taste; have ready four eggs well beaten, pour the boiling milk on them, and keep stirring till cool; when put it to freeze.

Custard with Raisins.

Stone and cut a tea-cup of raisins, put them in a quart of milk; when it boils stir in five eggs well beaten, with two table-spoonsful of sugar, and a little lemon peel; keep stirring till it boils again, then take it off the fire, and stir till nearly cold; when put it in cups, or in a large bowl; beat the whites of three eggs with sugar, and when quite cold put them on the top of the custard.

To Boil Custard in Water.

Beat the eggs, sugar and seasoning together, and put it in a pitcher or nice stone jar; put in the milk and stir it well together; set the pitcher in a pot of boiling water, and stir till it is cooked, when take the pitcher out and stir till nearly cool. Custard should never be boiled or baked two much--a minute too long will sometimes spoil it.

Whips.

Grate the peel of a lemon in a pint of cream, sweeten it with loaf sugar, and whip it well; beat the whites of three eggs and mix with it; put apple jelly, seasoned with lemon, in the bottom of your glasses, and as the froth rises put it on the top of the jelly.

Trifle.

Put slices of sponge cake or Naples biscuit in the bottom of a deep glass dish; on this put slices of preserved citron, or apples preserved with lemon; pour over this a boiled custard, and on the top put a whip made by the foregoing receipt.

Floating Island.

Beat the whites of five eggs till the beater will stand up in them; then add, a little at a time, four spoonsful of powdered loaf-sugar, and currant jelly, or preserved syrup of any kind; put rich milk in the bottom of a glass, or china bowl, and put the island on the top. In making floating island, you should allow the whites of six eggs to six persons. You can have very good custards at the same time with the yelks of the eggs.

Apple Float.

To a quart of apples, slightly stewed and well mashed, put the whites of three eggs, well beaten, and four table-spoons heaping full of loaf sugar, heat them together for fifteen minutes, and eat with rich milk and nutmeg.

Carrageen or Irish Moss Blancmange.

Wash in three waters half an ounce of Carrageen moss; drain and put it in two quarts of new milk, let it boil for a few minutes, strain it in a pitcher, wet the moulds, and pour it in while hot; let it stand till it becomes thick, when it may be eaten with sugar and cream, seasoned with peach or rose water, or with a lemon rolled in the sugar. Some prefer seasoning the blancmange before putting it in the moulds. It will keep in a cool place two days, and is better to be made the day before it is eaten.

To Keep Suet for several Months.

Chop the suet you wish to preserve until summer as fine as for mince pies or puddings, then add a table-spoonful of salt to three table-spoonsful of suet; mix all well together, and put it in jars. Keep it tied up close, as exposure to the air makes it strong. It should be soaked an hour before you wish to use it, to remove the salt taste.

Skim Curds.

Put to boil a gallon of sweet milk; when it fairly boils, pour in a quart of butter-milk; in a few minutes the curd will rise, which skim off and set by, to cool for dessert; season it as you help to it at table, with cream and sugar to the taste.

Whey Skim Curds.

Boil the whey, and put in a pint of sour butter-milk; when the curds rise to the top take them off, and set them in a cold place; they make a nice dessert to eat with sugar, cream and nutmeg.

Cheese Curds.

Put to boil a gallon of skim milk, stir into it two spoonsful of rennet wine; when it turns, dip up the curds and set them away to cool; eat them with sweetened cream and nutmeg.

Rennet Wine for cold Custards or Curds.

Rub the salt from a nicely dried rennet, and cut it up; put it in a bottle, and fill it up with good wine. If care is taken to keep it filled up, it will last for several years, to make cold custard and cheese curds.

To Preserve Milk to use at Sea.

To every quart of new milk put a pound of loaf-sugar; let it boil very slowly in an iron pot, over clear coals, till it is as thick as thin cream--stirring it all the time, pour it out in a pitcher, and stir till it is cold; put in bottles, cork it tight, and put sealing wax over the corks; it must be shaken before it is used.

SYRUPS, ICES, &c.

Lemon Syrup.

Clarify a pound of loaf or Havana sugar, or if you wish to make a large quantity, allow half a pint of water to every pound of sugar, and boil it, skimming it when the scum arises, until it is of the consistency of honey; then to every pound of sugar, add an ounce of tartaric acid. If you do not find it sour enough, after it has stood two or three days, add more of the acid. If you like the taste of oil of lemon, add a few drops. A small quantity of the syrup prepared in this way, poured into cold water, makes a refreshing drink in warm weather.

Lemon Syrup for Seasoning.

Pare the lemons very thin, and put the peel to boil in a quart of water; cover it, to keep in the flavor; put two pounds of loaf sugar to the peel of a dozen lemons, and boil it till it becomes a rich syrup; keep it corked up in a bottle, to season ice cream.

Syrup of Lemon Juice.

Dissolve three pounds of loaf-sugar in three quarts of water, squeeze and strain lemons enough to make a quart of juice; boil it slowly with the water and sugar, and take off the scum as it rises; when it is quite clear, strain and bottle it. It will supply the place of fresh lemons when they cannot be had.

Pine Apple Syrup.

Pare the pine apples, cut them in pieces, and to three pounds of pine apple put a quart of water; cover it and let it boil till very soft, when mash and strain it; to a pint of this juice put a pound of sugar, boil it till it is a rich syrup, and keep it corked up in bottles to season ice cream.

Almond Cream.

Take a pound of blanched almonds, and roll them fine with a bottle; mix them with a few drops of rose-water, and stir them into a quart of cream; sweeten it with loaf-sugar, put it in a pot over the fire, and stir it till it thickens.

Tincture of Vanilla.

Vanilla beans, well bruised, half an ounce; French brandy, one gill; let it stand one week, and it will be fit for use. Keep it corked tight. This article will keep any length of time, and is very convenient for seasoning ices.

Superior Receipt for Ice Cream.

One gallon of cream, two pounds rolled loaf-sugar, one tea-spoonful of oil of lemon. If for vanilla cream; use a table-spoonful of tincture of vanilla, two eggs beaten; mix well and freeze in the usual way. The seasoning should be well mixed with the sugar, before it is added to the cream; by this means, it will be all flavored alike. This has been much admired.

Coloring for ice cream, may be made in this way: take of powdered cochineal, cream of tartar and powdered alum, each two drachms; of salts of tartar, ten grains; pour upon the powders half a pint of boiling water; let it stand for two hours to settle, or filter through paper. Use as much of this infusion as will give the desired shade. This produces a brilliant pink color.

Freezing Ice Cream.

Take a bucket of ice and pound it fine; mix with it two quarts of salt; put your cream in a freezer; cover it close, and immerse it in the bucket; draw the ice round it, so as to touch every part; after it has been in a few minutes, put in a spoon, and stir it from the edge to the centre. When the cream is put in a mould, close it and move it in the ice, as you cannot use a spoon without waste.

Ice Cream with Lemon.

Roll two fresh lemons, in as much powdered loaf-sugar as will sweeten a quart of cream; if you wish the juice, you can put some in with more sugar; freeze it. A good plan is to rub the lemon on a large lump of sugar, and then use the sugar in sweetening the cream.

Ice Cream with Fruit.

Mix the juice of the fruit with as much sugar as will be wanted before you add the cream, which need not be very rich.

Pokeberry Juice to Stain Ices.

Mash and strain ripe pokeberries; to each pint of juice put a pound of sugar; boil them together till it becomes a jelly; when cold put it in a jar and tie it close; use a small quantity of this to stain ice cream or jelly.

Isinglass Jelly.

To one ounce of shaved isinglass, put a quart of water; boil it down, to a pint, and strain it through a flannel bag; add some sugar and wine; stir it and put it in glasses.

Blancmange.

Shave an ounce of isinglass, and dissolve it in boiling water; then boil it in a quart of new milk; strain it and sweeten it to your taste; season as you prefer, with rose water, cinnamon, or vanilla.

Blancmange of Jelly.

To one pint of calf's foot jelly, add a pint of cream, a little mace, and a quarter of a pound of loaf-sugar; boil it fifteen minutes, stirring it constantly; strain it through a flannel bag, and when nearly cold put in n glass of white wine; wet your moulds with cold cream before putting it in.

Calf's Foot Jelly.

Split the feet, and soak them in cold water, four or five hours; wash them clean, and put them to boil in six quarts of water; when it has boiled down to one-half, strain it through a colander, and skim off all the fat that is on the top; set it away to cool, and when the jelly is quite stiff, wipe it with a towel, to take off any grease that should remain; cut it in pieces, and pare of the discolored parts; put it in your preserving kettle, with half a pint of wine, the juice and peel of two lemons, mace and sugar to your taste, and the whites and shells of six eggs; after it has boiled twenty minutes, pour in a little cold water, to make it settle; if any scum arises, take it off; let it boil five minutes longer, and take it off the fire; keep it covered for about an hour, when strain it through a bag that has been dipped in hot water, and put it in your glasses.

When eggs are used in calf's foot and other jellies, care should be taken to have the ingredients cool. If the jelly is hot when the eggs are added, it cannot be clarified so well--they should only cook by heating the jelly after they have been diffused, by stirring them through it.

Raisins in Syrup.

Make a syrup of half a pound of sugar to a pint of water, boil and skim it; put in five bunches of raisins, and let them boil twenty minutes; if you prefer, you can pick off the stems.

To Blanch Almonds and Peach Kernels.

Pour boiling water on them, which will make them peel easily; either roll them with a bottle on the cake board or pound in a mortar, with a little loaf-sugar; they should not be pounded too much or they will be oily; peach kernels make a fine flavoring for custard, but

as they contain prussic acid, do not use too many.

Snow Cream.

Take the richest cream you can procure, season it with a few drops of essence of lemon, or syrup of lemon peel, and powdered white sugar, and if you choose a spoonful of preserve syrup, and just as you send it to table, stir in light newly fallen snow till it is nearly as stiff as ice cream.

Kisses.

Beat the whites of eight eggs till they will stand alone; put with them, a little at a time, a pound of powdered sugar; roll a lemon in some of the sugar till the flavor is extracted. After it is beaten very well, drop it in heaps about the size of half an egg on a sheet of paper; smooth them over with a spoon, and let them be of a regular shape; bake them in an oven that has been moderately heated, till they are of a pale brown color; do not have the oven too cool, or they will run together; take them from the papers carefully, and stick two together.

CAKES.

Remarks on Making and Baking Cake.

The materials for making cake should be of the best quality, as your success very much depends on it. Flour should be dried and sifted, sugar rolled fine, spices pounded and sifted. Where brown sugar is used, it should be spread on a dish and dried before rolling it. I have known very good pound cake made with brown sugar; also jumbles, &c. Persons that make their own butter sometimes use it fresh from the churn, which prevents the necessity of washing the salt out of it for cake, and it mixes more readily than hard butter. Currants should be picked over, washed and dried; raisins should be stemmed and stoned. When these preparations are made the day before, it is a great assistance. Eggs should be fresh, or they will not beat light: in beating the whites, take a broad flat dish, and beat them until you can hold the dish upside down,--this is a test of their lightness. A large bowl is best for mixing and beating cake. You must use your hand for mixing the sugar and butter, and as you add the other ingredients, you may take a large wooden spoon; beat it some time after all is mixed. The oven should be ready to bake immediately, as standing makes cake heavy. A brick oven is the most certain,--and over your pans of cake, you should spread several layers of newspaper, to prevent its browning too suddenly. Cake requires more time than bread: a large cake should stay in the oven from an hour and a half to two hours, turning and looking at it from time to time; when you think it is sufficiently baked, stick a broad bright knife in the centre; if it is dry and free from dough when drawn out, the cake is likely to be done, though sometimes this is not a certain test, and you will have to draw a little from the centre of the cake with the knife. A broom straw will sometimes answer in a small cake instead of a knife. A large stone pan, with a cover, is the best for keeping cake, or a large covered bowl.

Icing for Cake.

Roll and sift a pound of loaf-sugar; whip the whites of three eggs; put in the sugar gradually, and beat it for half an hour; if it is so thick that it will not run, put in some rose water; let the cake be nearly cool; dry it in an oven that is nearly cool.

Another Way.

Put the white of one egg and a little rose water into half a pound of pulverized sugar, and heat them together till they stand; when it is nearly light enough, add a few drops of lemon juice, or a small portion of tartaric acid, dissolved in a _little_ water. It must be beaten in a bowl which has never had any thing greasy in it, (either cream or butter). The cake must have a little flour sifted over it, and wiped off with a towel, then cover it with a thin coat of the icing, set it under the stove or in a place that is a little warm, and let it harden; then add the second coat thicker; this will he perfectly white, but the first is always dark and has crumbs through it.

A Rich Fruit Cake.

Have the following articles prepared before you begin the cake: dry and sift four pounds of flour, four pounds of butter with the salt washed out, two pounds of loaf-sugar pounded, one ounce of nutmegs grated, an ounce of mace pounded; wash four pounds of currants; dry, pick, and rub them in flour; stone and cut two pounds of raisins; slice two pounds of citron, blanch a pound of sweet almonds and cut them in very thin slices; break thirty eggs, separate the whites and yelks, and beat them till very light; work the butter with your hand till it is soft as cream; put in alternately the flour, sugar and eggs. When all are mixed in, and the cake looks

very light, add the spice, fruit, almonds, and half a pint of brandy; set it in a well heated oven to bake; when it has risen, and the top is beginning to brown, cover it with paper; let it bake four hours, and when it is nearly cool, ice it. This will keep a long time in a stone pan, covered close.

A cheaper Fruit Cake.

Take four pounds of flour, three of butter, three of sugar, two of raisins, one of currants, two dozen eggs, an ounce of mace, three nutmegs, and a half pint of brandy; if you want it dark, put in a little molasses; mix the ingredients together, as the above fruit cake, and bake it from two to three hours.

Fruit or Plum Cake.

Dry and sift a pound of flour, roll a pound of sugar, and beat it with a pound of butter, and the yelks of ten eggs well beaten; wash and dry a pound of currants and rub them in flour; stone and cut half a pound of raisins, and mix in with a glass of rose brandy, and a grated nutmeg, or mace; when all the rest are well mixed together, beat up the whites of the eggs, and add them; bake it an hour and a half.

Pound Cake.

Wash the salt from a pound of butter, and beat it with a pound of loaf sugar till it is as soft as cream; have a pound of flour sifted, and beat ten eggs, the whites and yelks separately; put alternately into the butter and sugar the flour and eggs, continue to beat till they are all in, and the cake looks light; add some grated lemon peel, a nutmeg, and half a wine-glass of brandy; butter the pan, and bake it an hour; when it is nearly cold, ice it. If you want a very large cake, double the quantity. You can tell when a cake is done by running in a broom-straw, or the blade of a bright knife; if it comes out without sticking, it is done, but if not, set it back. You can keep a cake a great while in a stone pan that has a lid to fit tight.

White Cake.

Beat the whites of twenty eggs; wash the salt out of a pound of butter; sift a pound of flour, roll a pound of loaf-sugar, blanch a pound of almonds; roll them fine with a bottle, and mix them with rose water.

Work the butter, sugar and almonds together till they look like cream; have the eggs beaten very light, and add them and the flour alternately till you get all in; beat the whole together till it is very light; have a pan buttered, and put it in a heated oven to bake; when it begins to brown, put white paper over the top; bake it about three hours; when it is nearly cold, prepare an icing, flavored with rose water; put it on the top and sides.

Washington Cake.

Take a pound and three-quarters of sugar, the same of flour, three-quarters of a pound of butter, eight eggs, a pint of milk, and mix them as a pound-cake; just as it is ready to bake, dissolve a tea-spoonful of salaeratus in a little sour cream, and stir in; season with nutmeg and rose brandy, or essence of lemon; bake it as pound cake.

Some persons put in a tea-spoonful of lemon juice just before baking.

Madison Cake.

Take a pound and a quarter of flour, and the same of sugar and butter; five eggs, a pound, of raisins, and one of currants; two glasses of wine or brandy; mace, nutmeg, and a tea-spoonful of salaeratus, dissolved in a pint of new milk; bake it as pound cake.

Indian Pound Cake.

Take three-quarters of a pound of Indian meal sifted, and one-quarter of wheat flour; roll a pound of sugar, work into it three-quarters of a pound of butter; season with nutmeg and rose brandy; add four eggs beaten light; mix and bake as other pound cake.

Rice Flour Pound Cake.

Take seven eggs, a pound of rice flour, one of sugar, and half a pound of butter; season it with rose water and nutmeg; mix and bake it as other pound cake, and ice it.

Sponge Cake.

Balance twelve fresh eggs with sugar, and six with flour; beat the eggs very light, the whites and yelks separately; mix alternately the sugar and eggs, and add the grated peel of a lemon; butter a large pan, or several small ones; add the flour just as it is put in the oven, stirring it just sufficiently to mix. Beating it after the flour is added makes it heavy; pour it in, and put it to bake as soon as possible. This makes a good pudding, with white sauce. One-half rice flour is an improvement.

Rice Sponge Cake.

Take three-quarters of a pound of rice flour, one pound of white sugar, finely powdered, and ten eggs; beat the yelks with the sugar, the whites alone; add them and the flour to the yelks and sugar, a little at a time; season it with rose brandy and nutmeg, and bake it in shallow pans.

Sponge Cake in Small Pans.

Take twelve eggs, with the weight of them in sugar, and the weight of six of them in flour; beat the yelks with the sugar, the whites alone; season with nutmeg or grated lemon peel; put all together, adding the flour the last; stir it quickly after the flour is added, as it will make it heavy to beat it much; grease several small pans and pour it in, bake with a quick heat, and they will be done in half an hour, or less, according to the size. They are pretty iced.

Lemon Sponge Cake.

Take ten eggs, separate them, a pound of loaf-sugar, half a pound of flour, the grated peel of two lemons and the juice of one; beat the yelks with the sugar, the whites alone, when add them and sift in the flour by degrees; beat well, have your pan buttered, and bake with a quick heat either in a stove or dutch-oven, or a brick oven, the heat should not be quite so great as for light bread--it will bake in about an hour.

Cup Cake.

Take four cups of flour, three of sugar, one of melted butter, one of sour cream, with a tea-spoonful of salaeratus dissolved in it, and three eggs; season it with brandy and nutmeg; mix, and bake it as pound cake.

Loaf Cake.

Take about a pound of risen bread dough, work into it a tea-cup of butter, three eggs beaten, a pound of sugar, a nutmeg grated and a glass of brandy or wine; a pound of raisins, stoned and chopped, should be added after it is well beaten; half a pint of cream slightly warmed, with a table-spoonful of vinegar, and a tea-spoonful of dissolved salaeratus should be stirred in just as you are ready to bake it; also sifted flour enough to make it the proper consistence; bake in a large pan, in a brick oven or stove, and it will require an hour and a quarter.

Queen Cake.

Mix a pound of dried flour, the same of sifted sugar, and currants; wash a pound of butter, add rose water--beat it well--a tea-cup of cream; then mix with it eight eggs, yelks and whites beaten separately; add the dry ingredients by degrees; beat the whole an hour, bake in little tins, or saucers, filling only half.

Rich Jumbles.

Rub a pound of butter into a pound and a quarter of flour; beat four eggs with a pound and a quarter of sugar; when very light, mix them with the butter and flour; mix in a glass of rose water, and a nutmeg; roll them in rings, and bake them slowly; sift powdered sugar over after they are baked.

Common Jumbles.

Take a pound of flour, half a pound of butter, and three-quarters of sugar, three eggs, a little nutmeg and rose brandy; mix the butter and sugar together, and add the flour and eggs; mould them in rings, and bake them slowly.

Molasses Jumbles.

Beat three-quarters of a pound of sugar, the same of butter, and three eggs together; stir in half a pint of molasses; add rose brandy and nutmeg, and enough flour to make a soft dough; roll it in rings, and bake as other jumbles. By the addition of half a pint of molasses and a tea-spoonful of salaeratus, you will have a common black cake, which may be baked in one large pan.

Jumbles for Delicate Persons.

Roll a heaped pint of light-brown sugar, and rub it in two pints or flour, half a pound of butter, and a dessert spoonful of cinnamon; beat an egg, and mix it with half a tea-cup of rich milk (in which a very small lump of salaeratus has been dissolved;) stir all together with a wine glass of rose brandy; work it well, roll thin and cut them out--bake with moderate heat.

Cup Jumbles.

Five tea-cups of flour, three of sugar, one heaped of butter, one of sweet cream, three eggs and the peel of one lemon grated, or nutmeg, or mace if you like; roll them thin, and bake in a quick oven.

Jackson Jumbles.

Three tea-cups of sugar, one of butter, five of flour, one tea-spoonful of salaeratus in a cup of sour cream and two eggs; bake in a quick oven; season them with the peel of a fresh lemon grated, and half a wine-glass of brandy.

Macaroons.

Blanch a pound of almonds, beat them in a mortar, and put with them a little rose water to keep them from oiling, the white of an egg, and a large spoonful of flour; roll a pound of loaf-sugar, and beat the whites of four eggs; beat them all together; shape them on white paper with a spoon, and bake them on tin plates in a slow oven; let them be quite cold before you remove them from the paper.

Naples Biscuit.

Beat twelve eggs till light; add to them a pound of dried flour and one of powdered sugar; beat all together till perfectly light; put in some rose water and nutmeg, and bike it in small shallow pans in a moderately heated oven.

New Year Cake.

Mix together three pounds of flour, a pound and a half of sugar, and three-quarters of a pound of butter: dissolve a tea-spoonful of salaeratus in enough new milk to wet the flour; mix them together; grate in a nutmeg, or the peel of a lemon; roll them out, cut them in shapes, and bake.

Cider Cake.

Take a pound and a half of flour, three-quarters of sugar, and a quarter of a pound of butter; dissolve a tea-spoonful of salaeratus in as much cider as will make it a soft dough, and bake it in shallow pans; season it with spice to your taste.

Dover Cake.

One pound of flour, one of sugar, half a pound of butter, six eggs, half a nutmeg, a spoonful of rose brandy; beat the butter and sugar together, adding the other ingredients, the whites of the eggs beaten separately; bake as pound cake.

Jelly Cake.

This cake can be made by the sponge, cup, or Dover cake recipe; have shallow tin pans or plates of the same size, butter them, and pour in the batter so as to be about half an inch thick when baked; they take but a few minutes to bake of a light-brown; and as you take them from the oven, put them on a china plate, with a layer of jelly between each cake, till you have four or five layers; cut

the cake in slices before handing it. Currant jelly is to be preferred, but quince will answer, or peach marmalade.

Almond Cake.

Ten eggs, one pound of loaf-sugar, half a pound of almonds, half a pound of flour, one nutmeg; beat the yelks first, then put in the sugar, beating them very light; blanch the almonds and pound them in a mortar, with rose water or the juice of a lemon; add them alternately with the flour, and the whites of the eggs well beaten. If you bake in one large cake, it will require an hour and a half in a slow oven; in small pans, it will take less time, and in either case, will require watching.

Raised Plum Cake.

Take three pounds of flour, and mix to it as much new milk as will make a thick batter, and a tea-cup of yeast; when it is light, beat together a pound of butter, a pound of sugar, and four eggs; mix this in with a pound of raisins, stoned and cut, half a pound of currants, a grated nutmeg, and a glass of rose brandy; bake it two hours.

Black Cake.

Rub a pound and a half of softened butter in three pounds of flour, add a pound of brown sugar, rolled fine, a pint of molasses, a table-spoonful of rose brandy, a nutmeg or some mace, four eggs well beaten, a pound of raisins stoned and chopped; mix the whole well, and before baking add a tea-cup of sour cream with a tea-spoonful of soda dissolved in it--beat it up again, have the pans well buttered, and put in about three parts full; this quantity will make about six cakes, in bread pans; bake as bread and if it brown too much, put paper on it, if it seems too stiff, add a little more molasses or cream. It will keep several weeks in cold weather.

Bunns.

Take a pound and a quarter of flour, half a pound of butter, and three-quarters of a pound of sugar, six eggs, half a pound of currants, half a nutmeg, a glass of brandy, and a pint of new milk; mix all well together, and put in half a tea-cup of yeast; let it rise, and when light, bake it in shallow pans.

Butter-milk Cakes.

One pound of sugar, a quarter of a pound of butter, three eggs, a tea-cup of butter-milk, nutmeg or cinnamon to taste; add as much flour as will make a dough that will roll out; cut in round cakes and bake with a quick heat.

A Composition Cake.

One pound of sugar, one of flour, half a pound of butter, six eggs, two and a half wine-glasses of milk, one tea-spoonful of soda and one of tartaric acid; warm the milk and butter; add the sugar, then the yelks of the eggs beaten light, then the whites and the flour alternately, then the soda, (to be dissolved in half a wine-glass of water;) season with nutmeg, mace, or a little essence of lemon, and add lastly, the tartaric acid, dissolved in half a wine-glass of water. Bake it one hour in an oven, as hot as is usual for bread; when brown at the top, cover it with paper. A pound of dried currants is an agreeable addition.

Ginger Cup-cake.

Three cups of flour, one of sugar, one of molasses, one of butter, a table-spoonful of ginger, one tea-spoonful of salaeratus, and three eggs; bake in pans. A pound of stoned and chopped raisins is an improvement.

Light Ginger bread.

Take three cups of molasses, five of flour, one of sugar, three eggs, and a tea-spoonful of salaeratus, dissolved in a cup of sour cream; work the sugar with a quarter of a pound of butter; beat two dozen cloves, and put in with two table-spoonsful of ginger; mix all together, and bake in shallow pans or cups.

Crisp Ginger-cake.

Take three pounds of flour, one of sugar, and one of butter; mix these together with three table-spoonsful of ginger, some cloves and anise seed, and wet it with molasses; roll it thin; cut it in shapes, and bake with a quick heat.

Ginger-bread Nuts.

Take a pound and a half of flour, three-quarters of a pound of sugar, the same of butter, some cloves and cinnamon pounded fine, and an ounce of ginger; mix these well together, and make it into a stiff dough, with molasses; roll it thin, and cut it in small cakes.

Crullers.

Take two pounds of flour, three-quarters of a pound of sugar, half a pound of butter, six eggs, and some mace or nutmeg; mix the flour, sugar and butter together, and wet it with the eggs; if too stiff, put in some cream, roll the dough thin; cut it in shapes, and fry them in boiling lard. The more lard there is, the less they will soak it up.

Rusk.

Take a quart of milk, a tea-cup of cream, half a pound of lard, quarter of a pound of butter, a spoonful of salt, and boil them together; beat well two eggs with a pound of sugar, and pour the boiling milk on them gradually, stirring all the time; when nearly cold, add a tea-cup of yeast, and flour sufficient to make a stiff batter; when quite light, knead it up as bread, and let it lighten again before molding out; when they are moulded out, wet them over with sugar and cream, and let them rise a few minutes and bake them; grate a little sugar over when they come out of the oven.

Rusk for Drying.

Boil a quart of milk, and put in it half a pound of butter, and a little salt; when nearly cold, stir in a tea-cup of yeast, a pound of sugar, and flour to make a batter; when it is light, knead it up with flour, and let it rise again; grease your pans, and make it out in cakes, about the size of a tea-cup, and an inch thick; put two layers in each part, and bake them three-quarters of an hour; when take them out, break them apart, and put the top ones in other pans, and let them dry slowly in the oven for an hour or more.

This rusk will keep for months, and is very useful in sickness, to make panada; it is also good for delicate persons that rich cake disagrees with, or to take on a journey. Nutmeg or mace to your taste.

If you like it richer, two eggs may be put in.

Bread Rusk.

Take as much lightened dough, as would make a loaf of bread, spread it open, and put in a tea-cup of sugar, some nutmeg and a piece of butter; work it well, mould it out, and bake it with your bread; wet the top with sugar and cream before it goes in the oven.

Dough-nuts.

Boil a quart of new milk and melt in it half a pound of butter; beat three eggs with two pounds of sugar, and pour on them the boiling milk, stirring all the time; when it is nearly cold, star in a tea-cup of yeast, a spoonful of salt, and flour enough to make a stiff batter; when this is quite light, knead in flour to make a soft dough, two grated nutmegs and a little mace; let it rise again till it is very light; roll it out thin, cut it in shapes, and fry them in hot lard; dust over cinnamon and loaf-sugar, pounded fine, while they are hot.

Common Dough-nuts.

Pour a pint of boiling water into a pint of new milk, put in a quarter of a pound of lard, and a table-spoonful of salt; stir in a tea-cup of yeast and flour to make a stiff batter; let it rise, and when very light put in two pounds of light-brown sugar, two nutmegs, and enough flour to make a soft dough; work it well and let it rise again till it is very light; roll out and fry as other dough-nuts.

PRESERVES, JELLIES, &c.

To Clarify Sugar.

To every four pounds of sugar put a quart of water and the whites of two eggs; if you put in the egg after it gets hot, it will cook before it has the desired effect; when it comes to a boil, and the scum rises, pour in a little cold water; let it boil up; take it off to settle, and skim it well; let it boil up, and skim it three times, when it will be fit to preserve with. You should always clarify white Havana sugar.

Apples.

Apples should be preserved in November, and they will keep till June. Take firm pippins, pare them and take out the cores, leaving them whole; or after you have cored them, cut them across in two pieces, they will then be in rings; put them in cold water as fast as they are pared, to keep them from turning dark; make a syrup of a pound of loaf-sugar, and half a pint of water to each pound of apples; wipe the apples, and put in as many as will go in, without one laying on another; let them boil swiftly till they look clear, then take them up carefully on dishes, and put in some more; when all are done, if the syrup should seem too thin, boil it up after the apples are taken out; cut the peel of several lemons in thin rings, boil them in a little water till they are soft, and throw them in the syrup after the apples are taken out; put the syrup in a bowl, and set all away till the next day, when put the apples in glass jars or large bowls, spread the lemon peel about them and put the syrup on the top; paste several thicknesses of paper over, and set them in a dry cool closet.

If you only want the apples to keep a few weeks, they may be done with half a pound of sugar to a pound of apples, and will look and taste quite as well.

Apples with Brown Sugar.

Pare and halve your apples, either pippins, red-streaks or wine-saps; make a syrup of light-brown sugar, allowing half a pound to a pound of the fruit; after boiling and clarifying the syrup, pour it over the fruit, and set it by for two days, then cook them, and seasoned with green ginger root they are excellent; they will not require much cooking, and should be of a light-brown color.

Crab Apples.

Put the crab apples in a kettle with grape leaves in and around them, with some alum; keep them at scalding heat for an hour, take them out, skin them, and take out the seeds with a small knife, leaving on the stems; put them in cold water, make a syrup of a pound of sugar to a pound of apples; wipe the apples and put them in; let them stew gently till they look clear; take them out, and let the syrup boil longer.

Currants.

Make a syrup of one pint of currant juice to three pounds of sugar; if it is brown sugar, put in the white of an egg to clarify it; let it boil and skim it; have three pounds of currants picked and stemmed; put them in the syrup, and let them boil slowly, about twenty minutes; take them up and let the syrup boil longer.

Pine Apples.

Pare and slice the pine apples, and make a syrup of a pound of sugar and half a pint of water to a pound of fruit; clarify and skim it, then put in the apples and let them cook gently for half an hour; if you do not want to keep them long, much less sugar will do.

Blackberries.

Allow a pint of currant juice and a pint of water to six pounds of blackberries; give them their weight in brown sugar; let them boil till they appear to be done, and the syrup is rich. Blackberry jelly can be made as currant jelly, and is good for sick children, mixed with water.

Blackberry Flummery.

Stew three pints of blackberries with one pint of sugar--soak a tea-cup full of ground rice--and when the berries have been stewing about fifteen minutes, stir in the rice, and stir the whole time until it becomes thick. This should be eaten cold with cream, and will keep two days.

Cherries.

To preserve four pounds of cherries, take one pint of currant juice, into which put five pounds of sugar; when this boils up, take off any scum that rises, and put in half of the cherries, with part of each stem on; when they look so clear that you can see the stone, they are done; take these up on a dish and put in the rest, and let them do slowly the same length of time; take them up and let the syrup boil a few minutes longer; do not put them in the jars till they are quite cold. Glass jars are the best to keep all early fruits in,

as you can then see if they begin to ferment; if they do, you must boil them over; always put them in a window where they will be exposed to the sun.

Common Cherries.

Stone the light-colored common cherries, and to every pound of fruit, allow a pound of sugar, which boil up with the juice; after you have skimmed it, throw in the cherries, and let them boil till the syrup is rich.

Cherries for Common Use.

Stone twelve pounds of morel cherries; allow half a pound of brown sugar to each pound of fruit, after it is stoned, let them cook slowly for two hours; examine them through the summer, and if they show any signs of fermentation, set them in a brick-oven, after the bread is done, or in a dutch-oven of hot water, which keep at boiling heat for an hour.

It is a good plan to know the weight of your preserving kettle, as you can then weigh the fruit in it, with a pair of steelyards.

Apricots.

Pour boiling water on the apricots and wipe them dry; then cut them in half and take out the stone; make a syrup of their weight in sugar, and a little water; when this has boiled, put in the fruit, and let it cook slowly till it is clear, and the syrup is rich.

Ginger.

Scrape the outside from the green ginger, and boil it in a little water, till it is soft; then take it out, and scrape off any spots that are on it; make a syrup of half a pint of water to a pound of sugar and a pound of ginger; let it boil slowly about half an hour; take it up and boil the syrup a little longer.

Green Gage Plums.

Take an equal quantity of fruit and sugar, pour boiling water on the plums, and wipe them dry; stick them over with a pin; make a syrup of the sugar and some water, and when it boils, put in half of the plums; let them do slowly till they are clear, then take them out and put in the rest; if the syrup should be thin, let it boil longer. Do not put them in the jars till the next day. Egg plums may be done in the same way.

Green Lemons.

Take the young lemons, cut them in half, scrape them, and take out the pulp; cut them in such shapes as you please; put them in a preserving kettle and cover them with water; put in a little alum to green them, and let them boil till they are transparent, then take them out and drain them on a cloth; give the kettle another cleansing, and put them in with their weight in sugar; let them stew gently, but be careful that they do not boil; let them cook till the syrup is rich.

Raspberries.

Boil three pounds of raspberries in a pint of currant juice, for ten minutes; put in four pounds of sugar, and let them boil half an hour, or until it is a jelly. Paste paper over the jar.

Citron Melon.

Pare the melon and cut it in slices half an inch thick, without the seeds; let it lay in salt and water for an hour, then wash the salt off, and boil it in strong ginger tea; make a thin syrup and boil it again, then make a syrup of a pound of loaf-sugar to a pound of citron, and boil it in this till it is clear; season it with mace and lemon peel.

Watermelon Rinds.

Cut the rinds in any form you please; put them in strong salt and water, with cabbage leaves over and around them, and set them in a warm place till they become yellow; then wash them, and put them in a kettle with alum and water, and grape or cabbage leaves over and through them; set them on the fire, and keep it at scalding heat for two hours--but do not let them boil. If they are not of a fine green color, change the water and leaves; when they are green enough, put them in cold soft water for three days, changing

the water twice a day; then make a syrup of rather more than a pound of sugar to a pound of melon, some sliced ginger, the peel of a lemon, and a little mace; let them boil slowly fifteen minutes, take them up, and boil them again at the end of a week.

Cantelopes, Cucumbers, or Melons.

Take young watermelons, cucumbers or cantelopes; scrape the melons, and cut the rinds in shapes--leave the cucumbers whole; put them in a preserving kettle with alum and water; cover them, and let them boil till they are transparent; take them out, wash them in cold water, and wipe each piece separately; have your kettle nicely cleaned, and give them rather more than their weight in sugar; put a layer of sugar, and a layer of melon, some slices of green ginger, and the rind and juice of a lemon; let them stew over the fire till the syrup is rich; take them up, and stew them over again in about a week.

Cranberries.

To preserve cranberries, allow them their weight in sugar; make a syrup of the proportions of half a pint of water to two pounds of the sugar; boil and skim it before you put the fruit in; then let them boil until clear. To make sauce to eat with roast fowls, put three-quarters of a pound of sugar to a pound of fruit.

Gooseberries.

Take the large gooseberries, pick off the stems and blossoms, give them their weight in sugar; put them in the kettle alternately, with the sugar, and pour over them a pint of water to four pounds of fruit; let them boil gently till the scum arises; when this is taken off, let them cook faster; when clear, take them up on dishes, and boil the syrup longer.

Peaches.

Have sweet, white clingstone peaches--pare and stone them; to each pound, take a pound of sugar made in a syrup, put the peaches in, and when they look clear, take them up on dishes; let the syrup boil longer.

A New Mode of Preserving Peaches.

Pare, halve and weigh the peaches; put them in a preserving kettle of boiling water, and to six pounds of peaches, put a tea-spoonful of soda or pearl-ash; let them boil one minute; then take them out, and throw them in cold water; scrape off the black scum which adheres to the peaches; wipe and lay them on a dish; have the kettle cleaned, and put the peaches in layers, with half their weight in sugar; they will not require any water; let them cook slowly at first, then boil till clear--when take them out, and let the syrup boil till it becomes rich. The flavor of the peach is retained, and they are not so sweet as in the old way.

Damsons.

Weigh out as much sugar as you have fruit; if it is brown you must clarify it; put a pint of water to three pounds of sugar, make a syrup, wash the damsons, put them in and let them cook slowly for half an hour; then take them out on dishes, and let them dry in the sun for two days, taking them in the house at night; boil the syrup half an hour after the fruit is taken out; when done in this way they will be whole and clear. You can make a jam by boiling them slowly for two hours; or a jelly as currants.

To Preserve Strawberries.

Gather the strawberries in the mid-day, pick out the largest and best, stem them, and to each pound of strawberries put a pound of loaf-sugar and a glass of white wine; let them stand four or five hours; take off the syrup so as not to mash the fruit, and clarify it; then put in the strawberries, and to each pound put as much fine alum as will lay on the blade of a penknife; let them boil up several times, and shake them round in the kettle, but do not stir them with a spoon, as that will mash them; a few minutes boiling is sufficient; after you take out the fruit, let the syrup boil up, and when it is nearly cold pour it over them in the jar; put a piece of white paper over the top, and pour a spoonful of brandy on it; paste several thicknesses of paper over the jar.

If you like your preserved strawberries, cherries, or peaches, to have a fine pale color, allow them to bob half the time recommended in the receipt, then spread the fruit thin on dishes, with but little syrup, pour the rest of the syrup also on dishes, and set them daily in the sun; if the weather be clear and the sun hot, four days will be sufficient. Preserves done in this manner do not ferment. You should spread a piece of gauze or netting over them to keep out insects or dust.

Another Way.

To each pound of the fruit take a pound of crushed sugar; put them in the preserving kettle, a layer of sugar and a layer of fruit; let them stand a little while to make syrup before putting them over the fire; they should boil fast for twenty minutes; watch them all the time, taking off the scum as it rises; stir them gently without mashing the berries; put them in jars, put brandy papers over them and paste or tie them close. Preserves should never be put in jars that have had pickles in them.

Tomatoes.

Take solid round tomatoes, scald and peel them, give them their weight in sugar, put a layer of sugar and of tomatoes alternately; let them boil slowly till the syrup forms, then boil faster, till clear, and the syrup is rich; season with lemon peel, ginger or mace; some prefer the yellow tomato for preserving.

Quinces.

Pick out the finest quinces, pare them, and cut them in halves, or in rings; take the best of the parings and the seed, and boil them in water till they are very soft, strain the liquor, and have the kettle cleaned again, wash and weigh the quinces, and give them their weight in sugar, put the sugar in the water the parings were boiled in--skin it, and put in the quinces, let them boil very slowly till clear, take them up on dishes, and boil the syrup longer.

Green Peppers.

Get peppers that have a sweet taste, take out the seeds, leaving on the stems, lay them in salt and water for three days, changing the water each day, then put them in a kettle with leaves around them, and a small piece of alum, let them scald, but not boil, for two hours, take them out, and let them lay in water three days, changing it twice each day, then boil them in sugar and water fifteen minutes, then make a syrup, allowing them their weight in sugar, and boil them gently in it half an hour, take them out and boil the syrup longer.

Pumpkin.

Choose a fine grained, high colored pumpkin, fully ripe, cut it in thin slices, about four inches long and two wide, to two pounds of pumpkin, put two pounds of sugar in a bowl, cut the peel of two lemons in rings, and squeeze the juice over the pumpkin, let it stand all night, the next day put it on to preserve with two tea cups of water, let it cook gently till the pumpkin seems clear and crisp, take it up, scald the lemon peel, and boil it in the syrup, cool it on dishes, and put it in a jar.

Green Fox-Grape Jelly.

Fill a kettle with grapes, and let them boil with a pint of water till the skins burst, mash and strain them, put a pound of sugar to a pint of juice, and let it boil half and hour. Ripe fox-grapes may be made into very nice jelly in the same way, and is very good to drink in sickness, mixed with water.

Pears.

Pare and core the fruit, but leave the stems on; put them in a syrup of a pound of sugar, and a half a pint of water to a pound of pears, with some green ginger or lemon peel; boil the syrup half an hour after they are done.

Ripe Fox-Grape Jam.

To two quarts of grapes, allow three pounds of brown sugar, and a pint of water; have the grapes picked over and washed; put them all together and let them boil more than an hour; take them up on shallow dishes, and pick out as many seeds as you can with a spoon. This makes a good common preserve when other fruits are scarce; they are also very good for pies.

Currant Jelly.

Pick the leaves from the currants and fill your kettle with them; put a tea-cup of water to keep them from sticking; cover them with a plate and let them boil slowly half an hour; take them out, and strain them through a flannel bag; to every pint of juice put a pound of loaf-sugar; let it boil till it is a thick jelly, which will be in about fifteen minutes, and put it in tumblers or jars.

Lemon Butter or French Honey.

Take half a pound of butter, melt it in an earthen dish and squeeze in the juice of six lemons; beat twelve eggs with two pounds of brown sugar, stir it in with the rind of two lemons grated, mix it all together, and let it boil twenty minutes, when it will be about the consistency of honey; the flavor is agreeable, and it may be eaten on bread, or as a sauce for boiled pudding.

Currant Syrup.

Prepare the currants as for jelly; to every pint of juice put a pint of water and a pound of sugar; let it boil half an hour and skim it well; if the flavor of the raspberry is preferred, it may be added in the proportion of one pint of it to four of currant juice. It is a very pleasant drink mixed with water in warm weather.

Quince Jelly.

Wash and wipe the quinces; cut them in small pieces, and take out the seeds carefully; have your kettle cleaned and half full of water; throw the quinces and seeds in till you get it full; cover them over and let them boil till very soft; mash them well and strain them; to every pint of juice put a pound of sugar; clean the kettle again, pour in the juice and sugar, and let it boil till it forms a jelly; it should be put into tea-cups, if you want to turn it out whole, with brandy papers on top, and pasted over. It is a nice jelly to use with whips or trifle.

Apple Jelly.

Pare and quarter a preserving kettle full of pippin apples; cover them with water, and lay a plate close over them; let them boil until perfectly soft, taking the plate off to skim them; spread a coarse thin cloth over a large bowl; pour the apples on the cloth, and let the juice run through, without squeezing; hold the towel by the corners, and move it gently; take three-quarters of a pound of loaf-sugar to a pint of the juice, and boil it fast, skimming it, until it becomes jelly, which will be in from ten to fifteen minutes, pour it in tumblers or glass jars, and when quite cold, paste them over. This will keep a year. Red streak apples make a fine red jelly, boiled with the skins on them. If you have currant or grape jelly that has candied, they can be restored by making some apple syrup, and mixing it hot; it will not require any more sugar--about one-third apple juice; let it boil a few minutes. Very sweet preserves that have candied can be improved by this process.

Apple Marmalade.

Apples make a very good marmalade when other fruits are scarce, and can be done at any time through the fall, or winter, pare the apples, cut them up, and put them to boil, with some water and green ginger scraped, and tied up in a bag, after they have boiled an hour, take out the ginger, and put in half a pound of sugar to one of fruit, let it cook an hour longer.

Peach Marmalade.

Take soft yellow peaches, pare them, and cut them in quarters, give them their weight in sugar, put the peaches in the preserving kettle with a pint of water, without the sugar, and let them boil till they are well cooked, covered over with a plate, when done, mash them in the kettle till very fine, and stir in the sugar, let them cook slowly an hour, or they may be finished in a stone jar in the oven, or set in a stove boiler, and the water kept boiling all the time, they are not then so likely to burn as when finished over the fire, they will do with less sugar, if they are dried in the sun two days previous to preserving.

Another Way.

Pare and quarter the peaches, and to eight pounds of peaches, allow five pounds of sugar, put them on, sugar and peaches at once, mixing them through, let them stew slowly until a syrup forms, when they may cook pretty fast for several hours, without once stirring, then take them up, and mash them well, if the marmalade is not thick enough, spread it on dishes, and dry in your oven after the bread is taken out. Quinces and apples may be done in the same way.

Quince Marmalade.

Pare the quinces and cut them up fine, put the parings and cores to boil, then strain them, put in the quinces, and let them boil till soft-when mash them fine, and put in three-quarters of a pound of sugar to a pound of fruit, let them cook gently for two hours, and take them up in pint bowls; when cold, put brandy papers on the top of each, and paste them over, they will turn out whole to put on

table.

Marmalade of Mixed Fruits.

Pare equal quantities of peaches, apples, pears and quinces, cut them fine, and put them to boil with a pint of water to six pounds of fruit, let them cook thoroughly, but do not let them burn, take them out, and mash them well, clean the kettle, and put them back, with half their weight in sugar, let them cook very slowly for two hours.

Lemon Marmalade.

Soak the peel of lemons that have been left after making lemonade, changing the water twice a day for three days, to extract the bitter, boil them till soft, then mash and put in enough sugar to make it pleasant to the taste; stew it a short time after the sugar is put in; put it in a bowl, and when cold, cut it in slices for the table; it will keep several weeks.

To Conserve Pears.

Have the nicest pears you can get, pare them, and leave on the stems; take half a pound of loaf-sugar to a pound of pears; put them in the kettle together, with water enough to moisten the sugar; if the pears are very juicy, they will not need any; cover them over with a plate, and let them boil very gently for two hours; take them out on dishes, and boil the syrup to jelly, and put it away by itself; set the pears in the sun, or in a moderately heated oven; when quite dry, sprinkle them with loaf-sugar, and put them away in glass jars.

Peaches in Cider.

Scald and wipe the peaches; cut them from the stone, and dry them in the sun two days; boil a gallon of sweet cider half away; put in the peaches, and let them stew slowly till done; they will keep without any sugar, but you can put some in, if you wish them sweeter.

Pears can be kept in the same way.

Peaches, &c. in Brandy.

Take fresh yellow peaches, or large clingstones, pour boiling water on them, and wipe off the down; make a syrup of half a pound of sugar to a pound of fruit, and boil and skim it; put in the peaches, and let them cook for fifteen minutes; take them up without any syrup, and cool them on dishes; boil the syrup down to half, and put an equal quantity of peach or French brandy, pour this over the peaches after they are in jars.

Plums or cherries may be done in the same way.

Grapes in Brandy.

Put some close bunches of grapes, not too ripe, in a jar, and prick each one with a needle, strew over them half their weight in pounded rock candy, and fill up the jar with brandy.

To Conserve Peaches.

Take the yellow peaches, pare them, and cut them from the stone in one piece, to six pounds of peaches have two pounds of sugar, make a syrup of three-quarters of a pound of sugar, and a little water, put them in, and let them stay till they are quite clear, then take them up carefully on a dish, and set them in the sun to dry, pound the sugar fine, and strew over them, turning them over to let each part have some, do not put much on at a time, and if any syrup is made, remove them to fresh dishes, when they are sufficiently dry, lay them lightly in a jar, with a little sugar between each layer.

If the peaches are sweet clings, three pounds of sugar to twelve of peaches will be enough, if you dry them a day in the sun before they are stewed.

Sauce of Cherries, or Damsons.

Allow half a pound of brown sugar to every pound of fruit, and to each seven pounds a pint of molasses, and one of strong vinegar, let them cook slowly, so as not to break the skins, take them up in a jar, put in a few cloves, let the syrup boil longer, and pour it over.

Frosted Fruit.

Take large ripe cherries, apricots, plums or grapes; if cherries, cut off half of the stem; have in one dish some white of an egg beaten, and in another some powdered loaf-sugar; take the fruit, one at a time, and roll them first in the egg, and then in the sugar; lay them on a sheet of white paper in a sieve, and set it on the top of a stove or near a fire till the icing is hard.

Grapes for Pies.

After the first frost, pick the wild grapes, and put them in a jar, free from stems; fill it with boiling molasses, and tie it up close; set it on a hot hearth, or on the top of a stove, in a pan of water, for several days. These are very useful to make common pies in the winter.

Green Tomatoes for Pies.

Pick the green tomatoes before they are much frosted; scald them and take off the skins; put them in your kettle and let them boil for half an hour; cut them up, and put in a pound of sugar to three pounds of tomatoes, and let them cook for half an hour longer; season them with the juice and peel of a lemon, and put them away in jars. They make very good pies in the winter, and resemble gooseberries.

Conserve of Roses.

Gather the leaves of the damask rose, while they are fresh; spread a pound of loaf-sugar on your cake-board, and roll in about half a pound of rose leaves, or as many as will work into it, have your kettle cleaned, and stew them in it very gently for about half an hour; put it in tumblers to use when you have a cough. It is very good for children that are threatened with the croup; you should have some by the side of the bed to use at night.

To keep Damsons for Pies.

To every twelve pounds of damsons take seven pounds of brown sugar; put them together in a stone jar, a layer of fruit and a layer of sugar; tie it up close, and set it in a heated oven; let it stay till it is cold, and continue to set it in, after every baking, for several weeks; or you can cook them on the top of a stove, in a pan of hot water.

Dried Cherries, &c.

Dried cherries should be kept in a jar, with sugar sprinkled among them; they are very useful in sickness; a tea-cupful of cherries, with a quart of boiling water poured on them, and left to draw for half an hour, with sweetening, makes a very agreeable drink when you cannot get lemonade.

When stewed for pies you should allow them plenty of water, and not put in the sugar till they are nearly done.

Boiling water poured on dried apples also makes a good drink in sickness.

Apple Butter.

With Remarks on the Use of Earthen Vessels

Have your kettle well cleaned, and fill it early in the morning with cider made of sound apples, and just from the press; let it boil half away, which may be done by three o'clock in the afternoon; have pared and cut enough good apples to fill the kettle; put them in a clean tub, and pour the boiling cider over; then scour the kettle and put in the apples and cider, let them boil briskly till the apples sink to the bottom; slacken the fire and let them stew, like preserves, till ten o'clock at night. Some dried quinces stewed in cider and put in are an improvement. Season with orange peel, cinnamon or cloves, just before it is done; if you like it sweeter, you can put in some sugar an hour before it is done. If any thing occur that you cannot finish it in a day, pour it in a tub, and finish it the next day; when it is done put it in stone jars. Any thing acid should not be put in earthen vessels, as the glazing is poisonous. This way of

making apple butter requires but little stirring; you must keep a constant watch that it does not burn.

Pears and peaches may be done in the same way, and if they are sweet, will not require sugar.

Another Way.

It is important to have a large copper or bell-metal kettle, into which put the cider as soon as it comes from the press; put it over a brisk fire, and boil it half away; then put the cider from the kettle into clean stone jars, (warm the jars to prevent the danger of breaking them;) have your apples pared and cut over night, as many as would fill your kettle twice; have the kettle well cleaned, and in the morning put in half the cider, and fill the kettle nearly full of apples, and put it over a brisk fire; when they begin to boil up, stir them down, which may be done two or three times, before you put in your stick to stir constantly; then put in the rest of the apples and cider, as fast as the kettle will take them, and boil it four hours after the last apples are put in, stirring it all the time; you should have for the purpose a stick made of hickory wood, somewhat like a common hoe, with holes in it.

Candied Preserves, &c.

If your preserves candy, set the jars in hot water for half an hour; if they are in glass jars put them in something else, as glass cracks easily, when exposed to heat. Preserves made with white Havana sugar are not so liable to candy as others. Common preserves are improved, and are more certain to keep well, by being placed on flat dishes and set in a brick-oven after the bread is taken out: they may remain two or more hours without injury. When preserves are about to boil over, you should have a common fan at hand and fan them, which will sometimes answer instead of taking them from the fire.

Cider Marmalade.

Boil two gallons of sweet cider down to one gallon; have ready two gallons of apples, pared and cut; pour the cider out of the kettle, and clean it; then put in the apples, and pour the cider in, and two or three pounds of sugar; if it will not hold all conveniently, add at intervals; let them stew four hours; do not stir till they are nearly done--stirring makes fruit stick to the kettle and burn; if you stir once you must keep on. This is a pleasant sauce for dinner, or eaten with bread and butter at tea, and will keep in a cool place through the winter.

Tomato Figs.

Take six pounds of sugar, to one peck (or sixteen pounds) of ripe tomatoes--the pear-shaped look best; put them over the fire (_without peeling_) in your preserving kettle, their own juice being sufficient without the addition of water; boil them until the sugar penetrates and they are clarified. They are then taken out, spread on dishes, flattened and dried in the sun, or in a brick-oven after the bread is taken out. A small quantity of the syrup should be occasionally sprinkled over them whilst drying; after which, pack them down in jars, sprinkling each layer with powdered sugar. The syrup is afterwards concentrated and bottled for use. They retain surprisingly their flavor, which is agreeable and somewhat similar to the best figs. Ordinary brown sugar may be used, a large portion of which is retained in syrup.

Molasses Candy or Taffy.

Put a quart of good molasses (not sugar house) in a dutch-oven or iron pot, having previously greased it with butter; let it boil very fast, stirring it all the time for fifteen minutes; then put in a tea-cup of sugar and let it boil fifteen minutes longer, stirring all the time; take a little out on a plate, and when it is brittle, pour it while hot into tin plates rubbed with butter; put it in a cold place and break it up when you want it for use; never put taffy in china or earthen plates, as they would probably be broken in taking it out. Some think it an improvement to add the kernels of black walnuts, nicely picked--put them in just as you take up the taffy and give it one stir; a tea-cup of kernels to a pint of molasses is a good proportion.

Walnut Cheese.

Take a pint of nice kernels and pound them in a mortar with two tea-cups of brown sugar, and a table-spoonful of water; put it in cups or small bowls and it will turn out like other cheese. It is a favorite refreshment with some country children.

CORDIALS, WINES, VINEGAR, PICKLES, &c.

Peach Cordial.

Put a gallon of peach brandy into a wide-mouthed vessel, and five pounds of fine flavored peaches, cut from the stone; boil five pints of water with two pounds of loaf-sugar and a pound of peaches, till it is a clear and rich syrup; pour this boiling hot on the brandy and stir it well; put in two dozen peach kernels, blanched and pounded, and a little mace; let it stand three weeks covered tight--at the end of which time, bottle it for use. It is a nice seasoning for cake.

Quince Cordial.

Grate the quinces and strain them; to every quart of juice, put a pound of loaf-sugar and a pint of spirits; boil, strain and bottle it.

Cherry Cordial.

Mash and strain the cherries, boil the juice, and to a gallon, put two pounds of sugar, and half a pint of spirits; the sugar should be boiled in it; skim and strain; when cold, bottle it.

Lemon Brandy.

Have a bottle three-quarters full of brandy; when you use lemons for other purposes, pare off the yellow skin very thin, cut it small and drop it in the bottle, till you get it full. Be careful not to put in any of the tough white part, as that will give it a bitter taste; cork the bottle and keep it to season cakes and puddings.

Rose Brandy.

Fill a large bottle with damask rose leaves, picked while they are fresh; fill the bottle with brandy, or good spirits of any kind; cork it tightly and set it away for use. It will bear filling up several times.

Blackberry Cordial.

Mash and strain the blackberries; put the juice on to boil in a brass or bell-metal kettle; skim it well, and to each gallon of juice put three pounds of sugar and a quart of spirits; bruise some cloves and put in. This is valuable as a medicine for children in summer.

Rose Water.

Gather the damask rose leaves; have a tin pan that will fit under your warming-pan; wring a thin towel out of water, spread it over the pan, and put rose leaves on this about two inches thick; put another wet towel on top of the leaves, and three or four thicknesses of paper on it; put hot embers in the warming-pan, and set it on top of the paper, propped up so as not to fall; when you renew the coals, sprinkle the towel that is at the top of the rose leaves; when all the strength is out of the leaves, they will be in a cake; dry this, and put it in your drawers to scent the clothes; put another set of leaves in, sprinkle the towels, and so till you have used up all your rose leaves. Rose water is a very nice seasoning for cake or pudding; it should be kept corked tightly.

Cologne.

Put into a bottle half an ounce of oil of lavender, one drachm of oil of rosemary, two of essence of lemon, two of essence of bergamot, forty drops of oil of cinnamon, and a little musk, if you like it; pour on it three pints of best alcohol.

Blackberry Wine.

Gather the fruit when fully ripe, but before the sun has had time to dry the juice; put it in a tub and pour in clear cold water enough to cover it; mash it to a pulp with a wooden masher; strain it through a linen bag or towel; a deal of juice will remain in the pulp, which in order to get you must add some sugar to it, and boil it in your preserving kettle, when you may strain again, and will have little left but seeds; to every gallon of the liquor, add three pounds of good brown sugar; pour it in a keg, (which should stand in a cellar, or cool dry place:) let it stand two or three weeks, with the bung laid loosely on; as the froth works out fill it up, (with some of the liquor kept out for the purpose.) French brandy in the proportion of a quart to five gallons, is an improvement. At the end of three or four weeks, it may be closely bunged and put away in a safe dry closet, where it should remain undisturbed for a year, when it may be racked off, bottled and sealed over.

Gooseberry Wine.

Put three pounds of lump sugar in a gallon of water; boil and skim it; when it is nearly cold, pour in it four quarts of ripe gooseberries, that have been well mashed, and let it stand two days, stirring it frequently; steep half an ounce of isinglass in a pint of brandy for two days, and beat it with the whites of four eggs till they froth, and put it in the wine; stir it up, and strain it through a flannel bag into a cask or jug; fasten it so as to exclude the air; let it stand six months, and bottle it for use; put two or three raisins in each bottle, and cork it up.

Currant Wine.

Pick and mash the currants, either with your hands or a clean block, in a tub; strain them, and to one gallon of juice, put two gallons of water; and to each gallon of the mixture, put three pounds of sugar; stir it until the sugar is dissolved, then put it in a clean cask that has never been used for beer or cider; put it in a cellar or cool place, and let it work out at the bung for several weeks; have a gallon of it saved in a jug to fill up with, as it works out. When it is done working, bung it up.

You may rack it off towards spring, or it will not hurt it to stand a year.

If you want a barrel of wine, you must have eight gallons of currant juice, sixteen of water, and seventy-two pounds of sugar; put in a quart of brandy after it has done working; if you can get a clean brandy barrel to put it in, it is better than a new one.

Another Way.

Mash well together equal quantities of currants and water, strain the juice and to every gallon add three pounds of best brown sugar; fill the cask two-thirds full, bung it tight and put clay over; by this means the air is excluded while the process of fermentation is going on; the cask should be iron-bound; rack it off and bottle or put in demijohns the next spring after making.

Elderberry Wine, &c.

To each gallon of berries, put one of water; mash them in a tub, and leave them two days, stirring them frequently; then strain them, and to each gallon of juice put three pounds of brown sugar, and to every five gallons, two ounces of bruised ginger, and one of cloves, which tie up in a bag, and boil in the wine for an hour, and put it in a cask; when it is nearly cold, put in two spoonsful of lively yeast; let it ferment two days, and put in a pint of spirits with the bag of spice, and close it up. This is excellent as a medicine for delicate or elderly persons.

Fill a bottle with elderberries, with a dozen cloves, and fill it up with spirits. It is good to give children that have the summer disease; mix a tea-spoonful of it with sugar and water for a child, or a table-spoonful for a grown person.

Ginger Wine.

Boil nine quarts of water with six pounds of lump sugar, the rinds of three lemons very thinly pared, and two ounces of face ginger pounded; when it has boiled half an hour, skim it, and pour it on the juice of two lemons: when nearly cold, add two spoonsful of yeast; put a pound of raisins in the cask, with a half a pint of brandy, and half an ounce of shaved isinglass; strain it in the cask, and stop it tight; bottle it in six or seven weeks.

Raspberry Wine.

Pick over the raspberries, and to every quart put a quart of water; bruise them, and let them stand two days; strain off the liquor, and to every gallon put three pounds of lump sugar; stir it till the sugar is dissolved, and put it in a clean barrel, or keg; at the end of two months, bottle it, and put a spoonful of brandy, or a glass of wine in each bottle.

Raspberry Vinegar, and its uses.

Put two pounds of raspberries in a large bowl, and pour on them two quarts of white-wine vinegar; the next day, strain the liquor on two pounds of fresh raspberries; let this stand a day, and strain it into a stone jar; to each pint of the liquor put a pound of loaf sugar; stir till it is dissolved, and put the jar in a sauce-pan of water, which keep boiling for an hour; skim it, and bottle it when cold. This is used not only as a refreshing drink, mixed with water, but is said to be of use in complaints of the chest. No glazed or metal vessels should be used in making it.

Spruce Beer.

Boil some spruce boughs with some wheat bran, till it tastes sufficiently of the spruce; bruise some allspice, and put in; strain it, and put two quarts of molasses to half a barrel; when it is nearly cold, put in half a pint of yeast; after it has worked sufficiently, bung up the barrel.

To Make Two Gallons of Beer.

Put two pounds of brown sugar in a jug, with a heaped spoonful of ginger, and a pint of strong hop tea; pour in a gallon and a half of warm water, and a tea-cup of yeast; leave out the cork a day--then fasten it up, and set it in a cool place; or if you bottle it, put two or three raisins in each bottle.

Harvest Beer.

To make fifteen gallons of beer, put into a keg three pints of yeast, three pints of molasses, and two gallons of cold water; mix it well, and let it stand a few minutes; then take three quarts of molasses, and three gallons of boiling water, with one ounce of ginger; mix them well, and pour into the keg, and fill it up with cold water.

A decoction of the root of sassafras is good to put in beer.

Porter Beer.

A pleasant drink in summer is to take one bottle of porter, five bottles of water, and a pint of molasses, or a pound of sugar; make a spoonful of ginger into a tea, and mix all well together; have seven clean bottles, with two or three raisins in each; fill them, cork them tight, and lay them on their sides on the cellar floor.

Molasses Beer.

Take five pints of molasses, half a pint of yeast, two spoonsful of pounded ginger, and one of allspice; put these into a clean half-barrel, and pour on it two gallons of boiling water; shake it till a fermentation is produced; then fill it up with warm water, and let it work with the bung out, a day, when it will be fit for use; remove it to a cold place, or bottle it. This is a very good drink for laboring people in warm weather.

To Make Cider.

To make cider that will keep sweet for a length of time, requires particular attention to all the points. All the works and utensils in use must be perfectly clean, so that nothing acid shall come in contact with the pulp or liquor while pressing. The casks should be cleaned in the following manner:

After washing each barrel clean, put in a lump of unslaked lime, and pour in a gallon of boiling water; bung it up, and roll the barrel several times a day, letting it lay with the bung down; in the evening, empty out the lime-water, and wash the barrel clean in several waters; after the water is drained out, burn a brimstone match in it, made of a piece of coarse muslin one inch broad, and four long, dipped in melted brimstone; light one end of the match, and put it in; put the bung on slightly, so as to hold the other end, and allow air sufficient to make it burn; when the rag has burned out, drive in the bung to keep in the sulphuric gas, which, if allowed time, will condense on the sides.

The apples should be kept under cover, and secured from rain. After they have laid to mellow for two or three weeks, select those that are sound; break off the stems and leaves; have the trough perfectly clean, and after they are ground, keep them from the sun and rain for twenty-four hours; then press them, and fill into the casks; the first running is always the best; each cask that is filled should be numbered, so as to know the quality; and after they are all filled, draw off and mix them, the weak with the strong; keep the casks filled up with cider while they are fermenting; when the fermentation is subsiding, there will be a thin white scum rise slowly: when this is all off, lay on the bung lightly; rack it off in a few days in barrels, in which brimstone has been used, and bung it tight; rack it off again in March, and keep the bungs in tight.

To Make Vinegar.

You may always have good vinegar for pickling, and other purposes, by taking a little pains. Get a tight whiskey barrel, if it is clean you need not rinse it, and put into it ten gallons of the best vinegar you can procure, with one quart of whiskey and one quart of molasses; every day for a week, add a gallon of good cider that has not been watered, and shake the barrel each time; let it stand in this state two weeks, shaking the barrel frequently. After this, you may put in a gallon of cider occasionally, with any that has been left at table, or the settlings of decanters or bottles that have had wine in, but do not put in any water. It will make much sooner in the garret or a warm place, but if the barrel is fixed early in the summer, you will have plenty to pickle with in the fall; taste it so as not to add cider too fast. Have a phial with a string attached to it that you can put in at the bung. You should have a barrel of good hard cider before you begin to make vinegar. If you are in want of vinegar, fill a jug from the barrel, and set it in the hot sun, where it will turn sour much quicker. It is a good plan to keep a jug in a closet, where you can empty all the slops of cider and wine; and when you get it full, empty it in the barrel.

After the pickling is done, you can put as much hard cider in the barrel, a gallon at a time, as you have taken out, with a little molasses, and half a pint of whiskey; if you put too much of the latter it will prevent it from getting sour, but a little gives strength to the cider, and the molasses increases the acidity, and helps to color it. If you should have any juice of cherries, currants, or blackberries, put it in, or if you can get cheap sour raisins, they will be an improvement to the flavor of the vinegar; a tea-cup of burnt sugar will give it a good color.

Vinegar made in this way will keep pickles good for several years. If the cider has not sufficient strength it will take longer to make.

To Pickle Mangoes.

Pick your musk-melons at a proper age, before they get too hard; make a slit in the sides and take out the seeds with a tea-spoon; boil a pickle of ground alum salt, that will bear an egg, and let the melons lay in this a week; then make a new pickle, and let them lay in it another week; then wash them, and scald them in weak vinegar, or sour cider, with cabbage leaves around the kettle; put them in a jar, and put the vinegar and leaves in with them; leave them two days, then wipe them carefully, and to two dozen mangoes, have an ounce of mace, one of cloves, some nasturtions, small onions, scraped horse-radish, and mustard seed sufficient to fill them; fill up the inside of each one, and tie them round with strings. Put them in your kettle with strong vinegar, and let them scald a few minutes; then put them in a wide-mouthed jar, and pour the vinegar over; have them covered close, and they will keep good for several years. Large green tomatoes make good mangoes, previously salted and drained, when fill them as other mangoes.

For Pickling Mangoes with Oil and Vinegar.

Cut a square piece out to remove the inside; lay them in salt and water nine or ten days, and afterwards green them as any other pickle. For stuffing, take two ounces of garlic, dried and pulverized, two ounces of horse-radish, prepared as the garlic, two ounces of nutmegs, two ounces of cloves, two ounces of mace, two ounces of whole mustard seed. When the mangoes are large, put a small cucumber, and two beans in each. Wipe each mango perfectly dry before the stuffing is put in; sew each up, and tie twine around it; then put them in a pot, and pour the pot two-thirds full of sharp vinegar; pour sweet oil on the top till covered. The ingredients must be mixed with sweet oil. The spices, &c. mentioned, are sufficient for a dozen mangoes.

Cucumbers.

Gather the cucumbers while they are small, lay them in a jar with salt enough to make a pickle; pour in a little water, and if there is not salt enough to cover them, in a few days put in more. At the end of two weeks put them in a kettle, with cabbage leaves around and through them; fill it up with weak vinegar, and let them scald three hours; put all in a jar for three days, then take out the cucumbers, pour out the vinegar and leaves; put them back in the jar, with some cloves, peppers, horse-radish and mustard; boil some strong vinegar and pour over them.

Small Cucumbers.

Wash small cucumbers from two to four inches long; put a gallon of very strong vinegar in a large jar, with mustard seed, scraped horse-radish, and celery seed, a small portion of each, and a tea-cupful of salt; put the cucumbers in the jar; tie them close. Martina's may be pickled in the same way, or in the old way of pickling cucumbers.

To Pickle Cherries or Peaches.

If peaches, wipe them well with a coarse towel; if cherries, cut the stems half off, but do not stone them; put them in jars, and to every half gallon of vinegar it takes to cover them, put a pound of sugar, and cloves and cinnamon to taste; boil and skim it well, and when nearly cool pour it over the fruit; for three successive days pour off the vinegar, and boil and pour it on again.

Peaches.

Pick out sound clingstone peaches; lay them in salt and water for a day, then wipe them on a coarse cloth: boil up some strong vinegar, with a little ginger, whole pepper and mustard seed; put the peaches in a jar and pour this over.

White Walnuts.

Take full grown white walnuts, or butter-nuts, before the shells get so hard that a pin will not run through easily; put them in a jar; boil a pickle of ground alum salt that will bear an egg, skim it, and when it gets cold; pour it on the walnuts; let them lay in this ten days; then make another pickle as strong as the first, and leave them in it ten days longer; then scrape each one carefully, until you get all the rough skin off, wipe them with a very coarse cloth, and let them soak in cold water two days; boil them in weak vinegar, and let them lay in this a week; boil enough good vinegar to cover them; mix together scraped horse-radish, mustard seed, cloves, red pepper, onions and garlic; put a layer of the walnuts in a jar, and sprinkle the spice over; pour the boiling vinegar over the top.

English Walnuts.

Gather them when nearly full grown, but not too hard; pour boiling salt and water on them; let them be covered with it nine days, changing it every third day; then take them out on dishes, and put them in the sun to blacken, turning them over; then put them in a jar and strew over them pepper, cloves, garlic, mustard seed and scraped horse-radish; cover them with cold strong vinegar and tie them up.

Black Walnuts.

Gather the walnuts while you can run a pin through them; boil them in an iron pot three hours, to soften the shell; put them in a tub of cold water, hull and wash them, and put them in your jars; pour salt and water over them, and change it every day for a week; at the end of that time scald them in weak vinegar; let them stand in this three days, then pour it off, and for half a bushel of hulled walnuts, have quarter of a pound of cloves, a tea-cup of mustard seed, two spoonsful of black pepper, a pint of scraped horse-radish, two pods of red pepper, some sliced onions and garlic; put these in the jars with the walnuts, and fill them up with strong cold vinegar.

Pickled walnuts will keep for six or seven years, and are as good at the last as the first.

Virginia Yellow Pickles.

To two gallons of vinegar, put one pound of ginger, quarter of a pound of black pepper, two ounces of red pepper, two of cloves, a tea-cup of celery seed, a pint of horse-radish, a pint of mustard seed, a few onions or garlic, and three ounces of turmeric to turn them yellow. The above ingredients should be mixed together in a jar, and set in the sun by the first of July, tied up close, with a block over each jar to keep out the rain. Put whatever you intend to pickle in salt and water for two or three days; then pour boiling salt and water on them; wash them and drop them in the jars of vinegar.

You can pickle any thing in this way but walnuts. The same pickle, by adding more vinegar to it, will do for two years; if the jars are set by a fire, a much less time will do to take the strength out of the spices; the turmeric should be tied up in a bag.

Tomatoes.

Scald and peel a peck of ripe tomatoes; lay them on dishes, and strew salt thickly over them; let them stand for twenty-four hours, occasionally pouring off the liquor that the salt extracts; then drain them on a sifter, and gently squeeze them, as it is this juice that weakens the vinegar and makes the pickles spoil; take a large jar, put in a layer of tomatoes, then a layer of sliced onions, mustard seed, cloves and white pepper, or whole black pepper; (you may if you like, break two pods of red pepper and put in each jar.) When the jar is full, pour very strong vinegar over, and in a few days they will be ready for use, and will keep all winter. They retain much of the tomato flavor, and should be kept in a cool place.

Another Way.

Take small round tomatoes when they are not too ripe; stick them with a needle in several places, to keep the skin from bursting, and let them lay a week in salt and water; then wash them and put them in a jar with some cloves, pepper and small onions; cover them with strong cold vinegar, and tie up the jar.

Pepper Mangoes.

Take fully grown green peppers, cut a slit in the side of each and take out the seeds; make a strong brine and lay them in it for three days; then soak them in clear water a day and night; pack them in a jar, and pour boiling vinegar over them with a piece of alum; let them stay in this three days, when boil the vinegar again, and pour over them; when they are green, stuff them with chopped cabbage, mustard seed, cloves, horse-radish, pepper, and a small onion in each; tie them up, put them in a jar; boil fresh vinegar and pour over.

Observe always to have the kettle you boil vinegar in well cleaned; never put pickles in common earthen-ware, as the glazing is poisonous.

Onions.

Peel small white onions and pour boiling milk and water over them; when cold, put them in a jar, and make a pickle of strong vinegar, a little mace, ginger, white mustard seed, and horse-radish; boil it and pour over them.

If you want them to be white, do not put in black pepper or cloves.

Mushrooms.

Take the small round mushrooms that are pale pink underneath, with white tops, and peel easily; put them in a jar with a little mace, white mustard seed and salt; cover them with cold vinegar, and tie them close. If you put in black pepper or cloves, it will turn them dark.

Nasturtions.

Have some strong vinegar in a jar with a little salt, and as you gather the nasturtions, put them in, and keep the jar tied close.

Cherries.

Take sound morel cherries with the stems on, and put them in a jar; boil spices in strong vinegar, and pour over them hot. Damsons may be done in the same way. A little sugar improves the pickle.

Cabbage.

Take firm heads of purple cabbage, quarter them, sprinkle them with salt, and let them lay three or four days, when shave them fine, drain off the salt and put them in a jar, boil enough vinegar to cover them, with horse radish, pepper and cloves, when nearly cold pour it on the cabbage, and put in a little cochineal tied up in a bag, it will he fit for use in a week.

Another Way.

Cut hard cabbage fine as for slaw, sprinkle salt through it, and let it lay under a moderate pressure for twelve hours, then drain well through a colander, slice a dozen raw onions, have a large jar in readiness, put in a layer of cabbage, strew in some of the onions, a few cloves, a tea-cupful of mustard seed, some whole black pepper, cut six half ripe red pepper pods, and sprinkle in; add a little more salt, boil vinegar and pour on sufficient to cover the mixture.

Cut Cucumbers.

Slice large cucumbers lengthwise--do not pare them--then cut them half an inch thick; if you have small ones, slice them across, put them in a large jar, and sprinkle them well with salt, after standing a day or two, pour off the liquid the salt has extracted, drain them, and wash the jar, and put the cucumbers in alternately, with sliced onions, mustard seed, white pepper, whole black pepper and a few cloves, pour over them strong vinegar, and tie close, keep them in a cool place, but do not allow them to freeze in severe weather, as freezing spoils the flavor of pickles. When pickles do not keep well, pour off the vinegar, and put more on, but if the vinegar is of the best quality, there is little fear of this. Putting alcohol on over paper, will prevent their moulding.

Cucumber Catsup.

Take full grown cucumbers, pare them, and cut out the lines of white pith, which are on three sides; cut them in slices about half an inch thick; to six cucumbers, put one onion, sliced fine; then sprinkle them with salt, placing the fruit in layers, with salt between;--next morning, press the liquor from them; put them in _small jars,_ and fill up with strong vinegar, seasoned with pepper, mustard seed, and salt, if necessary. The small jars are recommended--as the cucumbers do not keep well after they have been exposed to the air.

Tomato Catsup.

Take a peck of ripe tomatoes, wash and cut out the stems, but do not peel them; put them over the fire in your bell-metal kettle, cover them, and let them boil till soft enough to mash, when pour them in a colander placed over a pan; drain them and throw away the liquid; then mash and strain the tomatoes, a few at a time, through a ball sifter: this is rather a tedious process; but, as the waste liquor has been previously drained off, the catsup will require but about twenty minutes boiling; throw in the spices before you take it up, fine pepper and salt, mustard, and a few whole cloves, and sliced onions, if you like their flavor; allow a tea-cup of strong vinegar to each bottle of catsup; part of which may be put in with the spices, and the rest in each bottle on top of the catsup, before you cork and seal them.

Walnut Catsup.

Gather the walnuts, as for pickling and put them in salt and water for ten days, then pound them in a mortar, and to every dozen walnuts put a quart of strong vinegar, and stir it every day for a week, then strain it through a bag, and to every quart of liquor put a tea-spoonful of pounded mace, the same of cloves, and a few pieces of garlic or onion, boil it twenty minutes, and when cold, bottle it. White or black walnuts are as good for catsup as the English walnut, and will keep good for several years.

Green Tomato Catsup.

After the tomatoes have ceased to ripen, slice and put them in a jar, with salt scattered through them, let them stand two days, then drain them in a colander, put them in the jars they are to remain in, strewing sliced onions, cloves, whole pepper, mustard seed, and one or two red pepper pods through them, boil vinegar enough to cover them and pour over, tie them close and put a plate on each jar.

Mushroom Catsup.

Take the largest mushrooms, those that are beginning to turn dark, cut off the roots, put them in a stone jar, with some salt, mash them and cover the jar, let them stand two days, stirring them several times a day, then strain and boil the liquor, to every quart of which, put a tea-spoonful of whole pepper and the same of cloves, and mustard seed, and a little ginger, when cold, bottle it, leaving room in each bottle for a tea-cupful of strong vinegar, and a table-spoonful of brandy; cork them up and seal them over. Tomato Sauce.

Scald and peel a peck of ripe tomatoes; cut them in slices and lay them on a large dish; cover well with salt each layer; the next morning put the tomatoes in a colander or on a sifter, and drain off all the liquid; then mash them with a wooden masher, and to each quart, put a pint of strong vinegar, two table-spoonsful of white mustard seed, a dozen cloves, a dozen grains of black pepper, an onion sliced and chopped, a table-spoonful of salt; if mashed fine you can pour it out of wide-mouthed bottles; put a table-spoonful of spirits in each bottle at the top; cork tight, and seal. If you prefer putting the sauce in small stone jars, put spirits on paper at the top of each. Spiced Peaches.

Take nine pounds of good ripe peaches, rub them with a course towel, and halve them; put four pounds of sugar and a pint of good vinegar in your preserving kettle, with cloves, cinnamon and mace; when the syrup is formed, throw in the peaches, a few at a time, so as to keep them as whole as may be; when clear, take them out and put in more; boil the syrup till quite rich, and then pour it over the peaches. Cherries may be done in the same way. Mushroom Sauce.

Gather large mushrooms, that have not turned dark, peel them and cut off the stems; put them in a pan and strew salt over each layer; when all are in, mash them well; then put them in a jar, put a plate on the top, and set it in a pot of cold water; let it heat gradually, and boil for fifteen or twenty minutes; to each quart of the pulp put three tea-cupsful of strong vinegar, two tea-spoonsful

of powdered mace, or one of cloves, two of white mustard seed, one of black pepper; put it in jars or wide-mouthed bottles, with a spoonful of alcohol at the top of each, and secure it from the air. This is by some preferred to the catsup.

TO CURE BACON, BEEF, PORK, SAUSAGE, &c.

To Cure Bacon.

To one thousand weight of pork, put one bushel of fine salt, one pound and a half of saltpetre rolled fine and mixed with the salt; rub this on the meat and pack it away in a tight hogshead; let it lay for six weeks, then hang it up and smoke it with hickory wood, every day for two weeks, and afterwards two or three times a week for a month; then take it down and rub it all over with hickory ashes, which is an effectual remedy against the fly or skipper. When the weather is unusually warm at the time of salting your pork, more care is requisite to preserve it from taint. When it is cut up, if it seems warm, lay it on boards, or on the bare ground, till it is sufficiently cool for salting; examine the meat tubs or casks frequently, and if there is an appearance of mould, strew salt over; if the weather has been very warm after packing, and on examining, you should find evidence of its spoiling, lose no time in unpacking the meat; for a hogshead of hams and shoulders that are in this state, have six pounds of brown sugar, three pounds of salaeratus, mixed with half a bushel of salt; rub each piece with this, and as you pack it in the hogshead, (which should be well washed and cleaned,) sprinkle a little coarse salt over each layer of pork, and also on the bottom of the hogshead. I have known this plan to save a large quantity of pork, that would have been unfit for use, if it had not been discovered and attended to in time. Some persons use crushed charcoal to purify their meat. Shoulders are more easily affected than hams, and if the weather is warm the ribs should be cut out of the shoulders. Jowls also require particular care; black pepper, about a pound to a hogshead, sprinkled on the meat before it is hung up to smoke, is valuable as a preventive where flies are troublesome; have a large pepper-box kept for the purpose, and dust every part that is exposed; pepper is also good to put on beef before it is hung up to dry; wash it off before cooking, and it does not injure the flavor.

To Pickle Pork.

Take out all the ribs, and cut it in pieces of about three pounds each; pack it in a tight barrel, and salt it well with coarse salt; boil a very strong pickle made of coarse salt, and when it is cold pour it over the meat, and put a weight on the top; if you wish pork to keep, do not put saltpetre in, as it injures the flavor.

To Cure Hams and Shoulders.

To cure five hundred weight of hams and shoulders, take fifteen quarts of common salt, one pound and a half of saltpetre rolled fine, half a pound of red pepper pods chopped fine, and four quarts of molasses; mix them all together and rub the meat well, pack it down, cover it close, and let it remain six weeks, then hang it up and smoke it with green hickory wood for three weeks. If there is a damp spell of weather, it is best to make a fire in your meat-house occasionally through the summer, to keep the meat from moulding.

To Make a Pickle for Chines.

Rub the chines with fine salt, and pack them in a tight barrel, make a pickle of coarse salt, strong enough to bear an egg, boil and skim it, and when nearly cold pour it on, let there be enough to cover them, and put a weight on the top. Chines are good smoked. It is best to make a separate pickle for the heads; wash and scrape them, cut off the ears and noses, and take out the eyes. The jowls may be packed and smoked with the bacon. Sausage Meat, &c. Separate the tender parts of the meat from the rough and bony pieces, and chop each sort separately, to twenty-two pounds of meat have half a pound of salt, three heaped table-spoonsful of sage, three of pepper, and two of thyme. If you have a box large enough to hold this quantity, sprinkle it over the meat before it is chopped, and it will be thoroughly mixed by the time it is done. It is best to have a small piece fried to taste, and if it is not seasoned right, it can be altered; you should have some pieces of fat, chopped in with the meat. The sage and thyme should be carefully dried, but not heated too much, neither should it be hung up too near the fire, as it would spoil the flavor, rub it through a wire sifter, and if that should not make it fine enough, pound it in a mortar or grind it in your pepper mill. The pepper should be ground and ready some days before it is needed, as the pork season in the country is (while it lasts) one of the busiest in the year, every thing should be prepared beforehand that you possibly can. It is a good plan to have plenty of bread and pies baked, and a quantity of apples stewed, vegetables washed and ready to cook, so that every member of the family, that is able, may devote herself to the work of putting away the meat which is of so much importance for the coming year, while some are cutting up the fat to render into

lard, others may be employed in assorting the sausage meat, and cutting it into small pieces for the chopping machine, by trimming off every part that can be spared. You can have one hundred pounds of sausage from twelve hundred weight of pork, and since the introduction of sausage choppers, a great deal more sausage is made, than formerly, by the old method. Clean a few of the maws, and soak them in salt and water, and fill them with sausage meat, sew them close, let them lay in pickle for two weeks then hang them up, and when your meat is smoked, let them have a few days smoke. In this way sausage will keep all summer, and is very nice when boiled slowly for several hours, and eaten cold. The best fat to chop in with sausage is taken from the chines or back bones. To keep sausage for present use, put it in small stone pans, and pour melted lard over the top; for later in the season, make muslin bags that will hold about three pounds, with a loop sewed on to hang them up by; fill them with meat, tie them tight, and hang them in a cool airy place; they will keep in this way till August, when you want to fry them, rip part of the seam, cut out as many slices as you want, tie up the bag and hang it up again. If you have a large quantity, a sausage chopper is a great convenience. Liver Sausage Take four livers, with the lights and hearts, have two heads cleaned, and boil them with any scraps, or skinny pieces you have, skim the pot, take out the livers when they are done, and let the heads boil longer, when they are done, pick out the bones, and chop all together, season with sage, thyme, sweet marjoram, salt and pepper, put it in pans, and fry it as sausage. Bologna Sausage Chop ten pounds of beef, with two pounds and a half of the fat of fresh pork, pound one ounce of mace, and one of cloves, and mix in, let it stand a day, then stuff it in large skins, let them lay in brine ten days, then hang them up to smoke a few days, they can be put in the same brine with beef or tongues. Hogs' Head Cheese Take off the ears and noses of four heads, and pick out the eyes, and lay them in salt and water all night, then wash and put them on to boil, take out the bones carefully, chop and season them well, and pack it in bowls, they will turn out whole, and may be eaten cold with vinegar, or fried as sausage.

Pigs' Feet.

Pigs' feet should be well cleaned by dipping them in scalding water, and scraping off the hairs, leave them in weak salt and water two days, changing it each day; if you wish to boil them for souse, they are now ready, but if the weather is cold they will keep in this a month. They should be kept in a cold place, and if they are frozen there is no danger of their spoiling, but if there comes on a thaw, change the salt and water, soak them in fresh water all night before you boil them. In this way they are good to eat with pepper and vinegar while hot, or may be dipped in batter and fried after they are cold.

To make Souse.

Boil the feet till the bones come out easily, and pick out all the large bones, pack them in a stone pan with pepper and salt, and cover it with vinegar, they may be eaten cold, or dipped in flour and fried. Another way is to pick out all the bones, season them with salt, pepper and sage, and warm them up as you want to use them.

Pigs' feet, after being boiled, are very nice stewed as terrapins, make the gravy with butter and water, they are nourishing food for delicate persons.

Vessels for salting meat should be cleaned well after the meat is hung up, and set on boards in the cellar, if they do not smell sweet, they should be washed and soaked before meat is packed in them again. You should see that the hoops are sound, and have covers made to fit them. If taken care of in this way, they will last a number of years.

Scrapple.

Take eight pounds of scraps of pork, that will not do for sausage, boil it in four gallons of water, when tender, chop it fine, strain the liquor and pour it back into the pot, put in the meat, season it with sage, summer savory, salt and pepper to taste; stir in a quart of corn meal; after simmering a few minutes, thicken it with buckwheat flour very thick, it requires very little cooking after it is thickened, but must be stirred constantly.

Dried Beef.

An experienced housekeeper has furnished the following method for curing and drying beef, which will keep good for two years, without being injured by must or fly, and is much admired. Have the rounds divided, leaving a piece of the sinew to hang up by, lay the pieces in a tub of cold water for an hour, then rub each piece of beef that will weigh fifteen or twenty pounds, with a handful of brown sugar and a table-spoonful of saltpetre, pulverized, and a pint of fine salt, sprinkle fine salt in the bottom of a clean tight barrel, and lay the pieces in, strewing a little coarse salt between each piece; let it lay two days, then make the brine in a clean tub,

with cold water and ground alum salt--stir it well, it must be strong enough to bear an egg half up, put in half a pound of best brown sugar and a table-spoonful of saltpetre to each gallon of the salt and water, pour it over the beef; put a clean large stone on the top of the meat to keep it under the pickle, (which is very important,) put a cover on the barrel; examine it occasionally to see that the pickle does not leak,--and if it should need more, add of the same strength; let it stand six weeks, then hang it up in the smoke house, and after it has drained, smoke it moderately for ten days, it should then hang in a dry place, before cooking, let it soak for twenty four hours; a piece that weighs fifteen or twenty pounds should boil two hours--one half the size, one hour, and a small piece should soak six or twelve hours, according to size. Beef cured in this way will make a nice relish, when thinly sliced and eaten cold, for breakfast or tea, or put between slices of bread and butter for lunch, it will keep for several weeks,--and persons of delicate stomachs can sometimes relish a thin slice, eaten cold, when they cannot retain hot or rich food.

This receipt will answer for all parts of the beef, to be boiled for the dinner table through the summer.

To Cure Beef.

Make a pickle of six quarts of salt, six gallons of water, half a pound of saltpetre, and three of sugar, or half a gallon of molasses, pack the beef in a barrel, with fine and coarse salt mixed, when the pickle is cold, pour it over, and put a weight on the top, let it stay two weeks, when you can hang it up and smoke it, to boil through the summer, or boil the pickle over again, and leave it in till you want to use it; this is for two hundred pounds.

A New Method of Curing Beef.

Take six gallons of water, nine pounds of salt, (fine and coarse mixed,) three pounds of sugar, one quart of molasses, three ounces of saltpetre, and one ounce of pearl ash or salaeratus, boil and skim it well, and let it stand till entirely cold, when pour it on beef that has been sprinkled with salt for several days. You can boil of this beef from the brine all winter, or hang it up, and smoke it with your bacon.

To Cure a Dozen Tongues.

Soak the tongues an hour in a tub of cold water to extract the blood, and cut off most of the root, mix together a quarter of a pound of saltpetre, finely powdered, one pound of brown sugar, and a pint of salt, rub the tongues with this, and put them in a tight barrel; then make a pickle that will bear an egg, which pour over them, turn them every three days, and let them stay in the pickle two weeks, then smoke them two days, and hang them up in a dry place; boil and skim the pickle that the tongues have been in, and it will do for a round of beef.

Pickle for Two Rounds of Beef.

Cut the rounds in a suitable shape for drying, mix together two pints of salt, one of molasses, or a pound of sugar, and half a pound of saltpetre, rub them with this, and pack them in a tight vessel, make a pickle that will bear an egg, and pour it over, put a weight on the top, and let it lay for ten days, when take it out, and smoke it two days, hang it up in a dry place, it will be fit to slice and broil in a week, or cut it very thin, and stew or fry it with butter and cream. Legs of mutton may be salted as rounds of beef, and will resemble venison, when dried and chipped.

In preparing pickle for any kind of meat, observe that one gallon of water will hold, in solution, a quart of salt and two ounces of saltpetre.

To Corn Beef, Pork or Mutton.

Rub the meat well with salt, and pack it in a tub. If the weather is warm, it will require a good deal of salt, but no saltpetre.

To Restore Meat that has been kept too long.

When meat has been kept too long in summer, it may be improved by putting it in sour milk for several hours, or washing it in vinegar is good, some hours before it is cooked, you must wash it well in cold water several times, if it lays all night in sour milk, or salt and vinegar, it should be put in soak early in the morning in cold water. In very hot weather, when you have fresh meat, fowls, or fish left at dinner, sprinkle them with strong vinegar, salt and pepper, warm this up the next day, either as a fry or stew, the vinegar will evaporate, and not injure the taste. Cold rock fish is good, seasoned with salt, pepper and vinegar, to use as a relish for

breakfast or tea.

To Keep Meat Fresh.

Where persons live a distance from market, and have no fresh meat but what they kill, it is important to know how to keep it fresh. In winter, if it is hung up in an out-house, it will keep very well for six weeks, or more, when it has once frozen, it is safe till a thaw comes on, when rub it with salt. In the summer, if you have an ice-house, you can keep it without trouble. If rubbed with salt, and pinned in a cloth, it will keep in the cellar two days, or by lowering it down your well, attached to a rope, and changing the cloth every other day, it will keep good a week in hot weather.

To Put up Herring and Shad.

Those that put up their own fish should be careful to have the barrels tight and well cleaned, if the pickle leaks from them, they are liable to spoil. Scale the fish and wash them, as it will save much time, when you prepare them for cooking, take out the gills, but leave on the heads of herrings.

The heads should be taken off the shad, and split them down the back, put a layer of fish, then a layer of ground alum salt,--and after they are packed, put on a weight to keep them down. If herring are well cured, they will be good at the end of two years.

To Put up Herring, _According to the Harford Mode_.

First put the herring into the brine left from curing bacon, or, if you have none of that description, make a brine that will bear an egg, and let them remain in it thirty or forty hours; then, if for pickled herring, change them into new brine, which must also bear an egg, and head them up to keep. If for red herring, hang them up, and smoke them thoroughly. A little saltpetre, added to the brine, is an improvement. It is better to take out the roe.

BUTTER, CHEESE, COFFEE, TEA, &c.

Butter.

It is of the first importance that every thing connected with milk and butter should be kept clean; if the milk acquires an unpleasant taste, it communicates it to the butter. Tin pans are best to keep milk in, and they should be painted on the outside to keep them from rusting when they are put in water.

In summer, milk should be kept as cool as possible; before it is strained, the pans and strainer should be rinsed with cold water, and the milk not covered until it is cold, as soon as the cream rises sufficiently, it should be skimmed, and put in a large tin bucket with a lid that fits down tight, and stirred every day. Butter will be spoiled by neglecting to stir the cream, a yellow scum will form on it, which gives it an unpleasant taste. And if you leave a pan of milk till the cream is covered with spots of mould, you had better throw it away than put it in, as it will spoil the taste of a whole churning.

If you have no way of keeping your cream cool in hot weather, it ought to be churned twice a week, the earlier in the morning the better. Always put cold water in your churn the night before you use it, and change it in the morning just before you put in the cream. When the butter is gathering, take off the lid of the churn to let the heated air escape, and move it gently, have your butter ladle and pan scalded and cooled, take out the butter and work it till all the milk is out, scrape some lumps of salt, and work in, cover it up, and set away in a cool place till the next morning, when work it again.

If you have neither an ice, or spring house, a box by the side of the pump, with a cover over it, is very convenient to put cream and butter down the well, put them in tin kettles with covers to fit tight, and fasten them to strong tarred ropes twenty feet long. The air of a well will keep butter sweet for several weeks in the hottest weather. It is best to have one kettle or basket to put the butter in that is used at the table, it should be deep enough to hold five or six plates, each covered with a saucer. It can be kept in this way as firm and sweet as in an ice house. You can have a separate kettle to put a large lump of butter in for seasoning vegetables. If you print butter for home use, it is not necessary to weigh it, make it out in little lumps that will weigh about half a pound, scald the print and ladle, and put them in cold water, as you print each lump, lay it on a dish.

In winter it is more difficult to have good butter, as much depends on the food of the cows, the milk should be kept in a cellar, where it will not freeze, if you have a safe to keep it in, it need not be covered. Cream takes much longer to rise in winter, after it has stood

two days, to put it on the top of a moderately heated stove will assist it, when it is hot, set it away to skim the next day, when the cream will be thick and rich, and churns easier.

If the weather is very cold, and the cream has been chilled, have a large pot of water over the fire, set in the bucket when it is near boiling heat, and keep stirring till it is milk warm, have the churn scalded and put it in, by churning steadily, it will come as quick as in summer, one good working answers very well for butter in winter, always scald the churn before you put in the cream in cold weather.

To put up Butter for Winter.

Work it well, and salt it rather more than for table use, and pack it in stone pans or jars, with a thin cloth on the top, and salt on it an inch thick, keep it in a cool place, and if it is sweet when made, it will keep good till spring. It should be tied up with paper to exclude the air.

To Cure Butter that will keep for a Length of Time.

Reduce separately to a fine powder two pounds of the best fine salt, one pound of loaf sugar and half a pound of saltpetre. Sift these ingredients one above another, on a large sized sheet of paper, then mix them well together, keep this mixture covered up close in a nice jar, and placed in a dry closet.

When your butter is worked and salted in the usual way, and ready to put in the jars, use one ounce of this composition to every pound of butter, work it well into the mass.

Butter cured in this way, (it is said) will keep good for several years. I have never kept it longer than from the fall until late in the spring, it was then very sweet and good.

It will not do to use for a month, because earlier, the salts will not be sufficiently blended with it. It should be kept in wooden vessels, or nice stone jars. Earthen-ware jars are not suitable for butter, as during the decomposition of the salts, they corrode the glazing; and the butter becomes rancid and unhealthy.

A friend of mine, and a lady of much experience, remarked on reading the above--"This is an admirable receipt, and by attention to its directions, butter may be packed away with success even in the summer months. Thus in cities during warm weather butter is often cheap, a house-keeper may then purchase her winter supply.

"Select that which is sweetest and most firm, begin by putting a layer of the prints in the bottom of a stone pot, press the butter down close, so that no cavities for the admission of air may remain, then strew more of the mixture over it, proceed in this manner until the vessel is filled, when put on the top a small muslin bag filled with salt, and tie the jar up close. It is very important to keep the butter in a cool place."

A great deal depends on the butter being well worked. Persons that have large dairies should always have a machine to work it. A large churning may be more effectually cleared of the butter-milk in a few minutes, than in the old way in an hour. By doing it quickly, it does not get soft and oily in hot weather.

A Pickle for Butter.

To three gallons of water, add four and a half pounds of good brown sugar, one and a half ounces of saltpetre, one ounce of salaeratus; put them into an iron pot, and let them come to a boil; take off the scum; when cold it is ready for use; the butter should be salted in the usual way, and well worked; then made into rolls of two or three pounds each; have little bags of coarse muslin, tie each roll in a bag and put them in a large stone jar or clean firkin; when the pickle is entirely cold, pour it over, and put a plate on the top, with a weight on it to keep the butter under; tie it up close and keep it in a cold place; when a roll is wanted, take it out of the bag, and slice it off for table use. It should be put on little plates, and each covered with a saucer, to exclude the air. If the butter is good when put up in the fall, it will keep till you can get grass butter, in the spring. The jars for this purpose should not have been previously used for pickles.

Cheese.

Persons living in the country sometimes have more milk than they can use, of which cheese may be made. Put four gallons of new milk in a clean tub that is kept for the purpose; skim your night's milk, and put two gallons of it over the fire; when it is near boiling, put it in the tub with the new milk, and the rest of the night's milk; it should be rather more than milk warm, if it is too warm the cheese will have a strong taste. The day before you make cheese, put a piece of rennet three inches square in a tea-cup of water, and stir it in the milk; cover the tub and let it stand in a warm place; when the curd begins to form, cut it in squares with a long wooden knife, and spread a thin towel over it. When the whey comes through the cloth, you can dip it off with a saucer, then put a thin towel in the cheese vat, put in the curd, spread the cloth over the top, put on the lid, and press it moderately about half an hour; then put it back in the tub and salt it to your taste; mix it well, and if you want it very rich put in a quarter of a pound of butter; it is always better to skim the night's milk and put in butter, as the cream is apt to press out.

Have a clean cloth in the vat, put in the curd, close it over and put on the cover; if you have no cheese press, a heavy stone will answer the purpose; press it very gently at first, to keep the richness from running out. The next morning draw it out by the cloth, wash and wipe the vat, put in a clean cloth, and turn in the cheese upside down; do this morning and evening for two days; when you take out the cheese, and put it on a clean board; set it where the mice and flies will not get at it; rub it every morning with a little butter, and turn it three times a day; dust it over with cayenne pepper if you cannot keep it from the flies, and if it should crack, plaster on a piece of white paper with butter; it is fit for use in two weeks.

Cheese made in this way has a rich, mild taste, and most persons are fond of it. If you get eight gallons of milk a day, you may make cheese twice a week, and still have butter for the family. You should keep four thin cloths on purpose for cheese.

Pennsylvania Cream Cheese.

The cheese called by this name is not in reality made of cream. Take three gallons of milk, warm from the cow, and strain it into a tub, have a piece of rennet two inches square, soaked in half a pint of water for several hours, drain off the water, and stir it in; when it is sufficiently turned, cut the curd, spread a thin linen cloth over the top, and as the whey rises, dip it off with a saucer, put the curd as whole as possible into a cheese-hoop about the size of a dinner plate, first spreading a wet cloth inside, then fold the cloth smoothly over the top, put a weight on the top heavy enough to make the whey drain out gradually. In six or seven hours it will be ready to take out of the press, when rub it over with fine salt, set it in a dry dark place, change it from one plate to another twice a day, and it will be fit for use in less than a week.

To Prepare Rennet for making Whey or Cheese.

When the rennet is taken from the calf, wash it, lay it on a plate well covered with salt, put more on in two days, keep it in a cold place, in three or four days it will do to stretch on sticks, hang it up in a dry cool place, with as much salt as will stick to it, when quite dry, put it in a paper bag and hang it up, a piece two inches square soaked in two table-spoonsful of water will make a cold custard, the same piece salted and dried will do several times.

Cottage Cheese or Smearcase.

The best plan of making this dish, is to set the tin pan of clabber on a hot stove, or in a pot of water that is boiling over the fire. When the whey has risen sufficiently, pour it through a colander, and put the curd or cheese away in a cold place, and just before going to table, season it with salt and pepper to your taste, and pour some sweet cream over it.

Roasting Coffee.

Pick out the stones and black grains from the coffee, and if it is green, let it dry in an oven, or on a stove, then roast it till it is a light-brown, be careful that it does not burn, as a few burnt grains will spoil the flavor of the whole.

White coffee need not be dried before roasting, and will do in less time. Two pounds is a good quantity to roast for a small family. The whites of one or two eggs, well beaten, and stirred in the coffee when half cold, and well mixed through it, are sufficient to clear two pounds, and is the most economical way of using eggs. It will answer either for summer or winter. Some persons save egg shells for clearing coffee. Many persons use coffee roasters,--but some old experienced housekeepers think that the fine flavor flies off more than when done in a dutch-oven, and constantly stirred.

If you are careful, it can be done very well in the dripping-pan of a stove. Let the coffee get quite cold, and put it away either in a canister or tight box, and keep it in a dry place. Coffee may be roasted in a dripping-pan in a brick oven. After the bread is taken

out, there will be heat sufficient, put about two pounds in a pan, stir it a few times--it will roast gradually, and if not sufficiently brown, finish in a stove or before the fire. If you have a large family, by using several pans, six pounds of coffee can thus be roasted, and but little time spent on it.

Boiling Coffee.

A large tea-cupful of unground coffee will be sufficient for six persons, unless they take it very strong, (which is injurious to health,) grind it, and put it in the tin pot, with half a tea-cup of cold water, and the white of half an egg; shake it till it is mixed, then pour boiling water on it, and let it stand close to the fire, and just come to a boil, stir it, and do not let it boil over, let it keep at boiling heat five or ten minutes; then take it from the fire, and put in half a tea-cup of water to settle it, let it stand five minutes, and pour it off,--if you wish it particularly nice, strain it through a thin linen cloth, kept for the purpose, keep it by the fire till it goes to table. If you boil coffee too long, the aromatic flavor flies off.

Tea, &c.

Always be sure that the kettle is boiling when you make tea, or the flavor will not be so good, scald the pot, and allow a tea-spoonful for each person. Let green tea draw by the fire from two to five minutes. Black tea should draw ten minutes, and is much more suitable for delicate persons than green. Persons with weak nerves should never drink strong tea and coffee. I have known instances of persons being afflicted with violent attacks of nervous head-ache, that were cured by giving up the use of tea and coffee altogether, and their general health was also improved by it. Before pouring out tea, it should be stirred with a spoon that the strength of each cup may be alike.

Milk is the best drink for children, but if that cannot be had, sweetened water, with a little milk, will do.

A New Mode of Preparing Chocolate.

Have a pound of chocolate pulverized, and put in a jar, with the same quantity of rice flour, and an ounce of arrow-root, put on coals a quart of milk, when it boils, stir in a heaped table-spoonful of the above preparation, (dissolved in a tea-cup of water,) keep stirring it until it boils again, when pour it out, drink it with sugar and cream to your taste.

This is called by some "Rac-a-haut" chocolate, and is very nice for delicate persons, as well as those in health.

LARD, TALLOW, SOAP AND CANDLES.

Rendering Lard.

The leaf lard should be rendered by itself, as it does not take so long as that with the skin on. Cut it up fine and put it in a clean pot with half a pint of water, stir it frequently and let it boil fast at first, when the cracklings are light-brown and float on the top, it is nearly done, and should cook slowly, when done, strain it into your vessels with a thin cloth put over a colander. If you put lard in stone or earthen jars, it should be cooled first, as there is danger of their cracking, white oak firkins with iron hoops, and covers to fit tight, are good to keep lard, and if taken care of will last for twenty years.

The fat that has the skin on should be cut very fine, taking the skin off first. It takes longer to boil than leaf lard, and there is more danger of burning, put a pint of water in the pot.

The skins should be boiled alone, and will do for soap-fat after the lard is out of them.

Soak the inside fat all night in salt and water; wash it in the morning, and put it to boil without any water in the pot. It is not so nice as other lard, and should be strained by itself. It does very well for frying. Lard keeps well in large tin vessels with tight covers and is not apt to mould.

Rendering Tallow.

Cut the tallow fine, and put it to boil in a large pot with a quart of water; stir it frequently and keep it boiling moderately for six hours; when the cracklings begin to turn brown, it should boil very slowly till done.

Put a little water in the bottom of your dutch-ovens or tin pans, and strain it in with a cloth over the colander, or the settlings will run through and hurt the looks of your candles.

Soap.

It requires some care and experience to have good soap; but when you once get beforehand, it is easy to keep up the supply if the ashes are good. The leystand should be made of cedar or pine boards, in the shape of a mill-hopper, and have holes bored in the bottom for the ley to run through; have four posts planted in the ground to support it; let it be high enough for a small tub to set under.

If you cannot have it under a shed, there should be a tight cover of boards to protect it from the rain. Put some sticks in the bottom of the leystand, and some straw, and pack in a bushel of ashes, then half a peck of lime, and when it is half full of ashes, put in two buckets of water, and another when you get near the top; pack it well, and put on some more water; then cover it over; pour on hot water three times a day for several days. When you are ready to make soap, have a large pot of water, which must be kept boiling, and put it on as fast as it will bear, save the strongest ley by itself, (if the ley will float an egg, it will answer,) have your soap-fat laying in strong ley through the winter, put a gallon of this in a large pot, and put to it a gallon of the strongest ley; let it boil an hour, stirring it often, then put in two gallons more of strong ley, when this has boiled, put in weak ley till the pot is full, let it boil an hour or two slowly, and be careful that it does not go over, cool some on a plate, and if thick, it is done, but if not, boil it longer. Put it away in a tight barrel, and prepare to make more soap, if you have two large pots both of them can be kept going at the same time. Several barrels of soap can be made from one ley stand. A large oil cask is good to keep soap in. If a barrel leaks, set it under a spout in a rain, or fill it with water. It is of the greatest importance to keep the soap-fat in strong ley. Have an oil barrel in the cellar, half full of strong ley, and put in cracklings, bacon skins, pot skimmings, beef bones, or any scraps, when eaten by ley it will take but little boiling. It is much the easiest and safest way, where there are children, to make the soap without boiling. Put four gallons of soap-fat that has been eaten with ley, in a barrel with eight gallons of strong ley, stir it two or three times a day, for a week or two, then fill it up with weaker ley, you may have several barrels making at a time, so as always to have some for use, it takes some time to make it in this way. But if you are careful, and once get ahead, you need not boil the soap unless you prefer it so, if your ley is not strong, dissolve potash in hot water and add to strengthen it.

Hard Soap.

Have fifteen pounds of clean fat to twenty gallons of clear strong ley; let it boil until thick, when put in half a peck of coarse salt; if it does not curdle in two hours, put in more salt till it does, then pour it out in a tub to cool till the next day, when put on your pot with some weak ley, cut the soap out of the tub and boil it in this an hour, then put it in the tub, let it get cold, cut it in squares and put it on a board to dry. Unless you have plenty of ashes and soap-fat, it is much cheaper to buy hard soap than to make it. If you have but a barrel full of ashes you can make a barrel of soap, bore a hole in the bottom of a barrel, put a few sticks across, when half full of ashes put in a quart of lime and some water; keep the hole plugged up till you are ready to make the soap.

You can have a barrel of ashes put in the cellar in winter to use for washing and scrubbing, keep a tub under it to hold the ley as it drops.

Potash Soap.

Persons living in cities frequently have grease that would do to make soap, but are at a loss for ley, in consequence of burning coal instead of wood. Twelve pounds of pure grease of any kind, put with ten pounds of potash in an oil barrel, and filled with water, makes good thick soap, and is much cheaper than buying hard soap. It should be stirred frequently, and if the ingredients are put together in warm weather, and the barrel stands where it can be exposed to the heat of the sun, without danger of getting rain in it, it will be fit for use in a few weeks without the aid of fire, if you wish to make soap immediately put three pounds of potash, four of grease, and about ten gallons of water in a large iron pot, boil it over the fire, and it will make good thick soap in a few hours, it need only boil long enough to dissolve the potash, which is sometimes in very hard lumps. If you use the crumbled potash, you must put rather more of it, as it is not so strong, and a little lump of quick lime will make it turn quicker.

Another Receipt.

Two days before you wish to commence your soap, pour about two gallons of boiling water on ten or twelve pounds of potash, to dissolve it, then put it in an iron pot or kettle, with ten gallons of rain water, hang it over the fire, and when it has dissolved, pour

twelve pounds of grease, which has been purified by boiling in water, (or weak ley,) into a well hooped barrel, (an oil barrel from which one head has been taken, and the bung well fastened, is best,) then pour the water in which the potash was dissolved over the grease in the barrel, and stir it for half an hour; afterwards fill up the barrel with cold soft water, and stir it every day for two weeks. If at the end of that time, the fat swims on the top, beat a pound or two more of potash fine, throw it in the barrel, stir it well, and the soap will be finished.

Labor-saving Soap.

Take two pounds salt soda, two pounds yellow bar soap, ten quarts of water. Cut the soap in thin slices, and boil all together two hours, and strain it through a cloth, let it cool and it is fit for use. Put the clothes in soak the night before you wash, and to every pail of water in which you boil them, add one pound of the soap. They will need no rubbing, merely rinse them out, and they will be perfectly clean and white. This soap can be made for two cents per pound.

Ley and Soda Preparation for Washing Clothes.

To sixteen gallons of water, put one gallon of lime water; twelve ounces of soft soap, or if hard soap it must be first melted, and four ounces of soda, put them together in your wash kettle, and when nearly boiling, put in the clothes, being careful to have them as much of a kind as possible, they should be wet first with common water, boil one hour, then wash, scald and blue as usual. The limestone should remain in the water at least four days before it is used, and be about of the strength of lime-water for drinking, and the same stone will do for several times if good. The ley will do for boiling a second set of clothes by adding a little more, and afterwards for towels and coarse things. Prints and flannels must not be boiled.

Volatile Soap, _And Directions for Washing Clothes._

Cut up three pounds of country bard soap into three pints of strong ley; simmer it over the fire until the soap is dissolved, and add to it three ounces of pearl-ash, pour it into a stone jar, and stir in half a pint of spirits of turpentine, and a gill of spirits of hartshorn, cover the jar tight, and tie a cloth over it.

To use the soap, have a tub half full of water as hot as you can bear your hands in, assort the clothes, and, beginning with the cleanest of them, rub a small quantity of the soap on the soiled parts of each article, and immerse them in the water one by one, until it will cover no more, let them soak for fifteen or twenty minutes, then stir them well for a few minutes, and boil them for half an hour in eight or ten gallons of water, to which a table-spoonful of the soap has been added, rinse them, using blue water where it is required as usual, and they are ready for drying. After the white clothes are finished, the same waters will answer for the colored ones, adding hot water and more soap. By the use of this soap, most of the rubbing can be dispensed with, and it is not injurious to the texture of the clothes. It has been proved that the clothes washed in this way are more durable than with the common soaps, and the rubbing required in connection with them.

It is particularly recommended for washing flannels, and calicoes. The above quantity is sufficient for a family of four or five persons for a month, varying slightly as the clothes are more or less soiled. Its cheapness recommends it to all housekeepers.

Candles.

Weigh the tallow, then you can judge how many candles you can make, six and eight candles to the pound do very well for working and reading by, ten to the pound does to use in the kitchen or to carry about the house. Put the wicks on the rods the day before you expect to make candles, and dip them in a little melted tallow, you can then straighten them out. Have a large pot nearly half full of hot water, melt the tallow in another pot and fill it up, and keep more tallow at the fire to fill in as it is used out, put coals under the pot to keep it at a proper heat. Have poles set on stools about a foot apart, to support the rods, dip the rods in the pot, alternately, until they are as large as you wish them. Wax makes candles burn longer, but turns them yellow. The best way is, to put in two pounds of wax, when you first begin to dip, and it will be used up before they are dipped the last time, when they are done, cut off the ends and put them in boxes. Most good managers in the country make enough candles at a time to last a year. If you have not enough tallow to dip candles, you can mould some mutton tallow is very good for this purpose.

MISCELLANEOUS RECEIPTS.

Clear Starching.

Wash your muslins nicely; rub hard soap on them, and pour boiling water on, let them lay in this half an hour, or if they are very yellow, boil them in water that has a little blue, in a bell metal kettle, let them dry in the sun, boil your starch half an hour, as it will be clearer, and the things will take less clapping, rub the starch over the muslin until it is well covered, then clap it a few times, afterwards stretch out the muslin and hold it to the fire until it smokes, then stretch, clap, and shake it until the piece is dry enough to iron. When you begin to starch, have a pile of plates near, and as fast as the things are ready to iron, fold them up, and put them between the plates to keep moist. It is a good plan to have a board about three feet long and a foot wide, with a piece of blanket tacked on round the edges, to iron your collars and handkerchiefs on.

There is an art in doing up muslins, which will take but little time when once it is acquired. The same directions answer for clear starching crape, (which must first be bleached as flannels are done,) and add some drop lake to the blue coloring. In cold weather, to rub your hands over with a little clean tallow prevents them from chapping, and will not alter the appearance of the muslin.

To make Corn Starch.

Gather the corn when it is a proper age for table use; have a large tin grater, and grate the corn into a clean vessel, into which drop the cobs as you grate them until the vessel is about half full, rub the cobs and squeeze them dry as possible, and put them into another vessel of clean water, rub and squeeze them again the third rinsing will take all the starch out, let it settle, and then pour all the starch together and strain it through a coarse cloth, and then through a flannel, and let it settle until the next morning, when you will find a thick yellow substance under the water, covering the pure white article in the bottom of the vessel, remove the yellow substance and pour clean water on the starch and stir it up, as soon as it settles thoroughly again, pour off the water and put the starch on dishes, and set it in the sun to dry. When you want to use it, moisten it with cold water and pour boiling water on, till it is the right consistency for use. It requires no boiling.

Potato Starch.

Pare the potatoes and scrape or grate them in a pan of water, when this is done stir them well, and let them stand a few minutes to settle, pour off the water and the pulp from the top; pour water on the starch that has settled, and stir it up, let it settle again, when it will be nice and white, and may be put on plates to dry in the sun, after which it may be put away in a box or paper bags. It maybe used immediately. Stir it in boiling water as other starch, but boil it much less. It is said that potato starch will injure muslins when left to lay by for some time, it is used in some preparations of confectionary, and answers the same purpose as Poland starch.

To make Common Starch.

Mix a pint of wheat flour with cold water, till it is the consistence of batter, stir it into a gallon of boiling water, let it boil a few minutes, when strain it and mix in the blue--when it is ready to thin for white clothes. Some put a small piece of tallow in the starch as it boils--it makes it clearer.

Washing Calicoes, &c.

Calicoes may be kept from fading by washing them in the suds after white clothes, if it requires more soap, stir it in the water, as putting it on the garment will fade it, have the water moderately warm, and put in a handful of salt, when all the dirt is out, rinse them in clean water, starch, and hang them to dry on the wrong side, where they will get the air but not the sun. Alum is good to set colors. If you want to wash a calico dress, which you know will fade, make a corn mush, and as it boils, pour off half, which use as soap in washing the dress, and with the other half, (which should be boiled well,) starch it, and hang it out immediately. In washing bed quilts, to prevent fading, spread them on the clean grass wrong side up, this prevents the colors running into each other.

For chintz or lawn dresses have very nice starch, and clap it into them, after they are hung on the line, they iron much better this way, and look almost like new, sometimes to wash the cuffs and lower part carefully, and press it all over, will do without washing the whole dress. For ironing the skirt have a narrow ironing board, covered with a piece of blanket, to slip inside the dress.

Table Cloths, &c.

When two or three spots get on a table cloth, dip a towel in clean water and rub them off, and dry the cloth before it is put away, this saves washing, and if done carefully it will look like a clean cloth. If table cloths are stained with fruit, pour boiling water on the spots before soap is put on, when it is so deep that this will not take it out, apply lemon juice and salt, dry it in the sun, and put it on several times. You should always have cup-plates, as the marks of a coffee-cup spoils the appearance of a cloth, and the stain is

hard to get out. When table cloths and towels get yellow, soak them in sour milk several days. Unbleached table cloths are very good to save washing in winter, and can be laid by in summer, care should be taken to hang them to dry in the shade, as that will keep them from bleaching. New table cloths do not require any starch, but those that are partly worn look better for a little, every thing washes easier that has starch in. Nice table cloths, and all fine things, after being sprinkled and folded, should be tightly rolled up in towels, and ironed till perfectly dry, they will then retain their gloss. Large table cloths should be brushed clean from crumbs, and folded without shaking, as that tumbles them; those in daily use should be put under a press--a heavy book is suitable, or a board may be made for the purpose; they will keep in credit much longer than when laid in a drawer. It is well to put a common muslin cloth under a damask one on the table, as it improves the appearance.

Flannels.

Have the water in which you wash flannel as hot as you can bear your hands in, and rub the soap in the water, or it will shrink the flannel. The water it is rinsed in should also be hot.

When flannels have become yellow and fulled up, I have often smoked them with brimstone, and they will be as white as new, and the fulled places will open. The best plan is to have a box or chest, with strings put across to hang the flannels on, and a drawer to pull out where you can set in a pan with coals and brimstone. Have the flannels nicely washed, and put them in wet, close it up till you think it wants more brimstone, when you can pull out the drawer and renew it.

After they are bleached, they should hang up in the air to let the smell of the brimstone escape. If you have but a few things to do, you can put strings across the top of an old barrel, (with both the heads out,) cover it with a thick cloth, and lift it up to put in a pan of brimstone and coals. Always wash scarlet flannel with hard soap.

Mending Clothes.

All clothes should be looked over before they are put away, and if any require mending it must not be neglected; a broken stitch that can be mended in a few minutes, if left till it has been worn again, will require much more time. If young housekeepers suffer their mending to get behind hand, it will discourage them. After mending a shirt, it should be pressed before it is put away. If stocking heels are run while they are new, and the thin places darned in time, it saves much work.

Washing Windows.

A little soda dissolved in the water is valuable for washing windows; do not let it run on the sash, or it will stain the paint; rinse them in clear water, and wipe dry with a clean soft towel. When they are but little soiled, clear water will answer, but if smoked or coated with any thing, soda should be always used. Some persons rub their windows with soft buckskin or newspaper, when they are dry and clean, to give them a polish.

To Make White or Colored Washes, Dyeing, &c.

Take half a bushel of unslaked lime, slack with boiling water, covering it during the process to keep in the steam. Strain the liquid through a fine sieve or strainer, and add to it a peck of clean salt, previously dissolved in warm water, three pounds of ground rice boiled, to a thin paste; stir in, boiling hot, one pound of Spanish whiting, one of clean glue, dissolved by soaking it well, and simmering over a slow fire in a small kettle within a larger one containing water; add five gallons of boiling water to the whole mixture; stir it well, and if you are not ready to use it, cover it close. It should be put on quite hot; for this purpose, it can be kept in a kettle on a portable furnace. Coloring matter may be added to make any shade desired. Spanish brown stirred in will make a pink color, more or less deep according to the quantity, a delicate tinge of this is very pretty for inside walls. Indigo mixed with the Spanish brown makes a delicate purple, or alone with the mixture, a pale blue. Lamp-black, in moderate quantity, makes a slate color, suitable for the outside of buildings.

Lamp-black and Spanish brown together, produce a reddish stone color, yellow ochre, a yellow wash, but chrome goes further and makes a brighter color. It is well to try on a shingle, or piece of paper, or board, and let it dry to ascertain the color. If you wash over old paper, make a sizing of wheat flour like thin starch, put it on, and when dry, put on the coloring, for a white-washed wall, make a sizing of whiting and glue water. This precaution should always be taken before using chrome yellow or green, as the previous use of lime injures the color of the chrome. When walls have been badly smoked, add to your white-wash sufficient indigo to make it a clear white.

To Mix White-wash.

Pour a kettle of boiling water on a peck of unslaked lime, put in two pounds of whiting, and half a pint of salt, when all are mixed together, put in half an ounce of _Prussian blue,_ finely powdered, add water to make it a proper thickness to put on a wall.

White-wash for Buildings or Fences.

Put in a barrel, one bushel of best unslaked lime, pour on it two buckets of boiling water, and when it is mixed put in six pounds of fine whiting, fill up the barrel with water, stir it well, and keep it covered from the rain, let it stand several days before you use it, when stir it up; thin it with milk as you use it, and put half a pint of salt to each bucket full. This makes a durable wash for a rough-cast or frame house, or for fences; the salt prevents it from peeling off.

Chrome Yellow-wash.

Mix four pounds of whiting with as much water as will go over the room; dissolve a tea-cupful of glue, and put in; then wash the walls with this to prevent the lime from affecting the chrome; if they come in contact, the walls will be striped, and will not look at all well. Mix a wash of whiting, water and glue, and color it with two pounds of chrome yellow. After walls have been yellow, and you want to have them white, they must be washed over with whiting and glue, and then white-washed in the usual way.

Yellow Ochre wash.

Dissolve a pound of glue in hot water, and stir into it three pounds of yellow ochre, and one of whiting; mix it well, and thin it with water or skim milk. It is a suitable wash for a common room or kitchen.

Lamp-black mixed with molasses, and put in white-wash, makes a good color for a kitchen.

To Dye Orange Color.

For five pounds of woolen yarn, have one pound of annotta; dissolve it in boiling water, and put it in a pot of soft water with half a pound of pearl-ash; boil them ten minutes, stirring it well; wet the yarn in soap-suds; put it in, and let it boil twenty minutes; then hang it in the sun, and when dry, if it is not deep enough, dip it in again; and after it is thoroughly dry, wash it in soap and water.

Green-wash.

Take four pounds of blue vitriol, pound it fine, and mix with it three pounds of beat whiting, and half a pound of potash; pour on them six quarts of boiling water, and mix in half a pound of glue dissolved in water. Wash the walls with whiting before it is put on.

Chrome Yellow for Dyeing Carpet Rags.

Dissolve the chrome in warm water in an earthen vessel; dip the rags in vinegar and water, then in the chrome dye, and hang in the sun to dry. This color will stand for years in a rag carpet, and is very little trouble. Six cents worth of chrome will dye several pounds.

To Dye a Dark Drab.

For ten pounds of cotton or wool, have half a bushel of maple bark, the same of sumach berries, and a peck of walnut hulls or bark; put a layer of this in an iron pot, and a layer of the wool, till all is in; cover it with water, and boil it slowly for three hours, keeping the pot filled with water; then hang it out, and when dry, wash one skein, and if it is not dark enough, strain the dye, and put in a tea-cup of copperas; put in the yarn, and let it scald a few minutes; take it out, dry it, and wash it well with soft soap and water.

To Dye Cotton or Woollen Black.

To each pound of yarn, have one ounce of copperas, nine of logwood, a handful of salt, and a quart of good vinegar, which boil with copperas ten minutes in a brass kettle; shave the logwood, and boil it in an iron pot; when the color is extracted, strain it into the vinegar; put in the yarn, and let it simmer twenty minutes stirring it; then hang it in the air, and if it is not black enough, boil it over. You should have a clear day to do all coloring in.

Cedar Dye.

Boil the boughs of cedar in two or three gallons of water, for several hours, in an iron vessel; strain it off, add half a tea-spoonful of copperas, put it on the fire, and put in the articles you wish to dye; let them boil a few minutes, then hang them up to dry. This will dye sage color, and can be used for cotton, woollen or silk, and has the advantage of retaining its color. The cedar boughs should he used in the fall of the year, when the berries are on them. Pear bark is an improvement and makes the color darker.

To Dye Olive.

Make a strong sage tea, and add copperas and alum till it is dark; strain it; dip the cloth or silk in weak soap-suds, and then in the dye, and air it, till it is the color you wish.

Maple bark and copperas make a good dark color for common purposes.

To Dye Yellow.

Boil peach leaves when they are turning yellow in the fall, with a little alum.

Onion skins boiled with alum make a good yellow.

To Dye Brown.

Take young walnuts, with some of the leaves and bark; wash your wool in soap-suds; put a layer of it in a barrel, and a layer of the walnuts; fill it up with water, and put a weight on the top; at the end of a week wring it out, and let it lay in the hot sun two hours; put it back in the dye, and at the end of another week, sun it again; keep it in until sufficiently dark, when wash it in soap-suds. This makes a pretty brown that will not fade, and is stronger than when dyed with copperas.

To Dye Red.

To four pounds of yarn, take one pound of fine alum, and boil it in as much water as will cover the yarn; put in the yarn, and let it boil gently half an hour; then take it out and dry it; make a dye of two pounds of madder, and two ounces of crude tartar pulverized, and boil it; then put in the yarn, and let it boil half an hour; take it out and air it, and if it is not dark enough, put it in again, and boil it longer.

Brazil Wood Dye.

Tie two pounds of red or Brazil wood in a thin bag, and boil it for several hours in a brass or copper kettle in water; take out the Brazil wood and add a pound of alum, then put the rags in, and let them boil some time; hang them in the sun, and dry without washing them. This will dye woolen _red_, and cotton _pink_. Washing in soap suds will change it to purple.

Lead Color.

Take four ounces of red wood, two of logwood, half an ounce of pounded nut-galls, and quarter of a pound of green copperas; boil them in ten gallons of water, and strain it; wash the wool or cloth in soap-suds, put it in, and let it remain till it is as dark as you wish it; dry it in the sun, and wash it in soap-suds. Sugar paper, boiled in vinegar, makes a good lead color for stockings.

To Dye Scarlet.

Take one pound of blood root, and one pound of madder, boil them in six gallons of ley, then stir them three or four times in twenty-four hours, till there are signs of fermentation. This dyes ten pounds of cotton or linen.

To Dye Yarn Green.

Take one ounce of best Spanish indigo, finely powdered, and half a pound of oil of vitriol; put them in a bottle, and let them stand in the sun a week; shake it often, but do not cork it tight, lest it should burst the bottle; take four pounds of black-oak bark, and the same of hickory, shave them fine, and soak them till wet through; then boil them in ten gallons of water till all the color is extracted; when take out the chips, put in a pound of alum; shake the bottle of indigo and vitriol, and pour it in; let them boil together a few minutes, and put in the yarn; turn it over several times, and let it boil half an hour; then spread it out in the sun for about an hour, and wash it well in strong soap-suds through two waters, to keep it from becoming tender. This will color ten pounds of yarn. You

may have a fine blue color by omitting the bark. It will not answer for any thing but wool or silk, as the vitriol will destroy linen or cotton.

To Dye Cotton Blue.

Boil a pound of chipped logwood in water enough to cover the cotton; take out half a gallon, and dissolve in it an ounce of verdigris, and one of alum; boil the yarn in the logwood water an hour, stirring it, and keeping it loose; then take it out, and mix in the verdigris; put back the yarn, and let it boil four hours, stir all the time, and take it out every hour to give it air, dry it in the sun, and the next day boil it in soap-suds. This will dye six pounds of cotton a deep blue. After it is done, you may put in as much more, and it will dye a pale blue.

To Keep Apples in Winter.

Pick them carefully, so as not to bruise them; put them in an out-house, exposed to the north, either in boxes, or barrels, or lying in heaps; after they have been several weeks in this situation, pick them over and put them in barrels which should be headed; if the weather is not severe, let them remain in this cold situation as long as it will be safe, without their being frozen, then remove them to the cellar. Do not shut the windows till the severe weather comes on. Some persons pack them, in dry chaff, or sand, and put them in barrels and boxes in a cool garret.

Directions for Making Matresses.

If you have an old curled hair matress, you can make two, that will be equally useful as those that are composed of curled hair, by using cotton and hackled corn husks, in alternate layers with the hair. Some persons use a quantity of green corn, and save all the husks, and strip them with a fork, or hackle, and spread them on a garret floor to dry; they are nicer in this state than prepared from the dry husk; but if you have not sufficient, take the dry husks from corn that has been stripped off the top and blade in the field, and have it hackled as flax; for one matress, have as much as will fill two flour barrels tightly packed; sixteen pounds of refuse cotton, (such as is sometimes sold very low at the factories,) and half the hair of an old matress, (which should be well picked;) measure the bedstead you wish it for, and allow to each breadth of the ticking, a quarter of a yard in length over; for a small matress less should be allowed, and the same in width, (as it takes up in making;) cut the side strips as deep as you wish the matress, fit the corners, cut out a place for the foot posts, or fit each end square alike; after the bottom and sides are sewed together, run a tuck all round to save binding, sew the tick in a quilting frame, and stay it to the end pieces as a quilt; put a table under to support the weight, (which can be shifted as it is sewed;) first put a layer of hair, then cotton, then husks alternately, till it is done; be careful to let the hair be next the ticking; put some all round the sides and edges. When all is in, put on the top, and baste it down with strong thread; then with a chalk line strike across, to form squares to sew it by. Have a long needle prepared and polished smoothly, threaded with twine, or several strands of strong shoe thread; this should be well waxed, and long enough to go through and back again; have tufts, or two pieces of strong cloth prepared, to secure the stitches on both sides; one person should be under the frame, to pull the needle through and put it back; it should be tied tightly as possible; when you have done stitching, the matress should be sewed all round, taken out of the frame and the raw edges bound. They can be made of cotton and husks, without hair, or cotton alone. Those that have sheep can use the coarse wool, (and such as is not profitable for manufacturing,) with the husks, it is more elastic than cotton. Many persons are deprived of one of the greatest comforts in summer, and sleep on feathers, when a little care in preparing the materials, and putting them together would furnish your chambers with the most healthy and pleasant beds; a large cotton sheet should be kept on a matress, or a case made of unbleached muslin, this covering should be occasionally washed and starched. If you cannot get husks, straw will answer, or hay.

To Make a Rag Carpet.

Ten pounds of purple warp, ten of green, four of yellow, seven of red, will make a pretty stripe, mingled and arranged according to your fancy; the above quantity of warp, with fifty-eight pounds of rags will make forty-two yards, yard wide. In most cities warp can be purchased ready colored. A very good proportion is a pound and a quarter of rags, and three-quarters of a pound of warp to the yard. Save all the scraps in cutting out work; have a bag for the purpose hanging in a convenient place, and when you have leisure cut them. Old muslin garments that are not worth giving away, may be torn in strips and colored. In cutting out clothes for boys, from men's garments, there will always be scraps and strips. By purchasing a little red flannel to mix in, the appearance is improved. A carpet wears cleaner to be about one-third cotton, and two-thirds woollen rags to mix the colors. Do not sew a strip that is longer than three yards, and the cotton should be much shorter, as the warp is usually of that material, there is more danger from

fire.

To Keep Furs and Woollens.

Crack the grains of black pepper, and sprinkle in among your furs and woollen clothes; after they have been shaken and aired, fold them smooth and put them in linen bags or sheets; keep them in a large trunk or dark closet, and look at them once through the summer to see that they are safe. Tobacco and camphor are also good to pack them in, but the smell continues with them a long time, and is disagreeable to some persons. They should be well shaken and aired before they are worn.

To Keep Curtains.

Take the curtains down in the spring, shake them carefully and brush the dust from them; let them air a day, but not so that the sun will fade them; then fold them neatly, and pin them up in sheets.

Moreen or worsted curtains require the same care as woollen cloths.

To Keep Blankets in Summer.

If you have any blankets that are soiled and require washing in the spring, have it nicely done; when they are perfectly dry, put them on a bedstead in a spare chamber, keeping out one to use on each bed through the summer; spread a large sheet over; tuck under all round, and secure the corners with pins; tins will keep them from dust and moths, and makes a good bed to use in hot weather.

Carpets, &c.

When you take up carpets in the spring to put down matting, have them well shaken, and if there are any spots on them, they should be washed off with a stiff brush and dried; if there is oil or grease spilt on them, mix up whiting or nice clay with water; spread it on both sides of the spot, and baste thick paper over it. When dry, fold it up the size of a bedstead, and pin a coarse sheet round it. In this way they will be secure from moths, and the addition of a few quilted comforts on the top, makes a very pleasant bed in summer. The small moth-fly appears early in the summer, and should always be destroyed when seen, as the moth is produced from the eggs which they deposit in woollens; by being careful to kill them when they first come, a house may be kept nearly clear of them. Select the softest brooms for sweeping carpets, as stiff ones wear them out.

House Linen.

Have a book in which to set down all the bed and table linen, towels and napkins; every article of which should be marked and numbered, and counted at least once a month.

To Clean Paint.

Rub some whiting very fine on a plate; have ready some clean warm water, and a piece of flannel, which dip in the water and squeeze very dry; then take as much whiting as will stick to the flannel, and rub the paint to remove dust or grease, then wash it well with clean water and wipe it dry with a soft cloth.

Bran boiled in water, and left to settle, is very good to clean paint; use a soft cloth or flannel; it will take off fly specks and impart a gloss to the paint; wipe it quite dry. Unless soap is used with great care, it will injure paint.

Varnished paint requires nothing but clean warm water and to be wiped dry.

To Clean Bedsteads.

In the summer, bedsteads should be brushed and searched every week; if they are infested with bugs, boil the sacking in ley and water, or put it in an oven, on some boards, after the bread is taken out, to kill the eggs; fill a large bottle with red pepper pods of the strongest kind, and fill it up with vinegar; put this in each crack of the bedsteads every morning, until they entirely disappear; never omit to search the bedsteads longer than a week. It is a good way to fill up all the cracks of the bedsteads with resin soap. After they are cleaned, move the bed from the wall and fill up every crack in the plastering with calcined plaster and water, or putty.

Sometimes bed-bugs are brought in the cleanest houses before the family are aware of it. When persons return from travelling, the trunks should always be examined before they are taken into the chambers, or put away; a little care at the proper time will prevent

much trouble. Some persons scald their bedsteads with boiling vinegar; the acid is said to dissolve the shell of the egg. If poison is used, great care is necessary.

It is said that lard is good to use on bedsteads that are infested with bugs; the grease prevents their increase. All the cracks should be filled after the bedstead has been well searched.

To Clean Floors.

Scour all the spots with soap and sand, then go all over with the long scrubbing brush, a few boards at a time; rinse it well and wipe it dry. A floor that has been well cleaned, and dried without being walked on, will keep clean much longer than one that has been half done; too much soap or ley makes a floor look yellow.

Bare floors are very pleasant in summer, and when they get a few spots, they can be taken out with dry white sand, and a shoe-sole, and will not need scrubbing more than two or three times in a summer.

Cleaning Cellars--Rats, Roaches.

In the spring, cellars should be swept, and all refuse vegetables taken out; if left till warm weather, they will become putrid, and endanger the health of your family. The sprouts should be rubbed from the potatoes; all the barrels should be moved and swept under. Have boards laid on the floor for meat and fish barrels, and after they are emptied, have them washed and drained ready for use. Empty flour barrels should be swept out and the heads and hoops saved. Have lime sprinkled over the cellar floor twice during the summer, or oftener if it should be necessary. If the windows are kept shut in warm weather, the air will be unwholesome. Do not trust to servants, examine and see that it is done thoroughly.

The apartments where cold meat and milk are kept should be cobwebbed and swept once a week, and the safe washed out at least that often. If the cellar is paved with brick, keep a part of it washed clean, to set cold meat and milk on; cover them with tin pans and put a weight on the top if rats are troublesome. If there are rat holes have them stopped with pieces of brick, and broken glass bottles; never use ratsbane without the greatest caution, as it is a dangerous remedy. No food or milk should be in the cellar at the time, and keep it locked up all the while it is there. I have heard of lives being lost by it. Have water set about in pans for the rats to drink, and after three days, clear it all away and have the cellar cleaned and aired before putting any thing in it. Several persons have been in great danger from burning the arsenic; when it is used it should be put deep in the ground and covered up.

Mice are kept under by a good cat, and traps. If roaches are troublesome, set bowls or deep dishes, with molasses and a plate on the top, with room for them to get in, and set it close to a wall. I have seen hundreds caught in this way in one night, and it is much safer than setting any thing poisonous about the kitchen or pantry. They should be burnt in the morning, and the dishes set again at night. If you find a closet infested with ants, remove every thing that will attract them, scald and clean it well, and they will soon leave it. It is said that strips of cotton or linen dipped in spirits of turpentine, and placed about the closets, will drive them away.

Mats should be placed at all the outside doors, and at the top and bottom of the cellar stairs.

Putting Straw under Carpets.

It is thought that carpets wear better when straw is spread over the floor before they are put down, and it will prevent the dust from rising so much. Care should be taken to have them well tacked down, as it is dangerous on account of fire. Where straw is used, they may be kept down a much longer time without being shaken.

Picking Geese, &c.

When you pick geese and ducks, have a tub of boiling water; dip each one in, turning it over to let every part be well scalded, and as each one is scalded, wrap it up in a cloth, and when they are nearly cold, pick them. In this way the pen feathers are loosened, and they can be picked much cleaner. Wetting the feathers does not hurt them if they are well dried. They should be put in bags, and frequently sunned. Baking them in the oven after the bread comes out, cures them more thoroughly than any other way. Turkey and chicken feathers are not so good for beds as goose and duck; they may be picked in the same way.

Marble, &c.

Marble mantles should be washed but seldom; wipe off spots with a damp cloth, and rub them dry. Hearths should be washed with soap and water. When there is a spot of grease, mix clay or whiting with soft soap, and put on. Soap-stone hearths may be scoured with soap and fine sand, and washed off.

To Restore Colors taken out by Acid, &c.

Hartshorn rubbed on a silk or woollen garment will restore the color without injuring it. Spirits of turpentine is good to take grease or drops of paint out of cloth; apply it till the paint can be scraped off. Rub French chalk or magnesia on silk or ribbon that has been greased and hold near the fire; this will absorb the grease so that it may be brushed off.

To make New Feather Beds.

In making new feather beds, put half a pound of cayenne, and half a pound of black pepper in each bed; this will prevent the moths from getting into new feathers that have not been well cured. It is best to air your beds frequently, and shake them up, even if they are not slept in. It is the oil in the feathers that makes them smell bad, and when in constant use the heat of the body dries it up gradually; when beds or pillows have acquired this unpleasant smell, open them and put a few pounded cloves in each.

When new beds are covered with cases, the moth will sometimes eat through without its being discovered. Covers also prevent the air from sweetening the feathers, and when new they should never be covered unless in use. When beds are slept on, it is best to have a thick cotton sheet, or if it is cold weather, a blanket between the under sheet and the bed, and have them washed and aired occasionally.

To Clean Silver.

Wash the silver in soda water, rub it with whiting, and polish it with a piece of dry buckskin. Embossed silver requires a stiff brush. Another way is to let the silver lay in chalk and water for an hour, then take it out, and wipe it dry on flannel; polish it with a piece of buckskin.

Britannia Ware.

First wash it clean in soap-suds, then rub it with a woollen cloth and whiting, and polish off with dry buckskin.

Brass.

First rub the brasses with turpentine, vinegar or whiskey, then with rotten-stone and a woollen cloth, and polish off with a piece of soft leather.

For brasses that have been long out of use, chalk and vinegar may be used.

To Clean Stoves or Grates.

Have the stove slightly warm, and if there is rust on it rub it off with a dry brush; mix some black lead or British lustre with boiling water, rub it on a small part of the stove at a time, and polish it with a stiff brush. If the stove needs but little cleaning, wet the spots with water, dust a little lead on the brush and rub it quickly. The black lead should be washed off several times a year, and then renewed. Sheet iron stoves should be rubbed with a woollen cloth, as a brush is apt to streak. The lead may be mixed with the white of an egg in cold water. Alum water is good to mix lustre; it prevents the stove from rusting.

To polish the hearth of a Franklin stove, rub it over with a piece of grindstone, or use coarse sand with the sole of a shoe; when it begins to look bright, polish it with pumice stone.

Cement to Mend Cracks in Stoves.

Take two parts of ashes, three of clay, and one of sand; mix them well together with water, and put it on when the stove is cold. It is also good to stop a leak in a roof.

Fire-proof Cement.

Slack a peck of lime in boiling water; put into it three pounds of salt, three of brown sugar, and one of alum; mix them well together, and color it with lamp-black or ochre. This has been recommended to put on the roof of a building that is exposed to fire.

To Take Spots out of Mahogany.

Put a piece of paper on the spot, and hold a warm iron over it, then rub it with a waxed cloth. If furniture is hurt with flies, it should be well washed with a cloth, and rubbed with a cork and a waxed cloth.

Varnished furniture should be first rubbed with sweet oil, and then with a waxed cloth.

To Take Grease out of Floors.

Mix clay or fullers' earth with ley, and put a thick coat on the grease spot; scrape it off every few days, and put on more. To put soft soap on the place, and rub it over with a hot iron, will take out the grease.

Wash for Hearths.

Mix red ochre in milk, and put it on the hearths with a brush.

Blacking for Boots and Shoes.

Take one ounce of vitriolic acid, one wine-glass of olive oil, two ounces of ivory black, an ounce of gum arabic, a quart of vinegar, and a tea-cup of molasses; put the vitriol and oil together, then add the ivory black and other ingredients; when all are well mixed, bottle it.

To Make Boots and Shoes Water-proof.

Take one pint of linseed oil, one ounce of Burgundy pitch, two of beeswax, and two of spirits of turpentine; melt them carefully over a slow fire. With this you may rub new or old shoes in the sun, or at a short distance from the fire, and they will last longer, never shrink, and keep out water.

To Make Blacking for Morocco Shoes.

Pound some black sealing wax, and put in a bottle with half a pint of alcohol; shake it frequently, and when it is dissolved, you may rub it on morocco shoes when they are scaled or defaced, and they will look almost like new; dry it on in the sun.

To Grease Eggs for Winter.

In the spring when eggs are plenty and cheap, it is very well to put up several hundred, to use in the winter, when it is very difficult to get them, even in the country.

Grease each egg with sweet lard, and as you do so, lay them in a keg or jar, or old tin vessels that are out of use; put them in a dry closet and keep them covered over; if they are put in the cellar, they are liable to mould, which spoils them entirely. Do not put in any cracked ones, or they will injure the rest. In this way they have been known to keep a year, and were nearly as good for puddings, or batter cakes, as fresh eggs. They do not do to boil, or make pound or sponge cake, as they lose part of their lightening property.

To Keep Eggs in Lime Water.

Pour two gallons of hot water on a pint of lime and half a pint of salt; put the eggs in a jar or keg, and when it is cold, pour it over them, and put them in a cellar to keep; be sure that there are no cracked ones. Eggs may be kept a month or longer, spread out separately on dishes, so as one will not lay on another. They will keep best in a dark closet.

To Clean Soiled Eggs.

When eggs are discolored from laying on the ground, wash them first in strong vinegar, and then in cold water, and wipe them dry on a soft towel.

Chloride of Lime.

A few spoonsful of chloride of lime dissolved in some water in a bowl or saucer, is very useful to purify the apartment of an invalid, or in any case where there is an unpleasant smell, of any kind. It is a cheap article, and should always he kept convenient where there is sickness in the house.

To Take Lime out of Cloth.

Lime spots on woollen clothes may be effectually removed, by putting a little strong vinegar on the part, which completely neutralizes the lime, and does not usually effect the color; but it will be safest to wash it over with a cloth dipped in water, and rub it till nearly dry.

Hartshorn and alcohol mixed together are very useful in taking spots out of cloth or merino, applied with something that will not leave lint.

To Take Wax or Spermaceti out of Cloth.

Hold a red hot flat-iron within an inch or two of the cloth, and this will make the wax or spermaceti evaporate entirely; then rub the place with a towel (that is free from lint) or clean brown paper.

To Remove a Stopper from a Decanter.

Wet a cloth with hot water and wrap it round the neck of the bottle; this will cause the glass to expand, and the neck will be enlarged so as to allow of the stopper to be withdrawn, without any trouble.

Precautions against Fire.

Perhaps it may not be improper to remark that houses have been saved from being destroyed by fire at night, by there having been buckets of water left in the kitchen.

Never go to bed without seeing that there is a supply in readiness. Housekeepers should also arrange their family affairs so as to have as little going about with lights by servants as possible. Chimneys should be swept at proper intervals, and if you burn them, let it be on a rainy morning and never at night.

To Take Ink and Stains out of Linen.

Dip the spotted part in pure melted tallow, then wash out the tallow and the ink will come out with it. If you get a stain of fruit of any kind on linen, boil a little new milk, and dip the parts in and out for a few minutes; this must be done before any water is used, or it will not be likely to succeed. Oxalic acid, or salt and lemon juice are good, and care should be taken to rinse the articles well after the application.

Herbs, Gardens and Yards.

If you have a garden, be careful to raise herbs, both for cooking and to use in sickness. Parsley, thyme, sage and sweet marjoram occupy very little room in a garden, and cannot very well be dispensed with for kitchen use; and every family should have a bunch of wormwood; it is a fine tonic, either made while fresh, cut fine, with cold water, or after it has been dried, made with boiling water. Tansey is also a useful herb. Hoarhound is excellent for coughs, and is particularly useful in consumptive complaints, either as a syrup or made into candy. Balm is a cooling drink in a fever. Catnip tea is useful when you have a cold, and wish to produce a perspiration, and is good for infants that have the colic. Garlic is good for colds, and for children that have the croup; you should have some taken up in the fall to use through the winter. The root of elecampane gathered in the fall, scraped, sliced, and strung with a needle and thread to dry, will keep its strength for several years, and is useful for a cough with hoarhound. Rue is a valuable herb, a tea made of it and sweetened is good for worms.

It is not expected that persons living in a town should have room in their garden for herbs, but they are generally to be purchased at market, and should always be kept in the house, as sometimes in the winter they are much needed when it is difficult to find them.

Herbs should be spread out on a cloth to dry; turn them every day; when dry, put them in thick paper bags, and close up the top, so as to exclude the air. They can be kept hanging up, or laid on the shelf of a closet, where they will not be affected by damp.

Such herbs as sage, thyme and sweet marjoram, when thoroughly dry, should be pounded, sifted, and corked in bottles. Parsley should be cut fine with a pair of scissors, dried, and put in bottles; it is nearly as good this way as when fresh; keep it in a dark closet.

Where you have a garden, do not throw away the soap-suds that are left from washing, as they are very good to water herbs and flowers.

It is very important to have early vegetables. A garden that is spaded, or ploughed in the winter, is ready to plant much earlier. There are many things that will bear the spring frosts without injury, and if planted early will be ready to grow when the fine weather comes. Tomatoes should be sowed in boxes or a hot-bed to be ready to transplant.

The scrapings of a cellar are good to put in the garden to enrich it. Ashes sprinkled on a yard, or grass plat, will keep down the coarse grass, and produce white clover.

The grass should be cut out of a brick pavement with a knife, and boiling ley poured on to kill the roots.

Seeds should be saved as they ripen, from the finest plants; they should be kept in a box with a tight lid to keep them from mice.

Greasers for Bake-irons.

Take pieces of fat from the back bone, or chine of pork; cut them in pieces of half a pound each; leave the skin on; salt them. They will do to grease the bake-iron where you have buckwheat cakes every morning in winter, and should be kept in a cool place; after remaining in salt several weeks, they may be hung up in an airy place. This is nicer than suet.

Cement for the Tops of Bottles or Jars.

Take equal parts of rosin and brick-dust pounded fine; a lump of beeswax; stew them together, and keep in an old tin, melting it when you want to seal your bottles or jars.

Cement for Mending Cast-iron.

To mend a crack or sand hole in an iron pot, beat up the white of an egg, and mix equal weight of salt and sifted ashes; work it very smooth and fill up the crack, let it harden before it is used. If it is a large sand hole you wish to mend, put in a rivet and secure it with the cement, if it gets loose it is easily fastened by the same process.

Weather Proof Cement.

Take of fine sand one part, two of clay, three of ashes; mix with linseed oil to the consistency required. Put it on with a towel or brush. It is said to become as hard as marble.

To Cleanse Vials, &c.

Put ashes and water in each one, and boil them in water, letting them heat gradually. Pie plates may be cleansed in the same way. Iron pots that have been used for boiling milk, may be cleaned by boiling ashes and water in them.

Mending China with Milk.

China can be mended if not too badly broken, by boiling it in skim milk, it should be entirely clear of cream, or the oily particles will prevent its adhesion. Tie the pieces with tape or fine cord, put them into a kettle of cold milk, and let them boil two hours, then take it off the fire, and when cold take the china out, and set it away; let it stand for several months. China pitchers, tea-pot lids, cup-plates and dishes, have been used for years after being mended in this way.

Mending China with White Lead.

Take the bottom of an old paint keg, and carefully with a small knife, put it on the edge of glass or china, close the parts together, and place away; if badly broken, mend the small parts first, and set away; then when dry, putty the edges you wish to join carefully, and set on the top shelf of a closet, where it will be undisturbed for a year.

Linseed Oil for Furniture.

For polishing mahogany or walnut furniture, (that has never been varnished) linseed oil has been recommended. It possesses a tendency to harden and become solid, on long exposure to the air. It is this peculiar quality that renders it useful in its application to furniture. Rub the furniture you wish to polish (having previously washed all the wax from it with soap and water) all over with the oil; a small piece of sponge is suitable for the purpose, let it remain a few minutes so as to sink in the wood; then rub it in with a soft cloth, and again with a clean cloth. Do this every other day and your table will soon be fit to use for breakfast or tea without fear of spoiling the polish; when you wash it off it should be done with plain warm water, as soap will injure it. It is best not to use a table till it has had several rubbings with the oil, and then apply it once a week. The pores being filled with the application it becomes hard. Always give a table that is in use a rub with a dry cloth every morning.

For Filtering Water.

Put a thick layer of pounded charcoal, (say six inches,) at the bottom of a large earthen flower-pot; over this, lay a bed of fine sand, which has been washed, (to prevent its giving a taste to the water;) pour the water in the filterer and put a large stone pitcher under to receive it.

On A Larger Scale.

Prepare a tight barrel by charring it on the inside, (by having some hickory or oak shavings burnt in it,) then put in half a peck of quick lime, and fill it with water. After the lime water has stood in the barrel for two weeks, it will be ready for use.

This preparation of the barrel is necessary to remove the acid from the wood, which would communicate an unpleasant taste to the water.

Fit a partition in the barrel, (perforated with many holes,) about three inches from the bottom of the barrel, and having put in a tube, to go down from the top through the partition nearly to the bottom, put on the perforated partition some broken charcoal, then finer charcoal a foot thick, then about a foot of clean washed sand.

To use this filter pour the water through the tube, (which should be open at the top like a funnel;) the water runs to the bottom, and filters upward, leaving all the impurities at the bottom.

The pure water is drawn off from the top of the barrel by means of a spile or faucet.

To Keep Water Cool in Summer, when you have not Ice.

Where you live at a distance from water, and wish to keep it cool, put a large stone vessel in the coldest place you can find; fill it with water, cover it with a towel and wrap a wet cloth around it; this will keep it cool for some hours, which is a comfort in warm weather.

To Purify Water.

To put a small lump of lime into your water-cask is useful. Agitating and exposing it to the air, will help to keep it fresh.

Strain muddy water through a sieve, in which a cloth or sponge, (or a layer of fine sand or charcoal,) has been placed.

Hard water may be softened and rendered suitable for washing, by adding to every twelve gallons of water, about a quarter of a pound of sal soda.

Gum Arabic Paste.

Pulverize in a mortar an ounce of gum arabic, pour on boiling water and stir it till dissolved; do not put too much water. If you wish to keep this paste any length of time, put it in a wide-mouthed phial, and pour alcohol over it; keep it corked, and as you use it, you may thin it with water if required; put it on with a feather or brush.

Preserving Kettles.

Bell-metal, copper and brass kettles require very nice cleaning immediately before they are used, or it will endanger your health. Vinegar with salt or ashes should be used; save the vinegar that is left in the pickle jars for this purpose.

To Clean Knives and Forks.

In some families the knives are a great care to the housekeeper, but by proper management it is rendered easy. After using them, they should be wiped with a cloth, dipped in warm water, then wiped dry, (the handles should never be put in hot water,) then polish them with Bristol or Bath brick, which, with the rubbing cloths, should be kept in a small box, with a strip of leather nailed on one edge, on which to polish them after they are rubbed with the brick.

Knives that are not in daily use should be wrapped in raw cotton and then in paper, and if kept in a dry place will not be liable to rust.

To Clean Teeth. _With Remarks on Fixing the Habit, &c._

Pulverized charcoal mixed with honey, is very good to cleanse teeth, and make them white. A little Peruvian bark put in a phial with lime water is excellent to use occasionally by those that have offensive teeth; and tincture of myrrh mixed with a little water, may be used with advantage, to harden the gums. A little Peruvian bark put in the teeth just before going to bed, and washed out in the morning, is an excellent preservative of teeth. It is very important for parents to insist on children cleaning their teeth, at least, it is well for them to begin before they lose their first set, as it makes them last longer, and fixes the habit, which is of great importance.

To Clean Kid Gloves.

Take a piece of flannel; moisten it with a little milk; rub it on a cake of mild soap, and apply it to the soiled spots on the gloves; as soon as the dirt is removed, rub the spot with a dry piece of flannel, and dry them on the hands. Care must be taken that the gloves are not made too wet, or they will have a wrinkled appearance. Dark gloves that are worn in winter, should be exposed to the sun for about a quarter of an hour in the spring, before putting them away, or they will be liable to spot.

To Clean Papered Walls.

Cut the crust off of stale bread very thick, and rub the walls carefully from top to bottom, in a straight line, using a fresh piece of bread as soon as it looks much soiled.

To Take Old Putty from Window Glass.

Warm an iron, and rub it on the glass opposite the putty; this melts the oil, and you may easily remove the putty.

Cutting Glass for Mending Windows.

If you want to cut glass for mending windows, and have no diamond, dip a piece of cotton twine into turpentine, and stretch it tightly across the glass where you wish to break it; then set the string on fire, and after it is burned, break the glass while it is warm.

SIMPLE REMEDIES.

The following remedies are for diseases which occur in almost every family, and have been proved to be useful in a number of instances. As most old housekeepers have their favorite recipes, it is for the young and inexperienced these are particularly intended, and may be used with safety, when a physician is not at hand.

Remarks upon a Deeply Seated Cough.

It is very important to begin in time with a cold. Consumption is sometimes prevented by very simple remedies. To put Burgundy pitch plasters on the breast and back of the neck, often has a good effect; they should be re-spread frequently, and when one part is irritated, change them to another place. Put one on your side if you have a pain there.

Flannel should be put on next the skin by all means, which, with the above simple remedies, will cure a cold, if begun with in time.

I have frequently known new flannel put on those that usually wore it, greatly to benefit a delicate person. The increased irritation of the new flannel acts on the pores of the skin and promotes circulation. Hair soles worn in the shoe, or socks made of flannel, or soft buckskin worn under the stockings, are very good to keep the feet warm and dry. Persons predisposed to consumption should have nourishing food, and not eat too much at a time; they should avoid strong tea or coffee, and drink milk. Eggs, oysters, fresh fish and fowls, are very good for them. Fruit of all kinds is useful.

They should take exercise in the air, particularly riding on horse-back, or take a short walk, but not so as to be fatigued; to work moderately in a garden, when the ground is not too damp, is good exercise for a delicate person; the smell of fresh earth, and of flowers, is beneficial to both body and mind. After taking exercise, a glass of lemonade is very refreshing, and promotes appetite.

If there should be perspiration at night, change the sheets and pillow-cases frequently, and the under garments; air the chamber and bed-clothes every day; if the weather is too damp to raise the windows, shake up the bed, and leave it unmade half of the day, and put it out in the sun occasionally.

By all means avoid strong medicine, or any thing that has a tendency to weaken the body.

Sometimes blisters are used with very good effect; also, rubbing the breast and back with camphor or spirits, or with a piece of dry flannel.

Taking anodyne drops, particularly laudanum, should be avoided, if possible; they may still the cough during the night, but it will come on with increased violence in the morning; they weaken the stomach, increase the fever, and sometimes cause delirium.

Everything that tends to excite or irritate the mind, should be kept from them. It is very important to talk cheerfully to sick persons, particularly if confined to their chamber, which can be done without lightness or trifling.

If they see gloomy faces around them, it has a very disheartening effect; and, if the mind sinks, such is its intimate connection with the body, that it is hard to raise it.

I have known persons by judicious management to live for many years, after it was thought they were in a deep decline, by avoiding weakening medicines, taking exercise on horse-back and on foot, and never indulging in a full meal.

Sometimes such persons have very good appetites, and it is a satisfaction to their friends to see them eat heartily; but they should eat something frequently, rather than over-load the stomach too much. When they come in hungry from a ride, to beat up an egg with a tea-spoonful of wine, and a little sugar and nutmeg put in a tumbler with some milk, and taken with a cracker or biscuit, or a piece of thin toast broken up in it, has a very strengthening effect.

Persons are seldom benefitted by a strict diet, but it is sometimes enforced till they lose their appetite and cannot eat.

If the weather is so that exercise cannot be taken out of doors, some method should be devised for taking it in the house. Rubbing furniture and playing battle-door, are good exercise for a female, but should not be taken too much at a time.

Men that are confined to the house are sometimes very much at a loss what to do; if such would purchase a few tools, and appropriate a spare room as a workshop, it would promote their health. I have known men that were but little acquainted with the use of tools, do many useful and ornamental pieces of work, that were greatly valued by their friends; and the exertion kept their spirits from sinking, when the weather was too inclement to take exercise in the open air.

For a Cough.

Take a wine glass of the juice of the green hoarhound, or if that cannot be obtained, a strong decoction from the dry herb will answer; mix it in half a pint of new milk, sweetened either with sugar or honey; take this half an hour before breakfast. It has been known to cure obstinate coughs, and persons that have taken it for four weeks or more, have gained strength and flesh, and the pain in the breast was relieved. Flannel should be worn.

Elecampane and Hoarhound Syrup.

Put a pint of hoarhound in a quart of water, and let it draw by the fire; put a tea-cupful of dried elecampane root in a pint of water, cover it close, and let it boil till all the strength is out; strain it and the hoarhound together, and put them to boil with a pound of sugar; when it is a rich syrup, pour it in a pitcher to cool, and bottle it. Take a table-spoonful at a time when the cough is troublesome. Sometimes flaxseed is a useful addition to this syrup.

Brown Mixture for a Cough.

Take of paregoric, liquorice and gum arabic, each an ounce, from fifty to one hundred drops of antimonial wine and two gills of hot water; mix them well together, and when cold, bottle, and cork it tight; take two tea-spoonsful at a time; if it should nauseate, give a

smaller quantity. If this produce profuse perspiration avoid going in the air unless well wrapped up. This has been useful in the latter stages of the whooping cough.

Ginger Tea. _With Remarks on its Use, &c._

Strong ginger tea, sweetened and taken hot on going to bed, is very good. Where persons have been exposed to the air, and think they have taken fresh cold, keep the feet warm by taking a hot brick to bed, and do not increase the cold the next day. If it is not deeply seated, taking this a few nights will give relief. A piece of ginger root, kept about the person to chew, is good for a tickling in the throat, which many persons are subject to, when sitting in close heated apartments, in lecture rooms, or places of worship.

Lemon Mixture for a Cough.

Put two fresh eggs in a jar; cover them with the juice of six large lemons; let it stand until the hard shell of the eggs is eaten off; then beat it together; strain it, and add half a pound of rock candy, one gill of brandy and two table-spoonsful of sweet oil.

Mixture of Lemon Juice and Honey.

Take half a pint of honey and squeeze the juice of four lemons on it; mix well together, and add a small portion of sugar; take a tea-spoonful every time the cough is troublesome.

Hoarhound Candy.

Put two pounds of sugar in a pint of hoarhound tea, as strong as can be made, which may be done by drawing two sets of hoarhound in the same water, till the strength is out of each; when it is cold, mix in the sugar and the white of an egg; when it begins to boil, take off the scum as it rises, boil it slowly till it becomes thick, so that when you drop it on a plate, it will be hard and crisp, and pour it out in plates that have been greased with a little sweet butter; when cold, you can break it up for use, and tie it up in a jar. This is quite as useful as the candy you buy, and is much cheaper; it is very convenient for persons that have a cough, to have a little box of this about them to take when there is a tickling in the throat.

Mustard Bath for the Feet--Soap Stones, &c.

It gives relief to a bad cold in the early stages, to soak the feet in warm water, in which you have put half a tea cup of salt and two table spoonsful of pulverized mustard, and to drink ginger tea. You may keep your feet in the bath for half an hour, and then retire with a warm soap stone wrapped in a cloth and placed near them. A soap stone, the size of a brick will, when thoroughly heated, keep warm till morning, and is invaluable for an elderly person or one that suffers with cold feet.

Liverwort Syrup.

Make a quart of strong liverwort tea by extracting two sets of herbs in the same water, tie a tea cup of flaxseed in a bag and put with it; keep it covered while drawing; when the strength is all out, strain it on a pound of sugar, and let it boil slowly till it is thick--keeping it covered to prevent the strength from going off, when cold, bottle it, and set the bottle in a cool place while using it. Take a table-spoonful at a time about six times a day. This has been used for a cough with great benefit.

For Sore Throat.

Make a gargle of cayenne pepper, honey and spirits, or sage tea, with alum and honey, or figs boiled, mashed and strained, and use it once in two hours. If it is very bad, steam the mouth with a funnel held over hot vinegar, and put on a hot poultice of hops, boiled in weak ley and thickened with corn-meal; there should be a little lard spread over; renew it every time it gets cold. Another very good poultice, is hot mush strewed with powdered camphor; put it on as hot as can be borne, and change it when cold. A purgative should be given, either of senna and salts, castor oil; or rhubarb and soap pills. An emetic is of great importance, and has caused the throat to break when persons have been very ill.

Sore throats have been cured when quinsy was apprehended, by using powdered camphor and lard on flannel. It is a good way, when persons are subject to it, to keep an ounce of camphor mixed with lard, in a wide-mouthed bottle, or jar; and corked tight. The cayenne pepper and honey gargle should also be kept ready mixed, and used when the first symptoms appear; or in a violent attack, a plaster of snuff and lard may be applied with benefit, keeping it on only a few minutes at a time. Sometimes a bag of hot ashes sprinkled with vinegar, and applied hot as can be borne, has cured a sore throat in one night. Persons that have been

afflicted for years with repeated attacks of sore throat and quinsy, have been cured by bathing the throat, neck and ears with cold water every morning. The constant use of the shower bath is very important. Keep the feet warm.

Molasses Posset for a Cold.

Take a pint of the best molasses, a tea-spoonful of powdered ginger, a quarter of a pound of fresh butter, and let them simmer together for half an hour: then stir in the juice of two lemons, or if you have not these, two table-spoonsful of strong vinegar; cover over the sauce-pan, and let it stand by the fire five minutes longer. Some of this may be taken warm or cold.

For Whooping Cough.

Dissolve a scruple of salts of tartar in a gill of water, put in half a scruple of pulverized cochineal, sweeten it with loaf sugar, give an infant a tea-spoonful of this mixture four times a day, and a child four years old or upwards, a table-spoonful. In some cases the relief is instantaneous.

Another Remedy.

Half a pint of honey, half a pint of vinegar, two table-spoonsful of sweet oil stewed together a few minutes; when cold put it in a bottle, and put in a tea-spoonful of laudanum; shake it well, and give a table-spoonful when the cough is troublesome, and a dose just before going to bed. For an infant of six months, a small tea-spoonful is a dose, and for a child of four years, two tea-spoonsful. Where there is not much fever, a little port or claret wine, mixed with sugar and water, and taken with toast broken in it, is beneficial. Children should be taken out riding if possible, and should be well wrapped up.

For the Croup.

Put the child in warm water, and keep up the temperature by putting in more hot water; keep it in fifteen or twenty minutes, then wipe it dry and put it in a warm bed, or wrap a blanket round it and hold it on the lap; give it an emetic, and put powdered garlic and lard to the throat and soles of the feet; keep up the perspiration, by giving a few drops of antimonial wine every half hour. The next morning give it a dose of rhubarb tea or castor oil, and keep it from the air for several days. This treatment has been very beneficial when a physician was not at hand; and nothing had been done till his arrival, perhaps the child would have been too far gone to recover. In cases of croup, to wet a piece of flannel with, alcohol, and apply it to the throat as hot as it can be borne, has often a salutary effect, applied frequently. It is also good to use for a bad cold, &c.

Molasses stewed with a lump of butter, and a table-spoonful of vinegar, taken just before you go to bed, and to grease the nose, forehead and breast with mutton tallow, will sometimes cure a child without any thing else. To pound garlic in a rag and squeeze out the juice, mix it with molasses, and give a tea-spoonful at a time, has given relief when a child was very ill. Sliced onions, or garlic stewed with sugar and water, or molasses, is very good to take for a cold. Where children are subject to the croup, you should always have a pot of water over the fire, and light-wood near, to heat it as quick as possible. Children that are subject to these attacks should have their feet kept warm and dry, and always wear flannel next to the skin.

It is the duty of parents to make use of the most simple remedies, which may always be in readiness, and, if applied in time, may prevent the necessity of giving strong medicines, which injure the constitutions of young children. The least symptom of the disease should be attended to. Lobelia is a certain remedy for croup. If the case is light, a few drops of the tincture, increasing the dose according to the age of the child, given at short intervals, will cause it to vomit and prevent danger; but if the attack is a severe one, you should give the "third preparation of lobelia;" for a child of ten years, ten drops, and so on in proportion; mix it with sugar and water. Every mother should keep lobelia at hand, as it has been known to give certain relief in many cases.

A child of twelve months, may take of the tincture ten drops every fifteen or twenty minutes, till it acts as an emetic, or relieves by perspiration; one of two or three years may take twenty or thirty drops. The third preparation is of much greater strength than the tincture.

Infants' Colic, &c.

Tea made of catnip, and sweetened, given to an infant when it appears to be in pain, is often useful. Sweet marjoram tea also relieves pain, and has a soothing effect on the nerves.

To put the feet in warm water, and put a warm piece of flannel to the stomach, is important; but if neither of these relieve the child, put it in warm water for about ten minutes, and cover it from the air carefully; wipe it dry, and keep it warm afterwards. A little weak ginger tea is good for the colic; as also tea made of dried damask rose leaves; a tea-spoonful of leaves will make a tea-cupful of tea.

Uneasiness is frequently caused by their stomachs being overloaded with food, and care should be taken in this respect.

Having lately met with some remarks in the "Baltimore American," with which I am much pleased, I take the liberty of inserting them. "Narcotics and anodynes cannot be given with too much caution, the sensitive and nervous system of an infant should never be acted upon by these powerful drugs unless in extreme cases, and of these, few mothers should presume to judge. Two drops of laudanum, says the London Medical Gazette, have been known to kill an infant; and a single drop, it is said, stole the life of a new born babe.

"The most experienced medical men never administer medicines of this class to the very young, without exercising the utmost caution, and making the most accurate calculations.

"In the present day, the more general diffusion of correct facts in physiology and pathology has caused a large class of young mothers to reject the old system of giving narcotic drugs to infants. In carrying out this salutary reformation like all other reformers, they have a strong opposition to contend with; old fashioned nurses do much harm in opposing all nursery reformations, consequently young mothers will have a hard task to execute.

"Too many have not the steady courage to hold on to the end in mild, but firm opposition to all erroneous, but well meant interference. But there are others whose pure and unswerving love for their tender off-spring keeps them firm to their duty; to these the next generation will owe much. They are the little band of true-hearted reformers, whose good example will be like leaven, spreading until its influence is felt throughout the wide circle of maternal responsibility."

Summer Diseases.

The food of children in summer, should be light and nourishing; if of milk, be careful that it is sweet. If you cannot get it fresh as often as you want it, boiling will keep it sweet. Sour milk and improper food sometimes bring on the summer disease, which is easier prevented than cured.

A little rhubarb tea or tincture, with a small quantity of prepared chalk, will sometimes check it in its early stages, but the most effectual medicine that I have tried is called by some apothecaries, "red mixture," of which I will give a recipe.

Chicken water, slightly salted, is very good; make but a little at a time, and have it fresh.

Rice gruel, sweetened with loaf-sugar, and a little nutmeg, is nourishing. To make a drink of slippery-elm, shave the bark fine and put it in water; strain it, mix it with milk, and sweeten it. Elderberry and blackberry cordials are also good in cases where there is no fever.

The stomach and back should be bathed with spirits, and a little bag of pounded spices, wet with spirits, applied to the stomach, may be used with safety, when not within reach of a physician.

A bark jacket has been used with success in many instances, cut it out of fine muslin, to be double, spread it open, and cover one side with about two ounces of the best Lima bark, and twelve pounded cloves; put on the other side, sew it up, and quilt it across; put on shoulder straps and strings of soft ribbon; sprinkle it with spirits twice a day.

The child should have the benefit of the morning and evening air. If it is not convenient to ride it out, walking will answer, in the arms of a careful nurse, carried on a pillow, with an umbrella to protect its eyes from the light.

When a child is taken sick in a city, removing it to the country often has a beneficial effect. Milk thickened with arrow root is good diet for children. Flour dried in an oven for several hours, and used to thicken milk or water, is also good, sweetened with loaf-sugar, and is nutritious. They should eat but a small portion of any thing at a time.

To cut slices of lean fresh beef or mutton, put it in a bowl, and pour a pint of boiling water on it, and let it set close to the fire for an hour, is very good to give children occasionally, with but little salt; the stomach will sometimes retain this when other things are rejected. As thirst is an attendant on this disease, much salt should be avoided in all their food. Every thing about a sick child

should be kept clean, and its clothes well aired before changing them. If it is too ill to carry out of doors, have it changed from one room to another, and the apartment it left well aired.

Children who are afflicted with this disease, sometimes crave fruit. Ripe peaches, fresh from the tree, or ripe apples, baked or roasted before the fire, may he occasionally administered in small quantities with perfect safety.

To make toast-water, the bread should be toasted on both sides very dry, and boiling water poured on it.

I hope these hints will be useful to persons that cannot procure a physician, which is often the case in the country.

Mustard Whey.

Boil a pint of milk, and the same of water, with an ounce and a half of bruised mustard seed, until the curd separates--when strain the whey. This is a most desirable way of administering mustard; it warms and invigorates the system, promotes the different secretions, and in the low state of nervous fevers, will often supply the place of wine. It is also of use in chronic rheumatism, palsy and dropsy.

Red Mixture.

Take sixteen grains of powdered rhubarb, thirty of soda, fifty of prepared chalk, and two drops of the oil of spearmint, mixed in a vial with two ounces of water; keep it corked up and shake it before giving a dose. A child of ten months old should take a tea-spoonful every three or four hours. If there is much pain, two drops of laudanum may be added to every other dose. A table-spoonful is a dose for a grown person.

Erysipelas.

The decoction of sarsaparilla has proved useful in cases of erysipelas. Take two ounces of sarsaparilla, one of sassafras, one of burdock root, and one of liquorice; boil them slowly in three pints of water, keeping it covered close, until reduced to one-half. Take two table-spoonsful four times a day.

While taking medicine for the erysipelas, meat and all strong food should be avoided, and every thing that has a tendency to inflame the blood. Dusting the parts affected, with rye or buckwheat flour, sometimes has a cooling effect, and bathing with camphor or spirits will allay the irritation.

Nettle rash is very much like erysipelas, and the same treatment is good for both. Slippery-elm bark, chipped, and let to stand in cold water till it becomes thick, is a very cooling drink. It may be filled up the second time. Barley water is also a suitable drink.

Erysipelas is frequently brought on by violent exercise, and the perspiration being checked too suddenly. Persons that have once had it, should avoid extremes of heat and cold, and pay strict attention to diet--not eating any thing that disagrees with them. All acids, particularly pickles, are improper.

The stomach should be cleansed by emetics. Small and frequent doses of senna and salts, if taken just at going to bed, will not occasion much sickness, and tend greatly to relieve the system of this unpleasant disease. Where the case is slight, the rhubarb pills sometimes give relief. The pores of those that are subject to it are generally open, and flannel should be worn all the year, to prevent too sudden a check of perspiration.

Magnesia, Charcoal and Salts.

Form a valuable compound for family use: one ounce of each mixed together, and put in a wide-mouthed bottle; it is useful for head-ache, or diseases of the skin. Cases of erysipelas have been cured by its continued use. Take a tea-spoonful of the mixture, in a little water two or three times a day, or on going to bed at night. Persons of sedentary occupations, that are in the habit of taking pills, will find it to their relief to use this simple remedy. It has been found beneficial in cases of tetter and ringworm in the head, using at the same time, as a wash on the part affected, borax dissolved in strong vinegar.

In cases of erysipelas, the "charcoal mixture" has been used with great benefit; it is excellent for purifying the blood. Take it in small doses for two or three weeks, then discontinue it, and take it again at intervals. If this medicine should be found unpleasant, take a tea-spoonful of jelly, or something of that kind after it. It will answer quite as well to keep the magnesia, charcoal and salts in separate bottles, and mix them just as you take the dose, taking about an even tea-spoonful of each.

For Dropsy.

Put a quarter of a pound of cream of tartar, and a pound of new nails, in a stone jug, with half a gallon of water, let it stand three or four days, occasionally shaking it; take a table spoonful three times a day, on an empty stomach, and half an hour after each dose, take two spoonsful of mustard seed or scraped horse-radish. If the swelling abates, you may take the medicine less frequently, or omit every other day, but do not leave it off until you are entirely cured. After it has stood some time, it becomes stronger, when you may put in more water. This has been highly recommended for the dropsy.

Another Remedy.

Take a quart of gin, put into it one handful of the white buds of the common pine; shake it frequently, and take half a wine glassful at a time, twice a day, about an hour before a meal, and occasionally eat a little brown mustard seed; this should be persevered in, and has been known to afford great relief, in two obstinate cases.

For Rheumatism

Persons are liable to have the rheumatism from taking cold in the winter. Where the pain is most violent, put on plasters of Burgundy pitch, spread on leather. Persons that are subject to it, should always keep pitch in the house to use, as it will give relief; a silk handkerchief tied round the joint, keeps it warm and relieves stiffness. If the pain is in the back part of the head, put a blister on the neck, by all means. When persons have a bad spell of rheumatism, they should always take medicine, and avoid eating meat for a few days. Equal parts of rhubarb and castile soap, made into pills, with a little water, is a valuable medicine for rheumatism, and suits aged persons; the pills should be taken at night on going to bed. They are easily made, and should always be at hand: it is valuable as a cathartic in almost every case where mild medicine is necessary. The use of the shower bath is also beneficial. Flannel should always be worn next the skin, and the feet kept dry. Bathing with camphor sometimes relieves the pain, but there is a danger of driving it to a more vital part. Salt and water is useful to bathe for the rheumatism, when it is of long-standing.

Deafness, Remarks, &c.

A remarkable case of deafness was cured by the following remedy: (An aged person, whose hearing had been very good, gradually became so deaf as not to be able to hear common conversation; after suffering some months, the patient thought of trying the following remedy:) of honey, brandy and sweet oil, each a tea-spoonful, warm and mix well together; sew a soft linen rag to the eye of a strong darning needle; dip this mop in the mixture while warm, and put it in the ear; hold it in till cold, when renew and move it gently about; by so doing, wax that had accumulated, hardened, and stopped the cavity, was discharged, and the hearing of the patient restored. Wool should be worn in the ears, and an occasional use of the mixture; also flannel round the head at night. A young person was relieved by the persevering use of the following remedies: Put a small blister of Spanish flies behind the ears, very high up on the hard part, so as to be clear of the leaders (or it will occasion pain); when drawn, dress them in the usual way, and as soon as healed renew them; repeat this several times, keeping wool in the ears dipped in sweet oil, and at night put in small pieces of fat bacon that has been boiled, and tie a handkerchief around to keep them warm. When the blisters are healed, the hair should be cut short, to enable the patient to bathe the head in cold water, which should be poured from a pitcher; begin with it a little warm and gradually get it colder; this should be persevered in, even in cold weather; wipe the head and tie it up till dry. I have been induced to make these remedies public, by seeing several interesting young persons suffering from deafness, with a hope that they may be of use.

Remedy for Sick Head-ache.

A table-spoonful of table salt; dissolved in a pint of water, as warm as you can drink it; take at two doses, and drink freely of luke-warm water, until it causes vomiting; put a hot brick to the feet, and avoid the air, which will check the perspiration.

The Oil of Butter. _A Remedy for Dysentery, &c._

Put half a pound of fresh butter in a quart of boiling water, to extract the salt; let it melt and boil up. If there should be any curds on the top, take them off, then skim off the clear butter, and keep it covered by the fire; give from one to two table-spoonsful at a time, three or four times a day.

This is useful in cases of dysentery, and is also soothing to the stomach, after violent vomiting for a long time. Sometimes a plaster of mustard put on the stomach stops vomiting.

For Dysentery and Diarrhoea.

The following prescription from an eminent physician has proved valuable: Take of calcined magnesia two drachms, of aromatic spirits of ammonia two and a half drachms, of water half a pint, mix well together, and as a dose for a grown person, give a table-spoonful every half hour until relieved.

Some country nurses recommend dittany tea, or spice-wood berries boiled in new milk. A large poultice on the stomach and bowels, made of new milk, thickened with light bread, has given relief--keeping it warm.

Be careful to keep the patient's feet warm, and to bathe the back and stomach with spirits. Where the dittany and spice-wood cannot be obtained, other aromatics, as cinnamon and cloves, are good substitutes.

Remedies for the Dysentery and Cholera Morbus.

Take the roots of the low running blackberry or dewberry; make a strong tea; sweeten it, and drink it occasionally. Take a large apple; cut out the core, and wrap in wet paper; cover it up in hot ashes, and when cooked, take off the paper and eat it cold.

Take one pint of good hard cider, that is entirely sound, put a table-spoonful of hot ashes into it, and stir it as soon as it settles; take a table-spoonful once every hour for a grown person, until relief is obtained.

Remedy for the Ear-ache.

Mix a few drops of French brandy with sweet oil and a drop of laudanum, and pour it in the ear a little warm.

Another valuable remedy is to take a few wood lice, and stew them in a little lard, (which should be very pure,) for three or four minutes; then strain it and pour some in the ear before it gets cool.

This gives almost immediate relief. The heart of a roasted onion put warm in the ear, and tie around the head a silk handkerchief, has given relief.

A Wash for Sore Ears.

Make a tea of the black or candle-alder, wet a soft rag with it, and lay it on; it should be applied three times a day, and occasionally wash it with castile soap and water. The patient should take a mild purgative. If the ears are very much inflamed, there should be a bread and milk poultice put on occasionally. Elder ointment is also beneficial.

Weak Eyes.

Make a strong decoction of chamomile flowers, by boiling them in new milk; with this bathe the eyes several times a day--continue it for several weeks; to bathe the eyes in cold water before going to rest, is also good. Pure rye whiskey is very good to bathe weak eyes. Persons that are afflicted with sore eyes, have often been benefitted by putting a small blister behind the ears, very high up on the hard part, so as to avoid the leaders. Infants should not be exposed to the light too soon; it sometimes weakens the sight and seriously injures the eyes. The pith of sassafras put in water, is good to bathe inflamed eyes; a decoction of young hyson tea is also used with benefit. Persons afflicted with weak eyes should avoid a strong light, and should not strain their eyes with reading or sewing at night. I have known small doses of "charcoal mixture," relieve the eyes when there was slight inflammation. Attention to diet is necessary. Fold a linen handkerchief, dip it in cold water, and bind it over the eyes at night on retiring, and you will experience relief. Pain in the eyeballs is also relieved, by gently rubbing the finger and thumb over the lids towards the nose. This was published some years since, and I have known it give relief and strengthen the eyes.

For Worms.

Equal parts of salt and sugar, taken while fasting, are good for worms; a tea-spoonful is sufficient for a child two years old; to take half a cup of chamomile, rue or wormwood tea, with a little sugar, two hours before breakfast, is also good. Give a dose of senna after they have been taking this three days. It is very important to bruise garlic and rue, to apply to the stomach; put it in a bag, and wet it with spirits every day. The garlic and rue is said to keep the worms out of the stomach. Wormseed oil, a few drops at a time,

has given relief, but should be used cautiously. Old cheese grated and given to a child, has been known to afford relief: it is also beneficial when a child is seized with sudden illness from having eaten too many cherries.

For Tooth-ache.

Reduce two drachms of alum to a very fine powder, and mix with it seven drachms of nitrous spirits of ether; apply it to the tooth. Alum burnt on a hot shovel, and powdered, is sometimes good; also half a drop of the oil of cinnamon, on a piece of cotton or lint, where the tooth is hollow. Cayenne pepper on cotton, and moistened with spirits of camphor, has been known to afford relief. A poultice of hops applied to the cheek, or a piece of raw cotton with red pepper dusted on it, or a mustard plaster, will relieve a swelling which proceeds from tooth-ache.

Cure for Cholera Morbus.

Put a table-spoonful of hot ashes in half a pint of good hard cider, and give the patient three table-spoonsful of it at a time. This has given relief in half an hour.

Another cure is to take a soft cork and hum it thoroughly; when it ceases to blaze, powder the coal very fine on a plate. Mix a table-spoonful of this powder with a little milk or water, or any thing agreeable to the palate; repeat the dose till the disorder ceases, which it generally does after two or three doses. This has given relief to a person in the greatest agony with the bilious colic.

For Colic.

Drink strong ginger tea, while hot, and put hot bricks to the stomach and feet; if this does not give relief, take a dose of rhubarb or castor oil. Persons subject to the colic should keep a piece of ginger about them to chew after eating; wear flannel next the skin, and be careful to keep the feet dry: they should avoid strong coffee and tea, and eat nothing that disagrees with them. Dry toast without butter, and crackers, are good for persons that have the colic. For violent cases, take two table-spoonsful of brandy, and half a tea-spoonful of black pepper.

For Bilious Colic and Indigestion.

Pour three quarts of boiling water on a quart of hickory ashes and a tea-cup of soot; let it stand a day, then filter it, and if the complaint is bad, take a wine-glassful before and after each meal. This has been very beneficial to persons with the above complaint.

Warner's Cordial for Gout in the Stomach.

Take one ounce of rhubarb, two drachms of senna, two of fennel seed, two of coriander seed, one of saffron, and one of liquorice; stone and cut half a pound of good raisins, and put all in a quart of good spirits; let it stand in a warm place for ten days, shaking it every day; then strain it off and add a pint more spirits to the same ingredients; when all the strength is extracted, strain it and mix the first and last together. Take from two to four spoonsful of this cordial in as much boiling water as will make it as hot as you can take it; if the pain is not removed in half an hour, repeat the dose, and if your stomach will not retain it, add ten drops of laudanum.

Dr. Warner remarks, "after twenty years' experience of this medicine in myself and others, it is impossible for me to speak of it in terms higher than it deserves. When the vital parts are affected, persons subject to the gout should never sleep without it in their chamber."

Cure for Tetter.

Take one tea-spoonful of powdered Spanish flies, put them in half a pint of French brandy; wash the part affected occasionally. This has been highly recommended to me, as a remedy for tetter on the hands, but I have never seen it tried.

For Cramp in the Stomach.

Dissolve a tea-spoonful of table salt, in a tea-cup of warm water; if this does not stop the vomiting and cramp, repeat the dose; this is very useful in stopping the operation of an emetic, when it has continued too long. Flannel cloths dipped in hot spirits, and sprinkled with cayenne pepper, and applied to the stomach, sometimes relieves the pain; a mustard plaster is also of use.

For Cramp.

A foot-board to the bedstead is of great service, when you are taken with the cramp in the night, and by placing the foot against it, will sometimes give relief. Another remedy is to tie a string round the limb, between the body and the pain, about as tight as a physician does to draw blood; wear a bandage filled with pounded brimstone round the limb, to prevent a return of it. Sometimes to hold a roll of brimstone in each hand will relieve the cramp, and persons subject to it should keep some by the bed-side to use in the night.

For Scalds and Burns.

When persons are badly scalded or burned, to put raw cotton on immediately, and wet it with spirits, is very good; other remedies are, linseed oil and lime water; starch and cream; scraped potatoes, molasses, and eggs beaten up and put on immediately. Almost any thing will relieve the pain, that excludes the air. Be careful not to break the skin, as it will be longer in healing.

If a foot is scalded, pour cold water over it and cut the stocking. You should be careful to use linen rags about a burn, as cotton rags cause irritation.

After the place begins to heal up, a salve may be applied, made of equal parts of Burgundy pitch, beeswax, sheep's tallow, and sweet oil, melted together over the fire; renew it twice a day, washing the place each time with milk and water, and a little castile soap. A wash of weak sugar of lead water, is also good for burns. A poultice of powdered elm bark mixed with water, and put on frequently, wetting the sore with thick cream, is also soothing; be careful that the limb does not contract, as there is great danger if the sinews are affected. If there should be fever, a mild cathartic should be given. "Comstock's Pain Extractor" sometimes gives great relief; you may also apply immediately, with benefit, a tea-spoonful of air-slaked lime and a table-spoonful of lard; sift the lime and rub them well together. For a burn by vitriol or any caustic substance, apply whites of eggs mixed with powdered chalk, putting it on with a feather. Linen rags dipped in cold water and changed every few minutes, I have known applied day and night to give relief to a bad burn on the foot; but avoid putting the foot in water, although it gives present relief, it is dangerous.

For Ague.

Take half an ounce of coarsely powdered race ginger, infused in three gills of boiling water; when cool, strain and sweeten it; and for a dose give a heaped tea-spoonful of Peruvian bark, in a wine-glassful of the ginger tea, every two hours during the absence of the fever. To one ounce of best Peruvian bark, add two ounces of cloves powdered, and a half an ounce of cream of tartar; mix them well, and give two tea-spoonsful at a time every two hours: when clear of fever, begin at four in the morning, and give it until twelve at noon. Wormwood seed, a heaped tea-spoonful in a cup of water, as a dose, is also good. A third recipe is to take two ounces of best Lima bark, twelve heaped tea-spoonsful of magnesia, to be well mixed together, and divided into twelve doses. Take four doses on each well day, at intervals of four hours each, this has cured a number who had suffered with ague a long time.

Chilblains.

Put as much alum in hot water as will make it very strong, put the feet in when it is as hot as can be borne, and keep them in till it is cold, warm it over, and soak them every evening till they are entirely cured, by beginning in time, it need only be applied two or three times.

When blisters are formed, take one ounce of camphor, one of sheep's tallow, and one of sweet oil, stew them together gently till it becomes an ointment, and rub the feet with it.

Take an ounce of glue, and melt it in a pint of hot water over the fire, stir it until the glue is dissolved, pour it out and dip the part that is affected in this dilution until the uneasiness or burning is allayed, which is mostly in a few minutes.

Lockjaw.

If lock-jaw is apprehended from a scratch or wound, bathe the injured part frequently with weak ley, or warm pearl ash water, make a poultice by boiling bitter herbs in weak ley, and thicken it with corn-meal; put a little grease in just as you put it on. Bacon skin and the rind of fresh pork bound tightly on, are said to be good.

Falls.

If a child receives a fall, examine every part, and rub your hand on its back to tell if any part is injured. There are instances of persons being cripples for life, from receiving a hurt, that was not known of at the time. To rub with camphor and sweet oil, and bathe the child in warm water, is soothing.

For the Bite of a Spider.

Moisten a slice of wheat bread with sugar of lead, or pearl-ash water; bind it on, and keep wetting it as it becomes dry. If the place swells very much, take a table-spoonful of sweet oil every hour, till it is relieved. To drink water with salaeratus dissolved in it has been useful.

For the Sting of a Bee.

Rub the place with hartshorn or salaeratus water, immediately after it is stung, to prevent it from swelling; bruised peach leaves bound on, are also good, and laudanum, where it is very painful. If it swells very much, apply a poultice of onions and cream, or ley and bitter herbs.

For Bruises.

The oil of St. Johnswort applied on lint, is an excellent remedy for bruises, and if used immediately will prevent the blood from settling on the place; when children get their fingers or toes mashed, this is very good, and soon gives relief; salt butter is also very good. The leaves of the Jamestown weed, mashed with cream, are good for a stone-bruise.

For Felons.

Make a poultice of quick lime slaked in soft soap, and bind it on the finger; renew it every half hour. The leaves of Jamestown weed, bruised with cream or lard, are also good. Also, roast coarse salt in a piece of wet brown paper, or a cabbage leaf, about twenty minutes; when cool, pound it and mix it with resin soap; bind it on the felon; it is said to be a certain cure. The white of egg, with unslaked lime, has been known to give immediate relief.

For a Sprained Limb.

Strong vinegar and salt, put on brown paper, will soon cure a slight sprain, if applied frequently. If very painful, a bath should be made of bitter herbs, bran and vinegar, put on as hot as you can bear it. Great care should be taken not to use the limb too soon after it has been sprained. Some sprains of several months' standing have been greatly relieved by taking several electric shocks a day. St. Johnswort oil is good to rub on a sprained limb.

For a Sprained Ancle.

Of chalk, soft soap, salt, and brandy, take a spoonful each, and add the white of an egg; beat the mixture, and spread it on raw cotton, and apply it at once, when it will generally afford relief; and after repeatedly changing, it may be left off in twenty-four hours. The ancle is often weak when recovering, and benefit is derived from pouring cold water on it from a pitcher held high above you. Tallow and salt, mixed and spread on a piece of muslin, are good for a sprain.

Cuts or Wounds, &c.

When cuts bleed very much, tie a handkerchief tight above the wound, or place a finger on it until you can get a physician: in the country, persons should be supplied with a surgical needle and adhesive plaster, and have lint scraped and linen rags in a convenient place. Balsam apple put in a bottle when fresh, and whiskey poured on it, is an excellent application for fresh cute or bruises. For the stick of a needle or pin, try to make it bleed, and hold the finger in strong vinegar and salt, as hot as you can bear it, this will prevent a gathering. A mashed finger should be held in hot water a few minutes. No. 6 is a most valuable remedy for cuts or wounds; bind a linen rag over the cut, and pour on the No. 6.

For Tetter, Warts, &c.

Dig up the pocoon root that grows in the woods, wash and slice it, and put it in a bottle with strong vinegar; bathe the parts with it several times a day. Celandine root is also good, used in the same way, and either of them will remove warts and ringworms.

Poisons, Accidents, &c.

These are valuable remedies, and should hold a place in the memory of every one, if possible.

Mix a spoonful of powdered mustard in a tumbler of warm water, and drink it immediately; it acts as an emetic, and has proved effectual where an ounce of poison had been taken into the stomach. Where the skin is poisoned, use a wash of smartweed steeped in water, or mix soot and cream, and apply it frequently; bruised Jamestown weed and cream is also good. If you have been exposed to poisonous plants, wash your face and hands immediately in salt and vinegar, or salt and water. When "corrosive sublimate," has been swallowed, the whites of two eggs taken immediately will neutralize the poison, and change the effect to that of a dose of calomel.

Persons struck by lightning should be laid on the ground, and pour water over them till life is restored. When "oil of vitriol" or "aqua fortis" have been swallowed in large quantities, sweet oil should he taken, (as much as can be retained on the stomach.) For "oxalic acid," give magnesia or chalk and water.

For "tartar emetic," give Peruvian bark and water, (or a strong decoction of green tea, if you have not the bark.) For "saltpetre," give an emetic of mustard seed with water, and afterwards elm bark mucilage, and small doses of laudanum. This is also good in cases where arsenic has been swallowed.

When a child has swallowed a cent, pin or needle, give it the white of egg immediately; this forms a coating round the metal, and prevents injury in most cases; then give moderate doses of medicine, such as castor oil or salts.

When a fish bone has been swallowed, take the white of an egg, which will help to carry it down the throat; also cut a hard crust of bread.

Insects taken into the stomach, may generally be destroyed by taking a small quantity of vinegar and salt. When insects get into the ears, use a little salad oil, or melted lard.

Tar Ointment for the "Milk Crust."

Take a quarter of a pound of lard, and the same of sheep's tallow, three table-spoonsful of tar, an even spoonful of sulphur, an ounce of white turpentine, a lump of beeswax the size of a hickory-nut, the same quantity of powdered resin and scraped chalk, a tea-cupful of the inside bark of elder, a little celandine, southern wood, and English mallows; bruise the herbs, and put them on to boil, with the lard and tallow, and a little water to keep it from burning; when all the strength is out, strain them, and put the grease back in the pot, with the tar, and add the other ingredients a little at a time, and stir till all is melted; then strain it in a jar, and keep it covered for use.

Tar ointment is good for ringworms in the head, which some children have, and has cured children where the head and face was covered with what is called the "milk crust."

Before it is applied, the place should be washed with milk and water, and a gentle purgative should be administered occasionally. Rhubarb tea is good for this purpose.

If it is wanted in the winter, when you cannot get all the herbs green, dried ones will do; and when made, it will keep good several years.

If there is much hair on the head of a child, it should be cut off before this is put on.

It is very dangerous to give infants that are affected with the milk crust, calomel, or any strong medicine. They should he carried out in the air occasionally, and not kept all the time in a warm nursery; sometimes a change of food is attended with a good result.

There have been instances of infants dying very suddenly, where powerful medicines had been administered.

Hop Ointment.

Take a table-spoonful of the yellow dust of hops, and put it in three spoonsful of melted lard, and mix it well; put it away in a cup for use. This has proved beneficial in cases of swelling of the breast; when cold has been taken, it will sometimes backen gatherings; bathe the place with a warm hand several times a day, and keep flannel over it. Young mothers should keep this ready, as it is much better than preparations of camphor, which are injurious.

Precipitate Ointment, &c.

Take one ounce of Venice turpentine, half an ounce of powdered precipitate, half a pound of lard, and two table-spoonsful of cold water; mix the turpentine and precipitate together with a knife; then add the lard and water, a little at a time, till it is well mixed; then put it in little boxes. This is useful to dry up a breaking out on the face or hands; care should be taken while using it, not to take cold.

Camphor dissolved in alcohol, or any white spirits, is very good to use on pimples on the face.

Blister Ointment.

Sometimes after a blister has been drawn with cabbage leaves, it becomes very sore and inflamed; a salve may be made of the leaves of evergreen, (a plant which grows in gardens with a thick leaf;) pound the leaves, and stew them in cream or sweet lard; spread it on a fine linen rag, and apply it to the blister after it has been washed with milk and water.

Another salve for blisters is to bruise the leaves of the English mallows with a little southern wood; stew them in sweet lard until they are crisp, and strain it; apply it three times a day. This is good to heal a burn.

Lily Ointment.

Gather the flowers of the sweet white lily, while they are fresh, and stew them in sweet lard. This is good for a swelling, or sore.

Elder Ointment for Burns, &c.

After peeling off the outside bark of the elder, scraps off the green bark that is under, and stew it in lard till it is crisp; then strain it in a jar, and put it away to heal a blister or burn, or an old sore.

St. Johnswort Ointment, and its Uses.

Gather the yellow flowers of St. Johnswort while in full bloom; put them in a wide-mouthed bottle, and fill it with equal quantities of lard and sweet oil; tie a skin over it, and hang it in the sun for a month; then strain it, put it back in the bottle, and cork it up. This is one of the most effectual remedies for bruises, or for a mashed foot or hand. It should always be kept where there is a family of children.

Ointment for Mortification.

Take the berries, leaves and bark of the black alder, and bruise them well in a mortar; stew them in lard for an hour, stirring all the time; then strain it, and add a small piece of beeswax.

A poultice can be made for mortification, of the berries, leaves and bark of black alder, boiled in sweet cream, and thickened with wheat bread.

Another good poultice may be made of the inmost bark of sassafras root, pounded and boiled in weak ley, and thickened with corn meal. The patient should drink tea made of the roots of sassafras and burdock.

Bread and Milk, and Flaxseed Poultices.

Boil half a pint of sweet milk, and thicken it with crumbs of bread; let it boil till soft. This is the mildest poultice that can be made.

A tea-cup of flaxseed boiled till soft, requires no addition to make a good poultice.

Hop Poultice, and its Uses.

Boil a handful of hops in a pint of water till very soft; when thicken it with corn meal. This is very good for a sore throat, tooth-ache, or swelled face.

Onion Poultice.

Slice the onions and boil them in water till very soft; then mash and boil them with milk and some crumbs of bread. This will draw a bile or gathering to a head very soon.

Lily Root Poultice.

Pound the roots of the sweet white lily, and put them on to boil in rich milk; when soft, thicken it with crumbs of bread. This is a most valuable poultice for a gathering, and has given relief in many instances where the suffering was great.

Cream Poultice.

Put to boil a tea-cup of cream; mix two spoonsful of flour in milk, and stir in when it boils.

Ley Poultice.

Tie a spoonful of ashes in a rag, and boil it in a pint of water for fifteen minutes, with some catnip or life-everlasting; when the herbs are soft, take out the ashes, and thicken it with corn meal; spread some grease over as you apply it.

Adhesive Plaster.

Take three pounds of resin, one-quarter of a pound of beeswax, one-quarter of a pound of mutton tallow, melt together in an iron pan; then pour out about one-third into a bucket of water, turn up the edges until you can take hold with the hands and pull it as you would shoemakers' wax: grease papers and put the plaster on them for use; you may then pour out the rest and treat it in the same way.

A Valuable Salve for Burns and other Sores.

Take of high mallows, heal-all, night shade, and elder bark, a large handful, and about half the quantity of Jamestown weed; boil them for several hours; strain off the liquid, and add to it one pound of beeswax, one pound of mutton tallow, one pound of resin, half a pound of lard; boil them slowly for about two hours, and let it cool on the liquid. This salve will do to apply immediately to a burn or scald, or after other remedies have been used; it is also good to heal old sores or gatherings.

Deshler's Salve for Gatherings or Sores.

Take half a pound of sheep's suet, the same of resin and beeswax, a quarter of a pound of thick turpentine, and half a pint of linseed oil; pound the resin, and cut the beeswax and suet; put them over the fire with the other ingredients, and keep stirring till they are mixed, but do not let them boil; put it in a jar, and tie it up. It is good for burns, biles, gathered breasts, &c.

Salve for Corns, or Bunions.

Take a pint of sweet oil, half a pound of red lead, two ounces of Venice turpentine, two of beeswax, and one of white turpentine; boil the oil and red lead in brass or bell-metal till they turn brown, stirring it constantly; have the wax and white turpentine sliced, and put them in by degrees; take it off the fire, and stir till all is melted; then add the Venice turpentine, and continue to stir till it is cold; when dip your hands in cold water, and make it out in rolls about two inches long; wrap each roll up in paper, and keep them in a box. After soaking and scraping the corn, bind it on, spread on a soft rag. To warm a small piece of common adhesive plaster and apply it, gives almost immediate relief.

Sassafras Poultice.

Take the bark of the root and mash, or pound it; boil it in a little water, and take out the bark, and thicken it with crumbs of bread, and milk.

Balsam Apple in Spirits.

Cut a ripe balsam apple in small pieces, and fill a bottle with it; pour Holland gin on it.

This retains its strength for years, and is useful to take a few drops at a time for the colic; it is also valuable to apply with sugar to a cut or wound.

Cure for Bites.

Use equal quantities of resin soap, brown sugar, and powdered resin, worked well together, with a few drops of molasses. A poultice of onions, sassafras, or bread and milk may be used with advantage. For mosquito bites, apply spirits of hartshorn and camphor.

For Scurvy of the Gums.

Take a quarter of an ounce of bark, and a piece of new lime the size of a hazle-nut; put them in a bottle with half a pint of water; wash the mouth with this three times a day.

For an Infant's Sore Mouth.

Make a strong sage tea; put in a little bark and borax or alum, with honey to sweeten it; cork it up in a vial, and wash the child's gums with it three times a day, using a fresh rag every time.

For Affection of the Kidneys.

Boil some onions soft, mash, and apply them where the pain is seated. This has given great relief.

For a Gathering on a Finger.

Mix together equal parts of castile soap and chalk; wet it with camphor, and bind it on, or dip the finger in honey and camphorated spirits, as hot as you can bear. A little burnt alum put on lint is good; also a bread and milk poultice, with pounded sassafras root stewed in it, and renewed frequently. Honey and camphor mixed is useful for gatherings that have been of long standing.

Take of the following ingredients a tea-spoonful each: black pepper powdered finely, ginger, spirits of camphor, laudanum, and honey; beat them well with the yelk of an egg, and thicken with rye flour, or if you cannot obtain rye, corn and wheat flour mixed will answer; this will form a soft poultice, and should be applied in sufficient quantity to keep moist, and changed once a day. I have known this to cure several gatherings that threatened to be severe.

Huxham's Bark Tincture.

Take two ounces of bark, three drachms of Virginia snake root, one ounce of orange peel, and one quart of good spirits; set it in a warm place, and shake it daily for two weeks; then pour it off, and add a pint more spirits to the ingredients.

This is very useful to take, when recovering from the ague or bilious fever, or in the fall of the year; when these are apprehended, take two tea-spoonsful a day, before breakfast and dinner.

Wine Bitters for Debility, &c.

Take two ounces of chamomile flowers, two of centaury flowers, one of iron filings, and an ounce and a half of Jesuit's bark; put these in two quarts of good wine, and set it in the sun three days, shaking; it frequently. Half a wine-glass of this taken, twice a day, with water, is useful in cases of debility, where there is no fever.

Chamomile, and wormwood teas, are both excellent tonics, as is also wild cherry tree bark, made in strong tea, and taken cold.

Spice Wood Berries.

Boil in a pint of new milk, a table-spoonful of bruised spice wood berries. This has a very healing effect in cases of dysentery, and summer disease in children.

Spiced Rhubarb.

Take two ounces of rhubarb, half an ounce of cloves, the same of cinnamon, and quarter of an ounce of mace; stew them in a pint and a half of water till one half is evaporated; then strain it and add half a pint of good spirits. Two tea-spoonsful is a dose for a child a year old, with the summer disease, and two table-spoonsful for a grown person.

For Chapped Lips.

Put a tea-cupful of rich cream over some coals to stew with three table-spoonsful of powdered loaf-sugar. This has a healing effect.

Another remedy, equally good, is to a tea-cupful of honey, add half the quantity of mutton tallow, and stew together till well mixed; pour it out in a cup, and keep stirring till cold.

For chapped hands, mix together equal quantities of rich cream and strong vinegar, and rub it over every time you wash your hands.

Bathing.

Almost every family, even if their circumstances be moderate, can have a shower bath; they may save the expense, by improved health and strength; one bucket full of cold water is sufficient. You should wear on the head an oil-cloth cap. For a person in strong health, the bath may be taken on first rising in the morning; but for one disposed to be delicate, two or three hours after breakfast is the most proper time. To produce warmth, rub the person with a crash towel, or horse hair glove. You should be careful to take some exercise after the bath, or you will be more liable to take cold. Never take a bath soon after a meal, as that is injurious. Persons subject to colds, sore throat, rheumatism, sick head-ache, nervous disease, or general debility, have been greatly benefited by the daily use of the shower bath. Children that are oppressed with heat are much refreshed, and will rest well after a bath; the water should be moderated for them. Infants should be bathed every morning in a tub of water about milk warm, and may be very early accustomed to its use; they will become fond of it, and are less liable to take cold from exposure to the air. They generally take a refreshing nap after coming out of the bath. They should not be allowed to remain in more than five or ten minutes; should be well wiped with a soft towel, and then rubbed with flannel and dressed; their clothes being warmed to prevent a chill.

Elderberry Jam for Colds, &c.

A quart of nicely picked elderberries, to a pound of loaf-sugar and a tea-cup of water; let them boil slowly for an hour. If you prefer it without the seeds, strain the berries after boiling them for a few minutes, before you add the sugar. This is useful and agreeable for colds, taken through the day, or at night, when the cough is troublesome. It is said also to purify the blood, and is taken to prevent erysipelas.

Black Currant Jelly, a Remedy for Sore Throat.

Take ripe black currants, mash and strain them, and to every pint of the juice, add a pound of loaf-sugar; boil it until it becomes a jelly. It is valuable for sore throats.

Quince seeds dried, and boiling water poured on them, make a useful gargle for sore throat.

Lavender Compound.

Pick the lavender blossoms, and put them in a bottle, with a few blades of mace, and some cloves; fill up the bottle with good spirits, and let it stand corked up, till all the strength is extracted; when strain it off, and color it with a little cochineal.

FOOD FOR THE SICK.

Remarks on Preparing Food for the Sick.

Few young persons understand cooking for the sick. It is very important to know how to prepare their food in an inviting manner; every thing should be perfectly clean and nice. Avoid giving an invalid any thing out of a cup that has been used before; even if it is medicine, it will not be so hard to take out of a clean cup. It is well to have a stand or small table by the bed-side, that you can set any thing on. A small silver strainer that will just fit over a tumbler or tea-cup, is very useful to strain lemonade, panada or herb tea.

If you want any thing to use through the night, you should prepare it, if possible, beforehand; as a person that is sick, can sometimes fall asleep without knowing it, if the room is _kept perfectly still._

Boiled Custard.

Beat an egg with a heaped tea-spoonful of sugar; stir it into a tea-cupful of boiling milk, and stir till it is thick; pour it in a bowl on a slice of toast cut up, and grate a little nutmeg over.

Panada.

Put some crackers, crusts of dry bread or dried rusk, in a sauce-pan with cold water, and a few raisins; after it has boiled half an hour, put in sugar, nutmeg, and half a glass of wine, if the patient has no fever.

If you have dried rusk, it is a quicker way to put the rusk in a bowl with some sugar, and pour boiling water on it out of the tea-kettle. If the patient can take nothing but liquids, this makes a good drink when strained.

Egg Panada.

Boil a handful of good raisins in a quart of water; toast a slice of bread and cut it up; beat two eggs with a spoonful of sugar, and mix it with the bread; when the raisins are done, pour them on the toast and eggs, stirring all the time; season to your taste with wine, nutmeg and butter.

Oat-meal Gruel.

Mix two spoonsful of oat-meal, with as much water as will mix it easily, and stir it in a pint of boiling water in a sauce-pan until perfectly smooth; let it boil a few minutes; season it with sugar and nutmeg, and pour it out on a slice of bread toasted and cut up, or some dried rusk. If the patient should like them, you can put in a few raisins, stoned and cut up. This will keep good a day, and if nicely warmed over, is as good as when fresh.

Corn Gruel.

Mix two spoonsful of sifted corn-meal in some water; have a clean skillet with a pint of boiling water in it; stir it in, and when done, season it with salt to your taste, or sugar, if you prefer it;

Arrow-root.

Moisten two tea-spoonsful of powdered arrow-root with water, and rub it smooth with a spoon; then pour on half a pint of boiling water; season it with lemon juice, or wine and nutmeg. In cooking arrow-root for children, it is a very good way to make it very thick, and thin it afterwards with milk.

Sago.

Wash, the sago, (allowing two table-spoonsful to a quart of water,) and soak it an hour; boil it slowly till it thickens; sweeten it with loaf-sugar, and season it with wine or lemon juice.

Tapioca Jelly.

Wash the tapioca well, and let it soak for several hours in cold water; put it in a sauce-pan with the same water, and let it boil slowly till it is clear and thick; then season it with wine and loaf-sugar. The pearl tapioca will require less time to soak, and no washing. Allow three table-spoonsful of tapioca to a quart of water.

Milk Porridge.

Put half a pint of milk, and the same of water, in a sauce-pan to boil; mix two spoonsful of wheat flour in milk till very smooth, and stir in when it boils; keep stirring it five minutes, when pour it in a bowl and season with salt.

Barley Water.

Boil two table-spoonsful of barley in a quart of water; it is a cooling drink in fevers. If the weather is cold, you can make a larger quantity. Some boil whole raisins with barley; take it with or without seasoning.

To Poach Eggs.

Put a pint of water in a clean skillet, with a little butter and salt; when it boils, break two eggs in a plate, and put them in; in about a minute, take them up on a plate, in which there is a slice of bread toasted and buttered. This is a very delicate way of cooking eggs.

Barley Panada.

Boil a small tea-cup of barley in water till it is soft, with a tea-cup of raisins; put in nutmeg and sugar, and break in it toast or dried rusk.

Calf's Foot Blancmange.

Put a set of nicely cleaned feet in four quarts of water, and let it boil more than half away; strain through a colander, and when it is cold, scrape off all the fat, and take out that which settles at the bottom; put it in a sauce-pan, with a quart of new milk, sugar to your taste, lemon peel and juice, and cinnamon or mace; let it boil ten minutes and strain it; wet your moulds, and when it is nearly cold put it in them; when it is cold and stiff it can be turned out on a plate, and eaten with or without cream. This is very nice for a sick person, and is easily made.

Cream Toast.

Cut a slice of stale bread, and wet it with cream; toast it slowly and butter it; this is very nice for an invalid, and an agreeable change.

Milk Toast &c.

Boil a tea-cup of milk, and put in a spoonful of butter; toast a slice of bread and moisten it with water, then pour on the boiling milk. This is very good for sick persons, and can be eaten without much exertion. In making water-toast, the butter should be melted in boiling water, and put on while hot.

To Stew Dried Beef.

Chip some beef very thin, pour hot water on it, and let it stand a minute or two, then drain it off, and stew it in a skillet with a little cream and butter. If it is preferred dry, it may be fried in butter alone.

To Stew Ham, &c.

Cut a slice of ham into small pieces, and pour boiling water on it; let it soak a few minutes to extract the salt, and stew it in a little water; just before it is done, put in some cream and parsley.

If you broil ham that is uncooked, it should always be soaked in water a few minutes.

To Stew Chickens or Birds.

When sick persons are tired of broiled chickens, or birds, it is well to stew them for a change; the wing, with part of the breast of a chicken, will make a meal; stew it in a little water, and put in parsley, cream, pepper and salt, just as it is done.

Chicken Water.

If you have a small chicken, it will take half of it to make a pint of chicken water. Cut it up and put it to boil in a covered skillet with a quart of water; when it has boiled down to a pint, take it up, and put in a little salt and slice of toasted bread. This is valuable in cases of dysentery and cholera morbus, particularly when made of old fowls.

Beef Feet.

Soak the feet and have them nicely cleaned; boil them slowly, and take off the scum as it rises; when they are soft and tender, take them up, and separate the bones from the glutinous part, which is very nice for a sick person, and conveys nutriment in a form that will hardly disagree with the most delicate stomach, and has been, taken when nearly all other food was rejected; a few drops of vinegar, and a little salt, renders it more palatable.

Beef Tea, &c.

Take a piece of juicy beef, without any fat, cut it in small pieces, bruise it till tender, put it in a wide-mouthed bottle, and cork it tight; put this in a pot of cold water, set it over the fire, and let it boil an hour or more.

When a person can take but a small quantity of nourishment, this is very good. Mutton may be done in the same way.

Mutton and Veal Broth.

Boil a piece of mutton till it comes to pieces; then strain the broth, and let it get cold, so that the fat will rise, which must be taken off; then warm it, and put in a little salt. Veal broth may be made in the same way, and is more delicate for sick persons.

Wine Whey.

Boil a pint of milk, and put to it a glass of white wine; set it over the fire till it just boils again, then set it off till the curd has settled, when strain it, and sweeten to your taste.

Rennet Whey.

Warm a pint of milk, but do not let it get too hot, or it will spoil the taste of the whey. Wash the salt from a piece of rennet the size of a dollar, and put it in the milk; when it turns, take out the rennet; wash and put it in a cup of water, and it will do to use again to make whey. If you have rennet in a bottle of wine, two tea-spoonsful of it will make a quart of whey; but if the person has fever, it is best to make it without wine.

Mulled Jelly.

Take a table-spoonful of currant or grape jelly, and beat with it the white of an egg, and a little loaf-sugar; pour on it half a pint of boiling water, and break in a slice of dry toast, or two crackers.

Mulled Wine.

Beat together an egg, a glass of wine, and a spoonful of sugar; pour on it half a pint of hot water; stir all the time to keep it from curdling, and when you pour it in a tumbler, grate a little nutmeg over it.

Toast Water.

Cut slices of bread very thin, and toast dry, but do not let it burn; put it in a pitcher, and pour boiling water on it. Toast water will allay thirst better than almost any thing else. If it is wanted to drink through the night, it should always be made early in the evening.

Apple Water, &c.

Roast two apples, mash them and pour a pint of water on them; or slice raw apples, and pour boiling water on them.

Tamarinds, currant or grape jelly, cranberries, or dried fruit of any kind, make a good drink.

Coffee.

Sick persons should have their coffee made separate from the family, as standing in the tin pot spoils the flavor. Put two tea-spoonsful of ground coffee in a small mug, and pour boiling water on it; let it set by the fire to settle, and pour it off in a cup, with sugar and cream. Care should be taken that there are no burnt grains.

Chocolate.

To make a cup of chocolate, grate a large tea-spoonful in a mug, and pour a tea-cup of boiling water on it; let it stand covered by the fire a few minutes, when you can put in sugar and cream.

Black Tea.

Black tea is much more suitable than green for sick persons, as it does not affect the nerves. Pat a tea-spoonful in a pot that will hold about two cups, and pour boiling water on it. Let it set by the fire to draw five or ten minutes.

Rye Mush.

This is a nourishing and light diet for the sick, and is by some preferred to mush made of Indian meal. Four large spoonsful of rye flour mixed smooth in a little water, and stirred in a pint of boiling water; let it boil twenty minutes, stirring frequently. Nervous persons who sleep badly, rest much better after a supper of corn, or rye mush, than if they take tea or coffee.

DOMESTICS.

Hints on the Management of Domestics, &c.

Some families are always changing their domestics, and weary their friends with complaints of those they have, and inquiries for others.

Deliberate before you make a change; if servants are honest, speak the truth, and have an obliging disposition, it is better to bear with a few defects, than to discharge them; these are qualifications for the foundation of a good servant; and some of the most valuable I have had, were such as could hardly be put up with at first. By being patient, and speaking to them in a kind manner, they become attached and fearful of doing any thing to offend.

When they break any thing, or an accident occurs, accustom them to inform you of it immediately. Few mistresses, of well regulated minds, will be offended when openly told of accidents; but if they are left to be found out, you always feel more disposed to blame and reprove them. By speaking to them in a mild and forgiving manner, careless servants will become more careful.

A considerate mistress may, without loss of dignity, make them feel that she regards it as her duty to be their friend, and that she feels herself under an obligation to advise them in difficulties and promote their comfort.

We should reflect that theirs is a life of servitude, and if they over-exert themselves, or are too much exposed in early life, it will bring on disease that will shorten their days, or render old age a burden.

Some young persons are too indolent to wait on themselves, and ring for the servants on the most trifling occasions; when if they were accustomed to perform these little offices, their health would be much better, and we should not hear of so many complaints, the result of want of exercise. All female servants should have time to attend to their clothing; many have to work so hard through the day that their only leisure is at night, and then they hurry over their things in a careless manner.

Where your circumstances permit, a good man-servant is a valuable acquisition; and they are sometimes more easily governed than females.

If mistresses were better informed, they would not complain so much of the ignorance and awkwardness of their domestics. Always give them their orders in time. If a new dish is to be cooked, superintend its preparation yourself.

If you are capable of directing, a cook will soon learn to do without your constant attention.

If they are slow in their movements, insist on their beginning early to prepare a meal, so that there will be time sufficient for every thing to be done properly.

If you expect company, have every thing prepared, that can be done with safety, the day previous. In summer there are but few things that can be done without risk of spoiling: a ham or tongue may he washed ready to boil; castors and salt-stands put in order, and pastry or dessert prepared, that will not spoil by being kept a day.

In winter, many things can be kept for days in a state of preparation for cooking; and it greatly assists the work of the family, to have every thing done beforehand.

Do with as few domestics as possible; assist with the work yourself, rather than keep one too many. Those that take orphan children to bring up, are often rewarded for their trouble; as sometimes a girl of fifteen will be more useful than one much older: and where a family is small it does very well, but in large families, a little girl is so often called from her work, that it has a tendency to unsettle and make her careless.

Never allow your children to call on or interrupt servants when at their work or meals, to do any thing which a child could do for itself; children that treat domestics with respect, will generally find them willing to render any assistance in their power. I have known a few housekeepers, who have kept the same servants for years, who have assisted in rearing the children, until they almost viewed them as their own, and these were not faultless. If they had been discharged for trifles, they might have wandered, from one family to another, without being attached to any, until they became so indifferent, as not to be worthy of employ, but by the kindness and patience of their employer, they became so grateful and attached, as to be a treasure to her family. When they become weary of such constant servitude, would it not be better, instead of discharging, to give them time for rest and recreation in

visiting their friends? I have known them to return, renewed in health and spirits.

Encourage them to lay by as much of their wages as they can possibly spare, in such institutions as are thought the most safe, that they may have something to look to in case of sickness, or any event which would require its use.

Promote their reading in such books as are suited to their capacities; they sometimes have a little leisure, that could be well filled up in this way. I have found it to increase the happiness of those under my care, to encourage a fondness for reading, and improving their minds; it tends to keep them from unprofitable company, and too much visiting, to which so many are addicted.

Young girls should make and mend their own clothes, and keep them in good order, and they should be taught to knit. The material of which stockings are composed costs but little, and they wear much better than those that are bought. Knitting fills up leisure moments, and promotes industrious habits; and when age comes on, they will have a resource, although it appears so simple, yet if it is not learned while young it is hard to acquire when old.

When servants are guilty of faults that cannot be looked over, instead of publicly reproving them, take an opportunity when alone, and talk coolly; tell them of your sorrow at being obliged to notice their conduct, encourage them to pursue a different course, and that you will forgive them if they will strive to do better. I have known them much improved by this mode of treatment.

By inspecting every department, not only will waste be prevented, but dishonesty. In cities many persons find it necessary to lock up nearly every thing; and it is a lamentable state of things that so few are to be trusted.

Sometimes treating servants with confidence will have a good effect; but let them be aware that you have a knowledge of every thing that is going on.

Some young persons are completely at the mercy of their domestics. I have known great uneasiness to be experienced, and much loss; but by showing a little moral courage, and discharging those that are irreclaimable, an ascendancy was gained. Never suffer them to treat you with disrespect or impertinence. If it is known that they will be discharged for these faults, they will be on their guard.

If you have taken a boy or girl, to bring up as a domestic, endeavour to teach them, at least to spell and read; they are sometimes very fond of their books, and if you once get them to reading, it will become to them a favorite evening amusement; I have known them take up their books on every occasion of leisure, I have seen boys that worked hard through the day, spend all the evening with their books, slate, and occasionally a little writing. Sometimes, I have in the evening felt fatigued and listless, and would much rather read, and amuse myself, than go out to teach two or three in the kitchen; but in attending to this, (which I consider a duty,) have felt a sweet reward--indeed, their grateful thanks expressed by words, have encouraged me to keep on. I have thought a little instruction in this way, arouses their faculties, and tends to make them more industrious. When I have been prevented from teaching them for some time, by indisposition, or other causes, I have observed they were not so cheerful in the performance of their work. If they are reading any thing they do not fully understand, take a little time to explain it to them. It will be, my young friends, like sowing the good seed, and you, as well as they, will receive the reward.

I wish to encourage you in the most affectionate manner to attend to _this_ duty; you will find it will strengthen you in the performance of others. "The more we exert our faculties, the more we can accomplish. He that does nothing, renders himself incapable of doing any thing. While we are executing one work, we are preparing ourselves to undertake another."

REMARKS.

Remarks on Carving, &c.

I do not think it necessary to say much on the subject of carving, as those who are accustomed to sit at a well ordered table, and who observe the manner of the host and hostess, can soon acquire the art, both of carving and helping with ease. And when placed at the head of their own table, the knowledge thus gained will be found a great assistance.

The proper time for children to acquire good habits at meals, is not when there is company; it should be an every day lesson. As when parents are engaged with their friends or guests, they have no time to devote to the manners of their children, and to reprove them at table is very unpleasant, as well as mortifying.

Young children will soon acquire the manner of sitting quietly till they are helped, if they are made to understand that they will not be permitted to eat with their parents and friends, unless they behave with propriety.

I have thought it a great assistance to the good order of a large family, for every member to be punctual in their attendance at meals, and all to sit down together, with a short pause before the carving and helping commences. In those moments of quiet, the heart is sometimes awakened to a feeling of gratitude to the Almighty dispenser of our blessings.

At the table, different members of the family meet; and where affection and kindness, those aids to true politeness, preside, it is truly a delightful treat to be the guest of such a family.

Every symptom of selfishness should be discouraged, for if suffered to take root in a child, it lays the foundation of much that is disagreeable to themselves and others.

Inculcate this excellent rule, "of doing unto others, what you wish others to do unto you," and always preferring others to yourself.

It is the custom in some well regulated families, to permit the younger members, (as they arrive at a suitable age,) to take turns in presiding, not only at breakfast and tea, but at the dinner table. I have known quite young girls that had been taught in this way, carve a fowl or joint of meat with ease and grace. In helping, they should be taught not to over-load the plate, as it takes away the appetite of some persons to be helped too largely.

The gravy should be stirred so that all may be helped alike, and a small quantity put on the meat or fowl, to which it belongs, and not on vegetables unless it is particularly desired.

If there should be a rare dish on the table, it is best to hand it round and let every one help himself, after it has been nicely cut up. Ham is much nicer to be cut in very thin slices. So is salt beef and tongue.

Young housekeepers in selecting their dishes for dinner, (if they have not an experienced cook,) should avoid those that are difficult to prepare. Never try a new dish when you expect company. Your guests will be more gratified with a neat and moderate table, with a few plain and well cooked dishes, accompanied with the smiling countenance of the hostess, than with a great variety of ill cooked and badly arranged viands.

Economy the Source of Charity.

If your circumstances will not admit of giving away much, you can, by economy, give a little, and a blessing will attend it. There are few of the very poor, that know how to repair old clothing to advantage; a garment will be of much more service, that is well mended before it is given to them.

It has been remarked, that the poor are ungrateful, and forget the favors conferred upon them.

I have seldom found them deficient in this respect; and when they are, if we would reflect, that if some of us received no more than we deserve, we should be but poorly off.

We know in our own families, how acceptable is a nice present of something that a sick member can eat; and it is sometimes the means of restoring the appetite, when any thing cooked in the house is rejected. The feeling of love with which it is presented, is as a cordial to a sick person.

How much more acceptable will something nourishing be to one oppressed with poverty, as well as sickness.

When the rich are diseased, the physician often finds it necessary to enjoin strict abstinence; but very different is it with the poor, who frequently suffer for want of nourishment.

When the mother of a poor family is ill, how greatly are her sufferings augmented by the knowledge that her children are deprived of her services; and how acceptable to such a family would be a loaf of bread, or a large bowl of soup, which could be made of materials that would hardly be missed.

Dried beans or peas, and onions, are a cheap and valuable addition to soup; also cold vegetables. The liquor that fresh meat is boiled in, should be carefully saved for that purpose, if there are those near you that need it.

It may seem at first troublesome to a young housekeeper, to take the necessary care to save for the poor. It is certainly much easier to let the cook have her own way, and waste or not, as she pleases; but for your encouragement my young friends, permit me to say, you will be sweetly rewarded for your attention to them.

One eminent for his charities, near the close of life, made this remark: "What I spent I lost, but what I gave away remains with me."

To Encourage Children in Acts of Kindness to the Aged and Afflicted.

Young children may early be taught to administer to the wants of the aged and infirm.

Some mothers are in the practice of giving a small sum of money to their children, as a reward for some little service or piece of work that they have done. The money thus obtained, to be laid out for a sick or old poor person. This method has an excellent effect on the minds of children; it incites them to industry, teaches self-denial, and the feelings of love and charity which are thus early instilled into their tender minds, make a lasting impression.

If they spent their little fund in trifles for their own use, they would acquire a habit of selfishness; which, when once formed, it is most difficult to eradicate. I have remarked the pleasure with which children will relate the incidents of a visit, which they have been permitted to make to a poor family; and it is a refreshment to persons advanced in life, to see a young family thus trained.

As soon as little girls can sew, they should be encouraged to make garments for the poor, or repair their own old ones as a present to a child of their own size, or make patchwork out of old dresses for a bed covering for poor people. Their being permitted to do these things, should be as a reward for good behavior and attention to their lessons or other duties.

When they are old enough to make a loaf of bread, a pie, or a little plain cake, allow them to do it, and take as a present to, or make broth or panada for a sick person. This teaches them to prepare these things while young, and may be useful to them in after life.

How cheering it must be to the aged or afflicted, to see smiling young faces enter their dwellings, bearing their little offerings of food or clothing, the work of their own hands.

Be encouraged my dear young mothers; if you thus train your children to works of charity, you will be doubly blessed.

Early Rising Promotes Punctuality.

It is an old and true saying, "that if you waste an hour in the morning, it is seldom recovered all that day." This dispirits you, and the next day there is still something left undone.

A late riser is rarely punctual in her engagements, and more of the happiness of married life depends on forming a habit of strict punctuality, than young persons are generally aware of.

If you are distressed at having acquired habits of late rising, and want of punctuality, remember by perseverance, they can be overcome. Fix an hour for rising, and let nothing but illness prevent your being up at that time. While forming this useful habit, you should retire to rest early.

Many things can be better attended to at an early, than a late hour in the morning.

Where families rise before the sun, the day seems much longer; all the active employments of the early riser are accomplished before her later neighbors have finished their breakfast.

The duties of the bath and toilet being performed, her chamber well aired and arranged--and her parlor in order, she is ready for the more quiet employments of reading and sewing.

In a well regulated household, servants perform their duties with life and energy. Determine on an hour for your meals, and if all the members of the family adhere to it, scrupulous exactness will soon be established.

Hints to Young Wives.

The authoress is well aware of the difficulties which surround a young wife on her first setting out, particularly if situated at a distance from the kind mother who has hitherto directed her, with servants who watch every movement, and who will soon discover whether the new mistress is qualified for the task she has undertaken.

Accustom yourself to rise early; fix a certain hour, and let nothing but indisposition prevent your being up at the appointed time. By this means your affairs will all be arranged in good season, and you will have time for recreation, in walking, riding, or in reading such authors as will tend to strengthen and improve your mind.

Young persons removed from large families often suffer greatly from loneliness, whereas, if they were occupied with household affairs, they would not feel so severely the absence of their husbands while attending to business.

Be punctual to the hour that has been fixed on for your meals, and let good order prevail in every department of which you have the command. A mistress of a family is much happier, who knows how every thing is going on from the garret to the cellar. By inspecting every thing you soon become interested, and we all know when that is the case, the most difficult pursuits become easy and pleasant.

And with what pleasure will a young wife welcome her husband to his meals, when her conscience assures her that she has done her best, and that nothing is neglected; and how will it lighten his labors to reflect, when absent, that the partner he has chosen, is performing her duty at home.

I am fully persuaded that the formation of domestic happiness, is generally laid the first year of marriage: therefore, my young friends, act well your part; if you desire to be treated with confidence you must merit it. If you keep an exact account of all your expenses, there will be less danger of living beyond your income, of which there have been so many lamentable instances.

Never buy any thing because it is recommended as being cheap; many cheap things amount in time to a large sum. In selecting furniture, let utility, not fashion, govern your choice; some young persons furnish their parlors so extravagantly, that necessary and useful articles are neglected, for want of means to purchase them. Be persuaded that happiness does not consist so much in having splendid furniture, as in attending to the every day comforts of those around you. If you marry without the useful knowledge necessary for governing your family, lose no time in acquiring it.

There is a time when most young girls show a fondness for domestic affairs before they are old enough to go into company, when it would be an agreeable change to be absent from school and assisting their mothers; the knowledge thus acquired would never be lost.

Many a young man who commenced with fair prospects, has been ruined through his wife's ignorance of domestic duties, and she has suffered from the consequent diminution of his esteem and love.

I once knew a lovely and accomplished young lady, accustomed to every indulgence, who, on her marriage, removed several hundred miles from her parents, to reside in the country, where servants were difficult to procure. This delicate and sensitive young creature was much distressed by her ignorance of almost every thing connected with housekeeping; and after suffering repeated mortifications, concluded to learn to do the work herself; and when this dearly bought knowledge was acquired, she was able to teach her ignorant servants; and resolved, if ever she had daughters, to use every means in her power to teach them.

When a prudent wife is made acquainted with the circumstances of her husband, she will endeavor strictly to keep within their bounds; always remembering that losses and events, over which he has no control, may occur and greatly reduce his income. And how will it assist her to bear a reverse of fortune, if she has acted with discretion; it will strengthen the wife to encourage and cheer her partner, and enable him to struggle through difficulties which were thought insurmountable. Happiness will not forsake such a family though they lose almost every thing, the peace which is the result of a good conscience will remain; this will strengthen them to begin anew, and the Divine blessing will attend such efforts.

A few Remarks to Encourage Young Housekeepers in their First Attempts.

As bread is the most important article of food, one of your first attempts should be to make a few loaves of good bread and rolls, of the most simple kind. Bread rolls are very easily made. If you succeed tolerably, it will encourage you to try again. When you make cakes, begin with the simple kinds; plain jumbles or cakes that you can roll out, or crisp ginger-bread. Sponge cake is easier than those that have butter in them; I have known young persons succeed very well with it. Bread rusk is also easily made, or a few plain pies. Do not trust the baking to an ignorant person, but superintend it yourself. Sometimes baking in a stove, is protracted by the dampness of the wood. Before you bake, have dry wood prepared. Watch the time; it is a good plan to have a clock near the kitchen. Do not have too many things on hand at once; but perfect yourself in the knowledge of a few important dishes. If you make good yeast you will be more certain of good bread, light cakes and rolls. To cook a steak nicely, is also important; and with a dish of

potatoes well cooked, a dish of cold slaw and an apple pie, or a little stewed fruit, will make a good plain dinner.

When your family is small, you can have something nice every day, without cooking much. Veal cutlets, and mutton chops, are easy to cook, and may be prepared in a short time. If you have a fowl, and boil it, you can save the soup, and warm it over for the next day. A cold roast fowl may be hashed. On days that you have cold meat, a batter pudding, or plain rice pudding, is easily prepared.

If you wish to have an early breakfast, make every preparation that you can, over night; set the table, have the relish cut, ready to cook, or to warm over--and cold bread may be sliced, and wrapped in a cloth to keep it moist. Coffee should be ground, and dry fuel, and water at hand. With these preparations, breakfast may be ready in half an hour from the time the fire is made. If you have warm corn bread, or rolls, it will require more time; but if you have them made up over night, and put in a cool place, they will not sour, and can soon be baked. Maryland biscuit are very convenient, as they are always ready, and will keep good a week. I have found it a great advantage to set the table over night, particularly if you have a separate room to eat in; although it takes but a short time, every minute is important in the morning.

Where the mistress washes the breakfast things, and puts them in their proper places, and counts the spoons, and other articles, she can see when any thing is missing. A mop is useful for glass and china; keep a pan, or a small tub, for the purpose of holding the water, which should not be too hot. If tea things are put in very hot water, it will be apt to crack them or they will look smeared. Put a little soap in the water, wash the glass first, then the silver, then the cups and saucers, and lastly, the plates and knives and forks. If spoons have been used with eggs, put them to soak immediately, to prevent their turning dark. Have a common waiter for the pan to stand in and on it drain your tea things. Spoons when used with care, require polishing but seldom, as it wears the silver away. Dinner dishes should be washed first in moderately warm water and soap, rinsed in hot water, and drained before wiping. Put every thing in its proper place, and inspect your pantry and cellar frequently. Sometimes things are forgotten, for want of attention, until they are spoiled. Air the cellar frequently; do not let refuse vegetables accumulate, or any thing that would be likely to cause sickness.

You should provide coarse towels of different kinds, for china and glass, and for the dinner dishes, also knife cloths, have them marked and kept in their proper places. Some persons have their towels washed out every day, but it is better to save them for the weekly wash. If towels are thrown aside damp, they are liable to mildew. You should keep dusters of several kinds. Old silk handkerchiefs, are best for highly polished furniture, or an old barege veil answers a good purpose. For common purposes, a square of coarse muslin, or check is suitable. You should keep one floor cloth for chambers, and one for the kitchen. Keep brooms for different purposes; always use a soft one for carpets, as soon as they wear stiff, they will do for the kitchen, or pavements. Pouring a little hot water on a broom, softens it for carpets. You may save tea leaves, to sprinkle over your carpet, when you give a thorough sweeping, this will brighten it, and occasionally to wipe it over, with a cloth, that has been wrung out of hot water cleanses it, of course, this is only required for carpets in constant use.

It is of great importance to health, that sleeping apartments should be well aired and swept. If you sleep in an apartment, where there has been fire during the day, it should be well aired before going to bed, or if the room is close, have a little air admitted, so as not to blow on persons that are asleep. A window that will lower from the top is an advantage. Beds should be well aired before they are made, take the clothes off, and leave them at least an hour. In pleasant weather, you may keep chamber windows hoisted, for several hours, and even in cold weather, the windows may be kept up a short time, and if on any occasion, you may be obliged to have the beds made without airing, turn the clothes half way down, and leave them for several hours. Some persons have cheap calico covers, to spread over beds, while the room is swept, this is a good plan, on account of the dust. Bolster and pillow tucks wear better, if you have a check case basted on, this should be changed, washed and starched occasionally. It is a good plan also to have check covers for matresses and feather beds, but the covers should not be kept on beds that are not in use, lest they should be liable to moth. In winter a blanket should be put next a bed that is not often slept in, or for a delicate person, and be particularly careful, that sheets are dry before they are put away.

In summer it is most healthy to have your chamber floor bare, and have it washed occasionally. It is important to examine your clothes, after they come from the wash, and see that they are perfectly dry before they are put away.

CULTIVATION OF FLOWERS.

A few flowers and plants, when properly taken care of, are ornamental to the windows of a parlor, or sitting room; and will repay the care that is bestowed on them. Begin with a few that are easy to cultivate, and you will probably succeed. Persons that are fond of flowers, and have collected a number, are generally willing to give their young friends a few plants; and where we succeed in raising a fine plant from a slip, or cutting, we value it more than one that has been purchased at a green-house. Geraniums, cactus', wax plants, cape and catalonian jessamines, and some others, are easily cultivated in a parlor. Roses, camelias, and azaleas bloom best in a moderate temperature, as the heat of a parlor (unless very large) dries the buds, and prevents their coming to perfection. I have known these to bloom beautifully in a room that was very slightly heated--either over one in which there was fire, or in an apartment next a stove room. If the weather is very cold, they should be removed to a warmer room, until it moderates. The windows that are open to the south are best. When the blossoms have matured, you can bring them to the parlor; but if there is much heat, they will not remain perfect so long as in a moderate room.

Roses are sometimes troubled with insects, which should be brushed off with a feather, and the plants washed with a decoction of tobacco, (not too strong,) they will not bloom when thus infested. There is another insect that fastens itself to the bark of lemon trees, and other plants; frequent washing with soap suds and brushing the sterns, removes it, and some times wash the leaves with a sponge, when the weather is too cold to put them out of doors. Setting them out in a warm rain, or watering them well all over the foliage, is very reviving to plants. Be careful to have pieces of old broken earthen-ware at the bottom of each pot, to drain them, or the plants will not thrive. The earth should be sometimes removed, and an occasional re-potting, is an advantage; being careful not to disturb the roots. A mixture of charcoal and sand, and rich earth of more than one kind is thought best. Earth fresh from the woods is good for pot-plants, as well as borders, but should always be mixed with a stronger soil. Roses that are planted round a house, should have a deep and rich soil made for them, and they will then bloom beautifully all the season.

Pot plants should in summer be placed in a situation where they wilt not be exposed to intense heat. Some persons place their pots in the earth on the north side of the house; others keep them in a porch where they can get some sun. They require much more water in summer. The wax plant blooms beautifully in summer, and should be kept in a sheltered situation, not exposed to the wind; it should have a strong frame of wood and wire to run on, well secured in a tub or box. Hyacinths and crocuses should be planted in pots, boxes, or small tubs, in rich earth, in October or November; a small painted tub is very suitable, and will hold a dozen hyacinths, and as many crocus roots. The most beautiful I ever saw in a window, were planted in this way, by keeping some in the sun, and others in the shade you can have a succession of blooms, they are also pretty in root glasses, but this plan will exhaust the roots. After blooming in the house, they should be planted in the garden. The same roots will not answer the next year for parlor culture, they increase very fast in the garden by proper care.

There is something refining to the mind in the cultivation of flowers, either in a garden or in pots. Many hours that would be weary or lonely, are thus pleasantly occupied, and the mind refreshed.

I now take leave of the reader, with a sincere desire, that these remarks may be of use, and that the receipts which I have been at some pains in compiling and arranging, may be acceptable.

INDEX

A.

Accidents--poisons taken by mistake, remedies for, Acid, to restore Colors, &c., Acts of Kindness, to Encourage Children in, Adhesive Plaster, Ague, Cure for, Alamode, Beef, Almond Cake, Almond Cream, Almonds, to Blanch. Apple Butter, Apples, Baked, Apple and Bread Pudding, Apples, Crab, to Preserve, Apple Custard, Apple Dumplings, Apple Float, Apple Fritters, Apple Jelly, Apple Marmalade, Apples, Pine, Apples, to Preserve, Apples, Pine, Syrup, Apple Pudding, Apples, to Stew for Pies, Apple Water, Apricots, preserved, Arrow-root, Arrow root Pudding, Asparagus,

B.

Bacon--to Cure, Bacon, Dumplings, Bacon Fraise, Baking in a Brick-oven, Baking in a Dutch-oven, Baking in a Stove, Balloon Pudding, Balls, Force Meat, Balsam-apple, &c., Bannock, Corn, Bark Tincture, Bath, Mustard, Bathing, Batter Pudding, Barley Panada, Barley Water, Batter Bread with Yeast, Batter, a Loaf of Muffin, Beans, Green, for Winter use, Beans, Lima, Beans, String, Bean Soup, Beds, Feather, Bedsteads, Cleaning, Bee, Sting of a, Beef Alamode, Beef, Curing, Beef, Dried, Beef Kidney, to Fry, Beef Pudding, Baked, Beef Shin Soup, Beef Spiced in Irish style, Beef Steak Pie, Beef Steak Pudding, Beef Steak, Beef Tea, Beef,

Fried, Beef, Roasted, Beef, Pickle for two Rounds, Beef, Pork, or Mutton Cured, Beef, Stewed, for the Sick, Beef, Stuffed, Round of, Beef's Feet, Beef's Heart, Baked, Beef's Tongue, to Boil, Beer, Harvest, Beer, Molasses, Beer, Porter, Beer, Spruce, Beer, to make two Gallons, Beets, Berries, Spice Wood, Biles, Cure for, Bilious Colic, Birds' West Pudding, Biscuit, Dyspepsy, Biscuit, Light, Biscuit, Maryland, Biscuit, Naples, Biscuit, Quick, Biscuit, Salaeratus, Biscuit, Tea, Bitters, Wine, Brittania Ware, Black Cake, Black Currant Jelly, Black Walnuts, to Pickle, Blackberries, to Preserve, Blackberry Cordial, Blackberry Flummery, Blackberry Wine, Blacking for Boots and Shoes, Blacking for Morocco Shoes, Blancmange of Jelly, Blancmange of Moss, Blancmange, Blancmange, Calf's Foot, for the Sick, Blankets, Blister Ointment, Blue, to Color Cotton, Boiling Fresh Meat, Boiling Puddings, Bologna Sausage, Boots and Shoes, to make Water-proof, Brain Cakes, Brains and Tongue, Brandy, Lemon, Brandy, Peaches in, Brandy, Rose, Brass, to Clean, Brazil Wood Dye, Bread and Apple Pudding, Bread Batter Cakes, Bread of Indian Meal, remarks on making, Bread Pudding, Bread Rolls, Bread Rusk, Bread, Bread, Batter, with Yeast, Bread, Corn Meal, Bread, Dyspepsy, Bread, Graham, Bread, Indian, Bread, Light, Bread, Mixed, Brick Oven Directions, Brick Oven, to Bake in, Broth, Mutton and Veal, Brown Mixture for a Cough, Brown, to Color, Bruises, Buckwheat Cakes, Bunions, Bunns, Burns and Scalds, Butler, Butter for Winter Use, Butter, a Pickle for, Butter to Keep a Length of Time, Butter-milk, Batter Cakes, Butter, Drawn,

AN ENQUIRY CONCERNING HUMAN UNDERSTANDING.

BY DAVID HUME

Extracted from: Enquiries Concerning the Human Understanding, and Concerning the Principles of Morals, By David Hume.

Reprinted from The Posthumous Edition of 1777, and Edited with Introduction, Comparative Tables of Contents, and Analytical Index by L.A. Selby-Bigge, M.A., Late Fellow of University College, Oxford.

Second Edition, 1902

CONTENTS

I. Of the different Species of Philosophy II. Of the Origin of Ideas III. Of the Association of Ideas IV. Sceptical Doubts concerning the Operations of the Understanding V. Sceptical Solution of these Doubts VI. Of Probability VII. Of the Idea of necessary Connexion VIII. Of Liberty and Necessity IX. Of the Reason of Animals X. Of Miracles XI. Of a particular Providence and of a future State XII. Of the academical or sceptical Philosophy

INDEX

SECTION I.

OF THE DIFFERENT SPECIES OF PHILOSOPHY.

1. Moral philosophy, or the science of human nature, may be treated after two different manners; each of which has its peculiar merit, and may contribute to the entertainment, instruction, and reformation of mankind. The one considers man chiefly as born for action; and as influenced in his measures by taste and sentiment; pursuing one object, and avoiding another, according to the value which these objects seem to possess, and according to the light in which they present themselves. As virtue, of all objects, is allowed to be the most valuable, this species of philosophers paint her in the most amiable colours; borrowing all helps from poetry and eloquence, and treating their subject in an easy and obvious manner, and such as is best fitted to please the imagination, and engage the affections. They select the most striking observations and instances from common life; place opposite characters in a proper contrast; and alluring us into the paths of virtue by the views of glory and happiness, direct our steps in these paths by the soundest precepts and most illustrious examples. They make us _feel_ the difference between vice and virtue; they excite and regulate our sentiments; and so they can but bend our hearts to the love of probity and true honour, they think, that they have fully attained the end of all their labours.

2. The other species of philosophers consider man in the light of a reasonable rather than an active being, and endeavour to form his understanding more than cultivate his manners. They regard human nature as a subject of speculation; and with a narrow scrutiny examine it, in order to find those principles, which regulate our understanding, excite our sentiments, and make us approve or blame any particular object, action, or behaviour. They think it a reproach to all literature, that philosophy should not yet have fixed, beyond controversy, the foundation of morals, reasoning, and criticism; and should for ever talk of truth and falsehood, vice and virtue, beauty and deformity, without being able to determine the source of these distinctions. While they attempt this arduous task, they are deterred by no difficulties; but proceeding from particular instances to general principles, they still push on their enquiries to principles more general, and rest not satisfied till they arrive at those original principles, by which, in every science, all human curiosity must be bounded. Though their speculations seem abstract, and even unintelligible to common readers, they aim at the approbation of the learned and the wise; and think themselves sufficiently compensated for the labour of their whole lives, if

they can discover some hidden truths, which may contribute to the instruction of posterity.

3. It is certain that the easy and obvious philosophy will always, with the generality of mankind, have the preference above the accurate and abstruse; and by many will be recommended, not only as more agreeable, but more useful than the other. It enters more into common life; moulds the heart and affections; and, by touching those principles which actuate men, reforms their conduct, and brings them nearer to that model of perfection which it describes. On the contrary, the abstruse philosophy, being founded on a turn of mind, which cannot enter into business and action, vanishes when the philosopher leaves the shade, and comes into open day; nor can its principles easily retain any influence over our conduct and behaviour. The feelings of our heart, the agitation of our passions, the vehemence of our affections, dissipate all its conclusions, and reduce the profound philosopher to a mere plebeian.

4. This also must be confessed, that the most durable, as well as justest fame, has been acquired by the easy philosophy, and that abstract reasoners seem hitherto to have enjoyed only a momentary reputation, from the caprice or ignorance of their own age, but have not been able to support their renown with more equitable posterity. It is easy for a profound philosopher to commit a mistake in his subtile reasonings; and one mistake is the necessary parent of another, while he pushes on his consequences, and is not deterred from embracing any conclusion, by its unusual appearance, or its contradiction to popular opinion. But a philosopher, who purposes only to represent the common sense of mankind in more beautiful and more engaging colours, if by accident he falls into error, goes no farther; but renewing his appeal to common sense, and the natural sentiments of the mind, returns into the right path, and secures himself from any dangerous illusions. The fame of Cicero flourishes at present; but that of Aristotle is utterly decayed. La Bruyere passes the seas, and still maintains his reputation: But the glory of Malebranche is confined to his own nation, and to his own age. And Addison, perhaps, will be read with pleasure, when Locke shall be entirely forgotten.

The mere philosopher is a character, which is commonly but little acceptable in the world, as being supposed to contribute nothing either to the advantage or pleasure of society; while he lives remote from communication with mankind, and is wrapped up in principles and notions equally remote from their comprehension. On the other hand, the mere ignorant is still more despised; nor is any thing deemed a surer sign of an illiberal genius in an age and nation where the sciences flourish, than to be entirely destitute of all relish for those noble entertainments. The most perfect character is supposed to lie between those extremes; retaining an equal ability and taste for books, company, and business; preserving in conversation that discernment and delicacy which arise from polite letters; and in business, that probity and accuracy which are the natural result of a just philosophy. In order to diffuse and cultivate so accomplished a character, nothing can be more useful than compositions of the easy style and manner, which draw not too much from life, require no deep application or retreat to be comprehended, and send back the student among mankind full of noble sentiments and wise precepts, applicable to every exigence of human life. By means of such compositions, virtue becomes amiable, science agreeable, company instructive, and retirement entertaining.

Man is a reasonable being; and as such, receives from science his proper food and nourishment: But so narrow are the bounds of human understanding, that little satisfaction can be hoped for in this particular, either from the extent of security or his acquisitions. Man is a sociable, no less than a reasonable being: But neither can he always enjoy company agreeable and amusing, or preserve the proper relish for them. Man is also an active being; and from that disposition, as well as from the various necessities of human life, must submit to business and occupation: But the mind requires some relaxation, and cannot always support its bent to care and industry. It seems, then, that nature has pointed out a mixed kind of life as most suitable to the human race, and secretly admonished them to allow none of these biasses to _draw_ too much, so as to incapacitate them for other occupations and entertainments. Indulge your passion for science, says she, but let your science be human, and such as may have a direct reference to action and society. Abstruse thought and profound researches I prohibit, and will severely punish, by the pensive melancholy which they introduce, by the endless uncertainty in which they involve you, and by the cold reception which your pretended discoveries shall meet with, when communicated. Be a philosopher; but, amidst all your philosophy, be still a man.

5. Were the generality of mankind contented to prefer the easy philosophy to the abstract and profound, without throwing any blame or contempt on the latter, it might not be improper, perhaps, to comply with this general opinion, and allow every man to enjoy, without opposition, his own taste and sentiment. But as the matter is often carried farther, even to the absolute rejecting of all profound reasonings, or what is commonly called _metaphysics_, we shall now proceed to consider what can reasonably be pleaded in their behalf.

We may begin with observing, that one considerable advantage, which results from the accurate and abstract philosophy, is, its subserviency to the easy and humane; which, without the former, can never attain a sufficient degree of exactness in its

sentiments, precepts, or reasonings. All polite letters are nothing but pictures of human life in various attitudes and situations; and inspire us with different sentiments, of praise or blame, admiration or ridicule, according to the qualities of the object, which they set before us. An artist must be better qualified to succeed in this undertaking, who, besides a delicate taste and a quick apprehension, possesses an accurate knowledge of the internal fabric, the operations of the understanding, the workings of the passions, and the various species of sentiment which discriminate vice and virtue. How painful soever this inward search or enquiry may appear, it becomes, in some measure, requisite to those, who would describe with success the obvious and outward appearances of life and manners. The anatomist presents to the eye the most hideous and disagreeable objects; but his science is useful to the painter in delineating even a Venus or an Helen. While the latter employs all the richest colours of his art, and gives his figures the most graceful and engaging airs; he must still carry his attention to the inward structure of the human body, the position of the muscles, the fabric of the bones, and the use and figure of every part or organ. Accuracy is, in every case, advantageous to beauty, and just reasoning to delicate sentiment. In vain would we exalt the one by depreciating the other.

Besides, we may observe, in every art or profession, even those which most concern life or action, that a spirit of accuracy, however acquired, carries all of them nearer their perfection, and renders them more subservient to the interests of society. And though a philosopher may live remote from business, the genius of philosophy, if carefully cultivated by several, must gradually diffuse itself throughout the whole society, and bestow a similar correctness on every art and calling. The politician will acquire greater foresight and subtility, in the subdividing and balancing of power; the lawyer more method and finer principles in his reasonings; and the general more regularity in his discipline, and more caution in his plans and operations. The stability of modern governments above the ancient, and the accuracy of modern philosophy, have improved, and probably will still improve, by similar gradations.

6. Were there no advantage to be reaped from these studies, beyond the gratification of an innocent curiosity, yet ought not even this to be despised; as being one accession to those few safe and harmless pleasures, which are bestowed on human race. The sweetest and most inoffensive path of life leads through the avenues of science and learning; and whoever can either remove any obstructions in this way, or open up any new prospect, ought so far to be esteemed a benefactor to mankind. And though these researches may appear painful and fatiguing, it is with some minds as with some bodies, which being endowed with vigorous and florid health, require severe exercise, and reap a pleasure from what, to the generality of mankind, may seem burdensome and laborious. Obscurity, indeed, is painful to the mind as well as to the eye; but to bring light from obscurity, by whatever labour, must needs be delightful and rejoicing.

But this obscurity in the profound and abstract philosophy, is objected to, not only as painful and fatiguing, but as the inevitable source of uncertainty and error. Here indeed lies the justest and most plausible objection against a considerable part of metaphysics, that they are not properly a science; but arise either from the fruitless efforts of human vanity, which would penetrate into subjects utterly inaccessible to the understanding, or from the craft of popular superstitions, which, being unable to defend themselves on fair ground, raise these intangling brambles to cover and protect their weakness. Chaced from the open country, these robbers fly into the forest, and lie in wait to break in upon every unguarded avenue of the mind, and overwhelm it with religious fears and prejudices. The stoutest antagonist, if he remit his watch a moment, is oppressed. And many, through cowardice and folly, open the gates to the enemies, and willingly receive them with reverence and submission, as their legal sovereigns.

7. But is this a sufficient reason, why philosophers should desist from such researches, and leave superstition still in possession of her retreat? Is it not proper to draw an opposite conclusion, and perceive the necessity of carrying the war into the most secret recesses of the enemy? In vain do we hope, that men, from frequent disappointment, will at last abandon such airy sciences, and discover the proper province of human reason. For, besides, that many persons find too sensible an interest in perpetually recalling such topics; besides this, I say, the motive of blind despair can never reasonably have place in the sciences; since, however unsuccessful former attempts may have proved, there is still room to hope, that the industry, good fortune, or improved sagacity of succeeding generations may reach discoveries unknown to former ages. Each adventurous genius will still leap at the arduous prize, and find himself stimulated, rather that discouraged, by the failures of his predecessors; while he hopes that the glory of achieving so hard an adventure is reserved for him alone. The only method of freeing learning, at once, from these abstruse questions, is to enquire seriously into the nature of human understanding, and show, from an exact analysis of its powers and capacity, that it is by no means fitted for such remote and abstruse subjects. We must submit to this fatigue, in order to live at ease ever after: And must cultivate true metaphysics with some care, in order to destroy the false and adulterate. Indolence, which, to some persons, affords a safeguard against this deceitful philosophy, is, with others, overbalanced by curiosity; and despair, which, at some moments, prevails, may give place afterwards to sanguine hopes and expectations. Accurate and just reasoning is the only

catholic remedy, fitted for all persons and all dispositions; and is alone able to subvert that abstruse philosophy and metaphysical jargon, which, being mixed up with popular superstition, renders it in a manner impenetrable to careless reasoners, and gives it the air of science and wisdom.

8. Besides this advantage of rejecting, after deliberate enquiry, the most uncertain and disagreeable part of learning, there are many positive advantages, which result from an accurate scrutiny into the powers and faculties of human nature. It is remarkable concerning the operations of the mind, that, though most intimately present to us, yet, whenever they become the object of reflexion, they seem involved in obscurity; nor can the eye readily find those lines and boundaries, which discriminate and distinguish them. The objects are too fine to remain long in the same aspect or situation; and must be apprehended in an instant, by a superior penetration, derived from nature, and improved by habit and reflexion. It becomes, therefore, no inconsiderable part of science barely to know the different operations of the mind, to separate them from each other, to class them under their proper heads, and to correct all that seeming disorder, in which they lie involved, when made the object of reflexion and enquiry. This talk of ordering and distinguishing, which has no merit, when performed with regard to external bodies, the objects of our senses, rises in its value, when directed towards the operations of the mind, in proportion to the difficulty and labour, which we meet with in performing it. And if we can go no farther than this mental geography, or delineation of the distinct parts and powers of the mind, it is at least a satisfaction to go so far; and the more obvious this science may appear (and it is by no means obvious) the more contemptible still must the ignorance of it be esteemed, in all pretenders to learning and philosophy.

Nor can there remain any suspicion, that this science is uncertain and chimerical; unless we should entertain such a scepticism as is entirely subversive of all speculation, and even action. It cannot be doubted, that the mind is endowed with several powers and faculties, that these powers are distinct from each other, that what is really distinct to the immediate perception may be distinguished by reflexion; and consequently, that there is a truth and falsehood in all propositions on this subject, and a truth and falsehood, which lie not beyond the compass of human understanding. There are many obvious distinctions of this kind, such as those between the will and understanding, the imagination and passions, which fall within the comprehension of every human creature; and the finer and more philosophical distinctions are no less real and certain, though more difficult to be comprehended. Some instances, especially late ones, of success in these enquiries, may give us a juster notion of the certainty and solidity of this branch of learning. And shall we esteem it worthy the labour of a philosopher to give us a true system of the planets, and adjust the position and order of those remote bodies; while we affect to overlook those, who, with so much success, delineate the parts of the mind, in which we are so intimately concerned?

9. But may we not hope, that philosophy, if cultivated with care, and encouraged by the attention of the public, may carry its researches still farther, and discover, at least in some degree, the secret springs and principles, by which the human mind is actuated in its operations? Astronomers had long contented themselves with proving, from the phaenomena, the true motions, order, and magnitude of the heavenly bodies: Till a philosopher, at last, arose, who seems, from the happiest reasoning, to have also determined the laws and forces, by which the revolutions of the planets are governed and directed. The like has been performed with regard to other parts of nature. And there is no reason to despair of equal success in our enquiries concerning the mental powers and economy, if prosecuted with equal capacity and caution. It is probable, that one operation and principle of the mind depends on another; which, again, may be resolved into one more general and universal: And how far these researches may possibly be carried, it will be difficult for us, before, or even after, a careful trial, exactly to determine. This is certain, that attempts of this kind are every day made even by those who philosophize the most negligently: And nothing can be more requisite than to enter upon the enterprize with thorough care and attention; that, if it lie within the compass of human understanding, it may at last be happily achieved; if not, it may, however, be rejected with some confidence and security. This last conclusion, surely, is not desirable; nor ought it to be embraced too rashly. For how much must we diminish from the beauty and value of this species of philosophy, upon such a supposition? Moralists have hitherto been accustomed, when they considered the vast multitude and diversity of those actions that excite our approbation or dislike, to search for some common principle, on which this variety of sentiments might depend. And though they have sometimes carried the matter too far, by their passion for some one general principle; it must, however, be confessed, that they are excusable in expecting to find some general principles, into which all the vices and virtues were justly to be resolved. The like has been the endeavour of critics, logicians, and even politicians: Nor have their attempts been wholly unsuccessful; though perhaps longer time, greater accuracy, and more ardent application may bring these sciences still nearer their perfection. To throw up at once all pretensions of this kind may justly be deemed more rash, precipitate, and dogmatical, than even the boldest and most affirmative philosophy, that has ever attempted to impose its crude dictates and principles on mankind.

10. What though these reasonings concerning human nature seem abstract, and of difficult comprehension? This affords no presumption of their falsehood. On the contrary, it seems impossible, that what has hitherto escaped so many wise and profound philosophers can be very obvious and easy. And whatever pains these researches may cost us, we may think ourselves sufficiently rewarded, not only in point of profit but of pleasure, if, by that means, we can make any addition to our stock of knowledge, in subjects of such unspeakable importance.

But as, after all, the abstractedness of these speculations is no recommendation, but rather a disadvantage to them, and as this difficulty may perhaps be surmounted by care and art, and the avoiding of all unnecessary detail, we have, in the following enquiry, attempted to throw some light upon subjects, from which uncertainty has hitherto deterred the wise, and obscurity the ignorant. Happy, if we can unite the boundaries of the different species of philosophy, by reconciling profound enquiry with clearness, and truth with novelty! And still more happy, if, reasoning in this easy manner, we can undermine the foundations of an abstruse philosophy, which seems to have hitherto served only as a shelter to superstition, and a cover to absurdity and error!

SECTION II.

OF THE ORIGIN OF IDEAS.

11. Every one will readily allow, that there is a considerable difference between the perceptions of the mind, when a man feels the pain of excessive heat, or the pleasure of moderate warmth, and when he afterwards recalls to his memory this sensation, or anticipates it by his imagination. These faculties may mimic or copy the perceptions of the senses; but they never can entirely reach the force and vivacity of the original sentiment. The utmost we say of them, even when they operate with greatest vigour, is, that they represent their object in so lively a manner, that we could _almost_ say we feel or see it: But, except the mind be disordered by disease or madness, they never can arrive at such a pitch of vivacity, as to render these perceptions altogether undistinguishable. All the colours of poetry, however splendid, can never paint natural objects in such a manner as to make the description be taken for a real landskip. The most lively thought is still inferior to the dullest sensation.

We may observe a like distinction to run through all the other perceptions of the mind. A man in a fit of anger, is actuated in a very different manner from one who only thinks of that emotion. If you tell me, that any person is in love, I easily understand your meaning, and form a just conception of his situation; but never can mistake that conception for the real disorders and agitations of the passion. When we reflect on our past sentiments and affections, our thought is a faithful mirror, and copies its objects truly; but the colours which it employs are faint and dull, in comparison of those in which our original perceptions were clothed. It requires no nice discernment or metaphysical head to mark the distinction between them.

12. Here therefore we may divide all the perceptions of the mind into two classes or species, which are distinguished by their different degrees of force and vivacity. The less forcible and lively are commonly denominated _Thoughts_ or _Ideas_. The other species want a name in our language, and in most others; I suppose, because it was not requisite for any, but philosophical purposes, to rank them under a general term or appellation. Let us, therefore, use a little freedom, and call them _Impressions_; employing that word in a sense somewhat different from the usual. By the term _impression_, then, I mean all our more lively perceptions, when we hear, or see, or feel, or love, or hate, or desire, or will. And impressions are distinguished from ideas, which are the less lively perceptions, of which we are conscious, when we reflect on any of those sensations or movements above mentioned.

13. Nothing, at first view, may seem more unbounded than the thought of man, which not only escapes all human power and authority, but is not even restrained within the limits of nature and reality. To form monsters, and join incongruous shapes and appearances, costs the imagination no more trouble than to conceive the most natural and familiar objects. And while the body is confined to one planet, along which it creeps with pain and difficulty; the thought can in an instant transport us into the most distant regions of the universe; or even beyond the universe, into the unbounded chaos, where nature is supposed to lie in total confusion. What never was seen, or heard of, may yet be conceived; nor is any thing beyond the power of thought, except what implies an absolute contradiction.

But though our thought seems to possess this unbounded liberty, we shall find, upon a nearer examination, that it is really confined within very narrow limits, and that all this creative power of the mind amounts to no more than the faculty of compounding, transposing, augmenting, or diminishing the materials afforded us by the senses and experience. When we think of a golden mountain, we only join two consistent ideas, _gold_, and _mountain_, with which we were formerly acquainted. A virtuous horse we

can conceive; because, from our own feeling, we can conceive virtue; and this we may unite to the figure and shape of a horse, which is an animal familiar to us. In short, all the materials of thinking are derived either from our outward or inward sentiment: the mixture and composition of these belongs alone to the mind and will. Or, to express myself in philosophical language, all our ideas or more feeble perceptions are copies of our impressions or more lively ones.

14. To prove this, the two following arguments will, I hope, be sufficient. First, when we analyze our thoughts or ideas, however compounded or sublime, we always find that they resolve themselves into such simple ideas as were copied from a precedent feeling or sentiment. Even those ideas, which, at first view, seem the most wide of this origin, are found, upon a nearer scrutiny, to be derived from it. The idea of God, as meaning an infinitely intelligent, wise, and good Being, arises from reflecting on the operations of our own mind, and augmenting, without limit, those qualities of goodness and wisdom. We may prosecute this enquiry to what length we please; where we shall always find, that every idea which we examine is copied from a similar impression. Those who would assert that this position is not universally true nor without exception, have only one, and that an easy method of refuting it; by producing that idea, which, in their opinion, is not derived from this source. It will then be incumbent on us, if we would maintain our doctrine, to produce the impression, or lively perception, which corresponds to it.

15. Secondly. If it happen, from a defect of the organ, that a man is not susceptible of any species of sensation, we always find that he is as little susceptible of the correspondent ideas. A blind man can form no notion of colours; a deaf man of sounds. Restore either of them that sense in which he is deficient; by opening this new inlet for his sensations, you also open an inlet for the ideas; and he finds no difficulty in conceiving these objects. The case is the same, if the object, proper for exciting any sensation, has never been applied to the organ. A Laplander or Negro has no notion of the relish of wine. And though there are few or no instances of a like deficiency in the mind, where a person has never felt or is wholly incapable of a sentiment or passion that belongs to his species; yet we find the same observation to take place in a less degree. A man of mild manners can form no idea of inveterate revenge or cruelty; nor can a selfish heart easily conceive the heights of friendship and generosity. It is readily allowed, that other beings may possess many senses of which we can have no conception; because the ideas of them have never been introduced to us in the only manner by which an idea can have access to the mind, to wit, by the actual feeling and sensation.

16. There is, however, one contradictory phenomenon, which may prove that it is not absolutely impossible for ideas to arise, independent of their correspondent impressions. I believe it will readily be allowed, that the several distinct ideas of colour, which enter by the eye, or those of sound, which are conveyed by the ear, are really different from each other; though, at the same time, resembling. Now if this be true of different colours, it must be no less so of the different shades of the same colour; and each shade produces a distinct idea, independent of the rest. For if this should be denied, it is possible, by the continual gradation of shades, to run a colour insensibly into what is most remote from it; and if you will not allow any of the means to be different, you cannot, without absurdity, deny the extremes to be the same. Suppose, therefore, a person to have enjoyed his sight for thirty years, and to have become perfectly acquainted with colours of all kinds except one particular shade of blue, for instance, which it never has been his fortune to meet with. Let all the different shades of that colour, except that single one, be placed before him, descending gradually from the deepest to the lightest; it is plain that he will perceive a blank, where that shade is wanting, and will be sensible that there is a greater distance in that place between the contiguous colours than in any other. Now I ask, whether it be possible for him, from his own imagination, to supply this deficiency, and raise up to himself the idea of that particular shade, though it had never been conveyed to him by his senses? I believe there are few but will be of opinion that he can: and this may serve as a proof that the simple ideas are not always, in every instance, derived from the correspondent impressions; though this instance is so singular, that it is scarcely worth our observing, and does not merit that for it alone we should alter our general maxim.

17. Here, therefore, is a proposition, which not only seems, in itself, simple and intelligible; but, if a proper use were made of it, might render every dispute equally intelligible, and banish all that jargon, which has so long taken possession of metaphysical reasonings, and drawn disgrace upon them. All ideas, especially abstract ones, are naturally faint and obscure: the mind has but a slender hold of them: they are apt to be confounded with other resembling ideas; and when we have often employed any term, though without a distinct meaning, we are apt to imagine it has a determinate idea annexed to it. On the contrary, all impressions, that is, all sensations, either outward or inward, are strong and vivid: the limits between them are more exactly determined: nor is it easy to fall into any error or mistake with regard to them. When we entertain, therefore, any suspicion that a philosophical term is employed without any meaning or idea (as is but too frequent), we need but enquire, _from what impression is that supposed idea derived_? And if it be impossible to assign any, this will serve to confirm our suspicion. By bringing ideas into so clear a light we may reasonably hope to remove all dispute, which may arise, concerning their nature and reality.[1]

[1] It is probable that no more was meant by those, who denied innate ideas, than that all ideas were copies of our impressions; though it must be confessed, that the terms, which they employed, were not chosen with such caution, nor so exactly defined, as to prevent all mistakes about their doctrine. For what is meant by _innate_? If innate be equivalent to natural, then all the perceptions and ideas of the mind must be allowed to be innate or natural, in whatever sense we take the latter word, whether in opposition to what is uncommon, artificial, or miraculous. If by innate be meant, contemporary to our birth, the dispute seems to be frivolous; nor is it worth while to enquire at what time thinking begins, whether before, at, or after our birth. Again, the word _idea_, seems to be commonly taken in a very loose sense, by LOCKE and others; as standing for any of our perceptions, our sensations and passions, as well as thoughts. Now in this sense, I should desire to know, what can be meant by asserting, that self-love, or resentment of injuries, or the passion between the sexes is not innate?

But admitting these terms, _impressions_ and _ideas_, in the sense above explained, and understanding by _innate_, what is original or copied from no precedent perception, then may we assert that all our impressions are innate, and our ideas not innate.

To be ingenuous, I must own it to be my opinion, that LOCKE was betrayed into this question by the schoolmen, who, making use of undefined terms, draw out their disputes to a tedious length, without ever touching the point in question. A like ambiguity and circumlocution seem to run through that philosopher's reasonings on this as well as most other subjects.

SECTION III.

OF THE ASSOCIATION OF IDEAS.

18. It is evident that there is a principle of connexion between the different thoughts or ideas of the mind, and that, in their appearance to the memory or imagination, they introduce each other with a certain degree of method and regularity. In our more serious thinking or discourse this is so observable that any particular thought, which breaks in upon the regular tract or chain of ideas, is immediately remarked and rejected. And even in our wildest and most wandering reveries, nay in our very dreams, we shall find, if we reflect, that the imagination ran not altogether at adventures, but that there was still a connexion upheld among the different ideas, which succeeded each other. Were the loosest and freest conversation to be transcribed, there would immediately be observed something which connected it in all its transitions. Or where this is wanting, the person who broke the thread of discourse might still inform you, that there had secretly revolved in his mind a succession of thought, which had gradually led him from the subject of conversation. Among different languages, even where we cannot suspect the least connexion or communication, it is found, that the words, expressive of ideas, the most compounded, do yet nearly correspond to each other: a certain proof that the simple ideas, comprehended in the compound ones, were bound together by some universal principle, which had an equal influence on all mankind.

19. Though it be too obvious to escape observation, that different ideas are connected together; I do not find that any philosopher has attempted to enumerate or class all the principles of association; a subject, however, that seems worthy of curiosity. To me, there appear to be only three principles of connexion among ideas, namely, _Resemblance_, _Contiguity_ in time or place, and _Cause or Effect_.

That these principles serve to connect ideas will not, I believe, be much doubted. A picture naturally leads our thoughts to the original[2]: the mention of one apartment in a building naturally introduces an enquiry or discourse concerning the others[3]: and if we think of a wound, we can scarcely forbear reflecting on the pain which follows it[4]. But that this enumeration is complete, and that there are no other principles of association except these, may be difficult to prove to the satisfaction of the reader, or even to a man's own satisfaction. All we can do, in such cases, is to run over several instances, and examine carefully the principle which binds the different thoughts to each other, never stopping till we render the principle as general as possible[5]. The more instances we examine, and the more care we employ, the more assurance shall we acquire, that the enumeration, which we form from the whole, is complete and entire.

[2] Resemblance.

[3] Contiguity.

[4] Cause and effect.

[5] For instance, Contrast or Contrariety is also a connexion among Ideas: but it may, perhaps, be considered as a mixture of _Causation_ and _Resemblance_. Where two objects are contrary, the one destroys the other; that is, the cause of its annihilation,

and the idea of the annihilation of an object, implies the idea of its former existence.

SECTION IV.

SCEPTICAL DOUBTS CONCERNING THE OPERATIONS OF THE UNDERSTANDING.

PART I.

20. All the objects of human reason or enquiry may naturally be divided into two kinds, to wit, _Relations of Ideas_, and _Matters of Fact_. Of the first kind are the sciences of Geometry, Algebra, and Arithmetic; and in short, every affirmation which is either intuitively or demonstratively certain. _That the square of the hypothenuse is equal to the square of the two sides_, is a proposition which expresses a relation between these figures. _That three times five is equal to the half of thirty_, expresses a relation between these numbers. Propositions of this kind are discoverable by the mere operation of thought, without dependence on what is anywhere existent in the universe. Though there never were a circle or triangle in nature, the truths demonstrated by Euclid would for ever retain their certainty and evidence.

21. Matters of fact, which are the second objects of human reason, are not ascertained in the same manner; nor is our evidence of their truth, however great, of a like nature with the foregoing. The contrary of every matter of fact is still possible; because it can never imply a contradiction, and is conceived by the mind with the same facility and distinctness, as if ever so conformable to reality. _That the sun will not rise to-morrow_ is no less intelligible a proposition, and implies no more contradiction than the affirmation, _that it will rise_. We should in vain, therefore, attempt to demonstrate its falsehood. Were it demonstratively false, it would imply a contradiction, and could never be distinctly conceived by the mind.

It may, therefore, be a subject worthy of curiosity, to enquire what is the nature of that evidence which assures us of any real existence and matter of fact, beyond the present testimony of our senses, or the records of our memory. This part of philosophy, it is observable, has been little cultivated, either by the ancients or moderns; and therefore our doubts and errors, in the prosecution of so important an enquiry, may be the more excusable; while we march through such difficult paths without any guide or direction. They may even prove useful, by exciting curiosity, and destroying that implicit faith and security, which is the bane of all reasoning and free enquiry. The discovery of defects in the common philosophy, if any such there be, will not, I presume, be a discouragement, but rather an incitement, as is usual, to attempt something more full and satisfactory than has yet been proposed to the public.

22. All reasonings concerning matter of fact seem to be founded on the relation of _Cause and Effect_. By means of that relation alone we can go beyond the evidence of our memory and senses. If you were to ask a man, why he believes any matter of fact, which is absent; for instance, that his friend is in the country, or in France; he would give you a reason; and this reason would be some other fact; as a letter received from him, or the knowledge of his former resolutions and promises. A man finding a watch or any other machine in a desert island, would conclude that there had once been men in that island. All our reasonings concerning fact are of the same nature. And here it is constantly supposed that there is a connexion between the present fact and that which is inferred from it. Were there nothing to bind them together, the inference would be entirely precarious. The hearing of an articulate voice and rational discourse in the dark assures us of the presence of some person: Why? because these are the effects of the human make and fabric, and closely connected with it. If we anatomize all the other reasonings of this nature, we shall find that they are founded on the relation of cause and effect, and that this relation is either near or remote, direct or collateral. Heat and light are collateral effects of fire, and the one effect may justly be inferred from the other.

23. If we would satisfy ourselves, therefore, concerning the nature of that evidence, which assures us of matters of fact, we must enquire how we arrive at the knowledge of cause and effect.

I shall venture to affirm, as a general proposition, which admits of no exception, that the knowledge of this relation is not, in any instance, attained by reasonings _a priori_; but arises entirely from experience, when we find that any particular objects are constantly conjoined with each other. Let an object be presented to a man of ever so strong natural reason and abilities; if that object be entirely new to him, he will not be able, by the most accurate examination of its sensible qualities, to discover any of its causes or effects. Adam, though his rational faculties be supposed, at the very first, entirely perfect, could not have inferred from the fluidity and transparency of water that it would suffocate him, or from the light and warmth of fire that it would consume him. No object ever discovers, by the qualities which appear to the senses, either the causes which produced it, or the effects which will

arise from it; nor can our reason, unassisted by experience, ever draw any inference concerning real existence and matter of fact.

24. This proposition, _that causes and effects are discoverable, not by reason but by experience_, will readily be admitted with regard to such objects, as we remember to have once been altogether unknown to us; since we must be conscious of the utter inability, which we then lay under, of foretelling what would arise from them. Present two smooth pieces of marble to a man who has no tincture of natural philosophy; he will never discover that they will adhere together in such a manner as to require great force to separate them in a direct line, while they make so small a resistance to a lateral pressure. Such events, as bear little analogy to the common course of nature, are also readily confessed to be known only by experience; nor does any man imagine that the explosion of gunpowder, or the attraction of a loadstone, could ever be discovered by arguments _a priori_. In like manner, when an effect is supposed to depend upon an intricate machinery or secret structure of parts, we make no difficulty in attributing all our knowledge of it to experience. Who will assert that he can give the ultimate reason, why milk or bread is proper nourishment for a man, not for a lion or a tiger?

But the same truth may not appear, at first sight, to have the same evidence with regard to events, which have become familiar to us from our first appearance in the world, which bear a close analogy to the whole course of nature, and which are supposed to depend on the simple qualities of objects, without any secret structure of parts. We are apt to imagine that we could discover these effects by the mere operation of our reason, without experience. We fancy, that were we brought on a sudden into this world, we could at first have inferred that one Billiard-ball would communicate motion to another upon impulse; and that we needed not to have waited for the event, in order to pronounce with certainty concerning it. Such is the influence of custom, that, where it is strongest, it not only covers our natural ignorance, but even conceals itself, and seems not to take place, merely because it is found in the highest degree.

25. But to convince us that all the laws of nature, and all the operations of bodies without exception, are known only by experience, the following reflections may, perhaps, suffice. Were any object presented to us, and were we required to pronounce concerning the effect, which will result from it, without consulting past observation; after what manner, I beseech you, must the mind proceed in this operation? It must invent or imagine some event, which it ascribes to the object as its effect; and it is plain that this invention must be entirely arbitrary. The mind can never possibly find the effect in the supposed cause, by the most accurate scrutiny and examination. For the effect is totally different from the cause, and consequently can never be discovered in it. Motion in the second Billiard-ball is a quite distinct event from motion in the first; nor is there anything in the one to suggest the smallest hint of the other. A stone or piece of metal raised into the air, and left without any support, immediately falls: but to consider the matter _a priori_, is there anything we discover in this situation which can beget the idea of a downward, rather than an upward, or any other motion, in the stone or metal? And as the first imagination or invention of a particular effect, in all natural operations, is arbitrary, where we consult not experience; so must we also esteem the supposed tie or connexion between the cause and effect, which binds them together, and renders it impossible that any other effect could result from the operation of that cause. When I see, for instance, a Billiard-ball moving in a straight line towards another; even suppose motion in the second ball should by accident be suggested to me, as the result of their contact or impulse; may I not conceive, that a hundred different events might as well follow from that cause? May not both these balls remain at absolute rest? May not the first ball return in a straight line, or leap off from the second in any line or direction? All these suppositions are consistent and conceivable. Why then should we give the preference to one, which is no more consistent or conceivable than the rest? All our reasonings _a priori_ will never be able to show us any foundation for this preference.

In a word, then, every effect is a distinct event from its cause. It could not, therefore, be discovered in the cause, and the first invention or conception of it, _a priori_, must be entirely arbitrary. And even after it is suggested, the conjunction of it with the cause must appear equally arbitrary; since there are always many other effects, which, to reason, must seem fully as consistent and natural. In vain, therefore, should we pretend to determine any single event, or infer any cause or effect, without the assistance of observation and experience.

26. Hence we may discover the reason why no philosopher, who is rational and modest, has ever pretended to assign the ultimate cause of any natural operation, or to show distinctly the action of that power, which produces any single effect in the universe. It is confessed, that the utmost effort of human reason is to reduce the principles, productive of natural phenomena, to a greater simplicity, and to resolve the many particular effects into a few general causes, by means of reasonings from analogy, experience, and observation. But as to the causes of these general causes, we should in vain attempt their discovery; nor shall we ever be able to satisfy ourselves, by any particular explication of them. These ultimate springs and principles are totally shut up from human curiosity and enquiry. Elasticity, gravity, cohesion of parts, communication of motion by impulse; these are probably the ultimate

causes and principles which we shall ever discover in nature; and we may esteem ourselves sufficiently happy, if, by accurate enquiry and reasoning, we can trace up the particular phenomena to, or near to, these general principles. The most perfect philosophy of the natural kind only staves off our ignorance a little longer: as perhaps the most perfect philosophy of the moral or metaphysical kind serves only to discover larger portions of it. Thus the observation of human blindness and weakness is the result of all philosophy, and meets us at every turn, in spite of our endeavours to elude or avoid it.

27. Nor is geometry, when taken into the assistance of natural philosophy, ever able to remedy this defect, or lead us into the knowledge of ultimate causes, by all that accuracy of reasoning for which it is so justly celebrated. Every part of mixed mathematics proceeds upon the supposition that certain laws are established by nature in her operations; and abstract reasonings are employed, either to assist experience in the discovery of these laws, or to determine their influence in particular instances, where it depends upon any precise degree of distance and quantity. Thus, it is a law of motion, discovered by experience, that the moment or force of any body in motion is in the compound ratio or proportion of its solid contents and its velocity; and consequently, that a small force may remove the greatest obstacle or raise the greatest weight, if, by any contrivance or machinery, we can increase the velocity of that force, so as to make it an overmatch for its antagonist. Geometry assists us in the application of this law, by giving us the just dimensions of all the parts and figures which can enter into any species of machine; but still the discovery of the law itself is owing merely to experience, and all the abstract reasonings in the world could never lead us one step towards the knowledge of it. When we reason _a priori_, and consider merely any object or cause, as it appears to the mind, independent of all observation, it never could suggest to us the notion of any distinct object, such as its effect; much less, show us the inseparable and inviolable connexion between them. A man must be very sagacious who could discover by reasoning that crystal is the effect of heat, and ice of cold, without being previously acquainted with the operation of these qualities.

PART II.

28. But we have not yet attained any tolerable satisfaction with regard to the question first proposed. Each solution still gives rise to a new question as difficult as the foregoing, and leads us on to farther enquiries. When it is asked, _What is the nature of all our reasonings concerning matter of fact?_ the proper answer seems to be, that they are founded on the relation of cause and effect. When again it is asked, _What is the foundation of all our reasonings and conclusions concerning that relation?_ it may be replied in one word, Experience. But if we still carry on our sifting humour, and ask, _What is the foundation of all conclusions from experience?_ this implies a new question, which may be of more difficult solution and explication. Philosophers, that give themselves airs of superior wisdom and sufficiency, have a hard task when they encounter persons of inquisitive dispositions, who push them from every corner to which they retreat, and who are sure at last to bring them to some dangerous dilemma. The best expedient to prevent this confusion, is to be modest in our pretensions; and even to discover the difficulty ourselves before it is objected to us. By this means, we may make a kind of merit of our very ignorance.

I shall content myself, in this section, with an easy task, and shall pretend only to give a negative answer to the question here proposed. I say then, that, even after we have experience of the operations of cause and effect, our conclusions from that experience are _not_ founded on reasoning, or any process of the understanding. This answer we must endeavour both to explain and to defend.

29. It must certainly be allowed, that nature has kept us at a great distance from all her secrets, and has afforded us only the knowledge of a few superficial qualities of objects; while she conceals from us those powers and principles on which the influence of those objects entirely depends. Our senses inform us of the colour, weight, and consistence of bread; but neither sense nor reason can ever inform us of those qualities which fit it for the nourishment and support of a human body. Sight or feeling conveys an idea of the actual motion of bodies; but as to that wonderful force or power, which would carry on a moving body for ever in a continued change of place, and which bodies never lose but by communicating it to others; of this we cannot form the most distant conception. But notwithstanding this ignorance of natural powers[6] and principles, we always presume, when we see like sensible qualities, that they have like secret powers, and expect that effects, similar to those which we have experienced, will follow from them. If a body of like colour and consistence with that bread, which we have formerly eat, be presented to us, we make no scruple of repeating the experiment, and foresee, with certainty, like nourishment and support. Now this is a process of the mind or thought, of which I would willingly know the foundation. It is allowed on all hands that there is no known connexion between the sensible qualities and the secret powers; and consequently, that the mind is not led to form such a conclusion concerning their constant and regular conjunction, by anything which it knows of their nature. As to past _Experience_, it can be allowed to give _direct_ and _certain_ information of those precise objects only, and that precise period of time, which fell under its cognizance: but why this

experience should be extended to future times, and to other objects, which for aught we know, may be only in appearance similar; this is the main question on which I would insist. The bread, which I formerly eat, nourished me; that is, a body of such sensible qualities was, at that time, endued with such secret powers: but does it follow, that other bread must also nourish me at another time, and that like sensible qualities must always be attended with like secret powers? The consequence seems nowise necessary. At least, it must be acknowledged that there is here a consequence drawn by the mind; that there is a certain step taken; a process of thought, and an inference, which wants to be explained. These two propositions are far from being the same, _I have found that such an object has always been attended with such an effect_, and _I foresee, that other objects, which are, in appearance, similar, will be attended with similar effects_. I shall allow, if you please, that the one proposition may justly be inferred from the other: I know, in fact, that it always is inferred. But if you insist that the inference is made by a chain of reasoning, I desire you to produce that reasoning. The connexion between these propositions is not intuitive. There is required a medium, which may enable the mind to draw such an inference, if indeed it be drawn by reasoning and argument. What that medium is, I must confess, passes my comprehension; and it is incumbent on those to produce it, who assert that it really exists, and is the origin of all our conclusions concerning matter of fact.

[6] The word, Power, is here used in a loose and popular sense. The more accurate explication of it would give additional evidence to this argument. See Sect. 7.

30. This negative argument must certainly, in process of time, become altogether convincing, if many penetrating and able philosophers shall turn their enquiries this way and no one be ever able to discover any connecting proposition or intermediate step, which supports the understanding in this conclusion. But as the question is yet new, every reader may not trust so far to his own penetration, as to conclude, because an argument escapes his enquiry, that therefore it does not really exist. For this reason it may be requisite to venture upon a more difficult task; and enumerating all the branches of human knowledge, endeavour to show that none of them can afford such an argument.

All reasonings may be divided into two kinds, namely, demonstrative reasoning, or that concerning relations of ideas, and moral reasoning, or that concerning matter of fact and existence. That there are no demonstrative arguments in the case seems evident; since it implies no contradiction that the course of nature may change, and that an object, seemingly like those which we have experienced, may be attended with different or contrary effects. May I not clearly and distinctly conceive that a body, falling from the clouds, and which, in all other respects, resembles snow, has yet the taste of salt or feeling of fire? Is there any more intelligible proposition than to affirm, that all the trees will flourish in December and January, and decay in May and June? Now whatever is intelligible, and can be distinctly conceived, implies no contradiction, and can never be proved false by any demonstrative argument or abstract reasoning _a priori_.

If we be, therefore, engaged by arguments to put trust in past experience, and make it the standard of our future judgement, these arguments must be probable only, or such as regard matter of fact and real existence, according to the division above mentioned. But that there is no argument of this kind, must appear, if our explication of that species of reasoning be admitted as solid and satisfactory. We have said that all arguments concerning existence are founded on the relation of cause and effect; that our knowledge of that relation is derived entirely from experience; and that all our experimental conclusions proceed upon the supposition that the future will be conformable to the past. To endeavour, therefore, the proof of this last supposition by probable arguments, or arguments regarding existence, must be evidently going in a circle, and taking that for granted, which is the very point in question.

31. In reality, all arguments from experience are founded on the similarity which we discover among natural objects, and by which we are induced to expect effects similar to those which we have found to follow from such objects. And though none but a fool or madman will ever pretend to dispute the authority of experience, or to reject that great guide of human life, it may surely be allowed a philosopher to have so much curiosity at least as to examine the principle of human nature, which gives this mighty authority to experience, and makes us draw advantage from that similarity which nature has placed among different objects. From causes which appear _similar_ we expect similar effects. This is the sum of all our experimental conclusions. Now it seems evident that, if this conclusion were formed by reason, it would be as perfect at first, and upon one instance, as after ever so long a course of experience. But the case is far otherwise. Nothing so like as eggs; yet no one, on account of this appearing similarity, expects the same taste and relish in all of them. It is only after a long course of uniform experiments in any kind, that we attain a firm reliance and security with regard to a particular event. Now where is that process of reasoning which, from one instance, draws a conclusion, so different from that which it infers from a hundred instances that are nowise different from that single one? This question I propose as much for the sake of information, as with an intention of raising difficulties. I cannot find, I cannot imagine any

such reasoning. But I keep my mind still open to instruction, if any one will vouchsafe to bestow it on me.

32. Should it be said that, from a number of uniform experiments, we _infer_ a connexion between the sensible qualities and the secret powers; this, I must confess, seems the same difficulty, couched in different terms. The question still recurs, on what process of argument this _inference_ is founded? Where is the medium, the interposing ideas, which join propositions so very wide of each other? It is confessed that the colour, consistence, and other sensible qualities of bread appear not, of themselves, to have any connexion with the secret powers of nourishment and support. For otherwise we could infer these secret powers from the first appearance of these sensible qualities, without the aid of experience; contrary to the sentiment of all philosophers, and contrary to plain matter of fact. Here, then, is our natural state of ignorance with regard to the powers and influence of all objects. How is this remedied by experience? It only shows us a number of uniform effects, resulting from certain objects, and teaches us that those particular objects, at that particular time, were endowed with such powers and forces. When a new object, endowed with similar sensible qualities, is produced, we expect similar powers and forces, and look for a like effect. From a body of like colour and consistence with bread we expect like nourishment and support. But this surely is a step or progress of the mind, which wants to be explained. When a man says, _I have found, in all past instances, such sensible qualities conjoined with such secret powers_: And when he says, _Similar sensible qualities will always be conjoined with similar secret powers_, he is not guilty of a tautology, nor are these propositions in any respect the same. You say that the one proposition is an inference from the other. But you must confess that the inference is not intuitive; neither is it demonstrative: Of what nature is it, then? To say it is experimental, is begging the question. For all inferences from experience suppose, as their foundation, that the future will resemble the past, and that similar powers will be conjoined with similar sensible qualities. If there be any suspicion that the course of nature may change, and that the past may be no rule for the future, all experience becomes useless, and can give rise to no inference or conclusion. It is impossible, therefore, that any arguments from experience can prove this resemblance of the past to the future; since all these arguments are founded on the supposition of that resemblance. Let the course of things be allowed hitherto ever so regular; that alone, without some new argument or inference, proves not that, for the future, it will continue so. In vain do you pretend to have learned the nature of bodies from your past experience. Their secret nature, and consequently all their effects and influence, may change, without any change in their sensible qualities. This happens sometimes, and with regard to some objects: Why may it not happen always, and with regard to all objects? What logic, what process of argument secures you against this supposition? My practice, you say, refutes my doubts. But you mistake the purport of my question. As an agent, I am quite satisfied in the point; but as a philosopher, who has some share of curiosity, I will not say scepticism, I want to learn the foundation of this inference. No reading, no enquiry has yet been able to remove my difficulty, or give me satisfaction in a matter of such importance. Can I do better than propose the difficulty to the public, even though, perhaps, I have small hopes of obtaining a solution? We shall at least, by this means, be sensible of our ignorance, if we do not augment our knowledge.

33. I must confess that a man is guilty of unpardonable arrogance who concludes, because an argument has escaped his own investigation, that therefore it does not really exist. I must also confess that, though all the learned, for several ages, should have employed themselves in fruitless search upon any subject, it may still, perhaps, be rash to conclude positively that the subject must, therefore, pass all human comprehension. Even though we examine all the sources of our knowledge, and conclude them unfit for such a subject, there may still remain a suspicion, that the enumeration is not complete, or the examination not accurate. But with regard to the present subject, there are some considerations which seem to remove all this accusation of arrogance or suspicion of mistake.

It is certain that the most ignorant and stupid peasants--nay infants, nay even brute beasts--improve by experience, and learn the qualities of natural objects, by observing the effects which result from them. When a child has felt the sensation of pain from touching the flame of a candle, he will be careful not to put his hand near any candle; but will expect a similar effect from a cause which is similar in its sensible qualities and appearance. If you assert, therefore, that the understanding of the child is led into this conclusion by any process of argument or ratiocination, I may justly require you to produce that argument; nor have you any pretence to refuse so equitable a demand. You cannot say that the argument is abstruse, and may possibly escape your enquiry; since you confess that it is obvious to the capacity of a mere infant. If you hesitate, therefore, a moment, or if, after reflection, you produce any intricate or profound argument, you, in a manner, give up the question, and confess that it is not reasoning which engages us to suppose the past resembling the future, and to expect similar effects from causes which are, to appearance, similar. This is the proposition which I intended to enforce in the present section. If I be right, I pretend not to have made any mighty discovery. And if I be wrong, I must acknowledge myself to be indeed a very backward scholar; since I cannot now discover an argument which, it seems, was perfectly familiar to me long before I was out of my cradle.

SECTION V.

SCEPTICAL SOLUTION OF THESE DOUBTS.

PART I.

34. The passion for philosophy, like that for religion, seems liable to this inconvenience, that, though it aims at the correction of our manners, and extirpation of our vices, it may only serve, by imprudent management, to foster a predominant inclination, and push the mind, with more determined resolution, towards that side which already _draws_ too much, by the bias and propensity of the natural temper. It is certain that, while we aspire to the magnanimous firmness of the philosophic sage, and endeavour to confine our pleasures altogether within our own minds, we may, at last, render our philosophy like that of Epictetus, and other _Stoics_, only a more refined system of selfishness, and reason ourselves out of all virtue as well as social enjoyment. While we study with attention the vanity of human life, and turn all our thoughts towards the empty and transitory nature of riches and honours, we are, perhaps, all the while flattering our natural indolence, which, hating the bustle of the world, and drudgery of business, seeks a pretence of reason to give itself a full and uncontrolled indulgence. There is, however, one species of philosophy which seems little liable to this inconvenience, and that because it strikes in with no disorderly passion of the human mind, nor can mingle itself with any natural affection or propensity; and that is the Academic or Sceptical philosophy. The academics always talk of doubt and suspense of judgement, of danger in hasty determinations, of confining to very narrow bounds the enquiries of the understanding, and of renouncing all speculations which lie not within the limits of common life and practice. Nothing, therefore, can be more contrary than such a philosophy to the supine indolence of the mind, its rash arrogance, its lofty pretensions, and its superstitious credulity. Every passion is mortified by it, except the love of truth; and that passion never is, nor can be, carried to too high a degree. It is surprising, therefore, that this philosophy, which, in almost every instance, must be harmless and innocent, should be the subject of so much groundless reproach and obloquy. But, perhaps, the very circumstance which renders it so innocent is what chiefly exposes it to the public hatred and resentment. By flattering no irregular passion, it gains few partizans: By opposing so many vices and follies, it raises to itself abundance of enemies, who stigmatize it as libertine profane, and irreligious.

Nor need we fear that this philosophy, while it endeavours to limit our enquiries to common life, should ever undermine the reasonings of common life, and carry its doubts so far as to destroy all action, as well as speculation. Nature will always maintain her rights, and prevail in the end over any abstract reasoning whatsoever. Though we should conclude, for instance, as in the foregoing section, that, in all reasonings from experience, there is a step taken by the mind which is not supported by any argument or process of the understanding; there is no danger that these reasonings, on which almost all knowledge depends, will ever be affected by such a discovery. If the mind be not engaged by argument to make this step, it must be induced by some other principle of equal weight and authority; and that principle will preserve its influence as long as human nature remains the same. What that principle is may well be worth the pains of enquiry.

35. Suppose a person, though endowed with the strongest faculties of reason and reflection, to be brought on a sudden into this world; he would, indeed, immediately observe a continual succession of objects, and one event following another; but he would not be able to discover anything farther. He would not, at first, by any reasoning, be able to reach the idea of cause and effect; since the particular powers, by which all natural operations are performed, never appear to the senses; nor is it reasonable to conclude, merely because one event, in one instance, precedes another, that therefore the one is the cause, the other the effect. Their conjunction may be arbitrary and casual. There may be no reason to infer the existence of one from the appearance of the other. And in a word, such a person, without more experience, could never employ his conjecture or reasoning concerning any matter of fact, or be assured of anything beyond what was immediately present to his memory and senses.

Suppose, again, that he has acquired more experience, and has lived so long in the world as to have observed familiar objects or events to be constantly conjoined together; what is the consequence of this experience? He immediately infers the existence of one object from the appearance of the other. Yet he has not, by all his experience, acquired any idea or knowledge of the secret power by which the one object produces the other; nor is it, by any process of reasoning, he is engaged to draw this inference. But still he finds himself determined to draw it: And though he should be convinced that his understanding has no part in the operation, he would nevertheless continue in the same course of thinking. There is some other principle which determines him to form such a conclusion.

36. This principle is Custom or Habit. For wherever the repetition of any particular act or operation produces a propensity to renew the same act or operation, without being impelled by any reasoning or process of the understanding, we always say, that this

propensity is the effect of _Custom_. By employing that word, we pretend not to have given the ultimate reason of such a propensity. We only point out a principle of human nature, which is universally acknowledged, and which is well known by its effects. Perhaps we can push our enquiries no farther, or pretend to give the cause of this cause; but must rest contented with it as the ultimate principle, which we can assign, of all our conclusions from experience. It is sufficient satisfaction, that we can go so far, without repining at the narrowness of our faculties because they will carry us no farther. And it is certain we here advance a very intelligible proposition at least, if not a true one, when we assert that, after the constant conjunction of two objects--heat and flame, for instance, weight and solidity--we are determined by custom alone to expect the one from the appearance of the other. This hypothesis seems even the only one which explains the difficulty, why we draw, from a thousand instances, an inference which we are not able to draw from one instance, that is, in no respect, different from them. Reason is incapable of any such variation. The conclusions which it draws from considering one circle are the same which it would form upon surveying all the circles in the universe. But no man, having seen only one body move after being impelled by another, could infer that every other body will move after a like impulse. All inferences from experience, therefore, are effects of custom, not of reasoning[7].

[7] Nothing is more useful than for writers, even, on _moral_, _political_, or _physical_ subjects, to distinguish between _reason_ and _experience_, and to suppose, that these species of argumentation are entirely different from each other. The former are taken for the mere result of our intellectual faculties, which, by considering _a priori_ the nature of things, and examining the effects, that must follow from their operation, establish particular principles of science and philosophy. The latter are supposed to be derived entirely from sense and observation, by which we learn what has actually resulted from the operation of particular objects, and are thence able to infer, what will, for the future, result from them. Thus, for instance, the limitations and restraints of civil government, and a legal constitution, may be defended, either from _reason_, which reflecting on the great frailty and corruption of human nature, teaches, that no man can safely be trusted with unlimited authority; or from _experience_ and history, which inform us of the enormous abuses, that ambition, in every age and country, has been found to make of so imprudent a confidence.

The same distinction between reason and experience is maintained in all our deliberations concerning the conduct of life; while the experienced statesman, general, physician, or merchant is trusted and followed; and the unpractised novice, with whatever natural talents endowed, neglected and despised. Though it be allowed, that reason may form very plausible conjectures with regard to the consequences of such a particular conduct in such particular circumstances; it is still supposed imperfect, without the assistance of experience, which is alone able to give stability and certainty to the maxims, derived from study and reflection.

But notwithstanding that this distinction be thus universally received, both in the active speculative scenes of life, I shall not scruple to pronounce, that it is, at bottom, erroneous, at least, superficial.

If we examine those arguments, which, in any of the sciences above mentioned, are supposed to be the mere effects of reasoning and reflection, they will be found to terminate, at last, in some general principle or conclusion, for which we can assign no reason but observation and experience. The only difference between them and those maxims, which are vulgarly esteemed the result of pure experience, is, that the former cannot be established without some process of thought, and some reflection on what we have observed, in order to distinguish its circumstances, and trace its consequences: Whereas in the latter, the experienced event is exactly and fully familiar to that which we infer as the result of any particular situation. The history of a TIBERIUS or a NERO makes us dread a like tyranny, were our monarchs freed from the restraints of laws and senates: But the observation of any fraud or cruelty in private life is sufficient, with the aid of a little thought, to give us the same apprehension; while it serves as an instance of the general corruption of human nature, and shows us the danger which we must incur by reposing an entire confidence in mankind. In both cases, it is experience which is ultimately the foundation of our inference and conclusion.

There is no man so young and unexperienced, as not to have formed, from observation, many general and just maxims concerning human affairs and the conduct of life; but it must be confessed, that, when a man comes to put these in practice, he will be extremely liable to error, till time and farther experience both enlarge these maxims, and teach him their proper use and application. In every situation or incident, there are many particular and seemingly minute circumstances, which the man of greatest talent is, at first, apt to overlook, though on them the justness of his conclusions, and consequently the prudence of his conduct, entirely depend. Not to mention, that, to a young beginner, the general observations and maxims occur not always on the proper occasions, nor can be immediately applied with due calmness and distinction. The truth is, an unexperienced reasoner could be no reasoner at all, were he absolutely unexperienced; and when we assign that character to any one, we mean it only in a comparative sense, and suppose him possessed of experience, in a smaller and more imperfect degree.

Custom, then, is the great guide of human life. It is that principle alone which renders our experience useful to us, and makes us expect, for the future, a similar train of events with those which have appeared in the past.

Without the influence of custom, we should be entirely ignorant of every matter of fact beyond what is immediately present to the memory and senses. We should never know how to adjust means to ends, or to employ our natural powers in the production of any effect. There would be an end at once of all action, as well as of the chief part of speculation.

37. But here it may be proper to remark, that though our conclusions from experience carry us beyond our memory and senses, and assure us of matters of fact which happened in the most distant places and most remote ages, yet some fact must always be present to the senses or memory, from which we may first proceed in drawing these conclusions. A man, who should find in a desert country the remains of pompous buildings, would conclude that the country had, in ancient times, been cultivated by civilized inhabitants; but did nothing of this nature occur to him, he could never form such an inference. We learn the events of former ages from history; but then we must peruse the volumes in which this instruction is contained, and thence carry up our inferences from one testimony to another, till we arrive at the eyewitnesses and spectators of these distant events. In a word, if we proceed not upon some fact, present to the memory or senses, our reasonings would be merely hypothetical; and however the particular links might be connected with each other, the whole chain of inferences would have nothing to support it, nor could we ever, by its means, arrive at the knowledge of any real existence. If I ask why you believe any particular matter of fact, which you relate, you must tell me some reason; and this reason will be some other fact, connected with it. But as you cannot proceed after this manner, _in infinitum_, you must at last terminate in some fact, which is present to your memory or senses; or must allow that your belief is entirely without foundation.

38. What, then, is the conclusion of the whole matter? A simple one; though, it must be confessed, pretty remote from the common theories of philosophy. All belief of matter of fact or real existence is derived merely from some object, present to the memory or senses, and a customary conjunction between that and some other object. Or in other words; having found, in many instances, that any two kinds of objects--flame and heat, snow and cold--have always been conjoined together; if flame or snow be presented anew to the senses, the mind is carried by custom to expect heat or cold, and to _believe_ that such a quality does exist, and will discover itself upon a nearer approach. This belief is the necessary result of placing the mind in such circumstances. It is an operation of the soul, when we are so situated, as unavoidable as to feel the passion of love, when we receive benefits; or hatred, when we meet with injuries. All these operations are a species of natural instincts, which no reasoning or process of the thought and understanding is able either to produce or to prevent.

At this point, it would be very allowable for us to stop our philosophical researches. In most questions we can never make a single step farther; and in all questions we must terminate here at last, after our most restless and curious enquiries. But still our curiosity will be pardonable, perhaps commendable, if it carry us on to still farther researches, and make us examine more accurately the nature of this _belief_, and of the _customary conjunction_, whence it is derived. By this means we may meet with some explications and analogies that will give satisfaction; at least to such as love the abstract sciences, and can be entertained with speculations, which, however accurate, may still retain a degree of doubt and uncertainty. As to readers of a different taste; the remaining part of this section is not calculated for them, and the following enquiries may well be understood, though it be neglected.

PART II.

39. Nothing is more free than the imagination of man; and though it cannot exceed that original stock of ideas furnished by the internal and external senses, it has unlimited power of mixing, compounding, separating, and dividing these ideas, in all the varieties of fiction and vision. It can feign a train of events, with all the appearance of reality, ascribe to them a particular time and place, conceive them as existent, and paint them out to itself with every circumstance, that belongs to any historical fact, which it believes with the greatest certainty. Wherein, therefore, consists the difference between such a fiction and belief? It lies not merely in any peculiar idea, which is annexed to such a conception as commands our assent, and which is wanting to every known fiction. For as the mind has authority over all its ideas, it could voluntarily annex this particular idea to any fiction, and consequently be able to believe whatever it pleases; contrary to what we find by daily experience. We can, in our conception, join the head of a man to the body of a horse; but it is not in our power to believe that such an animal has ever really existed.

It follows, therefore, that the difference between _fiction_ and _belief_ lies in some sentiment or feeling, which is annexed to the latter, not to the former, and which depends not on the will, nor can be commanded at pleasure. It must be excited by nature, like all other sentiments; and must arise from the particular situation, in which the mind is placed at any particular juncture. Whenever any

object is presented to the memory or senses, it immediately, by the force of custom, carries the imagination to conceive that object, which is usually conjoined to it; and this conception is attended with a feeling or sentiment, different from the loose reveries of the fancy. In this consists the whole nature of belief. For as there is no matter of fact which we believe so firmly that we cannot conceive the contrary, there would be no difference between the conception assented to and that which is rejected, were it not for some sentiment which distinguishes the one from the other. If I see a billiard-ball moving towards another, on a smooth table, I can easily conceive it to stop upon contact. This conception implies no contradiction; but still it feels very differently from that conception by which I represent to myself the impulse and the communication of motion from one ball to another.

40. Were we to attempt a _definition_ of this sentiment, we should, perhaps, find it a very difficult, if not an impossible task; in the same manner as if we should endeavour to define the feeling of cold or passion of anger, to a creature who never had any experience of these sentiments. Belief is the true and proper name of this feeling; and no one is ever at a loss to know the meaning of that term; because every man is every moment conscious of the sentiment represented by it. It may not, however, be improper to attempt a _description_ of this sentiment; in hopes we may, by that means, arrive at some analogies, which may afford a more perfect explication of it. I say, then, that belief is nothing but a more vivid, lively, forcible, firm, steady conception of an object, than what the imagination alone is ever able to attain. This variety of terms, which may seem so unphilosophical, is intended only to express that act of the mind, which renders realities, or what is taken for such, more present to us than fictions, causes them to weigh more in the thought, and gives them a superior influence on the passions and imagination. Provided we agree about the thing, it is needless to dispute about the terms. The imagination has the command over all its ideas, and can join and mix and vary them, in all the ways possible. It may conceive fictitious objects with all the circumstances of place and time. It may set them, in a manner, before our eyes, in their true colours, just as they might have existed. But as it is impossible that this faculty of imagination can ever, of itself, reach belief, it is evident that belief consists not in the peculiar nature or order of ideas, but in the _manner_ of their conception, and in their _feeling_ to the mind. I confess, that it is impossible perfectly to explain this feeling or manner of conception. We may make use of words which express something near it. But its true and proper name, as we observed before, is _belief_; which is a term that every one sufficiently understands in common life. And in philosophy, we can go no farther than assert, that _belief_ is something felt by the mind, which distinguishes the ideas of the judgement from the fictions of the imagination. It gives them more weight and influence; makes them appear of greater importance; enforces them in the mind; and renders them the governing principle of our actions. I hear at present, for instance, a person's voice, with whom I am acquainted; and the sound comes as from the next room. This impression of my senses immediately conveys my thought to the person, together with all the surrounding objects. I paint them out to myself as existing at present, with the same qualities and relations, of which I formerly knew them possessed. These ideas take faster hold of my mind than ideas of an enchanted castle. They are very different to the feeling, and have a much greater influence of every kind, either to give pleasure or pain, joy or sorrow.

Let us, then, take in the whole compass of this doctrine, and allow, that the sentiment of belief is nothing but a conception more intense and steady than what attends the mere fictions of the imagination, and that this _manner_ of conception arises from a customary conjunction of the object with something present to the memory or senses: I believe that it will not be difficult, upon these suppositions, to find other operations of the mind analogous to it, and to trace up these phenomena to principles still more general.

41. We have already observed that nature has established connexions among particular ideas, and that no sooner one idea occurs to our thoughts than it introduces its correlative, and carries our attention towards it, by a gentle and insensible movement. These principles of connexion or association we have reduced to three, namely, _Resemblance_, _Contiguity_ and _Causation_; which are the only bonds that unite our thoughts together, and beget that regular train of reflection or discourse, which, in a greater or less degree, takes place among all mankind. Now here arises a question, on which the solution of the present difficulty will depend. Does it happen, in all these relations, that, when one of the objects is presented to the senses or memory, the mind is not only carried to the conception of the correlative, but reaches a steadier and stronger conception of it than what otherwise it would have been able to attain? This seems to be the case with that belief which arises from the relation of cause and effect. And if the case be the same with the other relations or principles of associations, this may be established as a general law, which takes place in all the operations of the mind.

We may, therefore, observe, as the first experiment to our present purpose, that, upon the appearance of the picture of an absent friend, our idea of him is evidently enlivened by the _resemblance_, and that every passion, which that idea occasions, whether of joy or sorrow, acquires new force and vigour. In producing this effect, there concur both a relation and a present impression. Where the picture bears him no resemblance, at least was not intended for him, it never so much as conveys our thought to him: And where it is absent, as well as the person, though the mind may pass from the thought of the one to that of the other, it feels its idea

to be rather weakened than enlivened by that transition. We take a pleasure in viewing the picture of a friend, when it is set before us; but when it is removed, rather choose to consider him directly than by reflection in an image, which is equally distant and obscure.

The ceremonies of the Roman Catholic religion may be considered as instances of the same nature. The devotees of that superstition usually plead in excuse for the mummeries, with which they are upbraided, that they feel the good effect of those external motions, and postures, and actions, in enlivening their devotion and quickening their fervour, which otherwise would decay, if directed entirely to distant and immaterial objects. We shadow out the objects of our faith, say they, in sensible types and images, and render them more present to us by the immediate presence of these types, than it is possible for us to do merely by an intellectual view and contemplation. Sensible objects have always a greater influence on the fancy than any other; and this influence they readily convey to those ideas to which they are related, and which they resemble. I shall only infer from these practices, and this reasoning, that the effect of resemblance in enlivening the ideas is very common; and as in every case a resemblance and a present impression must concur, we are abundantly supplied with experiments to prove the reality of the foregoing principle.

42. We may add force to these experiments by others of a different kind, in considering the effects of _contiguity_ as well as of _resemblance_. It is certain that distance diminishes the force of every idea, and that, upon our approach to any object; though it does not discover itself to our senses; it operates upon the mind with an influence, which imitates an immediate impression. The thinking on any object readily transports the mind to what is contiguous; but it is only the actual presence of an object, that transports it with a superior vivacity. When I am a few miles from home, whatever relates to it touches me more nearly than when I am two hundred leagues distant; though even at that distance the reflecting on any thing in the neighbourhood of my friends or family naturally produces an idea of them. But as in this latter case, both the objects of the mind are ideas; notwithstanding there is an easy transition between them; that transition alone is not able to give a superior vivacity to any of the ideas, for want of some immediate impression[8].

[8] 'Naturane nobis, inquit, datum dicam, an errore quodam, ut, cum ea loca videamus, in quibus memoria dignos viros acceperimus multum esse versatos, magis moveamur, quam siquando eorum ipsorum aut facta audiamus aut scriptum aliquod legamus? Velut ego nunc moveor. Venit enim mihi Plato in mentem, quera accepimus primum hic disputare solitum: cuius etiam illi hortuli propinqui non memoriam solum mihi afferunt, sed ipsum videntur in conspectu meo hic ponere. Hic Speusippus, hic Xenocrates, hic eius auditor Polemo; cuius ipsa illa sessio fuit, quam videmus. Equidem etiam curiam nostram, Hostiliam dico, non hanc novam, quae mihi minor esse videtur postquam est maior, solebam intuens, Scipionem, Catonem, Laelium, nostrum vero in primis avum cogitare. Tanta vis admonitionis est in locis; ut non sine causa ex his memoriae deducta sit disciplina.'

Cicero de Finibus. Lib. v.

43. No one can doubt but causation has the same influence as the other two relations of resemblance and contiguity. Superstitious people are fond of the reliques of saints and holy men, for the same reason, that they seek after types or images, in order to enliven their devotion, and give them a more intimate and strong conception of those exemplary lives, which they desire to imitate. Now it is evident, that one of the best reliques, which a devotee could procure, would be the handywork of a saint; and if his cloaths and furniture are ever to be considered in this light, it is because they were once at his disposal, and were moved and affected by him; in which respect they are to be considered as imperfect effects, and as connected with him by a shorter chain of consequences than any of those, by which we learn the reality of his existence.

Suppose, that the son of a friend, who had been long dead or absent, were presented to us; it is evident, that this object would instantly revive its correlative idea, and recal to our thoughts all past intimacies and familiarities, in more lively colours than they would otherwise have appeared to us. This is another phaenomenon, which seems to prove the principle above mentioned.

44. We may observe, that, in these phaenomena, the belief of the correlative object is always presupposed; without which the relation could have no effect. The influence of the picture supposes, that we _believe_ our friend to have once existed. Contiguity to home can never excite our ideas of home, unless we _believe_ that it really exists. Now I assert, that this belief, where it reaches beyond the memory or senses, is of a similar nature, and arises from similar causes, with the transition of thought and vivacity of conception here explained. When I throw a piece of dry wood into a fire, my mind is immediately carried to conceive, that it augments, not extinguishes the flame. This transition of thought from the cause to the effect proceeds not from reason. It derives its origin altogether from custom and experience. And as it first begins from an object, present to the senses, it renders the idea or

conception of flame more strong and lively than any loose, floating reverie of the imagination. That idea arises immediately. The thought moves instantly towards it, and conveys to it all that force of conception, which is derived from the impression present to the senses. When a sword is levelled at my breast, does not the idea of wound and pain strike me more strongly, than when a glass of wine is presented to me, even though by accident this idea should occur after the appearance of the latter object? But what is there in this whole matter to cause such a strong conception, except only a present object and a customary transition to the idea of another object, which we have been accustomed to conjoin with the former? This is the whole operation of the mind, in all our conclusions concerning matter of fact and existence; and it is a satisfaction to find some analogies, by which it may be explained. The transition from a present object does in all cases give strength and solidity to the related idea.

Here, then, is a kind of pre-established harmony between the course of nature and the succession of our ideas; and though the powers and forces, by which the former is governed, be wholly unknown to us; yet our thoughts and conceptions have still, we find, gone on in the same train with the other works of nature. Custom is that principle, by which this correspondence has been effected; so necessary to the subsistence of our species, and the regulation of our conduct, in every circumstance and occurrence of human life. Had not the presence of an object, instantly excited the idea of those objects, commonly conjoined with it, all our knowledge must have been limited to the narrow sphere of our memory and senses; and we should never have been able to adjust means to ends, or employ our natural powers, either to the producing of good, or avoiding of evil. Those, who delight in the discovery and contemplation of _final causes_, have here ample subject to employ their wonder and admiration.

45. I shall add, for a further confirmation of the foregoing theory, that, as this operation of the mind, by which we infer like effects from like causes, and _vice versa_, is so essential to the subsistence of all human creatures, it is not probable, that it could be trusted to the fallacious deductions of our reason, which is slow in its operations; appears not, in any degree, during the first years of infancy; and at best is, in every age and period of human life, extremely liable to error and mistake. It is more conformable to the ordinary wisdom of nature to secure so necessary an act of the mind, by some instinct or mechanical tendency, which may be infallible in its operations, may discover itself at the first appearance of life and thought, and may be independent of all the laboured deductions of the understanding. As nature has taught us the use of our limbs, without giving us the knowledge of the muscles and nerves, by which they are actuated; so has she implanted in us an instinct, which carries forward the thought in a correspondent course to that which she has established among external objects; though we are ignorant of those powers and forces, on which this regular course and succession of objects totally depends.

SECTION VI.

OF PROBABILITY[9].

[9] Mr. Locke divides all arguments into demonstrative and probable. In this view, we must say, that it is only probable all men must die, or that the sun will rise to-morrow. But to conform our language more to common use, we ought to divide arguments into _demonstrations_, _proofs_, and _probabilities_. By proofs meaning such arguments from experience as leave no room for doubt or opposition.

46. Though there be no such thing as _Chance_ in the world; our ignorance of the real cause of any event has the same influence on the understanding, and begets a like species of belief or opinion.

There is certainly a probability, which arises from a superiority of chances on any side; and according as this superiority encreases, and surpasses the opposite chances, the probability receives a proportionable encrease, and begets still a higher degree of belief or assent to that side, in which we discover the superiority. If a dye were marked with one figure or number of spots on four sides, and with another figure or number of spots on the two remaining sides, it would be more probable, that the former would turn up than the latter; though, if it had a thousand sides marked in the same manner, and only one side different, the probability would be much higher, and our belief or expectation of the event more steady and secure. This process of the thought or reasoning may seem trivial and obvious; but to those who consider it more narrowly, it may, perhaps, afford matter for curious speculation.

It seems evident, that, when the mind looks forward to discover the event, which may result from the throw of such a dye, it considers the turning up of each particular side as alike probable; and this is the very nature of chance, to render all the particular events, comprehended in it, entirely equal. But finding a greater number of sides concur in the one event than in the other, the mind is carried more frequently to that event, and meets it oftener, in revolving the various possibilities or chances, on which the ultimate result depends. This concurrence of several views in one particular event begets immediately, by an inexplicable contrivance of

nature, the sentiment of belief, and gives that event the advantage over its antagonist, which is supported by a smaller number of views, and recurs less frequently to the mind. If we allow, that belief is nothing but a firmer and stronger conception of an object than what attends the mere fictions of the imagination, this operation may, perhaps, in some measure, be accounted for. The concurrence of these several views or glimpses imprints the idea more strongly on the imagination; gives it superior force and vigour; renders its influence on the passions and affections more sensible; and in a word, begets that reliance or security, which constitutes the nature of belief and opinion.

47. The case is the same with the probability of causes, as with that of chance. There are some causes, which are entirely uniform and constant in producing a particular effect; and no instance has ever yet been found of any failure or irregularity in their operation. Fire has always burned, and water suffocated every human creature: The production of motion by impulse and gravity is an universal law, which has hitherto admitted of no exception. But there are other causes, which have been found more irregular and uncertain; nor has rhubarb always proved a purge, or opium a soporific to every one, who has taken these medicines. It is true, when any cause fails of producing its usual effect, philosophers ascribe not this to any irregularity in nature; but suppose, that some secret causes, in the particular structure of parts, have prevented the operation. Our reasonings, however, and conclusions concerning the event are the same as if this principle had no place. Being determined by custom to transfer the past to the future, in all our inferences; where the past has been entirely regular and uniform, we expect the event with the greatest assurance, and leave no room for any contrary supposition. But where different effects have been found to follow from causes, which are to _appearance_ exactly similar, all these various effects must occur to the mind in transferring the past to the future, and enter into our consideration, when we determine the probability of the event. Though we give the preference to that which has been found most usual, and believe that this effect will exist, we must not overlook the other effects, but must assign to each of them a particular weight and authority, in proportion as we have found it to be more or less frequent. It is more probable, in almost every country of Europe, that there will be frost sometime in January, than that the weather will continue open throughout that whole month; though this probability varies according to the different climates, and approaches to a certainty in the more northern kingdoms. Here then it seems evident, that, when we transfer the past to the future, in order to determine the effect, which will result from any cause, we transfer all the different events, in the same proportion as they have appeared in the past, and conceive one to have existed a hundred times, for instance, another ten times, and another once. As a great number of views do here concur in one event, they fortify and confirm it to the imagination, beget that sentiment which we call _belief,_ and give its object the preference above the contrary event, which is not supported by an equal number of experiments, and recurs not so frequently to the thought in transferring the past to the future. Let any one try to account for this operation of the mind upon any of the received systems of philosophy, and he will be sensible of the difficulty. For my part, I shall think it sufficient, if the present hints excite the curiosity of philosophers, and make them sensible how defective all common theories are in treating of such curious and such sublime subjects.

SECTION VII.

OF THE IDEA OF NECESSARY CONNEXION.

PART I.

48. The great advantage of the mathematical sciences above the moral consists in this, that the ideas of the former, being sensible, are always clear and determinate, the smallest distinction between them is immediately perceptible, and the same terms are still expressive of the same ideas, without ambiguity or variation. An oval is never mistaken for a circle, nor an hyperbola for an ellipsis. The isosceles and scalenum are distinguished by boundaries more exact than vice and virtue, right and wrong. If any term be defined in geometry, the mind readily, of itself, substitutes, on all occasions, the definition for the term defined: Or even when no definition is employed, the object itself may be presented to the senses, and by that means be steadily and clearly apprehended. But the finer sentiments of the mind, the operations of the understanding, the various agitations of the passions, though really in themselves distinct, easily escape us, when surveyed by reflection; nor is it in our power to recal the original object, as often as we have occasion to contemplate it. Ambiguity, by this means, is gradually introduced into our reasonings: Similar objects are readily taken to be the same: And the conclusion becomes at last very wide of the premises.

One may safely, however, affirm, that, if we consider these sciences in a proper light, their advantages and disadvantages nearly compensate each other, and reduce both of them to a state of equality. If the mind, with greater facility, retains the ideas of geometry clear and determinate, it must carry on a much longer and more intricate chain of reasoning, and compare ideas much

wider of each other, in order to reach the abstruser truths of that science. And if moral ideas are apt, without extreme care, to fall into obscurity and confusion, the inferences are always much shorter in these disquisitions, and the intermediate steps, which lead to the conclusion, much fewer than in the sciences which treat of quantity and number. In reality, there is scarcely a proposition in Euclid so simple, as not to consist of more parts, than are to be found in any moral reasoning which runs not into chimera and conceit. Where we trace the principles of the human mind through a few steps, we may be very well satisfied with our progress; considering how soon nature throws a bar to all our enquiries concerning causes, and reduces us to an acknowledgment of our ignorance. The chief obstacle, therefore, to our improvement in the moral or metaphysical sciences is the obscurity of the ideas, and ambiguity of the terms. The principal difficulty in the mathematics is the length of inferences and compass of thought, requisite to the forming of any conclusion. And, perhaps, our progress in natural philosophy is chiefly retarded by the want of proper experiments and phaenomena, which are often discovered by chance, and cannot always be found, when requisite, even by the most diligent and prudent enquiry. As moral philosophy seems hitherto to have received less improvement than either geometry or physics, we may conclude, that, if there be any difference in this respect among these sciences, the difficulties, which obstruct the progress of the former, require superior care and capacity to be surmounted.

49. There are no ideas, which occur in metaphysics, more obscure and uncertain, than those of _power, force, energy_ or _necessary connexion_, of which it is every moment necessary for us to treat in all our disquisitions. We shall, therefore, endeavour, in this section, to fix, if possible, the precise meaning of these terms, and thereby remove some part of that obscurity, which is so much complained of in this species of philosophy.

It seems a proposition, which will not admit of much dispute, that all our ideas are nothing but copies of our impressions, or, in other words, that it is impossible for us to _think_ of any thing, which we have not antecedently _felt_, either by our external or internal senses. I have endeavoured[10] to explain and prove this proposition, and have expressed my hopes, that, by a proper application of it, men may reach a greater clearness and precision in philosophical reasonings, than what they have hitherto been able to attain. Complex ideas may, perhaps, be well known by definition, which is nothing but an enumeration of those parts or simple ideas, that compose them. But when we have pushed up definitions to the most simple ideas, and find still some ambiguity and obscurity; what resource are we then possessed of? By what invention can we throw light upon these ideas, and render them altogether precise and determinate to our intellectual view? Produce the impressions or original sentiments, from which the ideas are copied. These impressions are all strong and sensible. They admit not of ambiguity. They are not only placed in a full light themselves, but may throw light on their correspondent ideas, which lie in obscurity. And by this means, we may, perhaps, attain a new microscope or species of optics, by which, in the moral sciences, the most minute, and most simple ideas may be so enlarged as to fall readily under our apprehension, and be equally known with the grossest and most sensible ideas, that can be the object of our enquiry.

[10] Section II.

50. To be fully acquainted, therefore, with the idea of power or necessary connexion, let us examine its impression; and in order to find the impression with greater certainty, let us search for it in all the sources, from which it may possibly be derived.

When we look about us towards external objects, and consider the operation of causes, we are never able, in a single instance, to discover any power or necessary connexion; any quality, which binds the effect to the cause, and renders the one an infallible consequence of the other. We only find, that the one does actually, in fact, follow the other. The impulse of one billiard-ball is attended with motion in the second. This is the whole that appears to the _outward_ senses. The mind feels no sentiment or _inward_ impression from this succession of objects: Consequently, there is not, in any single, particular instance of cause and effect, any thing which can suggest the idea of power or necessary connexion.

From the first appearance of an object, we never can conjecture what effect will result from it. But were the power or energy of any cause discoverable by the mind, we could foresee the effect, even without experience; and might, at first, pronounce with certainty concerning it, by mere dint of thought and reasoning.

In reality, there is no part of matter, that does ever, by its sensible qualities, discover any power or energy, or give us ground to imagine, that it could produce any thing, or be followed by any other object, which we could denominate its effect. Solidity, extension, motion; these qualities are all complete in themselves, and never point out any other event which may result from them. The scenes of the universe are continually shifting, and one object follows another in an uninterrupted succession; but the power of force, which actuates the whole machine, is entirely concealed from us, and never discovers itself in any of the sensible qualities of

body. We know, that, in fact, heat is a constant attendant of flame; but what is the connexion between them, we have no room so much as to conjecture or imagine. It is impossible, therefore, that the idea of power can be derived from the contemplation of bodies, in single instances of their operation; because no bodies ever discover any power, which can be the original of this idea.[11]

[11] Mr. Locke, in his chapter of power, says that, finding from experience, that there are several new productions in nature, and concluding that there must somewhere be a power capable of producing them, we arrive at last by this reasoning at the idea of power. But no reasoning can ever give us a new, original, simple idea; as this philosopher himself confesses. This, therefore, can never be the origin of that idea.

51. Since, therefore, external objects as they appear to the senses, give us no idea of power or necessary connexion, by their operation in particular instances, let us see, whether this idea be derived from reflection on the operations of our own minds, and be copied from any internal impression. It may be said, that we are every moment conscious of internal power; while we feel, that, by the simple command of our will, we can move the organs of our body, or direct the faculties of our mind. An act of volition produces motion in our limbs, or raises a new idea in our imagination. This influence of the will we know by consciousness. Hence we acquire the idea of power or energy; and are certain, that we ourselves and all other intelligent beings are possessed of power. This idea, then, is an idea of reflection, since it arises from reflecting on the operations of our own mind, and on the command which is exercised by will, both over the organs of the body and faculties of the soul.

52. We shall proceed to examine this pretension; and first with regard to the influence of volition over the organs of the body. This influence, we may observe, is a fact, which, like all other natural events, can be known only by experience, and can never be foreseen from any apparent energy or power in the cause, which connects it with the effect, and renders the one an infallible consequence of the other. The motion of our body follows upon the command of our will. Of this we are every moment conscious. But the means, by which this is effected; the energy, by which the will performs so extraordinary an operation; of this we are so far from being immediately conscious, that it must for ever escape our most diligent enquiry.

For _first_; is there any principle in all nature more mysterious than the union of soul with body; by which a supposed spiritual substance acquires such an influence over a material one, that the most refined thought is able to actuate the grossest matter? Were we empowered, by a secret wish, to remove mountains, or control the planets in their orbit; this extensive authority would not be more extraordinary, nor more beyond our comprehension. But if by consciousness we perceived any power or energy in the will, we must know this power; we must know its connexion with the effect; we must know the secret union of soul and body, and the nature of both these substances; by which the one is able to operate, in so many instances, upon the other.

Secondly, We are not able to move all the organs of the body with a like authority; though we cannot assign any reason besides experience, for so remarkable a difference between one and the other. Why has the will an influence over the tongue and fingers, not over the heart or liver? This question would never embarrass us, were we conscious of a power in the former case, not in the latter. We should then perceive, independent of experience, why the authority of will over the organs of the body is circumscribed within such particular limits. Being in that case fully acquainted with the power or force, by which it operates, we should also know, why its influence reaches precisely to such boundaries, and no farther.

A man, suddenly struck with palsy in the leg or arm, or who had newly lost those members, frequently endeavours, at first to move them, and employ them in their usual offices. Here he is as much conscious of power to command such limbs, as a man in perfect health is conscious of power to actuate any member which remains in its natural state and condition. But consciousness never deceives. Consequently, neither in the one case nor in the other, are we ever conscious of any power. We learn the influence of our will from experience alone. And experience only teaches us, how one event constantly follows another; without instructing us in the secret connexion, which binds them together, and renders them inseparable.

Thirdly, We learn from anatomy, that the immediate object of power in voluntary motion, is not the member itself which is moved, but certain muscles, and nerves, and animal spirits, and, perhaps, something still more minute and more unknown, through which the motion is successively propagated, ere it reach the member itself whose motion is the immediate object of volition. Can there be a more certain proof, that the power, by which this whole operation is performed, so far from being directly and fully known by an inward sentiment or consciousness, is, to the last degree mysterious and unintelligible? Here the mind wills a certain event: Immediately another event, unknown to ourselves, and totally different from the one intended, is produced: This event produces another, equally unknown: Till at last, through a long succession, the desired event is produced. But if the original power were felt, it must be known: Were it known, its effect also must be known; since all power is relative to its effect. And _vice versa,_ if the effect

be not known, the power cannot be known nor felt. How indeed can we be conscious of a power to move our limbs, when we have no such power; but only that to move certain animal spirits, which, though they produce at last the motion of our limbs, yet operate in such a manner as is wholly beyond our comprehension?

We may, therefore, conclude from the whole, I hope, without any temerity, though with assurance; that our idea of power is not copied from any sentiment or consciousness of power within ourselves, when we give rise to animal motion, or apply our limbs to their proper use and office. That their motion follows the command of the will is a matter of common experience, like other natural events: But the power or energy by which this is effected, like that in other natural events, is unknown and inconceivable.[12]

[12] It may be pretended, that the resistance which we meet with in bodies, obliging us frequently to exert our force, and call up all our power, this gives us the idea of force and power. It is this _nisus_, or strong endeavour, of which we are conscious, that is the original impression from which this idea is copied. But, first, we attribute power to a vast number of objects, where we never can suppose this resistance or exertion of force to take place; to the Supreme Being, who never meets with any resistance; to the mind in its command over its ideas and limbs, in common thinking and motion, where the effect follows immediately upon the will, without any exertion or summoning up of force; to inanimate matter, which is not capable of this sentiment. _Secondly,_ This sentiment of an endeavour to overcome resistance has no known connexion with any event: What follows it, we know by experience; but could not know it _a priori._ It must, however, be confessed, that the animal _nisus,_ which we experience, though it can afford no accurate precise idea of power, enters very much into that vulgar, inaccurate idea, which is formed of it.

53. Shall we then assert, that we are conscious of a power or energy in our own minds, when, by an act or command of our will, we raise up a new idea, fix the mind to the contemplation of it, turn it on all sides, and at last dismiss it for some other idea, when we think that we have surveyed it with sufficient accuracy? I believe the same arguments will prove, that even this command of the will gives us no real idea of force or energy.

First, It must be allowed, that, when we know a power, we know that very circumstance in the cause, by which it is enabled to produce the effect: For these are supposed to be synonimous. We must, therefore, know both the cause and effect, and the relation between them. But do we pretend to be acquainted with the nature of the human soul and the nature of an idea, or the aptitude of the one to produce the other? This is a real creation; a production of something out of nothing: Which implies a power so great, that it may seem, at first sight, beyond the reach of any being, less than infinite. At least it must be owned, that such a power is not felt, nor known, nor even conceivable by the mind. We only feel the event, namely, the existence of an idea, consequent to a command of the will: But the manner, in which this operation is performed, the power by which it is produced, is entirely beyond our comprehension.

Secondly, The command of the mind over itself is limited, as well as its command over the body; and these limits are not known by reason, or any acquaintance with the nature of cause and effect, but only by experience and observation, as in all other natural events and in the operation of external objects. Our authority over our sentiments and passions is much weaker than that over our ideas; and even the latter authority is circumscribed within very narrow boundaries. Will any one pretend to assign the ultimate reason of these boundaries, or show why the power is deficient in one case, not in another.

Thirdly, This self-command is very different at different times. A man in health possesses more of it than one languishing with sickness. We are more master of our thoughts in the morning than in the evening: Fasting, than after a full meal. Can we give any reason for these variations, except experience? Where then is the power, of which we pretend to be conscious? Is there not here, either in a spiritual or material substance, or both, some secret mechanism or structure of parts, upon which the effect depends, and which, being entirely unknown to us, renders the power or energy of the will equally unknown and incomprehensible?

Volition is surely an act of the mind, with which we are sufficiently acquainted. Reflect upon it. Consider it on all sides. Do you find anything in it like this creative power, by which it raises from nothing a new idea, and with a kind of _Fiat_, imitates the omnipotence of its Maker, if I may be allowed so to speak, who called forth into existence all the various scenes of nature? So far from being conscious of this energy in the will, it requires as certain experience as that of which we are possessed, to convince us that such extraordinary effects do ever result from a simple act of volition.

54. The generality of mankind never find any difficulty in accounting for the more common and familiar operations of nature--such as the descent of heavy bodies, the growth of plants, the generation of animals, or the nourishment of bodies by food: But suppose that, in all these cases, they perceive the very force or energy of the cause, by which it is connected with its effect, and is for ever infallible in its operation. They acquire, by long habit, such a turn of mind, that, upon the appearance of the cause, they immediately

expect with assurance its usual attendant, and hardly conceive it possible that any other event could result from it. It is only on the discovery of extraordinary phaenomena, such as earthquakes, pestilence, and prodigies of any kind, that they find themselves at a loss to assign a proper cause, and to explain the manner in which the effect is produced by it. It is usual for men, in such difficulties, to have recourse to some invisible intelligent principle[13] as the immediate cause of that event which surprises them, and which, they think, cannot be accounted for from the common powers of nature. But philosophers, who carry their scrutiny a little farther, immediately perceive that, even in the most familiar events, the energy of the cause is as unintelligible as in the most unusual, and that we only learn by experience the frequent _Conjunction_ of objects, without being ever able to comprehend anything like _Connexion_ between them.

[13] [Greek: theos apo maechanaes.]

55. Here, then, many philosophers think themselves obliged by reason to have recourse, on all occasions, to the same principle, which the vulgar never appeal to but in cases that appear miraculous and supernatural. They acknowledge mind and intelligence to be, not only the ultimate and original cause of all things, but the immediate and sole cause of every event which appears in nature. They pretend that those objects which are commonly denominated _causes,_ are in reality nothing but _occasions;_ and that the true and direct principle of every effect is not any power or force in nature, but a volition of the Supreme Being, who wills that such particular objects should for ever be conjoined with each other. Instead of saying that one billiard-ball moves another by a force which it has derived from the author of nature, it is the Deity himself, they say, who, by a particular volition, moves the second ball, being determined to this operation by the impulse of the first ball, in consequence of those general laws which he has laid down to himself in the government of the universe. But philosophers advancing still in their inquiries, discover that, as we are totally ignorant of the power on which depends the mutual operation of bodies, we are no less ignorant of that power on which depends the operation of mind on body, or of body on mind; nor are we able, either from our senses or consciousness, to assign the ultimate principle in one case more than in the other. The same ignorance, therefore, reduces them to the same conclusion. They assert that the Deity is the immediate cause of the union between soul and body; and that they are not the organs of sense, which, being agitated by external objects, produce sensations in the mind; but that it is a particular volition of our omnipotent Maker, which excites such a sensation, in consequence of such a motion in the organ. In like manner, it is not any energy in the will that produces local motion in our members: It is God himself, who is pleased to second our will, in itself impotent, and to command that motion which we erroneously attribute to our own power and efficacy. Nor do philosophers stop at this conclusion. They sometimes extend the same inference to the mind itself, in its internal operations. Our mental vision or conception of ideas is nothing but a revelation made to us by our Maker. When we voluntarily turn our thoughts to any object, and raise up its image in the fancy, it is not the will which creates that idea: It is the universal Creator, who discovers it to the mind, and renders it present to us.

56. Thus, according to these philosophers, every thing is full of God. Not content with the principle, that nothing exists but by his will, that nothing possesses any power but by his concession: They rob nature, and all created beings, of every power, in order to render their dependence on the Deity still more sensible and immediate. They consider not that, by this theory, they diminish, instead of magnifying, the grandeur of those attributes, which they affect so much to celebrate. It argues surely more power in the Deity to delegate a certain degree of power to inferior creatures than to produce every thing by his own immediate volition. It argues more wisdom to contrive at first the fabric of the world with such perfect foresight that, of itself, and by its proper operation, it may serve all the purposes of providence, than if the great Creator were obliged every moment to adjust its parts, and animate by his breath all the wheels of that stupendous machine.

But if we would have a more philosophical confutation of this theory, perhaps the two following reflections may suffice.

57. _First_, it seems to me that this theory of the universal energy and operation of the Supreme Being is too bold ever to carry conviction with it to a man, sufficiently apprized of the weakness of human reason, and the narrow limits to which it is confined in all its operations. Though the chain of arguments which conduct to it were ever so logical, there must arise a strong suspicion, if not an absolute assurance, that it has carried us quite beyond the reach of our faculties, when it leads to conclusions so extraordinary, and so remote from common life and experience. We are got into fairy land, long ere we have reached the last steps of our theory; and _there_ we have no reason to trust our common methods of argument, or to think that our usual analogies and probabilities have any authority. Our line is too short to fathom such immense abysses. And however we may flatter ourselves that we are guided, in every step which we take, by a kind of verisimilitude and experience, we may be assured that this fancied experience has no authority when we thus apply it to subjects that lie entirely out of the sphere of experience. But on this we shall have occasion to touch afterwards.[14]

[14] Section XII.

Secondly, I cannot perceive any force in the arguments on which this theory is founded. We are ignorant, it is true, of the manner in which bodies operate on each other: Their force or energy is entirely incomprehensible: But are we not equally ignorant of the manner or force by which a mind, even the supreme mind, operates either on itself or on body? Whence, I beseech you, do we acquire any idea of it? We have no sentiment or consciousness of this power in ourselves. We have no idea of the Supreme Being but what we learn from reflection on our own faculties. Were our ignorance, therefore, a good reason for rejecting any thing, we should be led into that principle of denying all energy in the Supreme Being as much as in the grossest matter. We surely comprehend as little the operations of one as of the other. Is it more difficult to conceive that motion may arise from impulse than that it may arise from volition? All we know is our profound ignorance in both cases[15].

[15] I need not examine at length the _vis inertiae_ which is so much talked of in the new philosophy, and which is ascribed to matter. We find by experience, that a body at rest or in motion continues for ever in its present state, till put from it by some new cause; and that a body impelled takes as much motion from the impelling body as it acquires itself. These are facts. When we call this a _vis inertiae_, we only mark these facts, without pretending to have any idea of the inert power; in the same manner as, when we talk of gravity, we mean certain effects, without comprehending that active power. It was never the meaning of Sir ISAAC NEWTON to rob second causes of all force or energy; though some of his followers have endeavoured to establish that theory upon his authority. On the contrary, that great philosopher had recourse to an etherial active fluid to explain his universal attraction; though he was so cautious and modest as to allow, that it was a mere hypothesis, not to be insisted on, without more experiments. I must confess, that there is something in the fate of opinions a little extraordinary. DES CARTES insinuated that doctrine of the universal and sole efficacy of the Deity, without insisting on it. MALEBRANCHE and other CARTESIANS made it the foundation of all their philosophy. It had, however, no authority in England. LOCKE, CLARKE, and CUDWORTH, never so much as take notice of it, but suppose all along, that matter has a real, though subordinate and derived power. By what means has it become so prevalent among our modern metaphysicians?

PART II.

58. But to hasten to a conclusion of this argument, which is already drawn out to too great a length: We have sought in vain for an idea of power or necessary connexion in all the sources from which we could suppose it to be derived. It appears that, in single instances of the operation of bodies, we never can, by our utmost scrutiny, discover any thing but one event following another, without being able to comprehend any force or power by which the cause operates, or any connexion between it and its supposed effect. The same difficulty occurs in contemplating the operations of mind on body--where we observe the motion of the latter to follow upon the volition of the former, but are not able to observe or conceive the tie which binds together the motion and volition, or the energy by which the mind produces this effect. The authority of the will over its own faculties and ideas is not a whit more comprehensible: So that, upon the whole, there appears not, throughout all nature, any one instance of connexion which is conceivable by us. All events seem entirely loose and separate. One event follows another; but we never can observe any tie between them. They seem _conjoined_, but never _connected_. And as we can have no idea of any thing which never appeared to our outward sense or inward sentiment, the necessary conclusion _seems_ to be that we have no idea of connexion or power at all, and that these words are absolutely without any meaning, when employed either in philosophical reasonings or common life.

59. But there still remains one method of avoiding this conclusion, and one source which we have not yet examined. When any natural object or event is presented, it is impossible for us, by any sagacity or penetration, to discover, or even conjecture, without experience, what event will result from it, or to carry our foresight beyond that object which is immediately present to the memory and senses. Even after one instance or experiment where we have observed a particular event to follow upon another, we are not entitled to form a general rule, or foretell what will happen in like cases; it being justly esteemed an unpardonable temerity to judge of the whole course of nature from one single experiment, however accurate or certain. But when one particular species of event has always, in all instances, been conjoined with another, we make no longer any scruple of foretelling one upon the appearance of the other, and of employing that reasoning, which can alone assure us of any matter of fact or existence. We then call the one object, _Cause;_ the other, _Effect._ We suppose that there is some connexion between them; some power in the one, by which it infallibly produces the other, and operates with the greatest certainty and strongest necessity.

It appears, then, that this idea of a necessary connexion among events arises from a number of similar instances which occur of the constant conjunction of these events; nor can that idea ever be suggested by any one of these instances, surveyed in all possible lights and positions. But there is nothing in a number of instances, different from every single instance, which is supposed

to be exactly similar; except only, that after a repetition of similar instances, the mind is carried by habit, upon the appearance of one event, to expect its usual attendant, and to believe that it will exist. This connexion, therefore, which we _feel_ in the mind, this customary transition of the imagination from one object to its usual attendant, is the sentiment or impression from which we form the idea of power or necessary connexion. Nothing farther is in the case. Contemplate the subject on all sides; you will never find any other origin of that idea. This is the sole difference between one instance, from which we can never receive the idea of connexion, and a number of similar instances, by which it is suggested. The first time a man saw the communication of motion by impulse, as by the shock of two billiard balls, he could not pronounce that the one event was _connected:_ but only that it was _conjoined_ with the other. After he has observed several instances of this nature, he then pronounces them to be _connected._ What alteration has happened to give rise to this new idea of _connexion?_ Nothing but that he now _feels_ these events to be connected in his imagination, and can readily foretell the existence of one from the appearance of the other. When we say, therefore, that one object is connected with another, we mean only that they have acquired a connexion in our thought, and give rise to this inference, by which they become proofs of each other's existence: A conclusion which is somewhat extraordinary, but which seems founded on sufficient evidence. Nor will its evidence be weakened by any general diffidence of the understanding, or sceptical suspicion concerning every conclusion which is new and extraordinary. No conclusions can be more agreeable to scepticism than such as make discoveries concerning the weakness and narrow limits of human reason and capacity.

60. And what stronger instance can be produced of the surprising ignorance and weakness of the understanding than the present? For surely, if there be any relation among objects which it imports to us to know perfectly, it is that of cause and effect. On this are founded all our reasonings concerning matter of fact or existence. By means of it alone we attain any assurance concerning objects which are removed from the present testimony of our memory and senses. The only immediate utility of all sciences, is to teach us, how to control and regulate future events by their causes. Our thoughts and enquiries are, therefore, every moment, employed about this relation: Yet so imperfect are the ideas which we form concerning it, that it is impossible to give any just definition of cause, except what is drawn from something extraneous and foreign to it. Similar objects are always conjoined with similar. Of this we have experience. Suitably to this experience, therefore, we may define a cause to be _an object, followed by another, and where all the objects similar to the first are followed by objects similar to the second_. Or in other words _where, if the first object had not been, the second never had existed_. The appearance of a cause always conveys the mind, by a customary transition, to the idea of the effect. Of this also we have experience. We may, therefore, suitably to this experience, form another definition of cause, and call it, _an object followed by another, and whose appearance always conveys the thought to that other._ But though both these definitions be drawn from circumstances foreign to the cause, we cannot remedy this inconvenience, or attain any more perfect definition, which may point out that circumstance in the cause, which gives it a connexion with its effect. We have no idea of this connexion, nor even any distinct notion what it is we desire to know, when we endeavour at a conception of it. We say, for instance, that the vibration of this string is the cause of this particular sound. But what do we mean by that affirmation? We either mean _that this vibration is followed by this sound, and that all similar vibrations have been followed by similar sounds:_ Or, _that this vibration is followed by this sound, and that upon the appearance of one the mind anticipates the senses, and forms immediately an idea of the other._ We may consider the relation of cause and effect in either of these two lights; but beyond these, we have no idea of it.[16]

[16] According to these explications and definitions, the idea of _power_ is relative as much as that of _cause;_ and both have a reference to an effect, or some other event constantly conjoined with the former. When we consider the _unknown_ circumstance of an object, by which the degree or quantity of its effect is fixed and determined, we call that its power: And accordingly, it is allowed by all philosophers, that the effect is the measure of the power. But if they had any idea of power, as it is in itself, why could not they Measure it in itself? The dispute whether the force of a body in motion be as its velocity, or the square of its velocity; this dispute, I say, need not be decided by comparing its effects in equal or unequal times; but by a direct mensuration and comparison.

As to the frequent use of the words, Force, Power, Energy, &c., which every where occur in common conversation, as well as in philosophy; that is no proof, that we are acquainted, in any instance, with the connecting principle between cause and effect, or can account ultimately for the production of one thing to another. These words, as commonly used, have very loose meanings annexed to them; and their ideas are very uncertain and confused. No animal can put external bodies in motion without the sentiment of a _nisus_ or endeavour; and every animal has a sentiment or feeling from the stroke or blow of an external object, that is in motion. These sensations, which are merely animal, and from which we can _a priori_ draw no inference, we are apt to transfer to inanimate objects, and to suppose, that they have some such feelings, whenever they transfer or receive motion. With regard to energies, which are exerted, without our annexing to them any idea of communicated motion, we consider only the constant experienced conjunction of the events; and as we _feel_ a customary connexion between the ideas, we transfer that feeling to the

objects; as nothing is more usual than to apply to external bodies every internal sensation, which they occasion.

61. To recapitulate, therefore, the reasonings of this section: Every idea is copied from some preceding impression or sentiment; and where we cannot find any impression, we may be certain that there is no idea. In all single instances of the operation of bodies or minds, there is nothing that produces any impression, nor consequently can suggest any idea of power or necessary connexion. But when many uniform instances appear, and the same object is always followed by the same event; we then begin to entertain the notion of cause and connexion. We then _feel_ a new sentiment or impression, to wit, a customary connexion in the thought or imagination between one object and its usual attendant; and this sentiment is the original of that idea which we seek for. For as this idea arises from a number of similar instances, and not from any single instance, it must arise from that circumstance, in which the number of instances differ from every individual instance. But this customary connexion or transition of the imagination is the only circumstance in which they differ. In every other particular they are alike. The first instance which we saw of motion communicated by the shock of two billiard balls (to return to this obvious illustration) is exactly similar to any instance that may, at present, occur to us; except only, that we could not, at first, _infer_ one event from the other; which we are enabled to do at present, after so long a course of uniform experience. I know not whether the reader will readily apprehend this reasoning. I am afraid that, should I multiply words about it, or throw it into a greater variety of lights, it would only become more obscure and intricate. In all abstract reasonings there is one point of view which, if we can happily hit, we shall go farther towards illustrating the subject than by all the eloquence and copious expression in the world. This point of view we should endeavour to reach, and reserve the flowers of rhetoric for subjects which are more adapted to them.

SECTION VIII.

OF LIBERTY AND NECESSITY.

PART I.

62. It might reasonably be expected in questions which have been canvassed and disputed with great eagerness, since the first origin of science and philosophy, that the meaning of all the terms, at least, should have been agreed upon among the disputants; and our enquiries, in the course of two thousand years, been able to pass from words to the true and real subject of the controversy. For how easy may it seem to give exact definitions of the terms employed in reasoning, and make these definitions, not the mere sound of words, the object of future scrutiny and examination? But if we consider the matter more narrowly, we shall be apt to draw a quite opposite conclusion. From this circumstance alone, that a controversy has been long kept on foot, and remains still undecided, we may presume that there is some ambiguity in the expression, and that the disputants affix different ideas to the terms employed in the controversy. For as the faculties of the mind are supposed to be naturally alike in every individual; otherwise nothing could be more fruitless than to reason or dispute together; it were impossible, if men affix the same ideas to their terms, that they could so long form different opinions of the same subject; especially when they communicate their views, and each party turn themselves on all sides, in search of arguments which may give them the victory over their antagonists. It is true, if men attempt the discussion of questions which lie entirely beyond the reach of human capacity, such as those concerning the origin of worlds, or the economy of the intellectual system or region of spirits, they may long beat the air in their fruitless contests, and never arrive at any determinate conclusion. But if the question regard any subject of common life and experience, nothing, one would think, could preserve the dispute so long undecided but some ambiguous expressions, which keep the antagonists still at a distance, and hinder them from grappling with each other.

63. This has been the case in the long disputed question concerning liberty and necessity; and to so remarkable a degree that, if I be not much mistaken, we shall find, that all mankind, both learned and ignorant, have always been of the same opinion with regard to this subject, and that a few intelligible definitions would immediately have put an end to the whole controversy. I own that this dispute has been so much canvassed on all hands, and has led philosophers into such a labyrinth of obscure sophistry, that it is no wonder, if a sensible reader indulge his ease so far as to turn a deaf ear to the proposal of such a question, from which he can expect neither instruction or entertainment. But the state of the argument here proposed may, perhaps, serve to renew his attention; as it has more novelty, promises at least some decision of the controversy, and will not much disturb his ease by any intricate or obscure reasoning.

I hope, therefore, to make it appear that all men have ever agreed in the doctrine both of necessity and of liberty, according to any reasonable sense, which can be put on these terms; and that the whole controversy has hitherto turned merely upon words. We shall begin with examining the doctrine of necessity.

64. It is universally allowed that matter, in all its operations, is actuated by a necessary force, and that every natural effect is so precisely determined by the energy of its cause that no other effect, in such particular circumstances, could possibly have resulted from it. The degree and direction of every motion is, by the laws of nature, prescribed with such exactness that a living creature may as soon arise from the shock of two bodies as motion in any other degree or direction than what is actually produced by it. Would we, therefore, form a just and precise idea of _necessity_, we must consider whence that idea arises when we apply it to the operation of bodies.

It seems evident that, if all the scenes of nature were continually shifted in such a manner that no two events bore any resemblance to each other, but every object was entirely new, without any similitude to whatever had been seen before, we should never, in that case, have attained the least idea of necessity, or of a connexion among these objects. We might say, upon such a supposition, that one object or event has followed another; not that one was produced by the other. The relation of cause and effect must be utterly unknown to mankind. Inference and reasoning concerning the operations of nature would, from that moment, be at an end; and the memory and senses remain the only canals, by which the knowledge of any real existence could possibly have access to the mind. Our idea, therefore, of necessity and causation arises entirely from the uniformity observable in the operations of nature, where similar objects are constantly conjoined together, and the mind is determined by custom to infer the one from the appearance of the other. These two circumstances form the whole of that necessity, which we ascribe to matter. Beyond the constant _conjunction_ of similar objects, and the consequent _inference_ from one to the other, we have no notion of any necessity or connexion.

If it appear, therefore, that all mankind have ever allowed, without any doubt or hesitation, that these two circumstances take place in the voluntary actions of men, and in the operations of mind; it must follow, that all mankind have ever agreed in the doctrine of necessity, and that they have hitherto disputed, merely for not understanding each other.

65. As to the first circumstance, the constant and regular conjunction of similar events, we may possibly satisfy ourselves by the following considerations. It is universally acknowledged that there is a great uniformity among the actions of men, in all nations and ages, and that human nature remains still the same, in its principles and operations. The same motives always produce the same actions. The same events follow from the same causes. Ambition, avarice, self-love, vanity, friendship, generosity, public spirit: these passions, mixed in various degrees, and distributed through society, have been, from the beginning of the world, and still are, the source of all the actions and enterprises, which have ever been observed among mankind. Would you know the sentiments, inclinations, and course of life of the Greeks and Romans? Study well the temper and actions of the French and English: You cannot be much mistaken in transferring to the former _most_ of the observations which you have made with regard to the latter. Mankind are so much the same, in all times and places, that history informs us of nothing new or strange in this particular. Its chief use is only to discover the constant and universal principles of human nature, by showing men in all varieties of circumstances and situations, and furnishing us with materials from which we may form our observations and become acquainted with the regular springs of human action and behaviour. These records of wars, intrigues, factions, and revolutions, are so many collections of experiments, by which the politician or moral philosopher fixes the principles of his science, in the same manner as the physician or natural philosopher becomes acquainted with the nature of plants, minerals, and other external objects, by the experiments which he forms concerning them. Nor are the earth, water, and other elements, examined by Aristotle, and Hippocrates, more like to those which at present lie under our observation than the men described by Polybius and Tacitus are to those who now govern the world.

Should a traveller, returning from a far country, bring us an account of men, wholly different from any with whom we were ever acquainted; men, who were entirely divested of avarice, ambition, or revenge; who knew no pleasure but friendship, generosity, and public spirit; we should immediately, from these circumstances, detect the falsehood, and prove him a liar, with the same certainty as if he had stuffed his narration with stories of centaurs and dragons, miracles and prodigies. And if we would explode any forgery in history, we cannot make use of a more convincing argument, than to prove, that the actions ascribed to any person are directly contrary to the course of nature, and that no human motives, in such circumstances, could ever induce him to such a conduct. The veracity of Quintus Curtius is as much to be suspected, when he describes the supernatural courage of Alexander, by which he was hurried on singly to attack multitudes, as when he describes his supernatural force and activity, by which he was able to resist them. So readily and universally do we acknowledge a uniformity in human motives and actions as well as in the operations of body.

Hence likewise the benefit of that experience, acquired by long life and a variety of business and company, in order to instruct us in the principles of human nature, and regulate our future conduct, as well as speculation. By means of this guide, we mount up to the knowledge of men's inclinations and motives, from their actions, expressions, and even gestures; and again descend to the interpretation of their actions from our knowledge of their motives and inclinations. The general observations treasured up by a course of experience, give us the clue of human nature, and teach us to unravel all its intricacies. Pretexts and appearances no longer deceive us. Public declarations pass for the specious colouring of a cause. And though virtue and honour be allowed their proper weight and authority, that perfect disinterestedness, so often pretended to, is never expected in multitudes and parties; seldom in their leaders; and scarcely even in individuals of any rank or station. But were there no uniformity in human actions, and were every experiment which we could form of this kind irregular and anomalous, it were impossible to collect any general observations concerning mankind; and no experience, however accurately digested by reflection, would ever serve to any purpose. Why is the aged husbandman more skilful in his calling than the young beginner but because there is a certain uniformity in the operation of the sun, rain, and earth towards the production of vegetables; and experience teaches the old practitioner the rules by which this operation is governed and directed.

66. We must not, however, expect that this uniformity of human actions should be carried to such a length as that all men, in the same circumstances, will always act precisely in the same manner, without making any allowance for the diversity of characters, prejudices, and opinions. Such a uniformity in every particular, is found in no part of nature. On the contrary, from observing the variety of conduct in different men, we are enabled to form a greater variety of maxims, which still suppose a degree of uniformity and regularity.

Are the manners of men different in different ages and countries? We learn thence the great force of custom and education, which mould the human mind from its infancy and form it into a fixed and established character. Is the behaviour and conduct of the one sex very unlike that of the other? Is it thence we become acquainted with the different characters which nature has impressed upon the sexes, and which she preserves with constancy and regularity? Are the actions of the same person much diversified in the different periods of his life, from infancy to old age? This affords room for many general observations concerning the gradual change of our sentiments and inclinations, and the different maxims which prevail in the different ages of human creatures. Even the characters, which are peculiar to each individual, have a uniformity in their influence; otherwise our acquaintance with the persons and our observation of their conduct could never teach us their dispositions, or serve to direct our behaviour with regard to them.

67. I grant it possible to find some actions, which seem to have no regular connexion with any known motives, and are exceptions to all the measures of conduct which have ever been established for the government of men. But if we would willingly know what judgement should be formed of such irregular and extraordinary actions, we may consider the sentiments commonly entertained with regard to those irregular events which appear in the course of nature, and the operations of external objects. All causes are not conjoined to their usual effects with like uniformity. An artificer, who handles only dead matter, may be disappointed of his aim, as well as the politician, who directs the conduct of sensible and intelligent agents.

The vulgar, who take things according to their first appearance, attribute the uncertainty of events to such an uncertainty in the causes as makes the latter often fail of their usual influence; though they meet with no impediment in their operation. But philosophers, observing that, almost in every part of nature, there is contained a vast variety of springs and principles, which are hid, by reason of their minuteness or remoteness, find, that it is at least possible the contrariety of events may not proceed from any contingency in the cause, but from the secret operation of contrary causes. This possibility is converted into certainty by farther observation, when they remark that, upon an exact scrutiny, a contrariety of effects always betrays a contrariety of causes, and proceeds from their mutual opposition. A peasant can give no better reason for the stopping of any clock or watch than to say that it does not commonly go right: But an artist easily perceives that the same force in the spring or pendulum has always the same influence on the wheels; but fails of its usual effect, perhaps by reason of a grain of dust, which puts a stop to the whole movement. From the observation of several parallel instances, philosophers form a maxim that the connexion between all causes and effects is equally necessary, and that its seeming uncertainty in some instances proceeds from the secret opposition of contrary causes.

Thus, for instance, in the human body, when the usual symptoms of health or sickness disappoint our expectation; when medicines operate not with their wonted powers; when irregular events follow from any particular cause; the philosopher and physician are not surprised at the matter, nor are ever tempted to deny, in general, the necessity and uniformity of those principles by which the animal economy is conducted. They know that a human body is a mighty complicated machine: That many secret powers lurk in it, which are altogether beyond our comprehension: That to us it must often appear very uncertain in its operations: And that therefore

the irregular events, which outwardly discover themselves, can be no proof that the laws of nature are not observed with the greatest regularity in its internal operations and government.

68. The philosopher, if he be consistent, must apply the same reasoning to the actions and volitions of intelligent agents. The most irregular and unexpected resolutions of men may frequently be accounted for by those who know every particular circumstance of their character and situation. A person of an obliging disposition gives a peevish answer: But he has the toothache, or has not dined. A stupid fellow discovers an uncommon alacrity in his carriage: But he has met with a sudden piece of good fortune. Or even when an action, as sometimes happens, cannot be particularly accounted for, either by the person himself or by others; we know, in general, that the characters of men are, to a certain degree, inconstant and irregular. This is, in a manner, the constant character of human nature; though it be applicable, in a more particular manner, to some persons who have no fixed rule for their conduct, but proceed in a continued course of caprice and inconstancy. The internal principles and motives may operate in a uniform manner, notwithstanding these seeming irregularities; in the same manner as the winds, rain, clouds, and other variations of the weather are supposed to be governed by steady principles; though not easily discoverable by human sagacity and enquiry.

69. Thus it appears, not only that the conjunction between motives and voluntary actions is as regular and uniform as that between the cause and effect in any part of nature; but also that this regular conjunction has been universally acknowledged among mankind, and has never been the subject of dispute, either in philosophy or common life. Now, as it is from past experience that we draw all inferences concerning the future, and as we conclude that objects will always be conjoined together which we find to have always been conjoined; it may seem superfluous to prove that this experienced uniformity in human actions is a source whence we draw _inferences_ concerning them. But in order to throw the argument into a greater variety of lights we shall also insist, though briefly, on this latter topic.

The mutual dependence of men is so great in all societies that scarce any human action is entirely complete in itself, or is performed without some reference to the actions of others, which are requisite to make it answer fully the intention of the agent. The poorest artificer, who labours alone, expects at least the protection of the magistrate, to ensure him the enjoyment of the fruits of his labour. He also expects that, when he carries his goods to market, and offers them at a reasonable price, he shall find purchasers, and shall be able, by the money he acquires, to engage others to supply him with those commodities which are requisite for his subsistence. In proportion as men extend their dealings, and render their intercourse with others more complicated, they always comprehend, in their schemes of life, a greater variety of voluntary actions, which they expect, from the proper motives, to co-operate with their own. In all these conclusions they take their measures from past experience, in the same manner as in their reasonings concerning external objects; and firmly believe that men, as well as all the elements, are to continue, in their operations, the same that they have ever found them. A manufacturer reckons upon the labour of his servants for the execution of any work as much as upon the tools which he employs, and would be equally surprised were his expectations disappointed. In short, this experimental inference and reasoning concerning the actions of others enters so much into human life that no man, while awake, is ever a moment without employing it. Have we not reason, therefore, to affirm that all mankind have always agreed in the doctrine of necessity according to the foregoing definition and explication of it?

70. Nor have philosophers ever entertained a different opinion from the people in this particular. For, not to mention that almost every action of their life supposes that opinion, there are even few of the speculative parts of learning to which it is not essential. What would become of _history,_ had we not a dependence on the veracity of the historian according to the experience which we have had of mankind? How could _politics_ be a science, if laws and forms of goverment had not a uniform influence upon society? Where would be the foundation of _morals,_ if particular characters had no certain or determinate power to produce particular sentiments, and if these sentiments had no constant operation on actions? And with what pretence could we employ our _criticism_ upon any poet or polite author, if we could not pronounce the conduct and sentiments of his actors either natural or unnatural to such characters, and in such circumstances? It seems almost impossible, therefore, to engage either in science or action of any kind without acknowledging the doctrine of necessity, and this _inference_ from motive to voluntary actions, from characters to conduct.

And indeed, when we consider how aptly _natural_ and _moral_ evidence link together, and form only one chain of argument, we shall make no scruple to allow that they are of the same nature, and derived from the same principles. A prisoner who has neither money nor interest, discovers the impossibility of his escape, as well when he considers the obstinacy of the gaoler, as the walls and bars with which he is surrounded; and, in all attempts for his freedom, chooses rather to work upon the stone and iron of the one, than upon the inflexible nature of the other. The same prisoner, when conducted to the scaffold, foresees his death as certainly from the constancy and fidelity of his guards, as from the operation of the axe or wheel. His mind runs along a certain train

of ideas: The refusal of the soldiers to consent to his escape; the action of the executioner; the separation of the head and body; bleeding, convulsive motions, and death. Here is a connected chain of natural causes and voluntary actions; but the mind feels no difference between them in passing from one link to another: Nor is less certain of the future event than if it were connected with the objects present to the memory or senses, by a train of causes, cemented together by what we are pleased to call a _physical_ necessity. The same experienced union has the same effect on the mind, whether the united objects be motives, volition, and actions; or figure and motion. We may change the name of things; but their nature and their operation on the understanding never change.

Were a man, whom I know to be honest and opulent, and with whom I live in intimate friendship, to come into my house, where I am surrounded with my servants, I rest assured that he is not to stab me before he leaves it in order to rob me of my silver standish; and I no more suspect this event than the falling of the house itself, which is new, and solidly built and founded._--But he may have been seized with a sudden and unknown frenzy.--_So may a sudden earthquake arise, and shake and tumble my house about my ears. I shall therefore change the suppositions. I shall say that I know with certainty that he is not to put his hand into the fire and hold it there till it be consumed: And this event, I think I can foretell with the same assurance, as that, if he throw himself out at the window, and meet with no obstruction, he will not remain a moment suspended in the air. No suspicion of an unknown frenzy can give the least possibility to the former event, which is so contrary to all the known principles of human nature. A man who at noon leaves his purse full of gold on the pavement at Charing-Cross, may as well expect that it will fly away like a feather, as that he will find it untouched an hour after. Above one half of human reasonings contain inferences of a similar nature, attended with more or less degrees of certainty proportioned to our experience of the usual conduct of mankind in such particular situations.

71. I have frequently considered, what could possibly be the reason why all mankind, though they have ever, without hesitation, acknowledged the doctrine of necessity in their whole practice and reasoning, have yet discovered such a reluctance to acknowledge it in words, and have rather shown a propensity, in all ages, to profess the contrary opinion. The matter, I think, may be accounted for after the following manner. If we examine the operations of body, and the production of effects from their causes, we shall find that all our faculties can never carry us farther in our knowledge of this relation than barely to observe that particular objects are _constantly conjoined_ together, and that the mind is carried, by a _customary transition,_ from the appearance of one to the belief of the other. But though this conclusion concerning human ignorance be the result of the strictest scrutiny of this subject, men still entertain a strong propensity to believe that they penetrate farther into the powers of nature, and perceive something like a necessary connexion between the cause and the effect. When again they turn their reflections towards the operations of their own minds, and _feel_ no such connexion of the motive and the action; they are thence apt to suppose, that there is a difference between the effects which result from material force, and those which arise from thought and intelligence. But being once convinced that we know nothing farther of causation of any kind than merely the _constant conjunction_ of objects, and the consequent _inference_ of the mind from one to another, and finding that these two circumstances are universally allowed to have place in voluntary actions; we may be more easily led to own the same necessity common to all causes. And though this reasoning may contradict the systems of many philosophers, in ascribing necessity to the determinations of the will, we shall find, upon reflection, that they dissent from it in words only, not in their real sentiment. Necessity, according to the sense in which it is here taken, has never yet been rejected, nor can ever, I think, be rejected by any philosopher. It may only, perhaps, be pretended that the mind can perceive, in the operations of matter, some farther connexion between the cause and effect; and connexion that has not place in voluntary actions of intelligent beings. Now whether it be so or not, can only appear upon examination; and it is incumbent on these philosophers to make good their assertion, by defining or describing that necessity, and pointing it out to us in the operations of material causes.

72. It would seem, indeed, that men begin at the wrong end of this question concerning liberty and necessity, when they enter upon it by examining the faculties of the soul, the influence of the understanding, and the operations of the will. Let them first discuss a more simple question, namely, the operations of body and of brute unintelligent matter; and try whether they can there form any idea of causation and necessity, except that of a constant conjunction of objects, and subsequent inference of the mind from one to another. If these circumstances form, in reality, the whole of that necessity, which we conceive in matter, and if these circumstances be also universally acknowledged to take place in the operations of the mind, the dispute is at an end; at least, must be owned to be thenceforth merely verbal. But as long as we will rashly suppose, that we have some farther idea of necessity and causation in the operations of external objects; at the same time, that we can find nothing farther in the voluntary actions of the mind; there is no possibility of bringing the question to any determinate issue, while we proceed upon so erroneous a supposition. The only method of undeceiving us is to mount up higher; to examine the narrow extent of science when applied to material causes; and to convince ourselves that all we know of them is the constant conjunction and inference above mentioned. We may,

perhaps, find that it is with difficulty we are induced to fix such narrow limits to human understanding: But we can afterwards find no difficulty when we come to apply this doctrine to the actions of the will. For as it is evident that these have a regular conjunction with motives and circumstances and characters, and as we always draw inferences from one to the other, we must be obliged to acknowledge in words that necessity, which we have already avowed, in every deliberation of our lives, and in every step of our conduct and behaviour.[17]

[17] The prevalence of the doctrine of liberty may be accounted for, from another cause, viz. a false sensation or seeming experience which we have, or may have, of liberty or indifference, in many of our actions. The necessity of any action, whether of matter or of mind, is not, properly speaking, a quality in the agent, but in any thinking or intelligent being, who may consider the action; and it consists chiefly in the determination of his thoughts to infer the existence of that action from some preceding objects; as liberty, when opposed to necessity, is nothing but the want of that determination, and a certain looseness or indifference, which we feel, in passing, or not passing, from the idea of one object to that of any succeeding one. Now we may observe, that, though, in _reflecting_ on human actions, we seldom feel such a looseness, or indifference, but are commonly able to infer them with considerable certainty from their motives, and from the dispositions of the agent; yet it frequently happens, that, in _performing_ the actions themselves, we are sensible of something like it: And as all resembling objects are readily taken for each other, this has been employed as a demonstrative and even intuitive proof of human liberty. We feel, that our actions are subject to our will, on most occasions; and imagine we feel, that the will itself is subject to nothing, because, when by a denial of it we are provoked to try, we feel, that it moves easily every way, and produces an image of itself (or a _Velleity,_ as it is called in the schools) even on that side, on which it did not settle. This image, or faint motion, we persuade ourselves, could, at that time, have been compleated into the thing itself; because, should that be denied, we find, upon a second trial, that, at present, it can. We consider not, that the fantastical desire of shewing liberty, is here the motive of our actions. And it seems certain, that, however we may imagine we feel a liberty within ourselves, a spectator can commonly infer our actions from our motives and character; and even where he cannot, he concludes in general, that he might, were he perfectly acquainted with every circumstance of our situation and temper, and the most secret springs of our complexion and disposition. Now this is the very essence of necessity, according to the foregoing doctrine.

73. But to proceed in this reconciling project with regard to the question of liberty and necessity; the most contentious question of metaphysics, the most contentious science; it will not require many words to prove, that all mankind have ever agreed in the doctrine of liberty as well as in that of necessity, and that the whole dispute, in this respect also, has been hitherto merely verbal. For what is meant by liberty, when applied to voluntary actions? We cannot surely mean that actions have so little connexion with motives, inclinations, and circumstances, that one does not follow with a certain degree of uniformity from the other, and that one affords no inference by which we can conclude the existence of the other. For these are plain and acknowledged matters of fact. By liberty, then, we can only mean _a power of acting or not acting, according to the determinations of the will;_ that is, if we choose to remain at rest, we may; if we choose to move, we also may. Now this hypothetical liberty is universally allowed to belong to every one who is not a prisoner and in chains. Here, then, is no subject of dispute.

74. Whatever definition we may give of liberty, we should be careful to observe two requisite circumstances; _first,_ that it be consistent with plain matter of fact; _secondly,_ that it be consistent with itself. If we observe these circumstances, and render our definition intelligible, I am persuaded that all mankind will be found of one opinion with regard to it.

It is universally allowed that nothing exists without a cause of its existence, and that chance, when strictly examined, is a mere negative word, and means not any real power which has anywhere a being in nature. But it is pretended that some causes are necessary, some not necessary. Here then is the advantage of definitions. Let any one _define_ a cause, without comprehending, as a part of the definition, a _necessary connexion_ with its effect; and let him show distinctly the origin of the idea, expressed by the definition; and I shall readily give up the whole controversy. But if the foregoing explication of the matter be received, this must be absolutely impracticable. Had not objects a regular conjunction with each other, we should never have entertained any notion of cause and effect; and this regular conjunction produces that inference of the understanding, which is the only connexion, that we can have any comprehension of. Whoever attempts a definition of cause, exclusive of these circumstances, will be obliged either to employ unintelligible terms or such as are synonymous to the term which he endeavours to define.[18] And if the definition above mentioned be admitted; liberty, when opposed to necessity, not to constraint, is the same thing with chance; which is universally allowed to have no existence.

[18] Thus, if a cause be defined, _that which produces any thing;_ it is easy to observe, that _producing_ is synonymous to _causing._ In like manner, if a cause be defined, _that by which any thing exists;_ this is liable to the same objection. For what is

meant by these words, _by which?_ Had it been said, that a cause is _that_ after which _any thing constantly exists;_ we should have understood the terms. For this is, indeed, all we know of the matter. And this constancy forms the very essence of necessity, nor have we any other idea of it.

PART II.

75. There is no method of reasoning more common, and yet none more blameable, than, in philosophical disputes, to endeavour the refutation of any hypothesis, by a pretence of its dangerous consequences to religion and morality. When any opinion leads to absurdities, it is certainly false; but it is not certain that an opinion is false, because it is of dangerous consequence. Such topics, therefore, ought entirely to be forborne; as serving nothing to the discovery of truth, but only to make the person of an antagonist odious. This I observe in general, without pretending to draw any advantage from it. I frankly submit to an examination of this kind, and shall venture to affirm that the doctrines, both of necessity and of liberty, as above explained, are not only consistent with morality, but are absolutely essential to its support.

Necessity may be defined two ways, conformably to the two definitions of _cause_, of which it makes an essential part. It consists either in the constant conjunction of like objects, or in the inference of the understanding from one object to another. Now necessity, in both these senses, (which, indeed, are at bottom the same) has universally, though tacitly, in the schools, in the pulpit, and in common life, been allowed to belong to the will of man; and no one has ever pretended to deny that we can draw inferences concerning human actions, and that those inferences are founded on the experienced union of like actions, with like motives, inclinations, and circumstances. The only particular in which any one can differ, is, that either, perhaps, he will refuse to give the name of necessity to this property of human actions: But as long as the meaning is understood, I hope the word can do no harm: Or that he will maintain it possible to discover something farther in the operations of matter. But this, it must be acknowledged, can be of no consequence to morality or religion, whatever it may be to natural philosophy or metaphysics. We may here be mistaken in asserting that there is no idea of any other necessity or connexion in the actions of body: But surely we ascribe nothing to the actions of the mind, but what everyone does, and must readily allow of. We change no circumstance in the received orthodox system with regard to the will, but only in that with regard to material objects and causes. Nothing, therefore, can be more innocent, at least, than this doctrine.

76. All laws being founded on rewards and punishments, it is supposed as a fundamental principle, that these motives have a regular and uniform influence on the mind, and both produce the good and prevent the evil actions. We may give to this influence what name we please; but, as it is usually conjoined with the action, it must be esteemed a _cause_, and be looked upon as an instance of that necessity, which we would here establish.

The only proper object of hatred or vengeance is a person or creature, endowed with thought and consciousness; and when any criminal or injurious actions excite that passion, it is only by their relation to the person, or connexion with him. Actions are, by their very nature, temporary and perishing; and where they proceed not from some _cause_ in the character and disposition of the person who performed them, they can neither redound to his honour, if good; nor infamy, if evil. The actions themselves may be blameable; they may be contrary to all the rules of morality and religion: But the person is not answerable for them; and as they proceeded from nothing in him that is durable and constant, and leave nothing of that nature behind them, it is impossible he can, upon their account, become the object of punishment or vengeance. According to the principle, therefore, which denies necessity, and consequently causes, a man is as pure and untainted, after having committed the most horrid crime, as at the first moment of his birth, nor is his character anywise concerned in his actions, since they are not derived from it, and the wickedness of the one can never be used as a proof of the depravity of the other.

Men are not blamed for such actions as they perform ignorantly and casually, whatever may be the consequences. Why? but because the principles of these actions are only momentary, and terminate in them alone. Men are less blamed for such actions as they perform hastily and unpremeditately than for such as proceed from deliberation. For what reason? but because a hasty temper, though a constant cause or principle in the mind, operates only by intervals, and infects not the whole character. Again, repentance wipes off every crime, if attended with a reformation of life and manners. How is this to be accounted for? but by asserting that actions render a person criminal merely as they are proofs of criminal principles in the mind; and when, by an alteration of these principles, they cease to be just proofs, they likewise cease to be criminal. But, except upon the doctrine of necessity, they never were just proofs, and consequently never were criminal.

77. It will be equally easy to prove, and from the same arguments, that _liberty_, according to that definition above mentioned, in which all men agree, is also essential to morality, and that no human actions, where it is wanting, are susceptible of any moral qualities, or can be the objects either of approbation or dislike. For as actions are objects of our moral sentiment, so far only as they are indications of the internal character, passions, and affections; it is impossible that they can give rise either to praise or blame, where they proceed not from these principles, but are derived altogether from external violence.

78. I pretend not to have obviated or removed all objections to this theory, with regard to necessity and liberty. I can foresee other objections, derived from topics which have not here been treated of. It may be said, for instance, that, if voluntary actions be subjected to the same laws of necessity with the operations of matter, there is a continued chain of necessary causes, pre-ordained and pre-determined, reaching from the original cause of all to every single volition of every human creature. No contingency anywhere in the universe; no indifference; no liberty. While we act, we are, at the same time, acted upon. The ultimate Author of all our volitions is the Creator of the world, who first bestowed motion on this immense machine, and placed all beings in that particular position, whence every subsequent event, by an inevitable necessity, must result. Human actions, therefore, either can have no moral turpitude at all, as proceeding from so good a cause; or if they have any turpitude, they must involve our Creator in the same guilt, while he is acknowledged to be their ultimate cause and author. For as a man, who fired a mine, is answerable for all the consequences whether the train he employed be long or short; so wherever a continued chain of necessary causes is fixed, that Being, either finite or infinite, who produces the first, is likewise the author of all the rest, and must both bear the blame and acquire the praise which belong to them. Our clear and unalterable ideas of morality establish this rule, upon unquestionable reasons, when we examine the consequences of any human action; and these reasons must still have greater force when applied to the volitions and intentions of a Being infinitely wise and powerful. Ignorance or impotence may be pleaded for so limited a creature as man; but those imperfections have no place in our Creator. He foresaw, he ordained, he intended all those actions of men, which we so rashly pronounce criminal. And we must therefore conclude, either that they are not criminal, or that the Deity, not man, is accountable for them. But as either of these positions is absurd and impious, it follows, that the doctrine from which they are deduced cannot possibly be true, as being liable to all the same objections. An absurd consequence, if necessary, proves the original doctrine to be absurd; in the same manner as criminal actions render criminal the original cause, if the connexion between them be necessary and evitable.

This objection consists of two parts, which we shall examine separately; _First_, that, if human actions can be traced up, by a necessary chain, to the Deity, they can never be criminal; on account of the infinite perfection of that Being from whom they are derived, and who can intend nothing but what is altogether good and laudable. Or, _Secondly_, if they be criminal, we must retract the attribute of perfection, which we ascribe to the Deity, and must acknowledge him to be the ultimate author of guilt and moral turpitude in all his creatures.

79. The answer to the first objection seems obvious and convincing. There are many philosophers who, after an exact scrutiny of all the phenomena of nature, conclude, that the WHOLE, considered as one system, is, in every period of its existence, ordered with perfect benevolence; and that the utmost possible happiness will, in the end, result to all created beings, without any mixture of positive or absolute ill or misery. Every physical ill, say they, makes an essential part of this benevolent system, and could not possibly be removed, even by the Deity himself, considered as a wise agent, without giving entrance to greater ill, or excluding greater good, which will result from it. From this theory, some philosophers, and the ancient _Stoics_ among the rest, derived a topic of consolation under all afflictions, while they taught their pupils that those ills under which they laboured were, in reality, goods to the universe; and that to an enlarged view, which could comprehend the whole system of nature, every event became an object of joy and exultation. But though this topic be specious and sublime, it was soon found in practice weak and ineffectual. You would surely more irritate than appease a man lying under the racking pains of the gout by preaching up to him the rectitude of those general laws, which produced the malignant humours in his body, and led them through the proper canals, to the sinews and nerves, where they now excite such acute torments. These enlarged views may, for a moment, please the imagination of a speculative man, who is placed in ease and security; but neither can they dwell with constancy on his mind, even though undisturbed by the emotions of pain or passion; much less can they maintain their ground when attacked by such powerful antagonists. The affections take a narrower and more natural survey of their object; and by an economy, more suitable to the infirmity of human minds, regard alone the beings around us, and are actuated by such events as appear good or ill to the private system.

80. The case is the same with _moral_ as with _physical_ ill. It cannot reasonably be supposed, that those remote considerations, which are found of so little efficacy with regard to one, will have a more powerful influence with regard to the other. The mind of

man is so formed by nature that, upon the appearance of certain characters, dispositions, and actions, it immediately feels the sentiment of approbation or blame; nor are there any emotions more essential to its frame and constitution. The characters which engage our approbation are chiefly such as contribute to the peace and security of human society; as the characters which excite blame are chiefly such as tend to public detriment and disturbance: Whence it may reasonably be presumed, that the moral sentiments arise, either mediately or immediately, from a reflection of these opposite interests. What though philosophical meditations establish a different opinion or conjecture; that everything is right with regard to the WHOLE, and that the qualities, which disturb society, are, in the main, as beneficial, and are as suitable to the primary intention of nature as those which more directly promote its happiness and welfare? Are such remote and uncertain speculations able to counterbalance the sentiments which arise from the natural and immediate view of the objects? A man who is robbed of a considerable sum; does he find his vexation for the loss anywise diminished by these sublime reflections? Why then should his moral resentment against the crime be supposed incompatible with them? Or why should not the acknowledgment of a real distinction between vice and virtue be reconcileable to all speculative systems of philosophy, as well as that of a real distinction between personal beauty and deformity? Both these distinctions are founded in the natural sentiments of the human mind: And these sentiments are not to be controuled or altered by any philosophical theory or speculation whatsoever.

81. The _second_ objection admits not of so easy and satisfactory an answer; nor is it possible to explain distinctly, how the Deity can be the mediate cause of all the actions of men, without being the author of sin and moral turpitude. These are mysteries, which mere natural and unassisted reason is very unfit to handle; and whatever system she embraces, she must find herself involved in inextricable difficulties, and even contradictions, at every step which she takes with regard to such subjects. To reconcile the indifference and contingency of human actions with prescience; or to defend absolute decrees, and yet free the Deity from being the author of sin, has been found hitherto to exceed all the power of philosophy. Happy, if she be thence sensible of her temerity, when she pries into these sublime mysteries; and leaving a scene so full of obscurities and perplexities, return, with suitable modesty, to her true and proper province, the examination of common life; where she will find difficulties enough to employ her enquiries, without launching into so boundless an ocean of doubt, uncertainty, and contradiction!

SECTION IX.

OF THE REASON OF ANIMALS.

82. All our reasonings concerning matter of fact are founded on a species of Analogy, which leads us to expect from any cause the same events, which we have observed to result from similar causes. Where the causes are entirely similar, the analogy is perfect, and the inference, drawn from it, is regarded as certain and conclusive: nor does any man ever entertain a doubt, where he sees a piece of iron, that it will have weight and cohesion of parts; as in all other instances, which have ever fallen under his observation. But where the objects have not so exact a similarity, the analogy is less perfect, and the inference is less conclusive; though still it has some force, in proportion to the degree of similarity and resemblance. The anatomical observations, formed upon one animal, are, by this species of reasoning, extended to all animals; and it is certain, that when the circulation of the blood, for instance, is clearly proved to have place in one creature, as a frog, or fish, it forms a strong presumption, that the same principle has place in all. These analogical observations may be carried farther, even to this science, of which we are now treating; and any theory, by which we explain the operations of the understanding, or the origin and connexion of the passions in man, will acquire additional authority, if we find, that the same theory is requisite to explain the same phenomena in all other animals. We shall make trial of this, with regard to the hypothesis, by which we have, in the foregoing discourse, endeavoured to account for all experimental reasonings; and it is hoped, that this new point of view will serve to confirm all our former observations.

83. _First_, It seems evident, that animals as well as men learn many things from experience, and infer, that the same events will always follow from the same causes. By this principle they become acquainted with the more obvious properties of external objects, and gradually, from their birth, treasure up a knowledge of the nature of fire, water, earth, stones, heights, depths, &c., and of the effects which result from their operation. The ignorance and inexperience of the young are here plainly distinguishable from the cunning and sagacity of the old, who have learned, by long observation, to avoid what hurt them, and to pursue what gave ease or pleasure. A horse, that has been accustomed to the field, becomes acquainted with the proper height which he can leap, and will never attempt what exceeds his force and ability. An old greyhound will trust the more fatiguing part of the chace to the younger, and will place himself so as to meet the hare in her doubles; nor are the conjectures, which he forms on this occasion, founded in any thing but his observation and experience.

This is still more evident from the effects of discipline and education on animals, who, by the proper application of rewards and punishments, may be taught any course of action, and most contrary to their natural instincts and propensities. Is it not experience, which renders a dog apprehensive of pain, when you menace him, or lift up the whip to beat him? Is it not even experience, which makes him answer to his name, and infer, from such an arbitrary sound, that you mean him rather than any of his fellows, and intend to call him, when you pronounce it in a certain manner, and with a certain tone and accent?

In all these cases, we may observe, that the animal infers some fact beyond what immediately strikes his senses; and that this inference is altogether founded on past experience, while the creature expects from the present object the same consequences, which it has always found in its observation to result from similar objects.

84. _Secondly_, It is impossible, that this inference of the animal can be founded on any process of argument or reasoning, by which he concludes, that like events must follow like objects, and that the course of nature will always be regular in its operations. For if there be in reality any arguments of this nature, they surely lie too abstruse for the observation of such imperfect understandings; since it may well employ the utmost care and attention of a philosophic genius to discover and observe them. Animals, therefore, are not guided in these inferences by reasoning: Neither are children: Neither are the generality of mankind, in their ordinary actions and conclusions: Neither are philosophers themselves, who, in all the active parts of life, are, in the main, the same with the vulgar, and are governed by the same maxims. Nature must have provided some other principle, of more ready, and more general use and application; nor can an operation of such immense consequence in life, as that of inferring effects from causes, be trusted to the uncertain process of reasoning and argumentation. Were this doubtful with regard to men, it seems to admit of no question with regard to the brute creation; and the conclusion being once firmly established in the one, we have a strong presumption, from all the rules of analogy, that it ought to be universally admitted, without any exception or reserve. It is custom alone, which engages animals, from every object, that strikes their senses, to infer its usual attendant, and carries their imagination, from the appearance of the one, to conceive the other, in that particular manner, which we denominate _belief_. No other explication can be given of this operation, in all the higher, as well as lower classes of sensitive beings, which fall under our notice and observation [19].

[19] Since all reasonings concerning facts or causes is derived merely from custom, it may be asked how it happens, that men so much surpass animals in reasoning, and one man so much surpasses another? Has not the same custom the same influence on all?

We shall here endeavour briefly to explain the great difference in human understandings: After which the reason of the difference between men and animals will easily be comprehended.

1. When we have lived any time, and have been accustomed to the uniformity of nature, we acquire a general habit, by which we always transfer the known to the unknown, and conceive the latter to resemble the former. By means of this general habitual principle, we regard even one experiment as the foundation of reasoning, and expect a similar event with some degree of certainty, where the experiment has been made accurately, and free from all foreign circumstances. It is therefore considered as a matter of great importance to observe the consequences of things; and as one man may very much surpass another in attention and memory and observation, this will make a very great difference in their reasoning.

2. Where there is a complication of causes to produce any effect, one mind may be much larger than another, and better able to comprehend the whole system of objects, and to infer justly their consequences.

3. One man is able to carry on a chain of consequences to a greater length than another.

4. Few men can think long without running into a confusion of ideas, and mistaking one for another; and there are various degrees of this infirmity.

5. The circumstance, on which the effect depends, is frequently involved in other circumstances, which are foreign and extrinsic. The separation of it often requires great attention, accuracy, and subtilty.

6. The forming of general maxims from particular observation is a very nice operation; and nothing is more usual, from haste or a narrowness of mind, which sees not on all sides, than to commit mistakes in this particular.

7. When we reason from analogies, the man, who has the greater experience or the greater promptitude of suggesting analogies, will be the better reasoner.

8. Byasses from prejudice, education, passion, party, &c. hang more upon one mind than another.

9. After we have acquired a confidence in human testimony, books and conversation enlarge much more the sphere of one man's experience and thought than those of another.

It would be easy to discover many other circumstances that make a difference in the understandings of men.

85. But though animals learn many parts of their knowledge from observation, there are also many parts of it, which they derive from the original hand of nature; which much exceed the share of capacity they possess on ordinary occasions; and in which they improve, little or nothing, by the longest practice and experience. These we denominate Instincts, and are so apt to admire as something very extraordinary, and inexplicable by all the disquisitions of human understanding. But our wonder will, perhaps, cease or diminish, when we consider, that the experimental reasoning itself, which we possess in common with beasts, and on which the whole conduct of life depends, is nothing but a species of instinct or mechanical power, that acts in us unknown to ourselves; and in its chief operations, is not directed by any such relations or comparisons of ideas, as are the proper objects of our intellectual faculties. Though the instinct be different, yet still it is an instinct, which teaches a man to avoid the fire; as much as that, which teaches a bird, with such exactness, the art of incubation, and the whole economy and order of its nursery.

SECTION X.

OF MIRACLES.

PART I.

86. There is, in Dr. Tillotson's writings, an argument against the _real presence_, which is as concise, and elegant, and strong as any argument can possibly be supposed against a doctrine, so little worthy of a serious refutation. It is acknowledged on all hands, says that learned prelate, that the authority, either of the scripture or of tradition, is founded merely in the testimony of the apostles, who were eye-witnesses to those miracles of our Saviour, by which he proved his divine mission. Our evidence, then, for the truth of the _Christian_ religion is less than the evidence for the truth of our senses; because, even in the first authors of our religion, it was no greater; and it is evident it must diminish in passing from them to their disciples; nor can any one rest such confidence in their testimony, as in the immediate object of his senses. But a weaker evidence can never destroy a stronger; and therefore, were the doctrine of the real presence ever so clearly revealed in scripture, it were directly contrary to the rules of just reasoning to give our assent to it. It contradicts sense, though both the scripture and tradition, on which it is supposed to be built, carry not such evidence with them as sense; when they are considered merely as external evidences, and are not brought home to every one's breast, by the immediate operation of the Holy Spirit.

Nothing is so convenient as a decisive argument of this kind, which must at least _silence_ the most arrogant bigotry and superstition, and free us from their impertinent solicitations. I flatter myself, that I have discovered an argument of a like nature, which, if just, will, with the wise and learned, be an everlasting check to all kinds of superstitious delusion, and consequently, will be useful as long as the world endures. For so long, I presume, will the accounts of miracles and prodigies be found in all history, sacred and profane.

87. Though experience be our only guide in reasoning concerning matters of fact; it must be acknowledged, that this guide is not altogether infallible, but in some cases is apt to lead us into errors. One, who in our climate, should expect better weather in any week of June than in one of December, would reason justly, and conformably to experience; but it is certain, that he may happen, in the event, to find himself mistaken. However, we may observe, that, in such a case, he would have no cause to complain of experience; because it commonly informs us beforehand of the uncertainty, by that contrariety of events, which we may learn from a diligent observation. All effects follow not with like certainty from their supposed causes. Some events are found, in all countries and all ages, to have been constantly conjoined together: Others are found to have been more variable, and sometimes to disappoint our expectations; so that, in our reasonings concerning matter of fact, there are all imaginable degrees of assurance, from the highest certainty to the lowest species of moral evidence.

A wise man, therefore, proportions his belief to the evidence. In such conclusions as are founded on an infallible experience, he expects the event with the last degree of assurance, and regards his past experience as a full _proof_ of the future existence of that event. In other cases, he proceeds with more caution: He weighs the opposite experiments: He considers which side is supported by the greater number of experiments: to that side he inclines, with doubt and hesitation; and when at last he fixes his judgement,

the evidence exceeds not what we properly call _probability_. All probability, then, supposes an opposition of experiments and observations, where the one side is found to overbalance the other, and to produce a degree of evidence, proportioned to the superiority. A hundred instances or experiments on one side, and fifty on another, afford a doubtful expectation of any event; though a hundred uniform experiments, with only one that is contradictory, reasonably beget a pretty strong degree of assurance. In all cases, we must balance the opposite experiments, where they are opposite, and deduct the smaller number from the greater, in order to know the exact force of the superior evidence.

88. To apply these principles to a particular instance; we may observe, that there is no species of reasoning more common, more useful, and even necessary to human life, than that which is derived from the testimony of men, and the reports of eye-witnesses and spectators. This species of reasoning, perhaps, one may deny to be founded on the relation of cause and effect. I shall not dispute about a word. It will be sufficient to observe that our assurance in any argument of this kind is derived from no other principle than our observation of the veracity of human testimony, and of the usual conformity of facts to the reports of witnesses. It being a general maxim, that no objects have any discoverable connexion together, and that all the inferences, which we can draw from one to another, are founded merely on our experience of their constant and regular conjunction; it is evident, that we ought not to make an exception to this maxim in favour of human testimony, whose connexion with any event seems, in itself, as little necessary as any other. Were not the memory tenacious to a certain degree, had not men commonly an inclination to truth and a principle of probity; were they not sensible to shame, when detected in a falsehood: Were not these, I say, discovered by experience to be qualities, inherent in human nature, we should never repose the least confidence in human testimony. A man delirious, or noted for falsehood and villany, has no manner of authority with us.

And as the evidence, derived from witnesses and human testimony, is founded on past experience, so it varies with the experience, and is regarded either as a _proof_ or a _probability_, according as the conjunction between any particular kind of report and any kind of object has been found to be constant or variable. There are a number of circumstances to be taken into consideration in all judgements of this kind; and the ultimate standard, by which we determine all disputes, that may arise concerning them, is always derived from experience and observation. Where this experience is not entirely uniform on any side, it is attended with an unavoidable contrariety in our judgements, and with the same opposition and mutual destruction of argument as in every other kind of evidence. We frequently hesitate concerning the reports of others. We balance the opposite circumstances, which cause any doubt or uncertainty; and when we discover a superiority on any side, we incline to it; but still with a diminution of assurance, in proportion to the force of its antagonist.

89. This contrariety of evidence, in the present case, may be derived from several different causes; from the opposition of contrary testimony; from the character or number of the witnesses; from the manner of their delivering their testimony; or from the union of all these circumstances. We entertain a suspicion concerning any matter of fact, when the witnesses contradict each other; when they are but few, or of a doubtful character; when they have an interest in what they affirm; when they deliver their testimony with hesitation, or on the contrary, with too violent asseverations. There are many other particulars of the same kind, which may diminish or destroy the force of any argument, derived from human testimony.

Suppose, for instance, that the fact, which the testimony endeavours to establish, partakes of the extraordinary and the marvellous; in that case, the evidence, resulting from the testimony, admits of a diminution, greater or less, in proportion as the fact is more or less unusual. The reason why we place any credit in witnesses and historians, is not derived from any _connexion_, which we perceive _a priori_, between testimony and reality, but because we are accustomed to find a conformity between them. But when the fact attested is such a one as has seldom fallen under our observation, here is a contest of two opposite experiences; of which the one destroys the other, as far as its force goes, and the superior can only operate on the mind by the force, which remains. The very same principle of experience, which gives us a certain degree of assurance in the testimony of witnesses, gives us also, in this case, another degree of assurance against the fact, which they endeavour to establish; from which contradition there necessarily arises a counterpoize, and mutual destruction of belief and authority.

I should not believe such a story were it told me by Cato, was a proverbial saying in Rome, even during the lifetime of that philosophical patriot.[20] The incredibility of a fact, it was allowed, might invalidate so great an authority.

[20] Plutarch, in vita Catonis.

The Indian prince, who refused to believe the first relations concerning the effects of frost, reasoned justly; and it naturally required very strong testimony to engage his assent to facts, that arose from a state of nature, with which he was unacquainted, and which

bore so little analogy to those events, of which he had had constant and uniform experience. Though they were not contrary to his experience, they were not conformable to it.[21]

[21] No Indian, it is evident, could have experience that water did not freeze in cold climates. This is placing nature in a situation quite unknown to him; and it is impossible for him to tell _a priori _what will result from it. It is making a new experiment, the consequence of which is always uncertain. One may sometimes conjecture from analogy what will follow; but still this is but conjecture. And it must be confessed, that, in the present case of freezing, the event follows contrary to the rules of analogy, and is such as a rational Indian would not look for. The operations of cold upon water are not gradual, according to the degrees of cold; but whenever it comes to the freezing point, the water passes in a moment, from the utmost liquidity to perfect hardness. Such an event, therefore, may be denominated _extraordinary_, and requires a pretty strong testimony, to render it credible to people in a warm climate: But still it is not _miraculous_, nor contrary to uniform experience of the course of nature in cases where all the circumstances are the same. The inhabitants of Sumatra have always seen water fluid in their own climate, and the freezing of their rivers ought to be deemed a prodigy: But they never saw water in Muscovy during the winter; and therefore they cannot reasonably be positive what would there be the consequence.

90. But in order to encrease the probability against the testimony of witnesses, let us suppose, that the fact, which they affirm, instead of being only marvellous, is really miraculous; and suppose also, that the testimony considered apart and in itself, amounts to an entire proof; in that case, there is proof against proof, of which the strongest must prevail, but still with a diminution of its force, in proportion to that of its antagonist.

A miracle is a violation of the laws of nature; and as a firm and unalterable experience has established these laws, the proof against a miracle, from the very nature of the fact, is as entire as any argument from experience can possibly be imagined. Why is it more than probable, that all men must die; that lead cannot, of itself, remain suspended in the air; that fire consumes wood, and is extinguished by water; unless it be, that these events are found agreeable to the laws of nature, and there is required a violation of these laws, or in other words, a miracle to prevent them? Nothing is esteemed a miracle, if it ever happen in the common course of nature. It is no miracle that a man, seemingly in good health, should die on a sudden: because such a kind of death, though more unusual than any other, has yet been frequently observed to happen. But it is a miracle, that a dead man should come to life; because that has never been observed in any age or country. There must, therefore, be a uniform experience against every miraculous event, otherwise the event would not merit that appellation. And as a uniform experience amounts to a proof, there is here a direct and full _proof_, from the nature of the fact, against the existence of any miracle; nor can such a proof be destroyed, or the miracle rendered credible, but by an opposite proof, which is superior.[22]

[22] Sometimes an event may not, _in itself_, seem to be contrary to the laws of nature, and yet, if it were real, it might, by reason of some circumstances, be denominated a miracle; because, in _fact_, it is contrary to these laws. Thus if a person, claiming a divine authority, should command a sick person to be well, a healthful man to fall down dead, the clouds to pour rain, the winds to blow, in short, should order many natural events, which immediately follow upon his command; these might justly be esteemed miracles, because they are really, in this case, contrary to the laws of nature. For if any suspicion remain, that the event and command concurred by accident, there is no miracle and no transgression of the laws of nature. If this suspicion be removed, there is evidently a miracle, and a transgression of these laws; because nothing can be more contrary to nature than that the voice or command of a man should have such an influence. A miracle may be accurately defined, _a transgression of a law of nature by a particular volition of the Deity, or by the interposition of some invisible agent_. A miracle may either be discoverable by men or not. This alters not its nature and essence. The raising of a house or ship into the air is a visible miracle. The raising of a feather, when the wind wants ever so little of a force requisite for that purpose, is as real a miracle, though not so sensible with regard to us.

91. The plain consequence is (and it is a general maxim worthy of our attention), 'That no testimony is sufficient to establish a miracle, unless the testimony be of such a kind, that its falsehood would be more miraculous, than the fact, which it endeavours to establish; and even in that case there is a mutual destruction of arguments, and the superior only gives us an assurance suitable to that degree of force, which remains, after deducting the inferior.' When anyone tells me, that he saw a dead man restored to life, I immediately consider with myself, whether it be more probable, that this person should either deceive or be deceived, or that the fact, which he relates, should really have happened. I weigh the one miracle against the other; and according to the superiority, which I discover, I pronounce my decision, and always reject the greater miracle. If the falsehood of his testimony would be more miraculous, than the event which he relates; then, and not till then, can he pretend to command my belief or opinion.

PART II.

92. In the foregoing reasoning we have supposed, that the testimony, upon which a miracle is founded, may possibly amount to an entire proof, and that the falsehood of that testimony would be a real prodigy: But it is easy to shew, that we have been a great deal too liberal in our concession, and that there never was a miraculous event established on so full an evidence.

For _first_, there is not to be found, in all history, any miracle attested by a sufficient number of men, of such unquestioned good-sense, education, and learning, as to secure us against all delusion in themselves; of such undoubted integrity, as to place them beyond all suspicion of any design to deceive others; of such credit and reputation in the eyes of mankind, as to have a great deal to lose in case of their being detected in any falsehood; and at the same time, attesting facts performed in such a public manner and in so celebrated a part of the world, as to render the detection unavoidable: All which circumstances are requisite to give us a full assurance in the testimony of men.

93. _Secondly_. We may observe in human nature a principle which, if strictly examined, will be found to diminish extremely the assurance, which we might, from human testimony, have, in any kind of prodigy. The maxim, by which we commonly conduct ourselves in our reasonings, is, that the objects, of which we have no experience, resembles those, of which we have; that what we have found to be most usual is always most probable; and that where there is an opposition of arguments, we ought to give the preference to such as are founded on the greatest number of past observations. But though, in proceeding by this rule, we readily reject any fact which is unusual and incredible in an ordinary degree; yet in advancing farther, the mind observes not always the same rule; but when anything is affirmed utterly absurd and miraculous, it rather the more readily admits of such a fact, upon account of that very circumstance, which ought to destroy all its authority. The passion of _surprise_ and _wonder_, arising from miracles, being an agreeable emotion, gives a sensible tendency towards the belief of those events, from which it is derived. And this goes so far, that even those who cannot enjoy this pleasure immediately, nor can believe those miraculous events, of which they are informed, yet love to partake of the satisfaction at second-hand or by rebound, and place a pride and delight in exciting the admiration of others.

With what greediness are the miraculous accounts of travellers received, their descriptions of sea and land monsters, their relations of wonderful adventures, strange men, and uncouth manners? But if the spirit of religion join itself to the love of wonder, there is an end of common sense; and human testimony, in these circumstances, loses all pretensions to authority. A religionist may be an enthusiast, and imagine he sees what has no reality: he may know his narrative to be false, and yet persevere in it, with the best intentions in the world, for the sake of promoting so holy a cause: or even where this delusion has not place, vanity, excited by so strong a temptation, operates on him more powerfully than on the rest of mankind in any other circumstances; and self-interest with equal force. His auditors may not have, and commonly have not, sufficient judgement to canvass his evidence: what judgement they have, they renounce by principle, in these sublime and mysterious subjects: or if they were ever so willing to employ it, passion and a heated imagination disturb the regularity of its operations. Their credulity increases his impudence: and his impudence overpowers their credulity.

Eloquence, when at its highest pitch, leaves little room for reason or reflection; but addressing itself entirely to the fancy or the affections, captivates the willing hearers, and subdues their understanding. Happily, this pitch it seldom attains. But what a Tully or a Demosthenes could scarcely effect over a Roman or Athenian audience, every _Capuchin_, every itinerant or stationary teacher can perform over the generality of mankind, and in a higher degree, by touching such gross and vulgar passions.

The many instances of forged miracles, and prophecies, and supernatural events, which, in all ages, have either been detected by contrary evidence, or which detect themselves by their absurdity, prove sufficiently the strong propensity of mankind to the extraordinary and the marvellous, and ought reasonably to beget a suspicion against all relations of this kind. This is our natural way of thinking, even with regard to the most common and most credible events. For instance: There is no kind of report which rises so easily, and spreads so quickly, especially in country places and provincial towns, as those concerning marriages; insomuch that two young persons of equal condition never see each other twice, but the whole neighbourhood immediately join them together. The pleasure of telling a piece of news so interesting, of propagating it, and of being the first reporters of it, spreads the intelligence. And this is so well known, that no man of sense gives attention to these reports, till he find them confirmed by some greater evidence. Do not the same passions, and others still stronger, incline the generality of mankind to believe and report, with the greatest vehemence and assurance, all religious miracles?

94. _Thirdly_. It forms a strong presumption against all supernatural and miraculous relations, that they are observed chiefly to abound among ignorant and barbarous nations; or if a civilized people has ever given admission to any of them, that people will be found to have received them from ignorant and barbarous ancestors, who transmitted them with that inviolable sanction and

authority, which always attend received opinions. When we peruse the first histories of all nations, we are apt to imagine ourselves transported into some new world; where the whole frame of nature is disjointed, and every element performs its operations in a different manner, from what it does at present. Battles, revolutions, pestilence, famine and death, are never the effect of those natural causes, which we experience. Prodigies, omens, oracles, judgements, quite obscure the few natural events, that are intermingled with them. But as the former grow thinner every page, in proportion as we advance nearer the enlightened ages, we soon learn, that there is nothing mysterious or supernatural in the case, but that all proceeds from the usual propensity of mankind towards the marvellous, and that, though this inclination may at intervals receive a check from sense and learning, it can never be thoroughly extirpated from human nature.

It is strange, a judicious reader is apt to say, upon the perusal of these wonderful historians, _that such prodigious_ _events never happen in our days_. But it is nothing strange, I hope, that men should lie in all ages. You must surely have seen instances enough of that frailty. You have yourself heard many such marvellous relations started, which, being treated with scorn by all the wise and judicious, have at last been abandoned even by the vulgar. Be assured, that those renowned lies, which have spread and flourished to such a monstrous height, arose from like beginnings; but being sown in a more proper soil, shot up at last into prodigies almost equal to those which they relate.

It was a wise policy in that false prophet, Alexander, who though now forgotten, was once so famous, to lay the first scene of his impostures in Paphlagonia, where, as Lucian tells us, the people were extremely ignorant and stupid, and ready to swallow even the grossest delusion. People at a distance, who are weak enough to think the matter at all worth enquiry, have no opportunity of receiving better information. The stories come magnified to them by a hundred circumstances. Fools are industrious in propagating the imposture; while the wise and learned are contented, in general, to deride its absurdity, without informing themselves of the particular facts, by which it may be distinctly refuted. And thus the impostor above mentioned was enabled to proceed, from his ignorant Paphlagonians, to the enlisting of votaries, even among the Grecian philosophers, and men of the most eminent rank and distinction in Rome: nay, could engage the attention of that sage emperor Marcus Aurelius; so far as to make him trust the success of a military expedition to his delusive prophecies.

The advantages are so great, of starting an imposture among an ignorant people, that, even though the delusion should be too gross to impose on the generality of them (_which, though seldom, is sometimes the case_) it has a much better chance for succeeding in remote countries, than if the first scene had been laid in a city renowned for arts and knowledge. The most ignorant and barbarous of these barbarians carry the report abroad. None of their countrymen have a large correspondence, or sufficient credit and authority to contradict and beat down the delusion. Men's inclination to the marvellous has full opportunity to display itself. And thus a story, which is universally exploded in the place where it was first started, shall pass for certain at a thousand miles distance. But had Alexander fixed his residence at Athens, the philosophers of that renowned mart of learning had immediately spread, throughout the whole Roman empire, their sense of the matter; which, being supported by so great authority, and displayed by all the force of reason and eloquence, had entirely opened the eyes of mankind. It is true; Lucian, passing by chance through Paphlagonia, had an opportunity of performing this good office. But, though much to be wished, it does not always happen, that every Alexander meets with a Lucian, ready to expose and detect his impostures.

95. I may add as a _fourth_ reason, which diminishes the authority of prodigies, that there is no testimony for any, even those which have not been expressly detected, that is not opposed by an infinite number of witnesses; so that not only the miracle destroys the credit of testimony, but the testimony destroys itself. To make this the better understood, let us consider, that, in matters of religion, whatever is different is contrary; and that it is impossible the religions of ancient Rome, of Turkey, of Siam, and of China should, all of them, be established on any solid foundation. Every miracle, therefore, pretended to have been wrought in any of these religions (and all of them abound in miracles), as its direct scope is to establish the particular system to which it is attributed; so has it the same force, though more indirectly, to overthrow every other system. In destroying a rival system, it likewise destroys the credit of those miracles, on which that system was established; so that all the prodigies of different religions are to be regarded as contrary facts, and the evidences of these prodigies, whether weak or strong, as opposite to each other. According to this method of reasoning, when we believe any miracle of Mahomet or his successors, we have for our warrant the testimony of a few barbarous Arabians: And on the other hand, we are to regard the authority of Titus Livius, Plutarch, Tacitus, and, in short, of all the authors and witnesses, Grecian, Chinese, and Roman Catholic, who have related any miracle in their particular religion; I say, we are to regard their testimony in the same light as if they had mentioned that Mahometan miracle, and had in express terms contradicted it, with the same certainty as they have for the miracle they relate. This argument may appear over subtile and refined; but is not in reality different from the reasoning of a judge, who supposes, that the credit of two witnesses, maintaining a crime against any one,

is destroyed by the testimony of two others, who affirm him to have been two hundred leagues distant, at the same instant when the crime is said to have been committed.

96. One of the best attested miracles in all profane history, is that which Tacitus reports of Vespasian, who cured a blind man in Alexandria, by means of his spittle, and a lame man by the mere touch of his foot; in obedience to a vision of the god Serapis, who had enjoined them to have recourse to the Emperor, for these miraculous cures. The story may be seen in that fine historian[23]; where every circumstance seems to add weight to the testimony, and might be displayed at large with all the force of argument and eloquence, if any one were now concerned to enforce the evidence of that exploded and idolatrous superstition. The gravity, solidity, age, and probity of so great an emperor, who, through the whole course of his life, conversed in a familiar manner with his friends and courtiers, and never affected those extraordinary airs of divinity assumed by Alexander and Demetrius. The historian, a cotemporary writer, noted for candour and veracity, and withal, the greatest and most penetrating genius, perhaps, of all antiquity; and so free from any tendency to credulity, that he even lies under the contrary imputation, of atheism and profaneness: The persons, from whose authority he related the miracle, of established character for judgement and veracity, as we may well presume; eye-witnesses of the fact, and confirming their testimony, after the Flavian family was despoiled of the empire, and could no longer give any reward, as the price of a lie. _Utrumque, qui interfuere, nunc quoque memorant, postquam nullum mendacio pretium_. To which if we add the public nature of the facts, as related, it will appear, that no evidence can well be supposed stronger for so gross and so palpable a falsehood.

[23] Hist. lib. iv. cap. 81. Suetonius gives nearly the same account _in vita_ Vesp.

There is also a memorable story related by Cardinal de Retz, which may well deserve our consideration. When that intriguing politician fled into Spain, to avoid the persecution of his enemies, he passed through Saragossa, the capital of Arragon, where he was shewn, in the cathedral, a man, who had served seven years as a door-keeper, and was well known to every body in town, that had ever paid his devotions at that church. He had been seen, for so long a time, wanting a leg; but recovered that limb by the rubbing of holy oil upon the stump; and the cardinal assures us that he saw him with two legs. This miracle was vouched by all the canons of the church; and the whole company in town were appealed to for a confirmation of the fact; whom the cardinal found, by their zealous devotion, to be thorough believers of the miracle. Here the relater was also cotemporary to the supposed prodigy, of an incredulous and libertine character, as well as of great genius; the miracle of so _singular_ a nature as could scarcely admit of a counterfeit, and the witnesses very numerous, and all of them, in a manner, spectators of the fact, to which they gave their testimony. And what adds mightily to the force of the evidence, and may double our surprise on this occasion, is, that the cardinal himself, who relates the story, seems not to give any credit to it, and consequently cannot be suspected of any concurrence in the holy fraud. He considered justly, that it was not requisite, in order to reject a fact of this nature, to be able accurately to disprove the testimony, and to trace its falsehood, through all the circumstances of knavery and credulity which produced it. He knew, that, as this was commonly altogether impossible at any small distance of time and place; so was it extremely difficult, even where one was immediately present, by reason of the bigotry, ignorance, cunning, and roguery of a great part of mankind. He therefore concluded, like a just reasoner, that such an evidence carried falsehood upon the very face of it, and that a miracle, supported by any human testimony, was more properly a subject of derision than of argument.

There surely never was a greater number of miracles ascribed to one person, than those, which were lately said to have been wrought in France upon the tomb of Abbe Paris, the famous Jansenist, with whose sanctity the people were so long deluded. The curing of the sick, giving hearing to the deaf, and sight to the blind, were every where talked of as the usual effects of that holy sepulchre. But what is more extraordinary; many of the miracles were immediately proved upon the spot, before judges of unquestioned integrity, attested by witnesses of credit and distinction, in a learned age, and on the most eminent theatre that is now in the world. Nor is this all: a relation of them was published and dispersed every where; nor were the _Jesuits_, though a learned body, supported by the civil magistrate, and determined enemies to those opinions, in whose favour the miracles were said to have been wrought, ever able distinctly to refute or detect them[24]. Where shall we find such a number of circumstances, agreeing to the corroboration of one fact? And what have we to oppose to such a cloud of witnesses, but the absolute impossibility or miraculous nature of the events, which they relate? And this surely, in the eyes of all reasonable people, will alone be regarded as a sufficient refutation.

[24] This book was writ by Mons. Montgeron, counsellor or judge of the parliament of Paris, a man of figure and character, who was also a martyr to the cause, and is now said to be somewhere in a dungeon on account of his book.

There is another book in three volumes (called _Recueil des Miracles de l'Abbe_ Paris) giving an account of many of these miracles, and accompanied with prefatory discourses, which are very well written. There runs, however, through the whole of these a ridiculous comparison between the miracles of our Saviour and those of the Abbe; wherein it is asserted, that the evidence for the latter is equal to that for the former: As if the testimony of men could ever be put in the balance with that of God himself, who conducted the pen of the inspired writers. If these writers, indeed, were to be considered merely as human testimony, the French author is very moderate in his comparison; since he might, with some appearance of reason, pretend, that the Jansenist miracles much surpass the other in evidence and authority. The following circumstances are drawn from authentic papers, inserted in the above-mentioned book.

Many of the miracles of Abbe Paris were proved immediately by witnesses before the officiality or bishop's court at Paris, under the eye of cardinal Noailles, whose character for integrity and capacity was never contested even by his enemies.

His successor in the archbishopric was an enemy to the Jansenists, and for that reason promoted to the see by the court. Yet 22 rectors or cures of Paris, with infinite earnestness, press him to examine those miracles, which they assert to be known to the whole world, and undisputably certain: But he wisely forbore.

The Molinist party had tried to discredit these miracles in one instance, that of Mademoiselle le Franc. But, besides that their proceedings were in many respects the most irregular in the world, particularly in citing only a few of the Jansenist witnesses, whom they tampered with: Besides this, I say, they soon found themselves overwhelmed by a cloud of new witnesses, one hundred and twenty in number, most of them persons of credit and substance in Paris, who gave oath for the miracle. This was accompanied with a solemn and earnest appeal to the parliament. But the parliament were forbidden by authority to meddle in the affair. It was at last observed, that where men are heated by zeal and enthusiasm, there is no degree of human testimony so strong as may not be procured for the greatest absurdity: And those who will be so silly as to examine the affair by that medium, and seek particular flaws in the testimony, are almost sure to be confounded. It must be a miserable imposture, indeed, that does not prevail in that contest.

All who have been in France about that time have heard of the reputation of Mons. Heraut, the _lieutenant de Police_, whose vigilance, penetration, activity, and extensive intelligence have been much talked of. This magistrate, who by the nature of his office is almost absolute, was vested with full powers, on purpose to suppress or discredit these miracles; and he frequently seized immediately, and examined the witnesses and subjects of them: But never could reach any thing satisfactory against them.

In the case of Mademoiselle Thibaut he sent the famous De Sylva to examine her; whose evidence is very curious. The physician declares, that it was impossible she could have been so ill as was proved by witnesses; because it was impossible she could, in so short a time, have recovered so perfectly as he found her. He reasoned, like a man of sense, from natural causes; but the opposite party told him, that the whole was a miracle, and that his evidence was the very best proof of it.

The Molinists were in a sad dilemma. They durst not assert the absolute insufficiency of human evidence, to prove a miracle. They were obliged to say, that these miracles were wrought by witchcraft and the devil. But they were told, that this was the resource of the Jews of old.

No Jansenist was ever embarrassed to account for the cessation of the miracles, when the church-yard was shut up by the king's edict. It was the touch of the tomb, which produced these extraordinary effects; and when no one could approach the tomb, no effects could be expected. God, indeed, could have thrown down the walls in a moment; but he is master of his own graces and works, and it belongs not to us to account for them. He did not throw down the walls of every city like those of Jericho, on the sounding of the rams horns, nor break up the prison of every apostle, like that of St. Paul.

No less a man, than the Due de Chatillon, a duke and peer of France, of the highest rank and family, gives evidence of a miraculous cure, performed upon a servant of his, who had lived several years in his house with a visible and palpable infirmity. I shall conclude with observing, that no clergy are more celebrated for strictness of life and manners than the secular clergy of France, particularly the rectors or cures of Paris, who bear testimony to these impostures. The learning, genius, and probity of the gentlemen, and the austerity of the nuns of Port-Royal, have been much celebrated all over Europe. Yet they all give evidence for a miracle, wrought on the niece of the famous Pascal, whose sanctity of life, as well as extraordinary capacity, is well known. The famous Racine gives an account of this miracle in his famous history of Port-Royal, and fortifies it with all the proofs, which a multitude of nuns, priests, physicians, and men of the world, all of them of undoubted credit, could bestow upon it. Several men of letters, particularly the bishop of Tournay, thought this miracle so certain, as to employ it in the refutation of atheists and

free-thinkers. The queen-regent of France, who was extremely prejudiced against the Port-Royal, sent her own physician to examine the miracle, who returned an absolute convert. In short, the supernatural cure was so uncontestable, that it saved, for a time, that famous monastery from the ruin with which it was threatened by the Jesuits. Had it been a cheat, it had certainly been detected by such sagacious and powerful antagonists, and must have hastened the ruin of the contrivers. Our divines, who can build up a formidable castle from such despicable materials; what a prodigious fabric could they have reared from these and many other circumstances, which I have not mentioned! How often would the great names of Pascal, Racine, Amaud, Nicole, have resounded in our ears? But if they be wise, they had better adopt the miracle, as being more worth, a thousand times, than all the rest of the collection. Besides, it may serve very much to their purpose. For that miracle was really performed by the touch of an authentic holy prickle of the holy thorn, which composed the holy crown, which, &c.

97. Is the consequence just, because some human testimony has the utmost force and authority in some cases, when it relates the battle of Philippi or Pharsalia for instance; that therefore all kinds of testimony must, in all cases, have equal force and authority? Suppose that the Caesarean and Pompeian factions had, each of them, claimed the victory in these battles, and that the historians of each party had uniformly ascribed the advantage to their own side; how could mankind, at this distance, have been able to determine between them? The contrariety is equally strong between the miracles related by Herodotus or Plutarch, and those delivered by Mariana, Bede, or any monkish historian.

The wise lend a very academic faith to every report which favours the passion of the reporter; whether it magnifies his country, his family, or himself, or in any other way strikes in with his natural inclinations and propensities. But what greater temptation than to appear a missionary, a prophet, an ambassador from heaven? Who would not encounter many dangers and difficulties, in order to attain so sublime a character? Or if, by the help of vanity and a heated imagination, a man has first made a convert of himself, and entered seriously into the delusion; who ever scruples to make use of pious frauds, in support of so holy and meritorious a cause?

The smallest spark may here kindle into the greatest flame; because the materials are always prepared for it. The _avidum genus auricularum_[25], the gazing populace, receive greedily, without examination, whatever sooths superstition, and promotes wonder.

[25] Lucret.

How many stories of this nature have, in all ages, been detected and exploded in their infancy? How many more have been celebrated for a time, and have afterwards sunk into neglect and oblivion? Where such reports, therefore, fly about, the solution of the phenomenon is obvious; and we judge in conformity to regular experience and observation, when we account for it by the known and natural principles of credulity and delusion. And shall we, rather than have a recourse to so natural a solution, allow of a miraculous violation of the most established laws of nature?

I need not mention the difficulty of detecting a falsehood in any private or even public history, at the place, where it is said to happen; much more when the scene is removed to ever so small a distance. Even a court of judicature, with all the authority, accuracy, and judgement, which they can employ, find themselves often at a loss to distinguish between truth and falsehood in the most recent actions. But the matter never comes to any issue, if trusted to the common method of altercations and debate and flying rumours; especially when men's passions have taken part on either side.

In the infancy of new religions, the wise and learned commonly esteem the matter too inconsiderable to deserve their attention or regard. And when afterwards they would willingly detect the cheat, in order to undeceive the deluded multitude, the season is now past, and the records and witnesses, which might clear up the matter, have perished beyond recovery.

No means of detection remain, but those which must be drawn from the very testimony itself of the reporters: and these, though always sufficient with the judicious and knowing, are commonly too fine to fall under the comprehension of the vulgar.

98. Upon the whole, then, it appears, that no testimony for any kind of miracle has ever amounted to a probability, much less to a proof; and that, even supposing it amounted to a proof, it would be opposed by another proof; derived from the very nature of the fact, which it would endeavour to establish. It is experience only, which gives authority to human testimony; and it is the same experience, which assures us of the laws of nature. When, therefore, these two kinds of experience are contrary, we have nothing to do but substract the one from the other, and embrace an opinion, either on one side or the other, with that assurance which arises from the remainder. But according to the principle here explained, this substraction, with regard to all popular religions, amounts to an entire annihilation; and therefore we may establish it as a maxim, that no human testimony can have such force as to prove a miracle, and make it a just foundation for any such system of religion.

99. I beg the limitations here made may be remarked, when I say, that a miracle can never be proved, so as to be the foundation of a system of religion. For I own, that otherwise, there may possibly be miracles, or violations of the usual course of nature, of such a kind as to admit of proof from human testimony; though, perhaps, it will be impossible to find any such in all the records of history. Thus, suppose, all authors, in all languages, agree, that, from the first of January 1600, there was a total darkness over the whole earth for eight days: suppose that the tradition of this extraordinary event is still strong and lively among the people: that all travellers, who return from foreign countries, bring us accounts of the same tradition, without the least variation or contradiction: it is evident, that our present philosophers, instead of doubting the fact, ought to receive it as certain, and ought to search for the causes whence it might be derived. The decay, corruption, and dissolution of nature, is an event rendered probable by so many analogies, that any phenomenon, which seems to have a tendency towards that catastrophe, comes within the reach of human testimony, if that testimony be very extensive and uniform.

But suppose, that all the historians who treat of England, should agree, that, on the first of January 1600, Queen Elizabeth died; that both before and after her death she was seen by her physicians and the whole court, as is usual with persons of her rank; that her successor was acknowledged and proclaimed by the parliament; and that, after being interred a month, she again appeared, resumed the throne, and governed England for three years: I must confess that I should be surprised at the concurrence of so many odd circumstances, but should not have the least inclination to believe so miraculous an event. I should not doubt of her pretended death, and of those other public circumstances that followed it: I should only assert it to have been pretended, and that it neither was, nor possibly could be real. You would in vain object to me the difficulty, and almost impossibility of deceiving the world in an affair of such consequence; the wisdom and solid judgement of that renowned queen; with the little or no advantage which she could reap from so poor an artifice: All this might astonish me; but I would still reply, that the knavery and folly of men are such common phenomena, that I should rather believe the most extraordinary events to arise from their concurrence, than admit of so signal a violation of the laws of nature.

But should this miracle be ascribed to any new system of religion; men, in all ages, have been so much imposed on by ridiculous stories of that kind, that this very circumstance would be a full proof of a cheat, and sufficient, with all men of sense, not only to make them reject the fact, but even reject it without farther examination. Though the Being to whom the miracle is ascribed, be, in this case, Almighty, it does not, upon that account, become a whit more probable; since it is impossible for us to know the attributes or actions of such a Being, otherwise than from the experience which we have of his productions, in the usual course of nature. This still reduces us to past observation, and obliges us to compare the instances of the violation of truth in the testimony of men, with those of the violation of the laws of nature by miracles, in order to judge which of them is most likely and probable. As the violations of truth are more common in the testimony concerning religious miracles, than in that concerning any other matter of fact; this must diminish very much the authority of the former testimony, and make us form a general resolution, never to lend any attention to it, with whatever specious pretence it may be covered.

Lord Bacon seems to have embraced the same principles of reasoning. 'We ought,' says he, 'to make a collection or particular history of all monsters and prodigious births or productions, and in a word of every thing new, rare, and extraordinary in nature. But this must be done with the most severe scrutiny, lest we depart from truth. Above all, every relation must be considered as suspicious, which depends in any degree upon religion, as the prodigies of Livy: And no less so, every thing that is to be found in the writers of natural magic or alchimy, or such authors, who seem, all of them, to have an unconquerable appetite for falsehood and fable[26].'

[26] Nov. Org. lib. ii. aph. 29.

100. I am the better pleased with the method of reasoning here delivered, as I think it may serve to confound those dangerous friends or disguised enemies to the _Christian Religion_, who have undertaken to defend it by the principles of human reason. Our most holy religion is founded on _Faith_, not on reason; and it is a sure method of exposing it to put it to such a trial as it is, by no means, fitted to endure. To make this more evident, let us examine those miracles, related in scripture; and not to lose ourselves in too wide a field, let us confine ourselves to such as we find in the _Pentateuch_, which we shall examine, according to the principles of these pretended Christians, not as the word or testimony of God himself, but as the production of a mere human writer and historian. Here then we are first to consider a book, presented to us by a barbarous and ignorant people, written in an age when they were still more barbarous, and in all probability long after the facts which it relates, corroborated by no concurring testimony, and resembling those fabulous accounts, which every nation gives of its origin. Upon reading this book, we find it full of prodigies and miracles. It gives an account of a state of the world and of human nature entirely different from the present: Of our fall from that state: Of the age of man, extended to near a thousand years: Of the destruction of the world by a deluge: Of the arbitrary

choice of one people, as the favourites of heaven; and that people the countrymen of the author: Of their deliverance from bondage by prodigies the most astonishing imaginable: I desire any one to lay his hand upon his heart, and after a serious consideration declare, whether he thinks that the falsehood of such a book, supported by such a testimony, would be more extraordinary and miraculous than all the miracles it relates; which is, however, necessary to make it be received, according to the measures of probability above established.

101. What we have said of miracles may be applied, without any variation, to prophecies; and indeed, all prophecies are real miracles, and as such only, can be admitted as proofs of any revelation. If it did not exceed the capacity of human nature to foretell future events, it would be absurd to employ any prophecy as an argument for a divine mission or authority from heaven. So that, upon the whole, we may conclude, that the _Christian Religion_ not only was at first attended with miracles, but even at this day cannot be believed by any reasonable person without one. Mere reason is insufficient to convince us of its veracity: And whoever is moved by _Faith_ to assent to it, is conscious of a continued miracle in his own person, which subverts all the principles of his understanding, and gives him a determination to believe what is most contrary to custom and experience.

SECTION XI.

OF A PARTICULAR PROVIDENCE AND OF A FUTURE STATE.

102. I was lately engaged in conversation with a friend who loves sceptical paradoxes; where, though he advanced many principles, of which I can by no means approve, yet as they seem to be curious, and to bear some relation to the chain of reasoning carried on throughout this enquiry, I shall here copy them from my memory as accurately as I can, in order to submit them to the judgement of the reader.

Our conversation began with my admiring the singular good fortune of philosophy, which, as it requires entire liberty above all other privileges, and chiefly flourishes from the free opposition of sentiments and argumentation, received its first birth in an age and country of freedom and toleration, and was never cramped, even in its most extravagant principles, by any creeds, concessions, or penal statutes. For, except the banishment of Protagoras, and the death of Socrates, which last event proceeded partly from other motives, there are scarcely any instances to be met with, in ancient history, of this bigotted jealousy, with which the present age is so much infested. Epicurus lived at Athens to an advanced age, in peace and tranquillity: Epicureans[27] were even admitted to receive the sacerdotal character, and to officiate at the altar, in the most sacred rites of the established religion: And the public encouragement[28] of pensions and salaries was afforded equally, by the wisest of all the Roman emperors[29], to the professors of every sect of philosophy. How requisite such kind of treatment was to philosophy, in her early youth, will easily be conceived, if we reflect, that, even at present, when she may be supposed more hardy and robust, she bears with much difficulty the inclemency of the seasons, and those harsh winds of calumny and persecution, which blow upon her.

[27] Luciani [Greek: symp. ae Lapithai].

[28] Luciani [Greek: eunouchos].

[29] Luciani and Dio.

You admire, says my friend, as the singular good fortune of philosophy, what seems to result from the natural course of things, and to be unavoidable in every age and nation. This pertinacious bigotry, of which you complain, as so fatal to philosophy, is really her offspring, who, after allying with superstition, separates himself entirely from the interest of his parent, and becomes her most inveterate enemy and persecutor. Speculative dogmas of religion, the present occasions of such furious dispute, could not possibly be conceived or admitted in the early ages of the world; when mankind, being wholly illiterate, formed an idea of religion more suitable to their weak apprehension, and composed their sacred tenets of such tales chiefly as were the objects of traditional belief, more than of argument or disputation. After the first alarm, therefore, was over, which arose from the new paradoxes and principles of the philosophers; these teachers seem ever after, during the ages of antiquity, to have lived in great harmony with the established superstition, and to have made a fair partition of mankind between them; the former claiming all the learned and wise, the latter possessing all the vulgar and illiterate.

103. It seems then, say I, that you leave politics entirely out of the question, and never suppose, that a wise magistrate can justly be jealous of certain tenets of philosophy, such as those of Epicurus, which, denying a divine existence, and consequently a providence and a future state, seem to loosen, in a great measure, the ties of morality, and may be supposed, for that reason,

pernicious to the peace of civil society.

I know, replied he, that in fact these persecutions never, in any age, proceeded from calm reason, or from experience of the pernicious consequences of philosophy; but arose entirely from passion and prejudice. But what if I should advance farther, and assert, that if Epicurus had been accused before the people, by any of the _sycophants_ or informers of those days, he could easily have defended his cause, and proved his principles of philosophy to be as salutary as those of his adversaries, who endeavoured, with such zeal, to expose him to the public hatred and jealousy?

I wish, said I, you would try your eloquence upon so extraordinary a topic, and make a speech for Epicurus, which might satisfy, not the mob of Athens, if you will allow that ancient and polite city to have contained any mob, but the more philosophical part of his audience, such as might be supposed capable of comprehending his arguments.

The matter would not be difficult, upon such conditions, replied he: And if you please, I shall suppose myself Epicurus for a moment, and make you stand for the Athenian people, and shall deliver you such an harangue as will fill all the urn with white beans, and leave not a black one to gratify the malice of my adversaries.

Very well: Pray proceed upon these suppositions.

104. I come hither, O ye Athenians, to justify in your assembly what I maintained in my school, and I find myself impeached by furious antagonists, instead of reasoning with calm and dispassionate enquirers. Your deliberations, which of right should be directed to questions of public good, and the interest of the commonwealth, are diverted to the disquisitions of speculative philosophy; and these magnificent, but perhaps fruitless enquiries, take place of your more familiar but more useful occupations. But so far as in me lies, I will prevent this abuse. We shall not here dispute concerning the origin and government of worlds. We shall only enquire how far such questions concern the public interest. And if I can persuade you, that they are entirely indifferent to the peace of society and security of government, I hope that you will presently send us back to our schools, there to examine, at leisure, the question the most sublime, but at the same time, the most speculative of all philosophy.

The religious philosophers, not satisfied with the tradition of your forefathers, and doctrine of your priests (in which I willingly acquiesce), indulge a rash curiosity, in trying how far they can establish religion upon the principles of reason; and they thereby excite, instead of satisfying, the doubts, which naturally arise from a diligent and scrutinous enquiry. They paint, in the most magnificent colours, the order, beauty, and wise arrangement of the universe; and then ask, if such a glorious display of intelligence could proceed from the fortuitous concourse of atoms, or if chance could produce what the greatest genius can never sufficiently admire. I shall not examine the justness of this argument. I shall allow it to be as solid as my antagonists and accusers can desire. It is sufficient, if I can prove, from this very reasoning, that the question is entirely speculative, and that, when, in my philosophical disquisitions, I deny a providence and a future state, I undermine not the foundations of society, but advance principles, which they themselves, upon their own topics, if they argue consistently, must allow to be solid and satisfactory.

105. You then, who are my accusers, have acknowledged, that the chief or sole argument for a divine existence (which I never questioned) is derived from the order of nature; where there appear such marks of intelligence and design, that you think it extravagant to assign for its cause, either chance, or the blind and unguided force of matter. You allow, that this is an argument drawn from effects to causes. From the order of the work, you infer, that there must have been project and forethought in the workman. If you cannot make out this point, you allow, that your conclusion fails; and you pretend not to establish the conclusion in a greater latitude than the phenomena of nature will justify. These are your concessions. I desire you to mark the consequences.

When we infer any particular cause from an effect, we must proportion the one to the other, and can never be allowed to ascribe to the cause any qualities, but what are exactly sufficient to produce the effect. A body of ten ounces raised in any scale may serve as a proof, that the counterbalancing weight exceeds ten ounces; but can never afford a reason that it exceeds a hundred. If the cause, assigned for any effect, be not sufficient to produce it, we must either reject that cause, or add to it such qualities as will give it a just proportion to the effect. But if we ascribe to it farther qualities, or affirm it capable of producing other effects, we can only indulge the licence of conjecture, and arbitrarily suppose the existence of qualities and energies, without reason or authority.

The same rule holds, whether the cause assigned be brute unconscious matter, or a rational intelligent being. If the cause be known only by the effect, we never ought to ascribe to it any qualities, beyond what are precisely requisite to produce the effect: Nor can we, by any rules of just reasoning, return back from the cause, and infer other effects from it, beyond those by which alone it is known to us. No one, merely from the sight of one of Zeuxis's pictures, could know, that he was also a statuary or architect, and

was an artist no less skilful in stone and marble than in colours. The talents and taste, displayed in the particular work before us; these we may safely conclude the workman to be possessed of. The cause must be proportioned to the effect; and if we exactly and precisely proportion it, we shall never find in it any qualities, that point farther, or afford an inference concerning any other design or performance. Such qualities must be somewhat beyond what is merely requisite for producing the effect, which we examine.

106. Allowing, therefore, the gods to be the authors of the existence or order of the universe; it follows, that they possess that precise degree of power, intelligence, and benevolence, which appears in their workmanship; but nothing farther can ever be proved, except we call in the assistance of exaggeration and flattery to supply the defects of argument and reasoning. So far as the traces of any attributes, at present, appear, so far may we conclude these attributes to exist. The supposition of farther attributes is mere hypothesis; much more the supposition, that, in distant regions of space or periods of time, there has been, or will be, a more magnificent display of these attributes, and a scheme of administration more suitable to such imaginary virtues. We can never be allowed to mount up from the universe, the effect, to Jupiter, the cause; and then descend downwards, to infer any new effect from that cause; as if the present effects alone were not entirely worthy of the glorious attributes, which we ascribe to that deity. The knowledge of the cause being derived solely from the effect, they must be exactly adjusted to each other; and the one can never refer to anything farther, or be the foundation of any new inference and conclusion.

You find certain phenomena in nature. You seek a cause or author. You imagine that you have found him. You afterwards become so enamoured of this offspring of your brain, that you imagine it impossible, but he must produce something greater and more perfect than the present scene of things, which is so full of ill and disorder. You forget, that this superlative intelligence and benevolence are entirely imaginary, or, at least, without any foundation in reason; and that you have no ground to ascribe to him any qualities, but what you see he has actually exerted and displayed in his productions. Let your gods, therefore, O philosophers, be suited to the present appearances of nature: and presume not to alter these appearances by arbitrary suppositions, in order to suit them to the attributes, which you so fondly ascribe to your deities.

107. When priests and poets, supported by your authority, O Athenians, talk of a golden or silver age, which preceded the present state of vice and misery, I hear them with attention and with reverence. But when philosophers, who pretend to neglect authority, and to cultivate reason, hold the same discourse, I pay them not, I own, the same obsequious submission and pious deference. I ask; who carried them into the celestial regions, who admitted them into the councils of the gods, who opened to them the book of fate, that they thus rashly affirm, that their deities have executed, or will execute, any purpose beyond what has actually appeared? If they tell me, that they have mounted on the steps or by the gradual ascent of reason, and by drawing inferences from effects to causes, I still insist, that they have aided the ascent of reason by the wings of imagination; otherwise they could not thus change their manner of inference, and argue from causes to effects; presuming, that a more perfect production than the present world would be more suitable to such perfect beings as the gods, and forgetting that they have no reason to ascribe to these celestial beings any perfection or any attribute, but what can be found in the present world.

Hence all the fruitless industry to account for the ill appearances of nature, and save the honour of the gods; while we must acknowledge the reality of that evil and disorder, with which the world so much abounds. The obstinate and intractable qualities of matter, we are told, or the observance of general laws, or some such reason, is the sole cause, which controlled the power and benevolence of Jupiter, and obliged him to create mankind and every sensible creature so imperfect and so unhappy. These attributes then, are, it seems, beforehand, taken for granted, in their greatest latitude. And upon that supposition, I own that such conjectures may, perhaps, be admitted as plausible solutions of the ill phenomena. But still I ask; Why take these attributes for granted, or why ascribe to the cause any qualities but what actually appear in the effect? Why torture your brain to justify the course of nature upon suppositions, which, for aught you know, may be entirely imaginary, and of which there are to be found no traces in the course of nature?

The religious hypothesis, therefore, must be considered only as a particular method of accounting for the visible phenomena of the universe: but no just reasoner will ever presume to infer from it any single fact, and alter or add to the phenomena, in any single particular. If you think, that the appearances of things prove such causes, it is allowable for you to draw an inference concerning the existence of these causes. In such complicated and sublime subjects, every one should be indulged in the liberty of conjecture and argument. But here you ought to rest. If you come backward, and arguing from your inferred causes, conclude, that any other fact has existed, or will exist, in the course of nature, which may serve as a fuller display of particular attributes; I must admonish you, that you have departed from the method of reasoning, attached to the present subject, and have certainly added something to the attributes of the cause, beyond what appears in the effect; otherwise you could never, with tolerable sense or propriety, add

anything to the effect, in order to render it more worthy of the cause.

108. Where, then, is the odiousness of that doctrine, which I teach in my school, or rather, which I examine in my gardens? Or what do you find in this whole question, wherein the security of good morals, or the peace and order of society, is in the least concerned?

I deny a providence, you say, and supreme governor of the world, who guides the course of events, and punishes the vicious with infamy and disappointment, and rewards the virtuous with honour and success, in all their undertakings. But surely, I deny not the course itself of events, which lies open to every one's inquiry and examination. I acknowledge, that, in the present order of things, virtue is attended with more peace of mind than vice, and meets with a more favourable reception from the world. I am sensible, that, according to the past experience of mankind, friendship is the chief joy of human life, and moderation the only source of tranquillity and happiness. I never balance between the virtuous and the vicious course of life; but am sensible, that, to a well-disposed mind, every advantage is on the side of the former. And what can you say more, allowing all your suppositions and reasonings? You tell me, indeed, that this disposition of things proceeds from intelligence and design. But whatever it proceeds from, the disposition itself, on which depends our happiness or misery, and consequently our conduct and deportment in life is still the same. It is still open for me, as well as you, to regulate my behaviour, by my experience of past events. And if you affirm, that, while a divine providence is allowed, and a supreme distributive justice in the universe, I ought to expect some more particular reward of the good, and punishment of the bad, beyond the ordinary course of events; I here find the same fallacy, which I have before endeavoured to detect. You persist in imagining, that, if we grant that divine existence, for which you so earnestly contend, you may safely infer consequences from it, and add something to the experienced order of nature, by arguing from the attributes which you ascribe to your gods. You seem not to remember, that all your reasonings on this subject can only be drawn from effects to causes; and that every argument, deducted from causes to effects, must of necessity be a gross sophism; since it is impossible for you to know anything of the cause, but what you have antecedently, not inferred, but discovered to the full, in the effect.

109. But what must a philosopher think of those vain reasoners, who, instead of regarding the present scene of things as the sole object of their contemplation, so far reverse the whole course of nature, as to render this life merely a passage to something farther; a porch, which leads to a greater, and vastly different building; a prologue, which serves only to introduce the piece, and give it more grace and propriety? Whence, do you think, can such philosophers derive their idea of the gods? From their own conceit and imagination surely. For if they derived it from the present phenomena, it would never point to anything farther, but must be exactly adjusted to them. That the divinity may _possibly_ be endowed with attributes, which we have never seen exerted; may be governed by principles of action, which we cannot discover to be satisfied: all this will freely be allowed. But still this is mere _possibility_ and hypothesis. We never can have reason to _infer_ any attributes, or any principles of action in him, but so far as we know them to have been exerted and satisfied.

Are there any marks of a distributive justice in the world? If you answer in the affirmative, I conclude, that, since justice here exerts itself, it is satisfied. If you reply in the negative, I conclude, that you have then no reason to ascribe justice, in our sense of it, to the gods. If you hold a medium between affirmation and negation, by saying, that the justice of the gods, at present, exerts itself in part, but not in its full extent; I answer, that you have no reason to give it any particular extent, but only so far as you see it, _at present_, exert itself.

110. Thus I bring the dispute, O Athenians, to a short issue with my antagonists. The course of nature lies open to my contemplation as well as to theirs. The experienced train of events is the great standard, by which we all regulate our conduct. Nothing else can be appealed to in the field, or in the senate. Nothing else ought ever to be heard of in the school, or in the closet. In vain would our limited understanding break through those boundaries, which are too narrow for our fond imagination. While we argue from the course of nature, and infer a particular intelligent cause, which first bestowed, and still preserves order in the universe, we embrace a principle, which is both uncertain and useless. It is uncertain; because the subject lies entirely beyond the reach of human experience. It is useless; because our knowledge of this cause being derived entirely from the course of nature, we can never, according to the rules of just reasoning, return back from the cause with any new inference, or making additions to the common and experienced course of nature, establish any new principles of conduct and behaviour.

111. I observe (said I, finding he had finished his harangue) that you neglect not the artifice of the demagogues of old; and as you were pleased to make me stand for the people, you insinuate yourself into my favour by embracing those principles, to which, you know, I have always expressed a particular attachment. But allowing you to make experience (as indeed I think you ought) the only standard of our judgement concerning this, and all other questions of fact; I doubt not but, from the very same experience, to which you appeal, it may be possible to refute this reasoning, which you have put into the mouth of Epicurus. If you saw, for instance, a

half-finished building, surrounded with heaps of brick and stone and mortar, and all the instruments of masonry; could you not _infer_ from the effect, that it was a work of design and contrivance? And could you not return again, from this inferred cause, to infer new additions to the effect, and conclude, that the building would soon be finished, and receive all the further improvements, which art could bestow upon it? If you saw upon the sea-shore the print of one human foot, you would conclude, that a man had passed that way, and that he had also left the traces of the other foot, though effaced by the rolling of the sands or inundation of the waters. Why then do you refuse to admit the same method of reasoning with regard to the order of nature? Consider the world and the present life only as an imperfect building, from which you can infer a superior intelligence; and arguing from that superior intelligence, which can leave nothing imperfect; why may you not infer a more finished scheme or plan, which will receive its completion in some distant point of space or time? Are not these methods of reasoning exactly similar? And under what pretence can you embrace the one, while you reject the other?

112. The infinite difference of the subjects, replied he, is a sufficient foundation for this difference in my conclusions. In works of _human_ art and contrivance, it is allowable to advance from the effect to the cause, and returning back from the cause, to form new inferences concerning the effect, and examine the alterations, which it has probably undergone, or may still undergo. But what is the foundation of this method of reasoning? Plainly this; that man is a being, whom we know by experience, whose motives and designs we are acquainted with, and whose projects and inclinations have a certain connexion and coherence, according to the laws which nature has established for the government of such a creature. When, therefore, we find, that any work has proceeded from the skill and industry of man; as we are otherwise acquainted with the nature of the animal, we can draw a hundred inferences concerning what may be expected from him; and these inferences will all be founded in experience and observation. But did we know man only from the single work or production which we examine, it were impossible for us to argue in this manner; because our knowledge of all the qualities, which we ascribe to him, being in that case derived from the production, it is impossible they could point to anything farther, or be the foundation of any new inference. The print of a foot in the sand can only prove, when considered alone, that there was some figure adapted to it, by which it was produced: but the print of a human foot proves likewise, from our other experience, that there was probably another foot, which also left its impression, though effaced by time or other accidents. Here we mount from the effect to the cause; and descending again from the cause, infer alterations in the effect; but this is not a continuation of the same simple chain of reasoning. We comprehend in this case a hundred other experiences and observations, concerning the _usual_ figure and members of that species of animal, without which this method of argument must be considered as fallacious and sophistical.

113. The case is not the same with our reasonings from the works of nature. The Deity is known to us only by his productions, and is a single being in the universe, not comprehended under any species or genus, from whose experienced attributes or qualities, we can, by analogy, infer any attribute or quality in him. As the universe shews wisdom and goodness, we infer wisdom and goodness. As it shews a particular degree of these perfections, we infer a particular degree of them, precisely adapted to the effect which we examine. But farther attributes or farther degrees of the same attributes, we can never be authorised to infer or suppose, by any rules of just reasoning. Now, without some such licence of supposition, it is impossible for us to argue from the cause, or infer any alteration in the effect, beyond what has immediately fallen under our observation. Greater good produced by this Being must still prove a greater degree of goodness: a more impartial distribution of rewards and punishments must proceed from a greater regard to justice and equity. Every supposed addition to the works of nature makes an addition to the attributes of the Author of nature; and consequently, being entirely unsupported by any reason or argument, can never be admitted but as mere conjecture and hypothesis[30].

[30] In general, it may, I think, be established as a maxim, that where any cause is known only by its particular effects, it must be impossible to infer any new effects from that cause; since the qualities, which are requisite to produce these new effects along with the former, must either be different, or superior, or of more extensive operation, than those which simply produced the effect, whence alone the cause is supposed to be known to us. We can never, therefore, have any reason to suppose the existence of these qualities. To say, that the new effects proceed only from a continuation of the same energy, which is already known from the first effects, will not remove the difficulty. For even granting this to be the case (which can seldom be supposed), the very continuation and exertion of a like energy (for it is impossible it can be absolutely the same), I say, this exertion of a like energy, in a different period of space and time, is a very arbitrary supposition, and what there cannot possibly be any traces of in the effects, from which all our knowledge of the cause is originally derived. Let the _inferred_ cause be exactly proportioned (as it should be) to the known effect; and it is impossible that it can possess any qualities, from which new or different effects can be _inferred_.

The great source of our mistake in this subject, and of the unbounded licence of conjecture, which we indulge, is, that we tacitly consider ourselves, as in the place of the Supreme Being, and conclude, that he will, on every occasion, observe the same conduct, which we ourselves, in his situation, would have embraced as reasonable and eligible. But, besides that the ordinary course of nature may convince us, that almost everything is regulated by principles and maxims very different from ours; besides this, I say, it must evidently appear contrary to all rules of analogy to reason, from the intentions and projects of men, to those of a Being so different, and so much superior. In human nature, there is a certain experienced coherence of designs and inclinations; so that when, from any fact, we have discovered one intention of any man, it may often be reasonable, from experience, to infer another, and draw a long chain of conclusions concerning his past or future conduct. But this method of reasoning can never have place with regard to a Being, so remote and incomprehensible, who bears much less analogy to any other being in the universe than the sun to a waxen taper, and who discovers himself only by some faint traces or outlines, beyond which we have no authority to ascribe to him any attribute or perfection. What we imagine to be a superior perfection, may really be a defect. Or were it ever so much a perfection, the ascribing of it to the Supreme Being, where it appears not to have been really exerted, to the full, in his works, savours more of flattery and panegyric, than of just reasoning and sound philosophy. All the philosophy, therefore, in the world, and all the religion, which is nothing but a species of philosophy, will never be able to carry us beyond the usual course of experience, or give us measures of conduct and behaviour different from those which are furnished by reflections on common life. No new fact can ever be inferred from the religious hypothesis; no event foreseen or foretold; no reward or punishment expected or dreaded, beyond what is already known by practice and observation. So that my apology for Epicurus will still appear solid and satisfactory; nor have the political interests of society any connexion with the philosophical disputes concerning metaphysics and religion.

114. There is still one circumstance, replied I, which you seem to have overlooked. Though I should allow your premises, I must deny your conclusion. You conclude, that religious doctrines and reasonings _can_ have no influence on life, because they _ought_ to have no influence; never considering, that men reason not in the same manner you do, but draw many consequences from the belief of a divine Existence, and suppose that the Deity will inflict punishments on vice, and bestow rewards on virtue, beyond what appear in the ordinary course of nature. Whether this reasoning of theirs be just or not, is no matter. Its influence on their life and conduct must still be the same. And, those, who attempt to disabuse them of such prejudices, may, for aught I know, be good reasoners, but I cannot allow them to be good citizens and politicians; since they free men from one restraint upon their passions, and make the infringement of the laws of society, in one respect, more easy and secure.

After all, I may, perhaps, agree to your general conclusion in favour of liberty, though upon different premises from those, on which you endeavour to found it. I think, that the state ought to tolerate every principle of philosophy; nor is there an instance, that any government has suffered in its political interests by such indulgence. There is no enthusiasm among philosophers; their doctrines are not very alluring to the people; and no restraint can be put upon their reasonings, but what must be of dangerous consequence to the sciences, and even to the state, by paving the way for persecution and oppression in points, where the generality of mankind are more deeply interested and concerned.

115. But there occurs to me (continued I) with regard to your main topic, a difficulty, which I shall just propose to you without insisting on it; lest it lead into reasonings of too nice and delicate a nature. In a word, I much doubt whether it be possible for a cause to be known only by its effect (as you have all along supposed) or to be of so singular and particular a nature as to have no parallel and no similarity with any other cause or object, that has ever fallen under our observation. It is only when two _species_ of objects are found to be constantly conjoined, that we can infer the one from the other; and were an effect presented, which was entirely singular, and could not be comprehended under any known _species_, I do not see, that we could form any conjecture or inference at all concerning its cause. If experience and observation and analogy be, indeed, the only guides which we can reasonably follow in inferences of this nature; both the effect and cause must bear a similarity and resemblance to other effects and causes, which we know, and which we have found, in many instances, to be conjoined with each other. I leave it to your own reflection to pursue the consequences of this principle. I shall just observe, that, as the antagonists of Epicurus always suppose the universe, an effect quite singular and unparalleled, to be the proof of a Deity, a cause no less singular and unparalleled; your reasonings, upon that supposition, seem, at least, to merit our attention. There is, I own, some difficulty, how we can ever return from the cause to the effect, and, reasoning from our ideas of the former, infer any alteration on the latter, or any addition to it.

SECTION XII.

OF THE ACADEMICAL OR SCEPTICAL PHILOSOPHY.

PART I.

116. There is not a greater number of philosophical reasonings, displayed upon any subject, than those, which prove the existence of a Deity, and refute the fallacies of _Atheists_; and yet the most religious philosophers still dispute whether any man can be so blinded as to be a speculative atheist. How shall we reconcile these contradictions? The knights-errant, who wandered about to clear the world of dragons and giants, never entertained the least doubt with regard to the existence of these monsters.

The _Sceptic_ is another enemy of religion, who naturally provokes the indignation of all divines and graver philosophers; though it is certain, that no man ever met with any such absurd creature, or conversed with a man, who had no opinion or principle concerning any subject, either of action or speculation. This begets a very natural question; What is meant by a sceptic? And how far it is possible to push these philosophical principles of doubt and uncertainty?

There is a species of scepticism, _antecedent_ to all study and philosophy, which is much inculcated by Des Cartes and others, as a sovereign preservative against error and precipitate judgement. It recommends an universal doubt, not only of all our former opinions and principles, but also of our very faculties; of whose veracity, say they, we must assure ourselves, by a chain of reasoning, deduced from some original principle, which cannot possibly be fallacious or deceitful. But neither is there any such original principle, which has a prerogative above others, that are self-evident and convincing: or if there were, could we advance a step beyond it, but by the use of those very faculties, of which we are supposed to be already diffident. The Cartesian doubt, therefore, were it ever possible to be attained by any human creature (as it plainly is not) would be entirely incurable; and no reasoning could ever bring us to a state of assurance and conviction upon any subject.

It must, however, be confessed, that this species of scepticism, when more moderate, may be understood in a very reasonable sense, and is a necessary preparative to the study of philosophy, by preserving a proper impartiality in our judgements, and weaning our mind from all those prejudices, which we may have imbibed from education or rash opinion. To begin with clear and self-evident principles, to advance by timorous and sure steps, to review frequently our conclusions, and examine accurately all their consequences; though by these means we shall make both a slow and a short progress in our systems; are the only methods, by which we can ever hope to reach truth, and attain a proper stability and certainty in our determinations.

117. There is another species of scepticism, _consequent_ to science and enquiry, when men are supposed to have discovered, either the absolute fallaciousness of their mental faculties, or their unfitness to reach any fixed determination in all those curious subjects of speculation, about which they are commonly employed. Even our very senses are brought into dispute, by a certain species of philosophers; and the maxims of common life are subjected to the same doubt as the most profound principles or conclusions of metaphysics and theology. As these paradoxical tenets (if they may be called tenets) are to be met with in some philosophers, and the refutation of them in several, they naturally excite our curiosity, and make us enquire into the arguments, on which they may be founded.

I need not insist upon the more trite topics, employed by the sceptics in all ages, against the evidence of _sense_; such as those which are derived from the imperfection and fallaciousness of our organs, on numberless occasions; the crooked appearance of an oar in water; the various aspects of objects, according to their different distances; the double images which arise from the pressing one eye; with many other appearances of a like nature. These sceptical topics, indeed, are only sufficient to prove, that the senses alone are not implicitly to be depended on; but that we must correct their evidence by reason, and by considerations, derived from the nature of the medium, the distance of the object, and the disposition of the organ, in order to render them, within their sphere, the proper _criteria_ of truth and falsehood. There are other more profound arguments against the senses, which admit not of so easy a solution.

118. It seems evident, that men are carried, by a natural instinct or prepossession, to repose faith in their senses; and that, without any reasoning, or even almost before the use of reason, we always suppose an external universe, which depends not on our perception, but would exist, though we and every sensible creature were absent or annihilated. Even the animal creation are governed by a like opinion, and preserve this belief of external objects, in all their thoughts, designs, and actions.

It seems also evident, that, when men follow this blind and powerful instinct of nature, they always suppose the very images, presented by the senses, to be the external objects, and never entertain any suspicion, that the one are nothing but representations of the other. This very table, which we see white, and which we feel hard, is believed to exist, independent of our perception, and to be something external to our mind, which perceives it. Our presence bestows not being on it: our absence does not annihilate it. It

preserves its existence uniform and entire, independent of the situation of intelligent beings, who perceive or contemplate it.

But this universal and primary opinion of all men is soon destroyed by the slightest philosophy, which teaches us, that nothing can ever be present to the mind but an image or perception, and that the senses are only the inlets, through which these images are conveyed, without being able to produce any immediate intercourse between the mind and the object. The table, which we see, seems to diminish, as we remove farther from it: but the real table, which exists independent of us, suffers no alteration: it was, therefore, nothing but its image, which was present to the mind. These are the obvious dictates of reason; and no man, who reflects, ever doubted, that the existences, which we consider, when we say, _this house_ and _that tree_, are nothing but perceptions in the mind, and fleeting copies or representations of other existences, which remain uniform and independent.

119. So far, then, are we necessitated by reasoning to contradict or depart from the primary instincts of nature, and to embrace a new system with regard to the evidence of our senses. But here philosophy finds herself extremely embarrassed, when she would justify this new system, and obviate the cavils and objections of the sceptics. She can no longer plead the infallible and irresistible instinct of nature: for that led us to a quite different system, which is acknowledged fallible and even erroneous. And to justify this pretended philosophical system, by a chain of clear and convincing argument, or even any appearance of argument, exceeds the power of all human capacity.

By what argument can it be proved, that the perceptions of the mind must be caused by external objects, entirely different from them, though resembling them (if that be possible) and could not arise either from the energy of the mind itself, or from the suggestion of some invisible and unknown spirit, or from some other cause still more unknown to us? It is acknowledged, that, in fact, many of these perceptions arise not from anything external, as in dreams, madness, and other diseases. And nothing can be more inexplicable than the manner, in which body should so operate upon mind as ever to convey an image of itself to a substance, supposed of so different, and even contrary a nature.

It is a question of fact, whether the perceptions of the senses be produced by external objects, resembling them: how shall this question be determined? By experience surely; as all other questions of a like nature. But here experience is, and must be entirely silent. The mind has never anything present to it but the perceptions, and cannot possibly reach any experience of their connexion with objects. The supposition of such a connexion is, therefore, without any foundation in reasoning.

120. To have recourse to the veracity of the supreme Being, in order to prove the veracity of our senses, is surely making a very unexpected circuit. If his veracity were at all concerned in this matter, our senses would be entirely infallible; because it is not possible that he can ever deceive. Not to mention, that, if the external world be once called in question, we shall be at a loss to find arguments, by which we may prove the existence of that Being or any of his attributes.

121. This is a topic, therefore, in which the profounder and more philosophical sceptics will always triumph, when they endeavour to introduce an universal doubt into all subjects of human knowledge and enquiry. Do you follow the instincts and propensities of nature, may they say, in assenting to the veracity of sense? But these lead you to believe that the very perception or sensible image is the external object. Do you disclaim this principle, in order to embrace a more rational opinion, that the perceptions are only representations of something external? You here depart from your natural propensities and more obvious sentiments; and yet are not able to satisfy your reason, which can never find any convincing argument from experience to prove, that the perceptions are connected with any external objects.

122. There is another sceptical topic of a like nature, derived from the most profound philosophy; which might merit our attention, were it requisite to dive so deep, in order to discover arguments and reasonings, which can so little serve to any serious purpose. It is universally allowed by modern enquirers, that all the sensible qualities of objects, such as hard, soft, hot, cold, white, black, &c. are merely secondary, and exist not in the objects themselves, but are perceptions of the mind, without any external archetype or model, which they represent. If this be allowed, with regard to secondary qualities, it must also follow, with regard to the supposed primary qualities of extension and solidity; nor can the latter be any more entitled to that denomination than the former. The idea of extension is entirely acquired from the senses of sight and feeling; and if all the qualities, perceived by the senses, be in the mind, not in the object, the same conclusion must reach the idea of extension, which is wholly dependent on the sensible ideas or the ideas of secondary qualities. Nothing can save us from this conclusion, but the asserting, that the ideas of those primary qualities are attained by _Abstraction_, an opinion, which, if we examine it accurately, we shall find to be unintelligible, and even absurd. An extension, that is neither tangible nor visible, cannot possibly be conceived: and a tangible or visible extension, which is neither hard nor soft, black nor white, is equally beyond the reach of human conception. Let any man try to conceive a triangle in general,

which is neither _Isosceles_ nor _Scalenum_, nor has any particular length or proportion of sides; and he will soon perceive the absurdity of all the scholastic notions with regard to abstraction and general ideas.[31]

[31] This argument is drawn from Dr. Berkeley; and indeed most of the writings of that very ingenious author form the best lessons of scepticism, which are to be found either among the ancient or modern philosopher, Bayle not excepted. He professes, however, in his title-page (and undoubtedly with great truth) to have composed his book against the sceptics as well as against the atheists and free-thinkers. But that all his arguments, though otherwise intended, are, in reality, merely sceptical, appears from this, _that they admit of no answer and produce no conviction_. Their only effect is to cause that momentary amazement and irresolution and confusion, which is the result of scepticism.

123. Thus the first philosophical objection to the evidence of sense or to the opinion of external existence consists in this, that such an opinion, if rested on natural instinct, is contrary to reason, and if referred to reason, is contrary to natural instinct, and at the same time carries no rational evidence with it, to convince an impartial enquirer. The second objection goes farther, and represents this opinion as contrary to reason: at least, if it be a principle of reason, that all sensible qualities are in the mind, not in the object. Bereave matter of all its intelligible qualities, both primary and secondary, you in a manner annihilate it, and leave only a certain unknown, inexplicable _something_, as the cause of our perceptions; a notion so imperfect, that no sceptic will think it worth while to contend against it.

PART II.

124. It may seem a very extravagant attempt of the sceptics to destroy _reason_ by argument and ratiocination; yet is this the grand scope of all their enquiries and disputes. They endeavour to find objections, both to our abstract reasonings, and to those which regard matter of fact and existence.

The chief objection against all _abstract_ reasonings is derived from the ideas of space and time; ideas, which, in common life and to a careless view, are very clear and intelligible, but when they pass through the scrutiny of the profound sciences (and they are the chief object of these sciences) afford principles, which seem full of absurdity and contradiction. No priestly _dogmas_, invented on purpose to tame and subdue the rebellious reason of mankind, ever shocked common sense more than the doctrine of the infinitive divisibility of extension, with its consequences; as they are pompously displayed by all geometricians and metaphysicians, with a kind of triumph and exultation. A real quantity, infinitely less than any finite quantity, containing quantities infinitely less than itself, and so on _in infinitum_; this is an edifice so bold and prodigious, that it is too weighty for any pretended demonstration to support, because it shocks the clearest and most natural principles of human reason.[32] But what renders the matter more extraordinary, is, that these seemingly absurd opinions are supported by a chain of reasoning, the clearest and most natural; nor is it possible for us to allow the premises without admitting the consequences. Nothing can be more convincing and satisfactory than all the conclusions concerning the properties of circles and triangles; and yet, when these are once received, how can we deny, that the angle of contact between a circle and its tangent is infinitely less than any rectilineal angle, that as you may increase the diameter of the circle _in infinitum_, this angle of contact becomes still less, even _in infinitum_, and that the angle of contact between other curves and their tangents may be infinitely less than those between any circle and its tangent, and so on, _in infinitum_? The demonstration of these principles seems as unexceptionable as that which proves the three angles of a triangle to be equal to two right ones, though the latter opinion be natural and easy, and the former big with contradiction and absurdity. Reason here seems to be thrown into a kind of amazement and suspence, which, without the suggestions of any sceptic, gives her a diffidence of herself, and of the ground on which she treads. She sees a full light, which illuminates certain places; but that light borders upon the most profound darkness. And between these she is so dazzled and confounded, that she scarcely can pronounce with certainty and assurance concerning any one object.

[32] Whatever disputes there may be about mathematical points, we must allow that there are physical points; that is, parts of extension, which cannot be divided or lessened, either by the eye or imagination. These images, then, which are present to the fancy or senses, are absolutely indivisible, and consequently must be allowed by mathematicians to be infinitely less than any real part of extension; and yet nothing appears more certain to reason, than that an infinite number of them composes an infinite extension. How much more an infinite number of those infinitely small parts of extension, which are still supposed infinitely divisible.

125. The absurdity of these bold determinations of the abstract sciences seems to become, if possible, still more palpable with regard to time than extension. An infinite number of real parts of time, passing in succession, and exhausted one after another, appears so evident a contradiction, that no man, one should think, whose judgement is not corrupted, instead of being improved, by

the sciences, would ever be able to admit of it.

Yet still reason must remain restless, and unquiet, even with regard to that scepticism, to which she is driven by these seeming absurdities and contradictions. How any clear, distinct idea can contain circumstances, contradictory to itself, or to any other clear, distinct idea, is absolutely incomprehensible; and is, perhaps, as absurd as any proposition, which can be formed. So that nothing can be more sceptical, or more full of doubt and hesitation, than this scepticism itself, which arises from some of the paradoxical conclusions of geometry or the science of quantity.[33]

[33] It seems to me not impossible to avoid these absurdities and contradictions, if it be admitted, that there is no such thing as abstract or general ideas, properly speaking; but that all general ideas are, in reality, particular ones, attached to a general term, which recalls, upon occasion, other particular ones, that resemble, in certain circumstances, the idea, present to the mind. Thus when the term Horse is pronounced, we immediately figure to ourselves the idea of a black or a white animal, of a particular size or figure: But as that term is also usually applied to animals of other colours, figures and sizes, these ideas, though not actually present to the imagination, are easily recalled; and our reasoning and conclusion proceed in the same way, as if they were actually present. If this be admitted (as seems reasonable) it follows that all the ideas of quantity, upon which mathematicians reason, are nothing but particular, and such as are suggested by the senses and imagination, and consequently, cannot be infinitely divisible. It is sufficient to have dropped this hint at present, without prosecuting it any farther. It certainly concerns all lovers of science not to expose themselves to the ridicule and contempt of the ignorant by their conclusions; and this seems the readiest solution of these difficulties.

126. The sceptical objections to _moral_ evidence, or to the reasonings concerning matter of fact, are either _popular_ or _philosophical_. The popular objections are derived from the natural weakness of human understanding; the contradictory opinions, which have been entertained in different ages and nations; the variations of our judgement in sickness and health, youth and old age, prosperity and adversity; the perpetual contradiction of each particular man's opinions and sentiments; with many other topics of that kind. It is needless to insist farther on this head. These objections are but weak. For as, in common life, we reason every moment concerning fact and existence, and cannot possibly subsist, without continually employing this species of argument, any popular objections, derived from thence, must be insufficient to destroy that evidence. The great subverter of _Pyrrhonism_ or the excessive principles of scepticism is action, and employment, and the occupations of common life. These principles may flourish and triumph in the schools; where it is, indeed, difficult, if not impossible, to refute them. But as soon as they leave the shade, and by the presence of the real objects, which actuate our passions and sentiments, are put in opposition to the more powerful principles of our nature, they vanish like smoke, and leave the most determined sceptic in the same condition as other mortals.

127. The sceptic, therefore, had better keep within his proper sphere, and display those _philosophical_ objections, which arise from more profound researches. Here he seems to have ample matter of triumph; while he justly insists, that all our evidence for any matter of fact, which lies beyond the testimony of sense or memory, is derived entirely from the relation of cause and effect; that we have no other idea of this relation than that of two objects, which have been frequently _conjoined_ together; that we have no argument to convince us, that objects, which have, in our experience, been frequently conjoined, will likewise, in other instances, be conjoined in the same manner; and that nothing leads us to this inference but custom or a certain instinct of our nature; which it is indeed difficult to resist, but which, like other instincts, may be fallacious and deceitful. While the sceptic insists upon these topics, he shows his force, or rather, indeed, his own and our weakness; and seems, for the time at least, to destroy all assurance and conviction. These arguments might be displayed at greater length, if any durable good or benefit to society could ever be expected to result from them.

128. For here is the chief and most confounding objection to _excessive_ scepticism, that no durable good can ever result from it; while it remains in its full force and vigour. We need only ask such a sceptic, _What his meaning is? And what he proposes by all these curious researches?_ He is immediately at a loss, and knows not what to answer. A Copernican or Ptolemaic, who supports each his different system of astronomy, may hope to produce a conviction, which will remain constant and durable, with his audience. A Stoic or Epicurean displays principles, which may not be durable, but which have an effect on conduct and behaviour. But a Pyrrhonian cannot expect, that his philosophy will have any constant influence on the mind: or if it had, that its influence would be beneficial to society. On the contrary, he must acknowledge, if he will acknowledge anything, that all human life must perish, were his principles universally and steadily to prevail. All discourse, all action would immediately cease; and men remain in a total lethargy, till the necessities of nature, unsatisfied, put an end to their miserable existence. It is true; so fatal an event is very little to be dreaded. Nature is always too strong for principle. And though a Pyrrhonian may throw himself or others into a

momentary amazement and confusion by his profound reasonings; the first and most trivial event in life will put to flight all his doubts and scruples, and leave him the same, in every point of action and speculation, with the philosophers of every other sect, or with those who never concerned themselves in any philosophical researches. When he awakes from his dream, he will be the first to join in the laugh against himself, and to confess, that all his objections are mere amusement, and can have no other tendency than to show the whimsical condition of mankind, who must act and reason and believe; though they are not able, by their most diligent enquiry, to satisfy themselves concerning the foundation of these operations, or to remove the objections, which may be raised against them.

PART III.

129. There is, indeed, a more _mitigated_ scepticism or _academical_ philosophy, which may be both durable and useful, and which may, in part, be the result of this Pyrrhonism, or _excessive_ scepticism, when its undistinguished doubts are, in some measure, corrected by common sense and reflection. The greater part of mankind are naturally apt to be affirmative and dogmatical in their opinions; and while they see objects only on one side, and have no idea of any counterpoising argument, they throw themselves precipitately into the principles, to which they are inclined; nor have they any indulgence for those who entertain opposite sentiments. To hesitate or balance perplexes their understanding, checks their passion, and suspends their action. They are, therefore, impatient till they escape from a state, which to them is so uneasy: and they think, that they could never remove themselves far enough from it, by the violence of their affirmations and obstinacy of their belief. But could such dogmatical reasoners become sensible of the strange infirmities of human understanding, even in its most perfect state, and when most accurate and cautious in its determinations; such a reflection would naturally inspire them with more modesty and reserve, and diminish their fond opinion of themselves, and their prejudice against antagonists. The illiterate may reflect on the disposition of the learned, who, amidst all the advantages of study and reflection, are commonly still diffident in their determinations: and if any of the learned be inclined, from their natural temper, to haughtiness and obstinacy, a small tincture of Pyrrhonism might abate their pride, by showing them, that the few advantages, which they may have attained over their fellows, are but inconsiderable, if compared with the universal perplexity and confusion, which is inherent in human nature. In general, there is a degree of doubt, and caution, and modesty, which, in all kinds of scrutiny and decision, ought for ever to accompany a just reasoner.

130. Another species of _mitigated_ scepticism which may be of advantage to mankind, and which may be the natural result of the Pyrrhonian doubts and scruples, is the limitation of our enquiries to such subjects as are best adapted to the narrow capacity of human understanding. The _imagination_ of man is naturally sublime, delighted with whatever is remote and extraordinary, and running, without control, into the most distant parts of space and time in order to avoid the objects, which custom has rendered too familiar to it. A correct _Judgement_ observes a contrary method, and avoiding all distant and high enquiries, confines itself to common life, and to such subjects as fall under daily practice and experience; leaving the more sublime topics to the embellishment of poets and orators, or to the arts of priests and politicians. To bring us to so salutary a determination, nothing can be more serviceable, than to be once thoroughly convinced of the force of the Pyrrhonian doubt, and of the impossibility, that anything, but the strong power of natural instinct, could free us from it. Those who have a propensity to philosophy, will still continue their researches; because they reflect, that, besides the immediate pleasure, attending such an occupation, philosophical decisions are nothing but the reflections of common life, methodized and corrected. But they will never be tempted to go beyond common life, so long as they consider the imperfection of those faculties which they employ, their narrow reach, and their inaccurate operations. While we cannot give a satisfactory reason, why we believe, after a thousand experiments, that a stone will fall, or fire burn; can we ever satisfy ourselves concerning any determination, which we may form, with regard to the origin of worlds, and the situation of nature, from, and to eternity?

This narrow limitation, indeed, of our enquiries, is, in every respect, so reasonable, that it suffices to make the slightest examination into the natural powers of the human mind and to compare them with their objects, in order to recommend it to us. We shall then find what are the proper subjects of science and enquiry.

131. It seems to me, that the only objects of the abstract science or of demonstration are quantity and number, and that all attempts to extend this more perfect species of knowledge beyond these bounds are mere sophistry and illusion. As the component parts of quantity and number are entirely similar, their relations become intricate and involved; and nothing can be more curious, as well as useful, than to trace, by a variety of mediums, their equality or inequality, through their different appearances. But as all other ideas are clearly distinct and different from each other, we can never advance farther, by our utmost scrutiny, than to observe this diversity, and, by an obvious reflection, pronounce one thing not to be another. Or if there be any difficulty in these decisions, it

proceeds entirely from the undeterminate meaning of words, which is corrected by juster definitions. That _the square of the hypothenuse is equal to the squares of the other two sides_, cannot be known, let the terms be ever so exactly defined, without a train of reasoning and enquiry. But to convince us of this proposition, _that where there is no property, there can be no injustice_, it is only necessary to define the terms, and explain injustice to be a violation of property. This proposition is, indeed, nothing but a more imperfect definition. It is the same case with all those pretended syllogistical reasonings, which may be found in every other branch of learning, except the sciences of quantity and number; and these may safely, I think, be pronounced the only proper objects of knowledge and demonstration.

132. All other enquiries of men regard only matter of fact and existence; and these are evidently incapable of demonstration. Whatever _is_ may _not be_. No negation of a fact can involve a contradiction. The non-existence of any being, without exception, is as clear and distinct an idea as its existence. The proposition, which affirms it not to be, however false, is no less conceivable and intelligible, than that which affirms it to be. The case is different with the sciences, properly so called. Every proposition, which is not true, is there confused and unintelligible. That the cube root of 64 is equal to the half of 10, is a false proposition, and can never be distinctly conceived. But that Caesar, or the angel Gabriel, or any being never existed, may be a false proposition, but still is perfectly conceivable, and implies no contradiction.

The existence, therefore, of any being can only be proved by arguments from its cause or its effect; and these arguments are founded entirely on experience. If we reason _a priori_, anything may appear able to produce anything. The falling of a pebble may, for aught we know, extinguish the sun; or the wish of a man control the planets in their orbits. It is only experience, which teaches us the nature and bounds of cause and effect, and enables us to infer the existence of one object from that of another[34]. Such is the foundation of moral reasoning, which forms the greater part of human knowledge, and is the source of all human action and behaviour.

[34] That impious maxim of the ancient philosophy, _Ex nihilo, nihil fit_, by which the creation of matter was excluded, ceases to be a maxim, according to this philosophy. Not only the will of the supreme Being may create matter; but, for aught we know _a priori_, the will of any other being might create it, or any other cause, that the most whimsical imagination can assign.

Moral reasonings are either concerning particular or general facts. All deliberations in life regard the former; as also all disquisitions in history, chronology, geography, and astronomy.

The sciences, which treat of general facts, are politics, natural philosophy, physic, chemistry, &c. where the qualities, causes and effects of a whole species of objects are enquired into.

Divinity or Theology, as it proves the existence of a Deity, and the immortality of souls, is composed partly of reasonings concerning particular, partly concerning general facts. It has a foundation in _reason_, so far as it is supported by experience. But its best and most solid foundation is _faith_ and divine revelation.

Morals and criticism are not so properly objects of the understanding as of taste and sentiment. Beauty, whether moral or natural, is felt, more properly than perceived. Or if we reason concerning it, and endeavour to fix its standard, we regard a new fact, to wit, the general tastes of mankind, or some such fact, which may be the object of reasoning and enquiry.

When we run over libraries, persuaded of these principles, what havoc must we make? If we take in our hand any volume; of divinity or school metaphysics, for instance; let us ask, _Does it contain any abstract reasoning concerning quantity or number?_ No. _Does it contain any experimental reasoning concerning matter of fact and existence?_ No. Commit it then to the flames: for it can contain nothing but sophistry and illusion.

INDEX

Abstraction not source of ideas of primary qualities, 122.

Academic philosophy, 34.

Action and philosophy, 1, 4, 34, 128;

Addition 4.

Analogy a species of, the foundation of all reasoning about matter of fact, 82;

Animals the reason of, 83-85; learn from experience and draw inferences, 83; which can only be founded on custom, 84; cause of difference between men and animals, 84 n.

Antiquity 62.

Appearances to senses must be corrected by reason, 117.

A priori 25, 36 n, 89 n, 132, 132 n.

Aristotle 4.

Association of ideas, three principles of, 18-19, 41-44 (v. _Cause_ C).

Atheism 116.

Bacon 99.

Belief (v. _Cause_ C, 39-45); and chance, 46.

Berkeley really a sceptic, 122 n.

Bigotry 102.

Body and soul, mystery of union of, 52; volition and movements of, 52.

Real existence of (v. _Scepticism_, B, 118-123).

Cause first (v. _God_, _Necessity_, 78-81; _Providence_, 102-115, 132 n). a principle of association of ideas, 19, 43; sole foundation of reasonings about matter of fact or real existence, 22.

A. _Knowledge of Causes arises from experience not from Reason_, 23-33.

Reasonings _a priori_ give no knowledge of cause and effect, 23 f.; impossible to see the effect in the cause since they are totally different, 25; natural philosophy never pretends to assign ultimate causes, but only to reduce causes to a few general causes, e.g. gravity, 26; geometry applies laws obtained by experience, 27.

Conclusions from experience not based on any process of the understanding, 28; yet we infer in the future a similar connexion between known qualities of things and their secret powers, to that which we assumed in the past. On what is this inference based? 29; demonstrative reasoning has no place here, and all experimental reasoning assumes the resemblance of the future to the past, and so cannot prove it without being circular, 30, 32; if reasoning were the basis of this belief, there would be no need for the multiplication of instances or of long experience, 31; yet conclusions about matter of fact are affected by experience even in beasts and children, so that they cannot be founded on abstruse reasoning, 33; to explain our inferences from experience a principle is required of equal weight and authority with reason, 34.

B. _Custom enables us to infer existence of one object from the appearance of another_, 35-38.

Experience enables us to ascribe a more than arbitrary connexion to objects, 35; we are determined to this by custom or habit which is the great guide of human life, 36; but our inference must be based on some fact present to the senses or memory, 37; the customary conjunction between such an object and some other object produces an operation of the soul which is as unavoidable as love, 38; animals also infer one event from another by custom, 82-84; and in man as in animals experimental reasoning depends on a species of instinct or mechanical power that acts in us unknown to ourselves, 85.

C. _Belief_, 39-45. Belief differs from fiction or the loose reveries of the fancy by some feeling annexed to it, 39; belief cannot be defined, but may be described as a more lively, forcible, firm, steady conception of an object than can be attained by the imagination alone, 40; it is produced by the principles of association, viz. resemblance, 41; contiguity, 42; causation, 43; by a kind of pre-established harmony between the course of nature and our ideas, 44; this operation of our minds necessary to our subsistence and so entrusted by nature to instinct rather than to reasoning, 45.

Probability, 46-7.

Belief produced by a majority of chances by an inexplicable contrivance of Nature, 46 (cf. 87-8); probability of causes: the failure of a cause ascribed to a secret counteracting cause, 47 (cf. 67); it is universally allowed that chance when strictly examined is a mere negative word, 74.

D. _Power_, 49-57.

Power, force, energy, necessary connexion must either be defined by analysis or explained by production of the impression from which they are copied, 49; from the first appearance of an object we cannot foretell its effect: we cannot see the power of a single body: we only see sequence, 50.

Is the idea of power derived from an internal impression and is it an idea of reflection? 51; it is not derived, as Locke said, from reasoning about power of production in nature, 50 n; nor from consciousness of influence of will over bodily organs, 52; nor from effort to overcome resistance, 52 n (cf. 60 n); nor from influence of will over mind, 53; many philosophers appeal to an invisible intelligent principle, to a volition of the supreme being, and regard causes as only occasions and our mental conceptions as revelations, 54-5; thus diminishing the grandeur of God, 56; this theory too bold and beyond verification by our faculties, and is no explanation, 57; vis inertiae, 57 n.

In single instances we only see sequence of loose events which are conjoined and never connected, 58; the idea of necessary connexion only arises from a number of similar instances, and the only difference between such a number and a single instance is that the former produces a habit of expecting the usual attendant, 59, 61. This customary transition is the impression from which we form the idea of necessary connexion.

E. _Reasoning from effect to cause and conversely_, 105-115 (v. _Providence_).

In arguing from effect to cause we must not infer more qualities in the cause than are required to produce the effect, nor reason backwards from an inferred cause to new effects, 105-8; we can reason back from cause to new effects in the case of human acts by analogy which rests on previous knowledge, 111-2; when the effect is entirely singular and does not belong to any species we cannot infer its cause at all, 115.

F. _Definitions of Cause_, 60 (cf. 74 n).

Ceremonies 41.

Chance ignorance of causes, 46; has no existence, 74 (v. _Cause_ B).

Cicero 4.

Circle in reasoning, 30.

Clarke 37 n.

Colour peculiarity of ideas of, 16.

Contiguity 19, 42.

Contradiction the test of demonstration, 132.

Contrariety 19 n.

Contrary of matter of fact always possible, 21, 132.

Creation 132 n.

Criticism 132.

Cudworth 57 n, 158 n.

Custom when strongest conceals itself, 24; an ultimate principle of all conclusions from experience, 36, 127; and belief, 39-45; gives rise to inferences of animals, 84.

Definition only applicable to complex ideas, 49; need of, 131; of cause, 60.

Demonstrative opp. intuitive, 20; reasoning, 30; confined to quantity and number, 131; impossible to demonstrate a fact since no negation of a fact can involve a contradiction, 132.

Descartes 57 n.; his universal doubt antecedent to study if strictly taken is incurable, since even from an indubitable first principle no advance can be made except by the faculties which we doubt, 116; his appeal to the veracity of God is useless, 120 (v. _Scepticism_, 116-132).

Design argument from, 105 f. (v. _Providence_).

Divisibility of mathematical and physical points, 124.

Doubt Cartesian, 116, 120 (v. _Scepticism_ A).

Epictetus 34.

Epicurean philosophy, defence of, 102-15; denial of providence and future state is harmless, 104 (v. _Providence_).

Euclid truths in, do not depend on existence of circles or triangles, 20.

Evidence moral and natural, 70; value of human, 82-9 (v. _Miracles_).

Evil doctrine of necessity either makes God the cause of evil or denies existence of evil as regards the whole, 78-81.

Existence external and perception, 118-9 (v. _Scepticism_, B, 116-32).

Ex nihilo nihil 132 n.

Experience (v. _Cause_ A, 23-33); opposition of reason and experience usual, but really erroneous and superficial, 36 n.

Infallible, may be regarded as proof, 87 (v. _Miracles_); all the philosophy and religion in the world cannot carry us beyond the usual course of experience, 113.

Extension 50; a supposed primary quality, 122.

Faith 101, 132.

Fiction and fact (v. _Cause_ C), 39 f.

Future inference to, from past, 29 (v. _Cause_ A).

General ideas, do not really exist, but only particular ideas attached to a general term, 125 n.

Geography mental, 8.

Geometry propositions of certain, as depending only on relations of ideas not on existence of objects, 20; gives no knowledge of ultimate causes: only applies laws discovered by experience, 27.

God idea of, 14; no idea of except what we learn from reflection on our own faculties, 57; theory that God is cause of all motion and thought, causes being only occasions of his volition, 54-57; by doctrine of necessity either there are no bad actions or God is the cause of evil, 78-81.

Veracity of, appealed to, 120.

And creation of matter, 132 n.

v. _Providence_, 102-115; _Scepticism_, 116-132.

Golden age, 107.

Gravity 26.

Habit (v. _Custom_, _Cause_ B).

History use of, 65.

Human nature, inconstancy a constant character of, 68.

Ideas A. _Origin of_, 11-17.

Perceptions divided into impressions and ideas, 11-12; the mind can only compound the materials derived from outward or inward sentiment, 13 (cf. 53); all ideas resolvable into simple ideas copied from precedent feelings, 14; deficiency in an organ of sensation produces deficiency in corresponding idea, 15-16; suspected ideas to be tested by asking for the impression from which it is derived, 17 (cf. 49); idea of reflection, 51; general ideas, 135 n; innate ideas, 19 n; power of will over ideas, 53.

B. _Association of_, 18-19.

Ideas introduce each other with a certain degree of method and regularity, 18; only three principles of association, viz. Resemblance, Contiguity, and Cause or Effect, 19; contrariety, 19 n; production of belief by these principles, 41-43.

C. Correspondence of ideas and course of nature, 44; relations of ideas one of two possible objects of enquiry, 20; such relations discoverable by the mere operation of thought, 20, 131; no demonstration possible except in case of ideas of quantity or number, 131.

Imagination 11, 39; and belief, 40.

Impressions all our more lively perceptions, 12; the test of ideas, 17, 49.

Incest peculiar turpitude of explained, 12.

Inconceivability of the negative, 132 (cf. 20).

Inertia 57 n.

Inference and similarity, 30, 115 (v. _Cause_).

Infinite divisibility, 124 f.

Instances multiplication of not required by reason, 31.

Instinct more trustworthy than reasoning, 45; the basis of all experimental reasoning, 85; the basis of realism, 118, 121.

Intuitive opp. mediate reasoning, 2.

La Bruyere 4.

Liberty (v. _Necessity_, 62-97). Definition of hypothetical liberty, 73. Necessary to morality, 77.

Locke 4, 40 n, 50 n, 57 n. His loose use of 'ideas,' 19 n; betrayed into frivolous disputes about innate ideas by the School-men, 19 n; distinction of primary and secondary qualities, 122.

Malebranche 4, 57 n..

Man a reasonable and active being, 4.

Marriage rules of, based on and vary with utility, 118.

Mathematics ideas of, clear and determinate, hence their superiority to moral and metaphysical sciences, 48; their difficulty, 48.

Mathematical and physical points, 124 n.

Matter necessity of, 64; creation of, 132 n (v. _Scepticism_ A).

Matter-of-fact contrary of, always possible, 21; arguments to new, based only on cause and effect, 22.

Metaphysics not a science, 5-6; how inferior and superior to mathematics, 48.

Mind mental geography, 8; secret springs and principles of, 9; can only mix and compound materials given by inward and outward sentiment, 13; power of will over, 53.

Miracles. 86-101.

Belief in human evidence diminishes according as the event witnessed is unusual or extraordinary, 89; difference between extraordinary and miraculous, 89 n; if the evidence for a miracle amounted to proof we should have one proof opposed by another proof, for the proof against a miracle is as complete as possible; an event is not miraculous unless there is a uniform experience, that is a proof, against it, 90; definition of miracle, 90 n; hence no testimony is sufficient to establish a miracle unless its falsehood would be more miraculous than the event it establishes, 91; as a fact the evidence for a miracle has never amounted to proof, 92; the passion for the wonderful in human nature, 93; prevalence of miracles in savage and early periods and their diminution with civilization, 94; the evidence for miracles in matters of religion opposed by the almost infinite number of witnesses for rival religions, 95; value of human testimony diminished by temptation to pose as a prophet or apostle, 97; no testimony for a miracle has ever amounted to a probability, much less to a proof, and if it did amount to a proof it would be opposed by another perfect proof, 98; so a miracle can never be proved so as to be the foundation of a system of religion, 99; a conclusion which confounds those who base the Christian religion on reason, not on faith, 100; the Christian religion cannot be believed without a miracle which will subvert the principle of a man's understanding and give him a determination to believe what is most contrary to custom and experience, 101.

Moral evil (q.v.) 80.

Moral science 30; inferior to mathematics, 48; sceptical objections to, 126-7.

Moral evidence easily combined with natural, 70.

Motion 50.

Nature design in, 105 f. (v. _Providence_), and the course of our ideas, 44.

State of, a philosophical fiction, 151, 151 n.

Necessary connexion (v. _Cause_).

Necessity two definitions of, 75.

A. _and Liberty_, 62-81; the controversy is based on ambiguity, and all mankind have always been of the same opinion on this subject, 63; our idea of the necessity of matter arises solely from observed uniformity and consequent inference, circumstances which are allowed by all men to exist in respect of human action, 64; history and knowledge of human nature assume such uniformity, 65, which does not exclude variety due to education and progress, 66; irregular actions to be explained by secret operation of contrary causes, 67; the inconstancy of human action, its constant character, as of winds and weather, 68; we all acknowledge and draw inferences from the regular conjunction of motives and actions, 69; history, politics, and morals show this, and the possibility of combining moral and natural evidence shows that they have a common origin, 70; the reluctance to acknowledge the necessity of actions due to a lingering belief that we can see real connexion behind mere conjunction, 71; we should begin with the examination not of the soul and will but of brute matter, 72; the prevalence of the liberty doctrine due to a false sensation of liberty and a false experiment, 72 n; though this question is the most contentious of all, mankind has always agreed in the doctrine of liberty, if we mean by it that hypothetical liberty which consists in a power of acting or not acting according to the determinations of our will, and which can be ascribed to every one who is not a prisoner, 73; liberty when opposed to necessity, and not merely to constraint, is the same as chance, 74.

B. _Both necessity and liberty are necessary to morality_, this doctrine of necessity only alters our view of matter and so is at least innocent, 75; rewards and punishments imply the uniform influence of motives, and connexion of character and action: if necessity be denied, a man may commit any crime and be no worse for it, 76; liberty also essential to morality, 77.

Objection that doctrine of necessity and of a regular chain of causes either makes God the cause of evil, or abolishes evil in actions, 78; Stoic answer, that the whole system is good, is specious but ineffectual in practice, 79; no speculative argument can counteract the impulse of our natural sentiments to blame certain actions, 80; how God can be the cause of all actions without being the author of moral evil is a mystery with which philosophy cannot deal, 81.

Negative inconceivability of, 132.

Newton 57 n.

Nisus 52 n, 60 n.

Number the object of demonstration, 131.

Occasional causes theory of, 55.

Parallelism between thought and course of nature, 44-5.

Perception and external objects, 119 f. (v. _Scepticism_, _Impression_, _Idea_).

Philosophy moral, two branches of, abstruse and practical, 1-5; gratifies innocent curiosity, 6; metaphysics tries to deal with matters inaccessible to human understanding, 6.

True, must lay down limits of understanding, 7 (cf. 113); a large part of, consists in mental geography, 8; may hope to resolve principles of mind into still more general principles, 9.

Natural, only staves off our ignorance a little longer, as moral or metaphysical philosophy serves only to discover larger portions of it, 26; academical, or sceptical, flatters no bias or passion except love of truth, and so has few partisans, 34; though it destroy speculation, cannot destroy action, for nature steps in and asserts her rights, 34; moral, inferior to mathematics in clearness of ideas, superior in shortness of arguments, 48.

Controversies in, due to ambiguity of terms, 62.

Disputes in, not be settled by appeal to dangerous consequences of a doctrine, 75.

Speculative, entirely indifferent to the peace of society and security of government, 104 (cf. 114).

All the philosophy in the world, and all the religion in the world, which is nothing but a species of philosophy, can never carry us beyond the usual course of experience, 113.

Happiness of, to have originated in an age and country of freedom and toleration, 102.

Points physical, indivisible, 124 n.

Power 50 f, 60 n. (v. _Cause_ D).

Probability 46 f. (v. _Cause_, B).

Probable arguments, 38, 46 n.

Production 50 n.

Promises not the foundation of justice, 257.

Proof 46 n, 86-101 (v. _Miracles_, _Demonstrative_).

Providence 102-115 (v. _God_).

The sole argument for a divine existence is from the marks of design in nature; must not infer greater power in the cause than is necessary to produce the observed effects, nor argue from such an inferred cause to any new effects which have not been observed, 105; so must not infer in God more power, wisdom, and benevolence than appears in nature, 106; so it is unnecessary to try and save the honour of the Gods by assuming the intractability of matter or the observance of general laws, 107; to argue from effects to unknown causes, and then from these causes to unknown effects, is a gross sophism, 108.

From imperfect exercise of justice in this world we cannot infer its perfect exercise in a future world, 109; we must regulate our conduct solely by the experienced train of events, 110; in case of human works of art we can infer the perfect from the imperfect, but that is because we know man by experience and also know other instances of his art, 111-112; but in the case of God we only know him by his productions, and do not know any class of beings to which he belongs, 113; and the universe, his production, is

entirely singular and does not belong to a known species of things, 115.

Punishment requires doctrines of necessity and liberty, 76 (v. _Necessity_).

Pyrrhonism 126.

Qualities primary and secondary, 122.

Quantity and number, the only objects of demonstration, the parts of them being entirely similar, 131.

Real presence, 86.

Reality and thought, 44.

Realism of the vulgar, 118.

Reason (a) opp. intuition, 29; opp. experience, 28, 36 n.

(b) Corrects sympathy and senses, 117. No match for nature, 34.

Fallacious, compared with instinct, 45.

Of men and animals, 84 n.

(c) attempts to destroy, by reasoning, 124; objections to abstract reasoning, 124 f. (v. _Scepticism_).

(d) _Reasoning_.

Two kinds of, demonstrative and moral, 30, 46 n, 132; moral, divided into general and particular, 132; produces demonstrations, proofs, and probabilities, 46 n.

Probable (v. _Cause_, 28-32).

Relations of ideas, discoverable by the mere operation of thought, independently of the existence of any object, 20.

Religion a kind of philosophy, 113 (v. _Miracles, Providence_).

Resemblance 19, 41 (v. _Similarity_).

Resistance and idea of power, 53 n.

Scepticism A. antecedent to study and philosophy, such as Descartes' universal doubt of our faculties, would be incurable: in a more moderate sense it is useful, 116 (cf. 129-30); extravagant attempts of, to destroy reason by reasoning, 124.

No such absurd creature as a man who has no opinion about anything at all, 116; admits of no answer and produces no conviction, 122 n. (cf. 34, 126, 128).

B. _As to the Senses_, 117-123.

The ordinary criticisms of our senses only show that they have to be corrected by Reason, 117; more profound arguments show that the vulgar belief in external objects is baseless, and that the objects we see are nothing but perceptions which are fleeting copies of other existences, 118; even this philosophy is hard to justify; it appeals neither to natural instinct, nor to experience, for experience tells nothing of objects which perceptions resemble, 119; the appeal to the _veracity of God_ is useless, 120; and scepticism is here triumphant, 121.

The distinction between primary and secondary qualities is useless, for the supposed primary qualities are only perceptions, 122; and Berkeley's theory that ideas of primary qualities are obtained by abstraction is impossible, 122, 122 n; if matter is deprived of both primary and secondary qualities there is nothing left except a mere something which is not worth arguing about, 123.

C. _As to Reason_, 124-130.

Attempt to destroy Reason by reasoning extravagant, 124; objection to _abstract reasoning_ because it asserts infinite divisibility of extension which is shocking to common sense, 124, and infinite divisibility of time, 125; yet the ideas attacked are so clear and

distinct that scepticism becomes sceptical about itself, 125.

Popular objections to _moral reasoning_ about matter of fact, based on weakness of understanding, variation of judgement, and disagreement among men, confuted by action, 126; philosophical objections, that we only experience conjunction and that inference is based on custom, 127; excessive scepticism refuted by its uselessness and put to flight by the most trivial event in life, 128.

Mitigated scepticism or academical philosophy useful as a corrective and as producing caution and modesty, 129; and as limiting understanding to proper objects, 130; all reasoning which is not either abstract, about quantity and number, or experimental, about matters of fact, is sophistry and illusion, 132.

D. In _Religion_ (v. _Miracles_, _Providence_).

Sciences 132 (v. _Reason_, (d); _Scepticism_, C).

Secret powers, 39; counteracting causes, 47, 67.

Senses outward and inward sensation supplies all the materials of thinking--must be corrected by reason, 117.

Scepticism concerning, 117 (v. _Scepticism_, B).

Similarity basis of all arguments from experience, 31 (cf. 115).

Solidity 50; a supposed primary quality, 122.

Soul and body, 52.

Space and time, 124 f.

Species an effect which belongs to no species does not admit of inference to its cause, 115 (cf. 113).

Stoics 34, 79.

Superstition 6 (v. _Providence_).

Theology science of, 132 (v. _God_, _Providence_).

Tillotson argument against real presence, 86.

Time and space, 124 f.

Truth 8, 17 (v. _Scepticism_).

Understanding limits of human, 7; operations of, to be classified, 8; opp. experience, 28; weakness of, 126 (v. _Reason_, _Scepticism_).

Voluntariness as ground of distinction between virtues and talents, 130.

Whole theory that everything is good as regards 'the whole,' 79, 80.

Will compounds materials given by senses, 13; influence of over organs of body can never give us the idea of power; for we are not conscious of any power in our will, only of sequence of motions on will, 52; so with power of will over our minds in raising up new ideas, 53.

Of God, cannot be used to explain motion, 57.

Freedom of (v. _Necessity_).

PREFACE LETTER FROM WENDELL PHILLIPS, ESQ. FREDERICK DOUGLASS. CHAPTER I CHAPTER II CHAPTER III CHAPTER IV CHAPTER V CHAPTER VI CHAPTER VII CHAPTER VIII CHAPTER IX CHAPTER X CHAPTER XI APPENDIX A PARODY

PREFACE

In the month of August, 1841, I attended an anti-slavery convention in Nantucket, at which it was my happiness to become acquainted with _Frederick Douglass_, the writer of the following Narrative. He was a stranger to nearly every member of that body; but, having recently made his escape from the southern prison-house of bondage, and feeling his curiosity excited to ascertain the principles and measures of the abolitionists,—of whom he had heard a somewhat vague description while he was a slave,—he was induced to give his attendance, on the occasion alluded to, though at that time a resident in New Bedford.

Fortunate, most fortunate occurrence!—fortunate for the millions of his manacled brethren, yet panting for deliverance from their awful thraldom!—fortunate for the cause of negro emancipation, and of universal liberty!—fortunate for the land of his birth, which he has already done so much to save and bless!—fortunate for a large circle of friends and acquaintances, whose sympathy and affection he has strongly secured by the many sufferings he has endured, by his virtuous traits of character, by his ever-abiding remembrance of those who are in bonds, as being bound with them!—fortunate for the multitudes, in various parts of our republic, whose minds he has enlightened on the subject of slavery, and who have been melted to tears by his pathos, or roused to virtuous indignation by his stirring eloquence against the enslavers of men!—fortunate for himself, as it at once brought him into the field of public usefulness, "gave the world assurance of a MAN," quickened the slumbering energies of his soul, and consecrated him to the great work of breaking the rod of the oppressor, and letting the oppressed go free!

I shall never forget his first speech at the convention—the extraordinary emotion it excited in my own mind—the powerful impression it created upon a crowded auditory, completely taken by surprise—the applause which followed from the beginning to the end of his felicitous remarks. I think I never hated slavery so intensely as at that moment; certainly, my perception of the enormous outrage which is inflicted by it, on the godlike nature of its victims, was rendered far more clear than ever. There stood one, in physical proportion and stature commanding and exact—in intellect richly endowed—in natural eloquence a prodigy—in soul manifestly "created but a little lower than the angels"—yet a slave, ay, a fugitive slave,—trembling for his safety, hardly daring to believe that on the American soil, a single white person could be found who would befriend him at all hazards, for the love of God and humanity! Capable of high attainments as an intellectual and moral being—needing nothing but a comparatively small amount of cultivation to make him an ornament to society and a blessing to his race—by the law of the land, by the voice of the people, by the terms of the slave code, he was only a piece of property, a beast of burden, a chattel personal, nevertheless!

A beloved friend from New Bedford prevailed on Mr. DOUGLASS to address the convention. He came forward to the platform with a hesitancy and embarrassment, necessarily the attendants of a sensitive mind in such a novel position. After apologizing for his ignorance, and reminding the audience that slavery was a poor school for the human intellect and heart, he proceeded to narrate some of the facts in his own history as a slave, and in the course of his speech gave utterance to many noble thoughts and thrilling reflections. As soon as he had taken his seat, filled with hope and admiration, I rose, and declared that PATRICK HENRY, of revolutionary fame, never made a speech more eloquent in the cause of liberty, than the one we had just listened to from the lips of that hunted fugitive. So I believed at that time—such is my belief now. I reminded the audience of the peril which surrounded this self-emancipated young man at the North,—even in Massachusetts, on the soil of the Pilgrim Fathers, among the descendants of revolutionary sires; and I appealed to them, whether they would ever allow him to be carried back into slavery,—law or no law, constitution or no constitution. The response was unanimous and in thunder-tones—"NO!" "Will you succor and protect him as a brother-man—a resident of the old Bay State?" "YES!" shouted the whole mass, with an energy so startling, that the ruthless tyrants south of Mason and Dixon's line might almost have heard the mighty burst of feeling, and recognized it as the pledge of an invincible determination, on the part of those who gave it, never to betray him that wanders, but to hide the outcast, and firmly to abide the consequences.

It was at once deeply impressed upon my mind, that, if Mr. DOUGLASS could be persuaded to consecrate his time and talents to the promotion of the anti-slavery enterprise, a powerful impetus would be given to it, and a stunning blow at the same time inflicted on northern prejudice against a colored complexion. I therefore endeavored to instil hope and courage into his mind, in order that he might dare to engage in a vocation so anomalous and responsible for a person in his situation; and I was seconded in this effort by warm-hearted friends, especially by the late General Agent of the Massachusetts Anti-Slavery Society, Mr. JOHN A. COLLINS, whose judgment in this instance entirely coincided with my own. At first, he could give no encouragement; with unfeigned diffidence, he expressed his conviction that he was not adequate to the performance of so great a task; the path marked out was wholly an untrodden one; he was sincerely apprehensive that he should do more harm than good. After much deliberation, however, he consented to make a trial; and ever since that period, he has acted as a lecturing agent, under the auspices either of the American or the Massachusetts Anti-Slavery Society. In labors he has been most abundant; and his success in combating prejudice, in gaining proselytes, in agitating the public mind, has far surpassed the most sanguine expectations that were raised at the commencement of his brilliant career. He has borne himself with gentleness and meekness, yet with true manliness of character. As a public speaker, he excels in pathos, wit, comparison, imitation, strength of reasoning, and fluency of language. There is in him that union of head and heart, which is indispensable to an enlightenment of the heads and a winning of the hearts of others. May his strength continue to be equal to his day! May he continue to "grow in grace, and in the knowledge of God," that he may be increasingly serviceable in the cause of bleeding humanity, whether at home or abroad!

It is certainly a very remarkable fact, that one of the most efficient advocates of the slave population, now before the public, is a fugitive slave, in the person of _Frederick Douglass_; and that the free colored population of the United States are as ably represented by one of their own number, in the person of _Charles Lenox Remond_, whose eloquent appeals have extorted the highest applause of multitudes on both sides of the Atlantic. Let the calumniators of the colored race despise themselves for their baseness and illiberality of spirit, and henceforth cease to talk of the natural inferiority of those who require nothing but time and opportunity to attain to the highest point of human excellence.

It may, perhaps, be fairly questioned, whether any other portion of the population of the earth could have endured the privations, sufferings and horrors of slavery, without having become more degraded in the scale of humanity than the slaves of African descent. Nothing has been left undone to cripple their intellects, darken their minds, debase their moral nature, obliterate all traces of their relationship to mankind; and yet how wonderfully they have sustained the mighty load of a most frightful bondage, under which they have been groaning for centuries! To illustrate the effect of slavery on the white man,—to show that he has no powers of endurance, in such a condition, superior to those of his black brother,—_Daniel O'Connell_, the distinguished advocate of universal emancipation, and the mightiest champion of prostrate but not conquered Ireland, relates the following anecdote in a speech delivered by him in the Conciliation Hall, Dublin, before the Loyal National Repeal Association, March 31, 1845. "No matter," said _Mr. O'Connell_, "under what specious term it may disguise itself, slavery is still hideous. _It has a natural, an inevitable tendency to brutalize every noble faculty of man._ An American sailor, who was cast away on the shore of Africa, where he was kept in slavery for three years, was, at the expiration of that period, found to be imbruted and stultified—he had lost all reasoning power; and having forgotten his native language, could only utter some savage gibberish between Arabic and English, which nobody could understand, and which even he himself found difficulty in pronouncing. So much for the humanizing influence of _The Domestic Institution_!" Admitting this to have been an extraordinary case of mental deterioration, it proves at least that the white slave can

sink as low in the scale of humanity as the black one.

Mr. Douglass has very properly chosen to write his own Narrative, in his own style, and according to the best of his ability, rather than to employ some one else. It is, therefore, entirely his own production; and, considering how long and dark was the career he had to run as a slave,—how few have been his opportunities to improve his mind since he broke his iron fetters,—it is, in my judgment, highly creditable to his head and heart. He who can peruse it without a tearful eye, a heaving breast, an afflicted spirit,—without being filled with an unutterable abhorrence of slavery and all its abettors, and animated with a determination to seek the immediate overthrow of that execrable system,—without trembling for the fate of this country in the hands of a righteous God, who is ever on the side of the oppressed, and whose arm is not shortened that it cannot save,—must have a flinty heart, and be qualified to act the part of a trafficker "in slaves and the souls of men." I am confident that it is essentially true in all its statements; that nothing has been set down in malice, nothing exaggerated, nothing drawn from the imagination; that it comes short of the reality, rather than overstates a single fact in regard to _slavery as it is_. The experience of _Frederick Douglass_, as a slave, was not a peculiar one; his lot was not especially a hard one; his case may be regarded as a very fair specimen of the treatment of slaves in Maryland, in which State it is conceded that they are better fed and less cruelly treated than in Georgia, Alabama, or Louisiana. Many have suffered incomparably more, while very few on the plantations have suffered less, than himself. Yet how deplorable was his situation! what terrible chastisements were inflicted upon his person! what still more shocking outrages were perpetrated upon his mind! with all his noble powers and sublime aspirations, how like a brute was he treated, even by those professing to have the same mind in them that was in Christ Jesus! to what dreadful liabilities was he continually subjected! how destitute of friendly counsel and aid, even in his greatest extremities! how heavy was the midnight of woe which shrouded in blackness the last ray of hope, and filled the future with terror and gloom! what longings after freedom took possession of his breast, and how his misery augmented, in proportion as he grew reflective and intelligent,—thus demonstrating that a happy slave is an extinct man! how he thought, reasoned, felt, under the lash of the driver, with the chains upon his limbs! what perils he encountered in his endeavors to escape from his horrible doom! and how signal have been his deliverance and preservation in the midst of a nation of pitiless enemies!

This Narrative contains many affecting incidents, many passages of great eloquence and power; but I think the most thrilling one of them all is the description _Douglass_ gives of his feelings, as he stood soliloquizing respecting his fate, and the chances of his one day being a freeman, on the banks of the Chesapeake Bay—viewing the receding vessels as they flew with their white wings before the breeze, and apostrophizing them as animated by the living spirit of freedom. Who can read that passage, and be insensible to its pathos and sublimity? Compressed into it is a whole Alexandrian library of thought, feeling, and sentiment—all that can, all that need be urged, in the form of expostulation, entreaty, rebuke, against that crime of crimes,—making man the property of his fellow-man! O, how accursed is that system, which entombs the godlike mind of man, defaces the divine image, reduces those who by creation were crowned with glory and honor to a level with four-footed beasts, and exalts the dealer in human flesh above all that is called God! Why should its existence be prolonged one hour? Is it not evil, only evil, and that continually? What does its presence imply but the absence of all fear of God, all regard for man, on the part of the people of the United States? Heaven speed its eternal overthrow!

So profoundly ignorant of the nature of slavery are many persons, that they are stubbornly incredulous whenever they read or listen to any recital of the cruelties which are daily inflicted on its victims. They do not deny that the slaves are held as property; but that terrible fact seems to convey to their minds no idea of injustice, exposure to outrage, or savage barbarity. Tell them of cruel scourgings, of mutilations and brandings, of scenes of pollution and blood, of the banishment of all light and knowledge, and they affect to be greatly indignant at such enormous exaggerations, such wholesale misstatements, such abominable libels on the character of the southern planters! As if all these direful outrages were not the natural results of slavery! As if it were less cruel to reduce a human being to the condition of a thing, than to give him a severe flagellation, or to deprive him of necessary food and clothing! As if whips, chains, thumb-screws, paddles, blood-hounds, overseers, drivers, patrols, were not all indispensable to keep the slaves down, and to give protection to their ruthless oppressors! As if, when the marriage institution is abolished, concubinage, adultery, and incest, must not necessarily abound; when all the rights of humanity are annihilated, any barrier remains to protect the victim from the fury of the spoiler; when absolute power is assumed over life and liberty, it will not be wielded with destructive sway! Skeptics of this character abound in society. In some few instances, their incredulity arises from a want of reflection; but, generally, it indicates a hatred of the light, a desire to shield slavery from the assaults of its foes, a contempt of the colored race, whether bond or free. Such will try to discredit the shocking tales of slaveholding cruelty which are recorded in this truthful Narrative; but they will labor in vain. _Mr. Douglass_ has frankly disclosed the place of his birth, the names of those who claimed ownership in his body and soul, and the names also of those who committed the crimes which he has alleged against them. His statements,

therefore, may easily be disproved, if they are untrue.

In the course of his Narrative, he relates two instances of murderous cruelty,—in one of which a planter deliberately shot a slave belonging to a neighboring plantation, who had unintentionally gotten within his lordly domain in quest of fish; and in the other, an overseer blew out the brains of a slave who had fled to a stream of water to escape a bloody scourging. _Mr. Douglass_ states that in neither of these instances was any thing done by way of legal arrest or judicial investigation. The Baltimore American, of March 17, 1845, relates a similar case of atrocity, perpetrated with similar impunity—as follows:—"_Shooting a slave._—We learn, upon the authority of a letter from Charles county, Maryland, received by a gentleman of this city, that a young man, named Matthews, a nephew of General Matthews, and whose father, it is believed, holds an office at Washington, killed one of the slaves upon his father's farm by shooting him. The letter states that young Matthews had been left in charge of the farm; that he gave an order to the servant, which was disobeyed, when he proceeded to the house, _obtained a gun, and, returning, shot the servant._ He immediately, the letter continues, fled to his father's residence, where he still remains unmolested."—Let it never be forgotten, that no slaveholder or overseer can be convicted of any outrage perpetrated on the person of a slave, however diabolical it may be, on the testimony of colored witnesses, whether bond or free. By the slave code, they are adjudged to be as incompetent to testify against a white man, as though they were indeed a part of the brute creation. Hence, there is no legal protection in fact, whatever there may be in form, for the slave population; and any amount of cruelty may be inflicted on them with impunity. Is it possible for the human mind to conceive of a more horrible state of society?

The effect of a religious profession on the conduct of southern masters is vividly described in the following Narrative, and shown to be any thing but salutary. In the nature of the case, it must be in the highest degree pernicious. The testimony of _Mr. Douglass_, on this point, is sustained by a cloud of witnesses, whose veracity is unimpeachable. "A slaveholder's profession of Christianity is a palpable imposture. He is a felon of the highest grade. He is a man-stealer. It is of no importance what you put in the other scale."

Reader! are you with the man-stealers in sympathy and purpose, or on the side of their down-trodden victims? If with the former, then are you the foe of God and man. If with the latter, what are you prepared to do and dare in their behalf? Be faithful, be vigilant, be untiring in your efforts to break every yoke, and let the oppressed go free. Come what may—cost what it may—inscribe on the banner which you unfurl to the breeze, as your religious and political motto—"NO COMPROMISE WITH SLAVERY! NO UNION WITH SLAVEHOLDERS!"

WM. LLOYD GARRISON BOSTON,

May 1, 1845.

LETTER FROM WENDELL PHILLIPS, ESQ.

BOSTON, _April_ 22, 1845.

My Dear Friend:

You remember the old fable of "The Man and the Lion," where the lion complained that he should not be so misrepresented "when the lions wrote history."

I am glad the time has come when the "lions write history." We have been left long enough to gather the character of slavery from the involuntary evidence of the masters. One might, indeed, rest sufficiently satisfied with what, it is evident, must be, in general, the results of such a relation, without seeking farther to find whether they have followed in every instance. Indeed, those who stare at the half-peck of corn a week, and love to count the lashes on the slave's back, are seldom the "stuff" out of which reformers and abolitionists are to be made. I remember that, in 1838, many were waiting for the results of the West India experiment, before they could come into our ranks. Those "results" have come long ago; but, alas! few of that number have come with them, as converts. A man must be disposed to judge of emancipation by other tests than whether it has increased the produce of sugar,—and to hate slavery for other reasons than because it starves men and whips women,—before he is ready to lay the first stone of his anti-slavery life.

I was glad to learn, in your story, how early the most neglected of God's children waken to a sense of their rights, and of the injustice done them. Experience is a keen teacher; and long before you had mastered your A B C, or knew where the "white sails" of the Chesapeake were bound, you began, I see, to gauge the wretchedness of the slave, not by his hunger and want, not by his lashes and toil, but by the cruel and blighting death which gathers over his soul.

In connection with this, there is one circumstance which makes your recollections peculiarly valuable, and renders your early insight the more remarkable. You come from that part of the country where we are told slavery appears with its fairest features. Let us hear, then, what it is at its best estate—gaze on its bright side, if it has one; and then imagination may task her powers to add dark lines to the picture, as she travels southward to that (for the colored man) Valley of the Shadow of Death, where the Mississippi sweeps along.

Again, we have known you long, and can put the most entire confidence in your truth, candor, and sincerity. Every one who has heard you speak has felt, and, I am confident, every one who reads your book will feel, persuaded that you give them a fair specimen of the whole truth. No one-sided portrait,—no wholesale complaints,—but strict justice done, whenever individual kindliness has neutralized, for a moment, the deadly system with which it was strangely allied. You have been with us, too, some years, and can fairly compare the twilight of rights, which your race enjoy at the North, with that “noon of night” under which they labor south of Mason and Dixon’s line. Tell us whether, after all, the half-free colored man of Massachusetts is worse off than the pampered slave of the rice swamps!

In reading your life, no one can say that we have unfairly picked out some rare specimens of cruelty. We know that the bitter drops, which even you have drained from the cup, are no incidental aggravations, no individual ills, but such as must mingle always and necessarily in the lot of every slave. They are the essential ingredients, not the occasional results, of the system.

After all, I shall read your book with trembling for you. Some years ago, when you were beginning to tell me your real name and birthplace, you may remember I stopped you, and preferred to remain ignorant of all. With the exception of a vague description, so I continued, till the other day, when you read me your memoirs. I hardly knew, at the time, whether to thank you or not for the sight of them, when I reflected that it was still dangerous, in Massachusetts, for honest men to tell their names! They say the fathers, in 1776, signed the Declaration of Independence with the halter about their necks. You, too, publish your declaration of freedom with danger compassing you around. In all the broad lands which the Constitution of the United States overshadows, there is no single spot,—however narrow or desolate,—where a fugitive slave can plant himself and say, “I am safe.” The whole armory of Northern Law has no shield for you. I am free to say that, in your place, I should throw the MS. into the fire.

You, perhaps, may tell your story in safety, endeared as you are to so many warm hearts by rare gifts, and a still rarer devotion of them to the service of others. But it will be owing only to your labors, and the fearless efforts of those who, trampling the laws and Constitution of the country under their feet, are determined that they will “hide the outcast,” and that their hearths shall be, spite of the law, an asylum for the oppressed, if, some time or other, the humblest may stand in our streets, and bear witness in safety against the cruelties of which he has been the victim.

Yet it is sad to think, that these very throbbing hearts which welcome your story, and form your best safeguard in telling it, are all beating contrary to the “statute in such case made and provided.” Go on, my dear friend, till you, and those who, like you, have been saved, so as by fire, from the dark prison-house, shall stereotype these free, illegal pulses into statutes; and New England, cutting loose from a blood-stained Union, shall glory in being the house of refuge for the oppressed,—till we no longer merely “_hide_ the outcast,” or make a merit of standing idly by while he is hunted in our midst; but, consecrating anew the soil of the Pilgrims as an asylum for the oppressed, proclaim our _welcome_ to the slave so loudly, that the tones shall reach every hut in the Carolinas, and make the broken-hearted bondman leap up at the thought of old Massachusetts.

God speed the day! _Till then, and ever,_ Yours truly, WENDELL PHILLIPS

FREDERICK DOUGLASS.

Frederick Douglass was born in slavery as Frederick Augustus Washington Bailey near Easton in Talbot County, Maryland. He was not sure of the exact year of his birth, but he knew that it was 1817 or 1818. As a young boy he was sent to Baltimore, to be a house servant, where he learned to read and write, with the assistance of his master’s wife. In 1838 he escaped from slavery and went to New York City, where he married Anna Murray, a free colored woman whom he had met in Baltimore. Soon thereafter he changed his name to Frederick Douglass. In 1841 he addressed a convention of the Massachusetts Anti-Slavery Society in Nantucket and so greatly impressed the group that they immediately employed him as an agent. He was such an impressive orator that numerous persons doubted if he had ever been a slave, so he wrote _Narrative Of The Life Of Frederick Douglass_. During the Civil War he assisted in the recruiting of colored men for the 54th and 55th Massachusetts Regiments and consistently argued for the emancipation of slaves. After the war he was active in securing and protecting the rights of the freemen. In his later years, at

different times, he was secretary of the Santo Domingo Commission, marshall and recorder of deeds of the District of Columbia, and United States Minister to Haiti. His other autobiographical works are _My Bondage And My Freedom_ and _Life And Times Of Frederick Douglass_, published in 1855 and 1881 respectively. He died in 1895.

CHAPTER I

I was born in Tuckahoe, near Hillsborough, and about twelve miles from Easton, in Talbot county, Maryland. I have no accurate knowledge of my age, never having seen any authentic record containing it. By far the larger part of the slaves know as little of their ages as horses know of theirs, and it is the wish of most masters within my knowledge to keep their slaves thus ignorant. I do not remember to have ever met a slave who could tell of his birthday. They seldom come nearer to it than planting-time, harvest-time, cherry-time, spring-time, or fall-time. A want of information concerning my own was a source of unhappiness to me even during childhood. The white children could tell their ages. I could not tell why I ought to be deprived of the same privilege. I was not allowed to make any inquiries of my master concerning it. He deemed all such inquiries on the part of a slave improper and impertinent, and evidence of a restless spirit. The nearest estimate I can give makes me now between twenty-seven and twenty-eight years of age. I come to this, from hearing my master say, some time during 1835, I was about seventeen years old.

My mother was named Harriet Bailey. She was the daughter of Isaac and Betsey Bailey, both colored, and quite dark. My mother was of a darker complexion than either my grandmother or grandfather.

My father was a white man. He was admitted to be such by all I ever heard speak of my parentage. The opinion was also whispered that my master was my father; but of the correctness of this opinion, I know nothing; the means of knowing was withheld from me. My mother and I were separated when I was but an infant—before I knew her as my mother. It is a common custom, in the part of Maryland from which I ran away, to part children from their mothers at a very early age. Frequently, before the child has reached its twelfth month, its mother is taken from it, and hired out on some farm a considerable distance off, and the child is placed under the care of an old woman, too old for field labor. For what this separation is done, I do not know, unless it be to hinder the development of the child's affection toward its mother, and to blunt and destroy the natural affection of the mother for the child. This is the inevitable result.

I never saw my mother, to know her as such, more than four or five times in my life; and each of these times was very short in duration, and at night. She was hired by a Mr. Stewart, who lived about twelve miles from my home. She made her journeys to see me in the night, travelling the whole distance on foot, after the performance of her day's work. She was a field hand, and a whipping is the penalty of not being in the field at sunrise, unless a slave has special permission from his or her master to the contrary—a permission which they seldom get, and one that gives to him that gives it the proud name of being a kind master. I do not recollect of ever seeing my mother by the light of day. She was with me in the night. She would lie down with me, and get me to sleep, but long before I waked she was gone. Very little communication ever took place between us. Death soon ended what little we could have while she lived, and with it her hardships and suffering. She died when I was about seven years old, on one of my master's farms, near Lee's Mill. I was not allowed to be present during her illness, at her death, or burial. She was gone long before I knew any thing about it. Never having enjoyed, to any considerable extent, her soothing presence, her tender and watchful care, I received the tidings of her death with much the same emotions I should have probably felt at the death of a stranger.

Called thus suddenly away, she left me without the slightest intimation of who my father was. The whisper that my master was my father, may or may not be true; and, true or false, it is of but little consequence to my purpose whilst the fact remains, in all its glaring odiousness, that slaveholders have ordained, and by law established, that the children of slave women shall in all cases follow the condition of their mothers; and this is done too obviously to administer to their own lusts, and make a gratification of their wicked desires profitable as well as pleasurable; for by this cunning arrangement, the slaveholder, in cases not a few, sustains to his slaves the double relation of master and father.

I know of such cases; and it is worthy of remark that such slaves invariably suffer greater hardships, and have more to contend with, than others. They are, in the first place, a constant offence to their mistress. She is ever disposed to find fault with them; they can seldom do any thing to please her; she is never better pleased than when she sees them under the lash, especially when she suspects her husband of showing to his mulatto children favors which he withholds from his black slaves. The master is frequently compelled to sell this class of his slaves, out of deference to the feelings of his white wife; and, cruel as the deed may strike any one to be, for a man to sell his own children to human flesh-mongers, it is often the dictate of humanity for him to do so; for, unless he does this, he must not only whip them himself, but must stand by and see one white son tie up his brother, of but few shades

darker complexion than himself, and ply the gory lash to his naked back; and if he lisp one word of disapproval, it is set down to his parental partiality, and only makes a bad matter worse, both for himself and the slave whom he would protect and defend.

Every year brings with it multitudes of this class of slaves. It was doubtless in consequence of a knowledge of this fact, that one great statesman of the south predicted the downfall of slavery by the inevitable laws of population. Whether this prophecy is ever fulfilled or not, it is nevertheless plain that a very different-looking class of people are springing up at the south, and are now held in slavery, from those originally brought to this country from Africa; and if their increase do no other good, it will do away the force of the argument, that God cursed Ham, and therefore American slavery is right. If the lineal descendants of Ham are alone to be scripturally enslaved, it is certain that slavery at the south must soon become unscriptural; for thousands are ushered into the world, annually, who, like myself, owe their existence to white fathers, and those fathers most frequently their own masters.

I have had two masters. My first master's name was Anthony. I do not remember his first name. He was generally called Captain Anthony—a title which, I presume, he acquired by sailing a craft on the Chesapeake Bay. He was not considered a rich slaveholder. He owned two or three farms, and about thirty slaves. His farms and slaves were under the care of an overseer. The overseer's name was Plummer. Mr. Plummer was a miserable drunkard, a profane swearer, and a savage monster. He always went armed with a cowskin and a heavy cudgel. I have known him to cut and slash the women's heads so horribly, that even master would be enraged at his cruelty, and would threaten to whip him if he did not mind himself. Master, however, was not a humane slaveholder. It required extraordinary barbarity on the part of an overseer to affect him. He was a cruel man, hardened by a long life of slaveholding. He would at times seem to take great pleasure in whipping a slave. I have often been awakened at the dawn of day by the most heart-rending shrieks of an own aunt of mine, whom he used to tie up to a joist, and whip upon her naked back till she was literally covered with blood. No words, no tears, no prayers, from his gory victim, seemed to move his iron heart from its bloody purpose. The louder she screamed, the harder he whipped; and where the blood ran fastest, there he whipped longest. He would whip her to make her scream, and whip her to make her hush; and not until overcome by fatigue, would he cease to swing the blood-clotted cowskin. I remember the first time I ever witnessed this horrible exhibition. I was quite a child, but I well remember it. I never shall forget it whilst I remember any thing. It was the first of a long series of such outrages, of which I was doomed to be a witness and a participant. It struck me with awful force. It was the blood-stained gate, the entrance to the hell of slavery, through which I was about to pass. It was a most terrible spectacle. I wish I could commit to paper the feelings with which I beheld it.

This occurrence took place very soon after I went to live with my old master, and under the following circumstances. Aunt Hester went out one night,—where or for what I do not know,—and happened to be absent when my master desired her presence. He had ordered her not to go out evenings, and warned her that she must never let him catch her in company with a young man, who was paying attention to her belonging to Colonel Lloyd. The young man's name was Ned Roberts, generally called Lloyd's Ned. Why master was so careful of her, may be safely left to conjecture. She was a woman of noble form, and of graceful proportions, having very few equals, and fewer superiors, in personal appearance, among the colored or white women of our neighborhood.

Aunt Hester had not only disobeyed his orders in going out, but had been found in company with Lloyd's Ned; which circumstance, I found, from what he said while whipping her, was the chief offence. Had he been a man of pure morals himself, he might have been thought interested in protecting the innocence of my aunt; but those who knew him will not suspect him of any such virtue. Before he commenced whipping Aunt Hester, he took her into the kitchen, and stripped her from neck to waist, leaving her neck, shoulders, and back, entirely naked. He then told her to cross her hands, calling her at the same time a d——d b—-h. After crossing her hands, he tied them with a strong rope, and led her to a stool under a large hook in the joist, put in for the purpose. He made her get upon the stool, and tied her hands to the hook. She now stood fair for his infernal purpose. Her arms were stretched up at their full length, so that she stood upon the ends of her toes. He then said to her, "Now, you d——d b—-h, I'll learn you how to disobey my orders!" and after rolling up his sleeves, he commenced to lay on the heavy cowskin, and soon the warm, red blood (amid heart-rending shrieks from her, and horrid oaths from him) came dripping to the floor. I was so terrified and horror-stricken at the sight, that I hid myself in a closet, and dared not venture out till long after the bloody transaction was over. I expected it would be my turn next. It was all new to me. I had never seen any thing like it before. I had always lived with my grandmother on the outskirts of the plantation, where she was put to raise the children of the younger women. I had therefore been, until now, out of the way of the bloody scenes that often occurred on the plantation.

CHAPTER II

My master's family consisted of two sons, Andrew and Richard; one daughter, Lucretia, and her husband, Captain Thomas Auld. They lived in one house, upon the home plantation of Colonel Edward Lloyd. My master was Colonel Lloyd's clerk and superintendent. He was what might be called the overseer of the overseers. I spent two years of childhood on this plantation in my old master's family. It was here that I witnessed the bloody transaction recorded in the first chapter; and as I received my first impressions of slavery on this plantation, I will give some description of it, and of slavery as it there existed. The plantation is about twelve miles north of Easton, in Talbot county, and is situated on the border of Miles River. The principal products raised upon it were tobacco, corn, and wheat. These were raised in great abundance; so that, with the products of this and the other farms belonging to him, he was able to keep in almost constant employment a large sloop, in carrying them to market at Baltimore. This sloop was named Sally Lloyd, in honor of one of the colonel's daughters. My master's son-in-law, Captain Auld, was master of the vessel; she was otherwise manned by the colonel's own slaves. Their names were Peter, Isaac, Rich, and Jake. These were esteemed very highly by the other slaves, and looked upon as the privileged ones of the plantation; for it was no small affair, in the eyes of the slaves, to be allowed to see Baltimore.

Colonel Lloyd kept from three to four hundred slaves on his home plantation, and owned a large number more on the neighboring farms belonging to him. The names of the farms nearest to the home plantation were Wye Town and New Design. "Wye Town" was under the overseership of a man named Noah Willis. New Design was under the overseership of a Mr. Townsend. The overseers of these, and all the rest of the farms, numbering over twenty, received advice and direction from the managers of the home plantation. This was the great business place. It was the seat of government for the whole twenty farms. All disputes among the overseers were settled here. If a slave was convicted of any high misdemeanor, became unmanageable, or evinced a determination to run away, he was brought immediately here, severely whipped, put on board the sloop, carried to Baltimore, and sold to Austin Woolfolk, or some other slave-trader, as a warning to the slaves remaining.

Here, too, the slaves of all the other farms received their monthly allowance of food, and their yearly clothing. The men and women slaves received, as their monthly allowance of food, eight pounds of pork, or its equivalent in fish, and one bushel of corn meal. Their yearly clothing consisted of two coarse linen shirts, one pair of linen trousers, like the shirts, one jacket, one pair of trousers for winter, made of coarse negro cloth, one pair of stockings, and one pair of shoes; the whole of which could not have cost more than seven dollars. The allowance of the slave children was given to their mothers, or the old women having the care of them. The children unable to work in the field had neither shoes, stockings, jackets, nor trousers, given to them; their clothing consisted of two coarse linen shirts per year. When these failed them, they went naked until the next allowance-day. Children from seven to ten years old, of both sexes, almost naked, might be seen at all seasons of the year.

There were no beds given the slaves, unless one coarse blanket be considered such, and none but the men and women had these. This, however, is not considered a very great privation. They find less difficulty from the want of beds, than from the want of time to sleep; for when their day's work in the field is done, the most of them having their washing, mending, and cooking to do, and having few or none of the ordinary facilities for doing either of these, very many of their sleeping hours are consumed in preparing for the field the coming day; and when this is done, old and young, male and female, married and single, drop down side by side, on one common bed,—the cold, damp floor,—each covering himself or herself with their miserable blankets; and here they sleep till they are summoned to the field by the driver's horn. At the sound of this, all must rise, and be off to the field. There must be no halting; every one must be at his or her post; and woe betides them who hear not this morning summons to the field; for if they are not awakened by the sense of hearing, they are by the sense of feeling: no age nor sex finds any favor. Mr. Severe, the overseer, used to stand by the door of the quarter, armed with a large hickory stick and heavy cowskin, ready to whip any one who was so unfortunate as not to hear, or, from any other cause, was prevented from being ready to start for the field at the sound of the horn.

Mr. Severe was rightly named: he was a cruel man. I have seen him whip a woman, causing the blood to run half an hour at the time; and this, too, in the midst of her crying children, pleading for their mother's release. He seemed to take pleasure in manifesting his fiendish barbarity. Added to his cruelty, he was a profane swearer. It was enough to chill the blood and stiffen the hair of an ordinary man to hear him talk. Scarce a sentence escaped him but that was commenced or concluded by some horrid oath. The field was the place to witness his cruelty and profanity. His presence made it both the field of blood and of blasphemy. From the rising till the going down of the sun, he was cursing, raving, cutting, and slashing among the slaves of the field, in the most frightful manner. His career was short. He died very soon after I went to Colonel Lloyd's; and he died as he lived, uttering, with his dying groans, bitter curses and horrid oaths. His death was regarded by the slaves as the result of a merciful providence.

Mr. Severe's place was filled by a Mr. Hopkins. He was a very different man. He was less cruel, less profane, and made less noise, than Mr. Severe. His course was characterized by no extraordinary demonstrations of cruelty. He whipped, but seemed to take no

pleasure in it. He was called by the slaves a good overseer.

The home plantation of Colonel Lloyd wore the appearance of a country village. All the mechanical operations for all the farms were performed here. The shoemaking and mending, the blacksmithing, cartwrighting, coopering, weaving, and grain-grinding, were all performed by the slaves on the home plantation. The whole place wore a business-like aspect very unlike the neighboring farms. The number of houses, too, conspired to give it advantage over the neighboring farms. It was called by the slaves the _Great House Farm._ Few privileges were esteemed higher, by the slaves of the out-farms, than that of being selected to do errands at the Great House Farm. It was associated in their minds with greatness. A representative could not be prouder of his election to a seat in the American Congress, than a slave on one of the out-farms would be of his election to do errands at the Great House Farm. They regarded it as evidence of great confidence reposed in them by their overseers; and it was on this account, as well as a constant desire to be out of the field from under the driver's lash, that they esteemed it a high privilege, one worth careful living for. He was called the smartest and most trusty fellow, who had this honor conferred upon him the most frequently. The competitors for this office sought as diligently to please their overseers, as the office-seekers in the political parties seek to please and deceive the people. The same traits of character might be seen in Colonel Lloyd's slaves, as are seen in the slaves of the political parties.

The slaves selected to go to the Great House Farm, for the monthly allowance for themselves and their fellow-slaves, were peculiarly enthusiastic. While on their way, they would make the dense old woods, for miles around, reverberate with their wild songs, revealing at once the highest joy and the deepest sadness. They would compose and sing as they went along, consulting neither time nor tune. The thought that came up, came out—if not in the word, in the sound;—and as frequently in the one as in the other. They would sometimes sing the most pathetic sentiment in the most rapturous tone, and the most rapturous sentiment in the most pathetic tone. Into all of their songs they would manage to weave something of the Great House Farm. Especially would they do this, when leaving home. They would then sing most exultingly the following words:—

"I am going away to the Great House Farm! O, yea! O, yea! O!"

This they would sing, as a chorus, to words which to many would seem unmeaning jargon, but which, nevertheless, were full of meaning to themselves. I have sometimes thought that the mere hearing of those songs would do more to impress some minds with the horrible character of slavery, than the reading of whole volumes of philosophy on the subject could do.

I did not, when a slave, understand the deep meaning of those rude and apparently incoherent songs. I was myself within the circle; so that I neither saw nor heard as those without might see and hear. They told a tale of woe which was then altogether beyond my feeble comprehension; they were tones loud, long, and deep; they breathed the prayer and complaint of souls boiling over with the bitterest anguish. Every tone was a testimony against slavery, and a prayer to God for deliverance from chains. The hearing of those wild notes always depressed my spirit, and filled me with ineffable sadness. I have frequently found myself in tears while hearing them. The mere recurrence to those songs, even now, afflicts me; and while I am writing these lines, an expression of feeling has already found its way down my cheek. To those songs I trace my first glimmering conception of the dehumanizing character of slavery. I can never get rid of that conception. Those songs still follow me, to deepen my hatred of slavery, and quicken my sympathies for my brethren in bonds. If any one wishes to be impressed with the soul-killing effects of slavery, let him go to Colonel Lloyd's plantation, and, on allowance-day, place himself in the deep pine woods, and there let him, in silence, analyze the sounds that shall pass through the chambers of his soul,—and if he is not thus impressed, it will only be because "there is no flesh in his obdurate heart."

I have often been utterly astonished, since I came to the north, to find persons who could speak of the singing, among slaves, as evidence of their contentment and happiness. It is impossible to conceive of a greater mistake. Slaves sing most when they are most unhappy. The songs of the slave represent the sorrows of his heart; and he is relieved by them, only as an aching heart is relieved by its tears. At least, such is my experience. I have often sung to drown my sorrow, but seldom to express my happiness. Crying for joy, and singing for joy, were alike uncommon to me while in the jaws of slavery. The singing of a man cast away upon a desolate island might be as appropriately considered as evidence of contentment and happiness, as the singing of a slave; the songs of the one and of the other are prompted by the same emotion.

CHAPTER III

Colonel Lloyd kept a large and finely cultivated garden, which afforded almost constant employment for four men, besides the chief gardener, (Mr. M'Durmond.) This garden was probably the greatest attraction of the place. During the summer months, people

came from far and near—from Baltimore, Easton, and Annapolis—to see it. It abounded in fruits of almost every description, from the hardy apple of the north to the delicate orange of the south. This garden was not the least source of trouble on the plantation. Its excellent fruit was quite a temptation to the hungry swarms of boys, as well as the older slaves, belonging to the colonel, few of whom had the virtue or the vice to resist it. Scarcely a day passed, during the summer, but that some slave had to take the lash for stealing fruit. The colonel had to resort to all kinds of stratagems to keep his slaves out of the garden. The last and most successful one was that of tarring his fence all around; after which, if a slave was caught with any tar upon his person, it was deemed sufficient proof that he had either been into the garden, or had tried to get in. In either case, he was severely whipped by the chief gardener. This plan worked well; the slaves became as fearful of tar as of the lash. They seemed to realize the impossibility of touching _tar_ without being defiled.

The colonel also kept a splendid riding equipage. His stable and carriage-house presented the appearance of some of our large city livery establishments. His horses were of the finest form and noblest blood. His carriage-house contained three splendid coaches, three or four gigs, besides dearborns and barouches of the most fashionable style.

This establishment was under the care of two slaves—old Barney and young Barney—father and son. To attend to this establishment was their sole work. But it was by no means an easy employment; for in nothing was Colonel Lloyd more particular than in the management of his horses. The slightest inattention to these was unpardonable, and was visited upon those, under whose care they were placed, with the severest punishment; no excuse could shield them, if the colonel only suspected any want of attention to his horses—a supposition which he frequently indulged, and one which, of course, made the office of old and young Barney a very trying one. They never knew when they were safe from punishment. They were frequently whipped when least deserving, and escaped whipping when most deserving it. Every thing depended upon the looks of the horses, and the state of Colonel Lloyd's own mind when his horses were brought to him for use. If a horse did not move fast enough, or hold his head high enough, it was owing to some fault of his keepers. It was painful to stand near the stable-door, and hear the various complaints against the keepers when a horse was taken out for use. "This horse has not had proper attention. He has not been sufficiently rubbed and curried, or he has not been properly fed; his food was too wet or too dry; he got it too soon or too late; he was too hot or too cold; he had too much hay, and not enough of grain; or he had too much grain, and not enough of hay; instead of old Barney's attending to the horse, he had very improperly left it to his son." To all these complaints, no matter how unjust, the slave must answer never a word. Colonel Lloyd could not brook any contradiction from a slave. When he spoke, a slave must stand, listen, and tremble; and such was literally the case. I have seen Colonel Lloyd make old Barney, a man between fifty and sixty years of age, uncover his bald head, kneel down upon the cold, damp ground, and receive upon his naked and toil-worn shoulders more than thirty lashes at the time. Colonel Lloyd had three sons—Edward, Murray, and Daniel,—and three sons-in-law, Mr. Winder, Mr. Nicholson, and Mr. Lowndes. All of these lived at the Great House Farm, and enjoyed the luxury of whipping the servants when they pleased, from old Barney down to William Wilkes, the coach-driver. I have seen Winder make one of the house-servants stand off from him a suitable distance to be touched with the end of his whip, and at every stroke raise great ridges upon his back.

To describe the wealth of Colonel Lloyd would be almost equal to describing the riches of Job. He kept from ten to fifteen house-servants. He was said to own a thousand slaves, and I think this estimate quite within the truth. Colonel Lloyd owned so many that he did not know them when he saw them; nor did all the slaves of the out-farms know him. It is reported of him, that, while riding along the road one day, he met a colored man, and addressed him in the usual manner of speaking to colored people on the public highways of the south: "Well, boy, whom do you belong to?" "To Colonel Lloyd," replied the slave. "Well, does the colonel treat you well?" "No, sir," was the ready reply. "What, does he work you too hard?" "Yes, sir." "Well, don't he give you enough to eat?" "Yes, sir, he gives me enough, such as it is."

The colonel, after ascertaining where the slave belonged, rode on; the man also went on about his business, not dreaming that he had been conversing with his master. He thought, said, and heard nothing more of the matter, until two or three weeks afterwards. The poor man was then informed by his overseer that, for having found fault with his master, he was now to be sold to a Georgia trader. He was immediately chained and handcuffed; and thus, without a moment's warning, he was snatched away, and forever sundered, from his family and friends, by a hand more unrelenting than death. This is the penalty of telling the truth, of telling the simple truth, in answer to a series of plain questions.

It is partly in consequence of such facts, that slaves, when inquired of as to their condition and the character of their masters, almost universally say they are contented, and that their masters are kind. The slaveholders have been known to send in spies among their slaves, to ascertain their views and feelings in regard to their condition. The frequency of this has had the effect to establish among the slaves the maxim, that a still tongue makes a wise head. They suppress the truth rather than take the

consequences of telling it, and in so doing prove themselves a part of the human family. If they have any thing to say of their masters, it is generally in their masters' favor, especially when speaking to an untried man. I have been frequently asked, when a slave, if I had a kind master, and do not remember ever to have given a negative answer; nor did I, in pursuing this course, consider myself as uttering what was absolutely false; for I always measured the kindness of my master by the standard of kindness set up among slaveholders around us. Moreover, slaves are like other people, and imbibe prejudices quite common to others. They think their own better than that of others. Many, under the influence of this prejudice, think their own masters are better than the masters of other slaves; and this, too, in some cases, when the very reverse is true. Indeed, it is not uncommon for slaves even to fall out and quarrel among themselves about the relative goodness of their masters, each contending for the superior goodness of his own over that of the others. At the very same time, they mutually execrate their masters when viewed separately. It was so on our plantation. When Colonel Lloyd's slaves met the slaves of Jacob Jepson, they seldom parted without a quarrel about their masters; Colonel Lloyd's slaves contending that he was the richest, and Mr. Jepson's slaves that he was the smartest, and most of a man. Colonel Lloyd's slaves would boast his ability to buy and sell Jacob Jepson. Mr. Jepson's slaves would boast his ability to whip Colonel Lloyd. These quarrels would almost always end in a fight between the parties, and those that whipped were supposed to have gained the point at issue. They seemed to think that the greatness of their masters was transferable to themselves. It was considered as being bad enough to be a slave; but to be a poor man's slave was deemed a disgrace indeed!

CHAPTER IV

Mr. Hopkins remained but a short time in the office of overseer. Why his career was so short, I do not know, but suppose he lacked the necessary severity to suit Colonel Lloyd. Mr. Hopkins was succeeded by Mr. Austin Gore, a man possessing, in an eminent degree, all those traits of character indispensable to what is called a first-rate overseer. Mr. Gore had served Colonel Lloyd, in the capacity of overseer, upon one of the out-farms, and had shown himself worthy of the high station of overseer upon the home or Great House Farm.

Mr. Gore was proud, ambitious, and persevering. He was artful, cruel, and obdurate. He was just the man for such a place, and it was just the place for such a man. It afforded scope for the full exercise of all his powers, and he seemed to be perfectly at home in it. He was one of those who could torture the slightest look, word, or gesture, on the part of the slave, into impudence, and would treat it accordingly. There must be no answering back to him; no explanation was allowed a slave, showing himself to have been wrongfully accused. Mr. Gore acted fully up to the maxim laid down by slaveholders,—"It is better that a dozen slaves should suffer under the lash, than that the overseer should be convicted, in the presence of the slaves, of having been at fault." No matter how innocent a slave might be—it availed him nothing, when accused by Mr. Gore of any misdemeanor. To be accused was to be convicted, and to be convicted was to be punished; the one always following the other with immutable certainty. To escape punishment was to escape accusation; and few slaves had the fortune to do either, under the overseership of Mr. Gore. He was just proud enough to demand the most debasing homage of the slave, and quite servile enough to crouch, himself, at the feet of the master. He was ambitious enough to be contented with nothing short of the highest rank of overseers, and persevering enough to reach the height of his ambition. He was cruel enough to inflict the severest punishment, artful enough to descend to the lowest trickery, and obdurate enough to be insensible to the voice of a reproving conscience. He was, of all the overseers, the most dreaded by the slaves. His presence was painful; his eye flashed confusion; and seldom was his sharp, shrill voice heard, without producing horror and trembling in their ranks.

Mr. Gore was a grave man, and, though a young man, he indulged in no jokes, said no funny words, seldom smiled. His words were in perfect keeping with his looks, and his looks were in perfect keeping with his words. Overseers will sometimes indulge in a witty word, even with the slaves; not so with Mr. Gore. He spoke but to command, and commanded but to be obeyed; he dealt sparingly with his words, and bountifully with his whip, never using the former where the latter would answer as well. When he whipped, he seemed to do so from a sense of duty, and feared no consequences. He did nothing reluctantly, no matter how disagreeable; always at his post, never inconsistent. He never promised but to fulfil. He was, in a word, a man of the most inflexible firmness and stone-like coolness.

His savage barbarity was equalled only by the consummate coolness with which he committed the grossest and most savage deeds upon the slaves under his charge. Mr. Gore once undertook to whip one of Colonel Lloyd's slaves, by the name of Demby. He had given Demby but few stripes, when, to get rid of the scourging, he ran and plunged himself into a creek, and stood there at the depth of his shoulders, refusing to come out. Mr. Gore told him that he would give him three calls, and that, if he did not come out at the third call, he would shoot him. The first call was given. Demby made no response, but stood his ground. The second and

third calls were given with the same result. Mr. Gore then, without consultation or deliberation with any one, not even giving Demby an additional call, raised his musket to his face, taking deadly aim at his standing victim, and in an instant poor Demby was no more. His mangled body sank out of sight, and blood and brains marked the water where he had stood.

A thrill of horror flashed through every soul upon the plantation, excepting Mr. Gore. He alone seemed cool and collected. He was asked by Colonel Lloyd and my old master, why he resorted to this extraordinary expedient. His reply was, (as well as I can remember,) that Demby had become unmanageable. He was setting a dangerous example to the other slaves,—one which, if suffered to pass without some such demonstration on his part, would finally lead to the total subversion of all rule and order upon the plantation. He argued that if one slave refused to be corrected, and escaped with his life, the other slaves would soon copy the example; the result of which would be, the freedom of the slaves, and the enslavement of the whites. Mr. Gore's defence was satisfactory. He was continued in his station as overseer upon the home plantation. His fame as an overseer went abroad. His horrid crime was not even submitted to judicial investigation. It was committed in the presence of slaves, and they of course could neither institute a suit, nor testify against him; and thus the guilty perpetrator of one of the bloodiest and most foul murders goes unwhipped of justice, and uncensured by the community in which he lives. Mr. Gore lived in St. Michael's, Talbot county, Maryland, when I left there; and if he is still alive, he very probably lives there now; and if so, he is now, as he was then, as highly esteemed and as much respected as though his guilty soul had not been stained with his brother's blood.

I speak advisedly when I say this,—that killing a slave, or any colored person, in Talbot county, Maryland, is not treated as a crime, either by the courts or the community. Mr. Thomas Lanman, of St. Michael's, killed two slaves, one of whom he killed with a hatchet, by knocking his brains out. He used to boast of the commission of the awful and bloody deed. I have heard him do so laughingly, saying, among other things, that he was the only benefactor of his country in the company, and that when others would do as much as he had done, we should be relieved of "the d——d niggers."

The wife of Mr. Giles Hicks, living but a short distance from where I used to live, murdered my wife's cousin, a young girl between fifteen and sixteen years of age, mangling her person in the most horrible manner, breaking her nose and breastbone with a stick, so that the poor girl expired in a few hours afterward. She was immediately buried, but had not been in her untimely grave but a few hours before she was taken up and examined by the coroner, who decided that she had come to her death by severe beating. The offence for which this girl was thus murdered was this:—She had been set that night to mind Mrs. Hicks's baby, and during the night she fell asleep, and the baby cried. She, having lost her rest for several nights previous, did not hear the crying. They were both in the room with Mrs. Hicks. Mrs. Hicks, finding the girl slow to move, jumped from her bed, seized an oak stick of wood by the fireplace, and with it broke the girl's nose and breastbone, and thus ended her life. I will not say that this most horrid murder produced no sensation in the community. It did produce sensation, but not enough to bring the murderess to punishment. There was a warrant issued for her arrest, but it was never served. Thus she escaped not only punishment, but even the pain of being arraigned before a court for her horrid crime.

Whilst I am detailing bloody deeds which took place during my stay on Colonel Lloyd's plantation, I will briefly narrate another, which occurred about the same time as the murder of Demby by Mr. Gore.

Colonel Lloyd's slaves were in the habit of spending a part of their nights and Sundays in fishing for oysters, and in this way made up the deficiency of their scanty allowance. An old man belonging to Colonel Lloyd, while thus engaged, happened to get beyond the limits of Colonel Lloyd's, and on the premises of Mr. Beal Bondly. At this trespass, Mr. Bondly took offence, and with his musket came down to the shore, and blew its deadly contents into the poor old man.

Mr. Bondly came over to see Colonel Lloyd the next day, whether to pay him for his property, or to justify himself in what he had done, I know not. At any rate, this whole fiendish transaction was soon hushed up. There was very little said about it at all, and nothing done. It was a common saying, even among little white boys, that it was worth a half-cent to kill a "nigger," and a half-cent to bury one.

CHAPTER V

As to my own treatment while I lived on Colonel Lloyd's plantation, it was very similar to that of the other slave children. I was not old enough to work in the field, and there being little else than field work to do, I had a great deal of leisure time. The most I had to do was to drive up the cows at evening, keep the fowls out of the garden, keep the front yard clean, and run of errands for my old master's daughter, Mrs. Lucretia Auld. The most of my leisure time I spent in helping Master Daniel Lloyd in finding his birds, after

he had shot them. My connection with Master Daniel was of some advantage to me. He became quite attached to me, and was a sort of protector of me. He would not allow the older boys to impose upon me, and would divide his cakes with me.

I was seldom whipped by my old master, and suffered little from any thing else than hunger and cold. I suffered much from hunger, but much more from cold. In hottest summer and coldest winter, I was kept almost naked—no shoes, no stockings, no jacket, no trousers, nothing on but a coarse tow linen shirt, reaching only to my knees. I had no bed. I must have perished with cold, but that, the coldest nights, I used to steal a bag which was used for carrying corn to the mill. I would crawl into this bag, and there sleep on the cold, damp, clay floor, with my head in and feet out. My feet have been so cracked with the frost, that the pen with which I am writing might be laid in the gashes.

We were not regularly allowanced. Our food was coarse corn meal boiled. This was called _mush_. It was put into a large wooden tray or trough, and set down upon the ground. The children were then called, like so many pigs, and like so many pigs they would come and devour the mush; some with oyster-shells, others with pieces of shingle, some with naked hands, and none with spoons. He that ate fastest got most; he that was strongest secured the best place; and few left the trough satisfied.

I was probably between seven and eight years old when I left Colonel Lloyd's plantation. I left it with joy. I shall never forget the ecstasy with which I received the intelligence that my old master (Anthony) had determined to let me go to Baltimore, to live with Mr. Hugh Auld, brother to my old master's son-in-law, Captain Thomas Auld. I received this information about three days before my departure. They were three of the happiest days I ever enjoyed. I spent the most part of all these three days in the creek, washing off the plantation scurf, and preparing myself for my departure.

The pride of appearance which this would indicate was not my own. I spent the time in washing, not so much because I wished to, but because Mrs. Lucretia had told me I must get all the dead skin off my feet and knees before I could go to Baltimore; for the people in Baltimore were very cleanly, and would laugh at me if I looked dirty. Besides, she was going to give me a pair of trousers, which I should not put on unless I got all the dirt off me. The thought of owning a pair of trousers was great indeed! It was almost a sufficient motive, not only to make me take off what would be called by pig-drovers the mange, but the skin itself. I went at it in good earnest, working for the first time with the hope of reward.

The ties that ordinarily bind children to their homes were all suspended in my case. I found no severe trial in my departure. My home was charmless; it was not home to me; on parting from it, I could not feel that I was leaving any thing which I could have enjoyed by staying. My mother was dead, my grandmother lived far off, so that I seldom saw her. I had two sisters and one brother, that lived in the same house with me; but the early separation of us from our mother had well nigh blotted the fact of our relationship from our memories. I looked for home elsewhere, and was confident of finding none which I should relish less than the one which I was leaving. If, however, I found in my new home hardship, hunger, whipping, and nakedness, I had the consolation that I should not have escaped any one of them by staying. Having already had more than a taste of them in the house of my old master, and having endured them there, I very naturally inferred my ability to endure them elsewhere, and especially at Baltimore; for I had something of the feeling about Baltimore that is expressed in the proverb, that "being hanged in England is preferable to dying a natural death in Ireland." I had the strongest desire to see Baltimore. Cousin Tom, though not fluent in speech, had inspired me with that desire by his eloquent description of the place. I could never point out any thing at the Great House, no matter how beautiful or powerful, but that he had seen something at Baltimore far exceeding, both in beauty and strength, the object which I pointed out to him. Even the Great House itself, with all its pictures, was far inferior to many buildings in Baltimore. So strong was my desire, that I thought a gratification of it would fully compensate for whatever loss of comforts I should sustain by the exchange. I left without a regret, and with the highest hopes of future happiness.

We sailed out of Miles River for Baltimore on a Saturday morning. I remember only the day of the week, for at that time I had no knowledge of the days of the month, nor the months of the year. On setting sail, I walked aft, and gave to Colonel Lloyd's plantation what I hoped would be the last look. I then placed myself in the bows of the sloop, and there spent the remainder of the day in looking ahead, interesting myself in what was in the distance rather than in things near by or behind.

In the afternoon of that day, we reached Annapolis, the capital of the State. We stopped but a few moments, so that I had no time to go on shore. It was the first large town that I had ever seen, and though it would look small compared with some of our New England factory villages, I thought it a wonderful place for its size—more imposing even than the Great House Farm!

We arrived at Baltimore early on Sunday morning, landing at Smith's Wharf, not far from Bowley's Wharf. We had on board the sloop a large flock of sheep; and after aiding in driving them to the slaughterhouse of Mr. Curtis on Louden Slater's Hill, I was

conducted by Rich, one of the hands belonging on board of the sloop, to my new home in Alliciana Street, near Mr. Gardner's ship-yard, on Fells Point.

Mr. and Mrs. Auld were both at home, and met me at the door with their little son Thomas, to take care of whom I had been given. And here I saw what I had never seen before; it was a white face beaming with the most kindly emotions; it was the face of my new mistress, Sophia Auld. I wish I could describe the rapture that flashed through my soul as I beheld it. It was a new and strange sight to me, brightening up my pathway with the light of happiness. Little Thomas was told, there was his Freddy,—and I was told to take care of little Thomas; and thus I entered upon the duties of my new home with the most cheering prospect ahead.

I look upon my departure from Colonel Lloyd's plantation as one of the most interesting events of my life. It is possible, and even quite probable, that but for the mere circumstance of being removed from that plantation to Baltimore, I should have to-day, instead of being here seated by my own table, in the enjoyment of freedom and the happiness of home, writing this Narrative, been confined in the galling chains of slavery. Going to live at Baltimore laid the foundation, and opened the gateway, to all my subsequent prosperity. I have ever regarded it as the first plain manifestation of that kind providence which has ever since attended me, and marked my life with so many favors. I regarded the selection of myself as being somewhat remarkable. There were a number of slave children that might have been sent from the plantation to Baltimore. There were those younger, those older, and those of the same age. I was chosen from among them all, and was the first, last, and only choice.

I may be deemed superstitious, and even egotistical, in regarding this event as a special interposition of divine Providence in my favor. But I should be false to the earliest sentiments of my soul, if I suppressed the opinion. I prefer to be true to myself, even at the hazard of incurring the ridicule of others, rather than to be false, and incur my own abhorrence. From my earliest recollection, I date the entertainment of a deep conviction that slavery would not always be able to hold me within its foul embrace; and in the darkest hours of my career in slavery, this living word of faith and spirit of hope departed not from me, but remained like ministering angels to cheer me through the gloom. This good spirit was from God, and to him I offer thanksgiving and praise.

CHAPTER VI

My new mistress proved to be all she appeared when I first met her at the door,—a woman of the kindest heart and finest feelings. She had never had a slave under her control previously to myself, and prior to her marriage she had been dependent upon her own industry for a living. She was by trade a weaver; and by constant application to her business, she had been in a good degree preserved from the blighting and dehumanizing effects of slavery. I was utterly astonished at her goodness. I scarcely knew how to behave towards her. She was entirely unlike any other white woman I had ever seen. I could not approach her as I was accustomed to approach other white ladies. My early instruction was all out of place. The crouching servility, usually so acceptable a quality in a slave, did not answer when manifested toward her. Her favor was not gained by it; she seemed to be disturbed by it. She did not deem it impudent or unmannerly for a slave to look her in the face. The meanest slave was put fully at ease in her presence, and none left without feeling better for having seen her. Her face was made of heavenly smiles, and her voice of tranquil music.

But, alas! this kind heart had but a short time to remain such. The fatal poison of irresponsible power was already in her hands, and soon commenced its infernal work. That cheerful eye, under the influence of slavery, soon became red with rage; that voice, made all of sweet accord, changed to one of harsh and horrid discord; and that angelic face gave place to that of a demon.

Very soon after I went to live with Mr. and Mrs. Auld, she very kindly commenced to teach me the A, B, C. After I had learned this, she assisted me in learning to spell words of three or four letters. Just at this point of my progress, Mr. Auld found out what was going on, and at once forbade Mrs. Auld to instruct me further, telling her, among other things, that it was unlawful, as well as unsafe, to teach a slave to read. To use his own words, further, he said, "If you give a nigger an inch, he will take an ell. A nigger should know nothing but to obey his master—to do as he is told to do. Learning would _spoil_ the best nigger in the world. Now," said he, "if you teach that nigger (speaking of myself) how to read, there would be no keeping him. It would forever unfit him to be a slave. He would at once become unmanageable, and of no value to his master. As to himself, it could do him no good, but a great deal of harm. It would make him discontented and unhappy." These words sank deep into my heart, stirred up sentiments within that lay slumbering, and called into existence an entirely new train of thought. It was a new and special revelation, explaining dark and mysterious things, with which my youthful understanding had struggled, but struggled in vain. I now understood what had been to me a most perplexing difficulty—to wit, the white man's power to enslave the black man. It was a grand achievement, and I prized it highly. From that moment, I understood the pathway from slavery to freedom. It was just what I wanted, and I got it at a

time when I the least expected it. Whilst I was saddened by the thought of losing the aid of my kind mistress, I was gladdened by the invaluable instruction which, by the merest accident, I had gained from my master. Though conscious of the difficulty of learning without a teacher, I set out with high hope, and a fixed purpose, at whatever cost of trouble, to learn how to read. The very decided manner with which he spoke, and strove to impress his wife with the evil consequences of giving me instruction, served to convince me that he was deeply sensible of the truths he was uttering. It gave me the best assurance that I might rely with the utmost confidence on the results which, he said, would flow from teaching me to read. What he most dreaded, that I most desired. What he most loved, that I most hated. That which to him was a great evil, to be carefully shunned, was to me a great good, to be diligently sought; and the argument which he so warmly urged, against my learning to read, only served to inspire me with a desire and determination to learn. In learning to read, I owe almost as much to the bitter opposition of my master, as to the kindly aid of my mistress. I acknowledge the benefit of both.

I had resided but a short time in Baltimore before I observed a marked difference, in the treatment of slaves, from that which I had witnessed in the country. A city slave is almost a freeman, compared with a slave on the plantation. He is much better fed and clothed, and enjoys privileges altogether unknown to the slave on the plantation. There is a vestige of decency, a sense of shame, that does much to curb and check those outbreaks of atrocious cruelty so commonly enacted upon the plantation. He is a desperate slaveholder, who will shock the humanity of his non-slaveholding neighbors with the cries of his lacerated slave. Few are willing to incur the odium attaching to the reputation of being a cruel master; and above all things, they would not be known as not giving a slave enough to eat. Every city slaveholder is anxious to have it known of him, that he feeds his slaves well; and it is due to them to say, that most of them do give their slaves enough to eat. There are, however, some painful exceptions to this rule. Directly opposite to us, on Philpot Street, lived Mr. Thomas Hamilton. He owned two slaves. Their names were Henrietta and Mary. Henrietta was about twenty-two years of age, Mary was about fourteen; and of all the mangled and emaciated creatures I ever looked upon, these two were the most so. His heart must be harder than stone, that could look upon these unmoved. The head, neck, and shoulders of Mary were literally cut to pieces. I have frequently felt her head, and found it nearly covered with festering sores, caused by the lash of her cruel mistress. I do not know that her master ever whipped her, but I have been an eye-witness to the cruelty of Mrs. Hamilton. I used to be in Mr. Hamilton's house nearly every day. Mrs. Hamilton used to sit in a large chair in the middle of the room, with a heavy cowskin always by her side, and scarce an hour passed during the day but was marked by the blood of one of these slaves. The girls seldom passed her without her saying, "Move faster, you _black gip!_" at the same time giving them a blow with the cowskin over the head or shoulders, often drawing the blood. She would then say, "Take that, you _black gip!_" continuing, "If you don't move faster, I'll move you!" Added to the cruel lashings to which these slaves were subjected, they were kept nearly half-starved. They seldom knew what it was to eat a full meal. I have seen Mary contending with the pigs for the offal thrown into the street. So much was Mary kicked and cut to pieces, that she was oftener called "_pecked_" than by her name.

CHAPTER VII

I lived in Master Hugh's family about seven years. During this time, I succeeded in learning to read and write. In accomplishing this, I was compelled to resort to various stratagems. I had no regular teacher. My mistress, who had kindly commenced to instruct me, had, in compliance with the advice and direction of her husband, not only ceased to instruct, but had set her face against my being instructed by any one else. It is due, however, to my mistress to say of her, that she did not adopt this course of treatment immediately. She at first lacked the depravity indispensable to shutting me up in mental darkness. It was at least necessary for her to have some training in the exercise of irresponsible power, to make her equal to the task of treating me as though I were a brute.

My mistress was, as I have said, a kind and tender-hearted woman; and in the simplicity of her soul she commenced, when I first went to live with her, to treat me as she supposed one human being ought to treat another. In entering upon the duties of a slaveholder, she did not seem to perceive that I sustained to her the relation of a mere chattel, and that for her to treat me as a human being was not only wrong, but dangerously so. Slavery proved as injurious to her as it did to me. When I went there, she was a pious, warm, and tender-hearted woman. There was no sorrow or suffering for which she had not a tear. She had bread for the hungry, clothes for the naked, and comfort for every mourner that came within her reach. Slavery soon proved its ability to divest her of these heavenly qualities. Under its influence, the tender heart became stone, and the lamblike disposition gave way to one of tiger-like fierceness. The first step in her downward course was in her ceasing to instruct me. She now commenced to practise her husband's precepts. She finally became even more violent in her opposition than her husband himself. She was not satisfied with simply doing as well as he had commanded; she seemed anxious to do better. Nothing seemed to make her more

angry than to see me with a newspaper. She seemed to think that here lay the danger. I have had her rush at me with a face made all up of fury, and snatch from me a newspaper, in a manner that fully revealed her apprehension. She was an apt woman; and a little experience soon demonstrated, to her satisfaction, that education and slavery were incompatible with each other.

From this time I was most narrowly watched. If I was in a separate room any considerable length of time, I was sure to be suspected of having a book, and was at once called to give an account of myself. All this, however, was too late. The first step had been taken. Mistress, in teaching me the alphabet, had given me the _inch,_ and no precaution could prevent me from taking the _ell._

The plan which I adopted, and the one by which I was most successful, was that of making friends of all the little white boys whom I met in the street. As many of these as I could, I converted into teachers. With their kindly aid, obtained at different times and in different places, I finally succeeded in learning to read. When I was sent of errands, I always took my book with me, and by going one part of my errand quickly, I found time to get a lesson before my return. I used also to carry bread with me, enough of which was always in the house, and to which I was always welcome; for I was much better off in this regard than many of the poor white children in our neighborhood. This bread I used to bestow upon the hungry little urchins, who, in return, would give me that more valuable bread of knowledge. I am strongly tempted to give the names of two or three of those little boys, as a testimonial of the gratitude and affection I bear them; but prudence forbids;—not that it would injure me, but it might embarrass them; for it is almost an unpardonable offence to teach slaves to read in this Christian country. It is enough to say of the dear little fellows, that they lived on Philpot Street, very near Durgin and Bailey's ship-yard. I used to talk this matter of slavery over with them. I would sometimes say to them, I wished I could be as free as they would be when they got to be men. "You will be free as soon as you are twenty-one, _but I am a slave for life!_ Have not I as good a right to be free as you have?" These words used to trouble them; they would express for me the liveliest sympathy, and console me with the hope that something would occur by which I might be free.

I was now about twelve years old, and the thought of being _a slave for life_ began to bear heavily upon my heart. Just about this time, I got hold of a book entitled "The Columbian Orator." Every opportunity I got, I used to read this book. Among much of other interesting matter, I found in it a dialogue between a master and his slave. The slave was represented as having run away from his master three times. The dialogue represented the conversation which took place between them, when the slave was retaken the third time. In this dialogue, the whole argument in behalf of slavery was brought forward by the master, all of which was disposed of by the slave. The slave was made to say some very smart as well as impressive things in reply to his master—things which had the desired though unexpected effect; for the conversation resulted in the voluntary emancipation of the slave on the part of the master.

In the same book, I met with one of Sheridan's mighty speeches on and in behalf of Catholic emancipation. These were choice documents to me. I read them over and over again with unabated interest. They gave tongue to interesting thoughts of my own soul, which had frequently flashed through my mind, and died away for want of utterance. The moral which I gained from the dialogue was the power of truth over the conscience of even a slaveholder. What I got from Sheridan was a bold denunciation of slavery, and a powerful vindication of human rights. The reading of these documents enabled me to utter my thoughts, and to meet the arguments brought forward to sustain slavery; but while they relieved me of one difficulty, they brought on another even more painful than the one of which I was relieved. The more I read, the more I was led to abhor and detest my enslavers. I could regard them in no other light than a band of successful robbers, who had left their homes, and gone to Africa, and stolen us from our homes, and in a strange land reduced us to slavery. I loathed them as being the meanest as well as the most wicked of men. As I read and contemplated the subject, behold! that very discontentment which Master Hugh had predicted would follow my learning to read had already come, to torment and sting my soul to unutterable anguish. As I writhed under it, I would at times feel that learning to read had been a curse rather than a blessing. It had given me a view of my wretched condition, without the remedy. It opened my eyes to the horrible pit, but to no ladder upon which to get out. In moments of agony, I envied my fellow-slaves for their stupidity. I have often wished myself a beast. I preferred the condition of the meanest reptile to my own. Any thing, no matter what, to get rid of thinking! It was this everlasting thinking of my condition that tormented me. There was no getting rid of it. It was pressed upon me by every object within sight or hearing, animate or inanimate. The silver trump of freedom had roused my soul to eternal wakefulness. Freedom now appeared, to disappear no more forever. It was heard in every sound, and seen in every thing. It was ever present to torment me with a sense of my wretched condition. I saw nothing without seeing it, I heard nothing without hearing it, and felt nothing without feeling it. It looked from every star, it smiled in every calm, breathed in every wind, and moved in every storm.

I often found myself regretting my own existence, and wishing myself dead; and but for the hope of being free, I have no doubt but that I should have killed myself, or done something for which I should have been killed. While in this state of mind, I was eager to

hear any one speak of slavery. I was a ready listener. Every little while, I could hear something about the abolitionists. It was some time before I found what the word meant. It was always used in such connections as to make it an interesting word to me. If a slave ran away and succeeded in getting clear, or if a slave killed his master, set fire to a barn, or did any thing very wrong in the mind of a slaveholder, it was spoken of as the fruit of _abolition._ Hearing the word in this connection very often, I set about learning what it meant. The dictionary afforded me little or no help. I found it was “the act of abolishing;” but then I did not know what was to be abolished. Here I was perplexed. I did not dare to ask any one about its meaning, for I was satisfied that it was something they wanted me to know very little about. After a patient waiting, I got one of our city papers, containing an account of the number of petitions from the north, praying for the abolition of slavery in the District of Columbia, and of the slave trade between the States. From this time I understood the words _abolition_ and _abolitionist,_ and always drew near when that word was spoken, expecting to hear something of importance to myself and fellow-slaves. The light broke in upon me by degrees. I went one day down on the wharf of Mr. Waters; and seeing two Irishmen unloading a scow of stone, I went, unasked, and helped them. When we had finished, one of them came to me and asked me if I were a slave. I told him I was. He asked, “Are ye a slave for life?” I told him that I was. The good Irishman seemed to be deeply affected by the statement. He said to the other that it was a pity so fine a little fellow as myself should be a slave for life. He said it was a shame to hold me. They both advised me to run away to the north; that I should find friends there, and that I should be free. I pretended not to be interested in what they said, and treated them as if I did not understand them; for I feared they might be treacherous. White men have been known to encourage slaves to escape, and then, to get the reward, catch them and return them to their masters. I was afraid that these seemingly good men might use me so; but I nevertheless remembered their advice, and from that time I resolved to run away. I looked forward to a time at which it would be safe for me to escape. I was too young to think of doing so immediately; besides, I wished to learn how to write, as I might have occasion to write my own pass. I consoled myself with the hope that I should one day find a good chance. Meanwhile, I would learn to write.

The idea as to how I might learn to write was suggested to me by being in Durgin and Bailey’s ship-yard, and frequently seeing the ship carpenters, after hewing, and getting a piece of timber ready for use, write on the timber the name of that part of the ship for which it was intended. When a piece of timber was intended for the larboard side, it would be marked thus—“L.” When a piece was for the starboard side, it would be marked thus—“S.” A piece for the larboard side forward, would be marked thus—“L. F.” When a piece was for starboard side forward, it would be marked thus—“S. F.” For larboard aft, it would be marked thus—“L. A.” For starboard aft, it would be marked thus—“S. A.” I soon learned the names of these letters, and for what they were intended when placed upon a piece of timber in the ship-yard. I immediately commenced copying them, and in a short time was able to make the four letters named. After that, when I met with any boy who I knew could write, I would tell him I could write as well as he. The next word would be, “I don’t believe you. Let me see you try it.” I would then make the letters which I had been so fortunate as to learn, and ask him to beat that. In this way I got a good many lessons in writing, which it is quite possible I should never have gotten in any other way. During this time, my copy-book was the board fence, brick wall, and pavement; my pen and ink was a lump of chalk. With these, I learned mainly how to write. I then commenced and continued copying the Italics in Webster’s Spelling Book, until I could make them all without looking on the book. By this time, my little Master Thomas had gone to school, and learned how to write, and had written over a number of copy-books. These had been brought home, and shown to some of our near neighbors, and then laid aside. My mistress used to go to class meeting at the Wilk Street meetinghouse every Monday afternoon, and leave me to take care of the house. When left thus, I used to spend the time in writing in the spaces left in Master Thomas’s copy-book, copying what he had written. I continued to do this until I could write a hand very similar to that of Master Thomas. Thus, after a long, tedious effort for years, I finally succeeded in learning how to write.

CHAPTER VIII

In a very short time after I went to live at Baltimore, my old master’s youngest son Richard died; and in about three years and six months after his death, my old master, Captain Anthony, died, leaving only his son, Andrew, and daughter, Lucretia, to share his estate. He died while on a visit to see his daughter at Hillsborough. Cut off thus unexpectedly, he left no will as to the disposal of his property. It was therefore necessary to have a valuation of the property, that it might be equally divided between Mrs. Lucretia and Master Andrew. I was immediately sent for, to be valued with the other property. Here again my feelings rose up in detestation of slavery. I had now a new conception of my degraded condition. Prior to this, I had become, if not insensible to my lot, at least partly so. I left Baltimore with a young heart overborne with sadness, and a soul full of apprehension. I took passage with Captain Rowe, in the schooner Wild Cat, and, after a sail of about twenty-four hours, I found myself near the place of my birth. I had now been absent from it almost, if not quite, five years. I, however, remembered the place very well. I was only about five years old when I left

it, to go and live with my old master on Colonel Lloyd's plantation; so that I was now between ten and eleven years old.

We were all ranked together at the valuation. Men and women, old and young, married and single, were ranked with horses, sheep, and swine. There were horses and men, cattle and women, pigs and children, all holding the same rank in the scale of being, and were all subjected to the same narrow examination. Silvery-headed age and sprightly youth, maids and matrons, had to undergo the same indelicate inspection. At this moment, I saw more clearly than ever the brutalizing effects of slavery upon both slave and slaveholder.

After the valuation, then came the division. I have no language to express the high excitement and deep anxiety which were felt among us poor slaves during this time. Our fate for life was now to be decided. We had no more voice in that decision than the brutes among whom we were ranked. A single word from the white men was enough—against all our wishes, prayers, and entreaties—to sunder forever the dearest friends, dearest kindred, and strongest ties known to human beings. In addition to the pain of separation, there was the horrid dread of falling into the hands of Master Andrew. He was known to us all as being a most cruel wretch,—a common drunkard, who had, by his reckless mismanagement and profligate dissipation, already wasted a large portion of his father's property. We all felt that we might as well be sold at once to the Georgia traders, as to pass into his hands; for we knew that that would be our inevitable condition,—a condition held by us all in the utmost horror and dread.

I suffered more anxiety than most of my fellow-slaves. I had known what it was to be kindly treated; they had known nothing of the kind. They had seen little or nothing of the world. They were in very deed men and women of sorrow, and acquainted with grief. Their backs had been made familiar with the bloody lash, so that they had become callous; mine was yet tender; for while at Baltimore I got few whippings, and few slaves could boast of a kinder master and mistress than myself; and the thought of passing out of their hands into those of Master Andrew—a man who, but a few days before, to give me a sample of his bloody disposition, took my little brother by the throat, threw him on the ground, and with the heel of his boot stamped upon his head till the blood gushed from his nose and ears—was well calculated to make me anxious as to my fate. After he had committed this savage outrage upon my brother, he turned to me, and said that was the way he meant to serve me one of these days,—meaning, I suppose, when I came into his possession.

Thanks to a kind Providence, I fell to the portion of Mrs. Lucretia, and was sent immediately back to Baltimore, to live again in the family of Master Hugh. Their joy at my return equalled their sorrow at my departure. It was a glad day to me. I had escaped a worse than lion's jaws. I was absent from Baltimore, for the purpose of valuation and division, just about one month, and it seemed to have been six.

Very soon after my return to Baltimore, my mistress, Lucretia, died, leaving her husband and one child, Amanda; and in a very short time after her death, Master Andrew died. Now all the property of my old master, slaves included, was in the hands of strangers,—strangers who had had nothing to do with accumulating it. Not a slave was left free. All remained slaves, from the youngest to the oldest. If any one thing in my experience, more than another, served to deepen my conviction of the infernal character of slavery, and to fill me with unutterable loathing of slaveholders, it was their base ingratitude to my poor old grandmother. She had served my old master faithfully from youth to old age. She had been the source of all his wealth; she had peopled his plantation with slaves; she had become a great grandmother in his service. She had rocked him in infancy, attended him in childhood, served him through life, and at his death wiped from his icy brow the cold death-sweat, and closed his eyes forever. She was nevertheless left a slave—a slave for life—a slave in the hands of strangers; and in their hands she saw her children, her grandchildren, and her great-grandchildren, divided, like so many sheep, without being gratified with the small privilege of a single word, as to their or her own destiny. And, to cap the climax of their base ingratitude and fiendish barbarity, my grandmother, who was now very old, having outlived my old master and all his children, having seen the beginning and end of all of them, and her present owners finding she was of but little value, her frame already racked with the pains of old age, and complete helplessness fast stealing over her once active limbs, they took her to the woods, built her a little hut, put up a little mud-chimney, and then made her welcome to the privilege of supporting herself there in perfect loneliness; thus virtually turning her out to die! If my poor old grandmother now lives, she lives to suffer in utter loneliness; she lives to remember and mourn over the loss of children, the loss of grandchildren, and the loss of great-grandchildren. They are, in the language of the slave's poet, Whittier,—

"Gone, gone, sold and gone To the rice swamp dank and lone, Where the slave-whip ceaseless swings, Where the noisome insect stings, Where the fever-demon strews Poison with the falling dews, Where the sickly sunbeams glare Through the hot and misty air:— Gone, gone, sold and gone To the rice swamp dank and lone, From Virginia hills and waters— Woe is me, my stolen daughters!"

The hearth is desolate. The children, the unconscious children, who once sang and danced in her presence, are gone. She gropes her way, in the darkness of age, for a drink of water. Instead of the voices of her children, she hears by day the moans of the dove, and by night the screams of the hideous owl. All is gloom. The grave is at the door. And now, when weighed down by the pains and aches of old age, when the head inclines to the feet, when the beginning and ending of human existence meet, and helpless infancy and painful old age combine together—at this time, this most needful time, the time for the exercise of that tenderness and affection which children only can exercise towards a declining parent—my poor old grandmother, the devoted mother of twelve children, is left all alone, in yonder little hut, before a few dim embers. She stands—she sits—she staggers—she falls—she groans—she dies—and there are none of her children or grandchildren present, to wipe from her wrinkled brow the cold sweat of death, or to place beneath the sod her fallen remains. Will not a righteous God visit for these things?

In about two years after the death of Mrs. Lucretia, Master Thomas married his second wife. Her name was Rowena Hamilton. She was the eldest daughter of Mr. William Hamilton. Master now lived in St. Michael's. Not long after his marriage, a misunderstanding took place between himself and Master Hugh; and as a means of punishing his brother, he took me from him to live with himself at St. Michael's. Here I underwent another most painful separation. It, however, was not so severe as the one I dreaded at the division of property; for, during this interval, a great change had taken place in Master Hugh and his once kind and affectionate wife. The influence of brandy upon him, and of slavery upon her, had effected a disastrous change in the characters of both; so that, as far as they were concerned, I thought I had little to lose by the change. But it was not to them that I was attached. It was to those little Baltimore boys that I felt the strongest attachment. I had received many good lessons from them, and was still receiving them, and the thought of leaving them was painful indeed. I was leaving, too, without the hope of ever being allowed to return. Master Thomas had said he would never let me return again. The barrier betwixt himself and brother he considered impassable.

I then had to regret that I did not at least make the attempt to carry out my resolution to run away; for the chances of success are tenfold greater from the city than from the country.

I sailed from Baltimore for St. Michael's in the sloop Amanda, Captain Edward Dodson. On my passage, I paid particular attention to the direction which the steamboats took to go to Philadelphia. I found, instead of going down, on reaching North Point they went up the bay, in a north-easterly direction. I deemed this knowledge of the utmost importance. My determination to run away was again revived. I resolved to wait only so long as the offering of a favorable opportunity. When that came, I was determined to be off.

CHAPTER IX

I have now reached a period of my life when I can give dates. I left Baltimore, and went to live with Master Thomas Auld, at St. Michael's, in March, 1832. It was now more than seven years since I lived with him in the family of my old master, on Colonel Lloyd's plantation. We of course were now almost entire strangers to each other. He was to me a new master, and I to him a new slave. I was ignorant of his temper and disposition; he was equally so of mine. A very short time, however, brought us into full acquaintance with each other. I was made acquainted with his wife not less than with himself. They were well matched, being equally mean and cruel. I was now, for the first time during a space of more than seven years, made to feel the painful gnawings of hunger—a something which I had not experienced before since I left Colonel Lloyd's plantation. It went hard enough with me then, when I could look back to no period at which I had enjoyed a sufficiency. It was tenfold harder after living in Master Hugh's family, where I had always had enough to eat, and of that which was good. I have said Master Thomas was a mean man. He was so. Not to give a slave enough to eat, is regarded as the most aggravated development of meanness even among slaveholders. The rule is, no matter how coarse the food, only let there be enough of it. This is the theory; and in the part of Maryland from which I came, it is the general practice,—though there are many exceptions. Master Thomas gave us enough of neither coarse nor fine food. There were four slaves of us in the kitchen—my sister Eliza, my aunt Priscilla, Henny, and myself; and we were allowed less than a half of a bushel of corn-meal per week, and very little else, either in the shape of meat or vegetables. It was not enough for us to subsist upon. We were therefore reduced to the wretched necessity of living at the expense of our neighbors. This we did by begging and stealing, whichever came handy in the time of need, the one being considered as legitimate as the other. A great many times have we poor creatures been nearly perishing with hunger, when food in abundance lay mouldering in the safe and smoke-house, and our pious mistress was aware of the fact; and yet that mistress and her husband would kneel every morning, and pray that God would bless them in basket and store!

Bad as all slaveholders are, we seldom meet one destitute of every element of character commanding respect. My master was one of this rare sort. I do not know of one single noble act ever performed by him. The leading trait in his character was meanness; and

if there were any other element in his nature, it was made subject to this. He was mean; and, like most other mean men, he lacked the ability to conceal his meanness. Captain Auld was not born a slaveholder. He had been a poor man, master only of a Bay craft. He came into possession of all his slaves by marriage; and of all men, adopted slaveholders are the worst. He was cruel, but cowardly. He commanded without firmness. In the enforcement of his rules, he was at times rigid, and at times lax. At times, he spoke to his slaves with the firmness of Napoleon and the fury of a demon; at other times, he might well be mistaken for an inquirer who had lost his way. He did nothing of himself. He might have passed for a lion, but for his ears. In all things noble which he attempted, his own meanness shone most conspicuous. His airs, words, and actions, were the airs, words, and actions of born slaveholders, and, being assumed, were awkward enough. He was not even a good imitator. He possessed all the disposition to deceive, but wanted the power. Having no resources within himself, he was compelled to be the copyist of many, and being such, he was forever the victim of inconsistency; and of consequence he was an object of contempt, and was held as such even by his slaves. The luxury of having slaves of his own to wait upon him was something new and unprepared for. He was a slaveholder without the ability to hold slaves. He found himself incapable of managing his slaves either by force, fear, or fraud. We seldom called him “master;” we generally called him “Captain Auld,” and were hardly disposed to title him at all. I doubt not that our conduct had much to do with making him appear awkward, and of consequence fretful. Our want of reverence for him must have perplexed him greatly. He wished to have us call him master, but lacked the firmness necessary to command us to do so. His wife used to insist upon our calling him so, but to no purpose. In August, 1832, my master attended a Methodist camp-meeting held in the Bay-side, Talbot county, and there experienced religion. I indulged a faint hope that his conversion would lead him to emancipate his slaves, and that, if he did not do this, it would, at any rate, make him more kind and humane. I was disappointed in both these respects. It neither made him to be humane to his slaves, nor to emancipate them. If it had any effect on his character, it made him more cruel and hateful in all his ways; for I believe him to have been a much worse man after his conversion than before. Prior to his conversion, he relied upon his own depravity to shield and sustain him in his savage barbarity; but after his conversion, he found religious sanction and support for his slaveholding cruelty. He made the greatest pretensions to piety. His house was the house of prayer. He prayed morning, noon, and night. He very soon distinguished himself among his brethren, and was soon made a class-leader and exhorter. His activity in revivals was great, and he proved himself an instrument in the hands of the church in converting many souls. His house was the preachers’ home. They used to take great pleasure in coming there to put up; for while he starved us, he stuffed them. We have had three or four preachers there at a time. The names of those who used to come most frequently while I lived there, were Mr. Storks, Mr. Ewery, Mr. Humphry, and Mr. Hickey. I have also seen Mr. George Cookman at our house. We slaves loved Mr. Cookman. We believed him to be a good man. We thought him instrumental in getting Mr. Samuel Harrison, a very rich slaveholder, to emancipate his slaves; and by some means got the impression that he was laboring to effect the emancipation of all the slaves. When he was at our house, we were sure to be called in to prayers. When the others were there, we were sometimes called in and sometimes not. Mr. Cookman took more notice of us than either of the other ministers. He could not come among us without betraying his sympathy for us, and, stupid as we were, we had the sagacity to see it.

While I lived with my master in St. Michael’s, there was a white young man, a Mr. Wilson, who proposed to keep a Sabbath school for the instruction of such slaves as might be disposed to learn to read the New Testament. We met but three times, when Mr. West and Mr. Fairbanks, both class-leaders, with many others, came upon us with sticks and other missiles, drove us off, and forbade us to meet again. Thus ended our little Sabbath school in the pious town of St. Michael’s.

I have said my master found religious sanction for his cruelty. As an example, I will state one of many facts going to prove the charge. I have seen him tie up a lame young woman, and whip her with a heavy cowskin upon her naked shoulders, causing the warm red blood to drip; and, in justification of the bloody deed, he would quote this passage of Scripture—“He that knoweth his master’s will, and doeth it not, shall be beaten with many stripes.”

Master would keep this lacerated young woman tied up in this horrid situation four or five hours at a time. I have known him to tie her up early in the morning, and whip her before breakfast; leave her, go to his store, return at dinner, and whip her again, cutting her in the places already made raw with his cruel lash. The secret of master’s cruelty toward “Henny” is found in the fact of her being almost helpless. When quite a child, she fell into the fire, and burned herself horribly. Her hands were so burnt that she never got the use of them. She could do very little but bear heavy burdens. She was to master a bill of expense; and as he was a mean man, she was a constant offence to him. He seemed desirous of getting the poor girl out of existence. He gave her away once to his sister; but, being a poor gift, she was not disposed to keep her. Finally, my benevolent master, to use his own words, “set her adrift to take care of herself.” Here was a recently-converted man, holding on upon the mother, and at the same time turning out her helpless child, to starve and die! Master Thomas was one of the many pious slaveholders who hold slaves for the very charitable purpose of taking care of them.

My master and myself had quite a number of differences. He found me unsuitable to his purpose. My city life, he said, had had a very pernicious effect upon me. It had almost ruined me for every good purpose, and fitted me for every thing which was bad. One of my greatest faults was that of letting his horse run away, and go down to his father-in-law's farm, which was about five miles from St. Michael's. I would then have to go after it. My reason for this kind of carelessness, or carefulness, was, that I could always get something to eat when I went there. Master William Hamilton, my master's father-in-law, always gave his slaves enough to eat. I never left there hungry, no matter how great the need of my speedy return. Master Thomas at length said he would stand it no longer. I had lived with him nine months, during which time he had given me a number of severe whippings, all to no good purpose. He resolved to put me out, as he said, to be broken; and, for this purpose, he let me for one year to a man named Edward Covey. Mr. Covey was a poor man, a farm-renter. He rented the place upon which he lived, as also the hands with which he tilled it. Mr. Covey had acquired a very high reputation for breaking young slaves, and this reputation was of immense value to him. It enabled him to get his farm tilled with much less expense to himself than he could have had it done without such a reputation. Some slaveholders thought it not much loss to allow Mr. Covey to have their slaves one year, for the sake of the training to which they were subjected, without any other compensation. He could hire young help with great ease, in consequence of this reputation. Added to the natural good qualities of Mr. Covey, he was a professor of religion—a pious soul—a member and a class-leader in the Methodist church. All of this added weight to his reputation as a "nigger-breaker." I was aware of all the facts, having been made acquainted with them by a young man who had lived there. I nevertheless made the change gladly; for I was sure of getting enough to eat, which is not the smallest consideration to a hungry man.

CHAPTER X

I had left Master Thomas's house, and went to live with Mr. Covey, on the 1st of January, 1833. I was now, for the first time in my life, a field hand. In my new employment, I found myself even more awkward than a country boy appeared to be in a large city. I had been at my new home but one week before Mr. Covey gave me a very severe whipping, cutting my back, causing the blood to run, and raising ridges on my flesh as large as my little finger. The details of this affair are as follows: Mr. Covey sent me, very early in the morning of one of our coldest days in the month of January, to the woods, to get a load of wood. He gave me a team of unbroken oxen. He told me which was the in-hand ox, and which the off-hand one. He then tied the end of a large rope around the horns of the in-hand ox, and gave me the other end of it, and told me, if the oxen started to run, that I must hold on upon the rope. I had never driven oxen before, and of course I was very awkward. I, however, succeeded in getting to the edge of the woods with little difficulty; but I had got a very few rods into the woods, when the oxen took fright, and started full tilt, carrying the cart against trees, and over stumps, in the most frightful manner. I expected every moment that my brains would be dashed out against the trees. After running thus for a considerable distance, they finally upset the cart, dashing it with great force against a tree, and threw themselves into a dense thicket. How I escaped death, I do not know. There I was, entirely alone, in a thick wood, in a place new to me. My cart was upset and shattered, my oxen were entangled among the young trees, and there was none to help me. After a long spell of effort, I succeeded in getting my cart righted, my oxen disentangled, and again yoked to the cart. I now proceeded with my team to the place where I had, the day before, been chopping wood, and loaded my cart pretty heavily, thinking in this way to tame my oxen. I then proceeded on my way home. I had now consumed one half of the day. I got out of the woods safely, and now felt out of danger. I stopped my oxen to open the woods gate; and just as I did so, before I could get hold of my ox-rope, the oxen again started, rushed through the gate, catching it between the wheel and the body of the cart, tearing it to pieces, and coming within a few inches of crushing me against the gate-post. Thus twice, in one short day, I escaped death by the merest chance. On my return, I told Mr. Covey what had happened, and how it happened. He ordered me to return to the woods again immediately. I did so, and he followed on after me. Just as I got into the woods, he came up and told me to stop my cart, and that he would teach me how to trifle away my time, and break gates. He then went to a large gum-tree, and with his axe cut three large switches, and, after trimming them up neatly with his pocketknife, he ordered me to take off my clothes. I made him no answer, but stood with my clothes on. He repeated his order. I still made him no answer, nor did I move to strip myself. Upon this he rushed at me with the fierceness of a tiger, tore off my clothes, and lashed me till he had worn out his switches, cutting me so savagely as to leave the marks visible for a long time after. This whipping was the first of a number just like it, and for similar offences.

I lived with Mr. Covey one year. During the first six months, of that year, scarce a week passed without his whipping me. I was seldom free from a sore back. My awkwardness was almost always his excuse for whipping me. We were worked fully up to the point of endurance. Long before day we were up, our horses fed, and by the first approach of day we were off to the field with our hoes and ploughing teams. Mr. Covey gave us enough to eat, but scarce time to eat it. We were often less than five minutes taking our meals. We were often in the field from the first approach of day till its last lingering ray had left us; and at saving-fodder time,

midnight often caught us in the field binding blades.

Covey would be out with us. The way he used to stand it, was this. He would spend the most of his afternoons in bed. He would then come out fresh in the evening, ready to urge us on with his words, example, and frequently with the whip. Mr. Covey was one of the few slaveholders who could and did work with his hands. He was a hard-working man. He knew by himself just what a man or a boy could do. There was no deceiving him. His work went on in his absence almost as well as in his presence; and he had the faculty of making us feel that he was ever present with us. This he did by surprising us. He seldom approached the spot where we were at work openly, if he could do it secretly. He always aimed at taking us by surprise. Such was his cunning, that we used to call him, among ourselves, “the snake.” When we were at work in the cornfield, he would sometimes crawl on his hands and knees to avoid detection, and all at once he would rise nearly in our midst, and scream out, “Ha, ha! Come, come! Dash on, dash on!” This being his mode of attack, it was never safe to stop a single minute. His comings were like a thief in the night. He appeared to us as being ever at hand. He was under every tree, behind every stump, in every bush, and at every window, on the plantation. He would sometimes mount his horse, as if bound to St. Michael’s, a distance of seven miles, and in half an hour afterwards you would see him coiled up in the corner of the wood-fence, watching every motion of the slaves. He would, for this purpose, leave his horse tied up in the woods. Again, he would sometimes walk up to us, and give us orders as though he was upon the point of starting on a long journey, turn his back upon us, and make as though he was going to the house to get ready; and, before he would get half way thither, he would turn short and crawl into a fence-corner, or behind some tree, and there watch us till the going down of the sun.

Mr. Covey’s _forte_ consisted in his power to deceive. His life was devoted to planning and perpetrating the grossest deceptions. Every thing he possessed in the shape of learning or religion, he made conform to his disposition to deceive. He seemed to think himself equal to deceiving the Almighty. He would make a short prayer in the morning, and a long prayer at night; and, strange as it may seem, few men would at times appear more devotional than he. The exercises of his family devotions were always commenced with singing; and, as he was a very poor singer himself, the duty of raising the hymn generally came upon me. He would read his hymn, and nod at me to commence. I would at times do so; at others, I would not. My non-compliance would almost always produce much confusion. To show himself independent of me, he would start and stagger through with his hymn in the most discordant manner. In this state of mind, he prayed with more than ordinary spirit. Poor man! such was his disposition, and success at deceiving, I do verily believe that he sometimes deceived himself into the solemn belief, that he was a sincere worshipper of the most high God; and this, too, at a time when he may be said to have been guilty of compelling his woman slave to commit the sin of adultery. The facts in the case are these: Mr. Covey was a poor man; he was just commencing in life; he was only able to buy one slave; and, shocking as is the fact, he bought her, as he said, for _a breeder_. This woman was named Caroline. Mr. Covey bought her from Mr. Thomas Lowe, about six miles from St. Michael’s. She was a large, able-bodied woman, about twenty years old. She had already given birth to one child, which proved her to be just what he wanted. After buying her, he hired a married man of Mr. Samuel Harrison, to live with him one year; and him he used to fasten up with her every night! The result was, that, at the end of the year, the miserable woman gave birth to twins. At this result Mr. Covey seemed to be highly pleased, both with the man and the wretched woman. Such was his joy, and that of his wife, that nothing they could do for Caroline during her confinement was too good, or too hard, to be done. The children were regarded as being quite an addition to his wealth.

If at any one time of my life more than another, I was made to drink the bitterest dregs of slavery, that time was during the first six months of my stay with Mr. Covey. We were worked in all weathers. It was never too hot or too cold; it could never rain, blow, hail, or snow, too hard for us to work in the field. Work, work, work, was scarcely more the order of the day than of the night. The longest days were too short for him, and the shortest nights too long for him. I was somewhat unmanageable when I first went there, but a few months of this discipline tamed me. Mr. Covey succeeded in breaking me. I was broken in body, soul, and spirit. My natural elasticity was crushed, my intellect languished, the disposition to read departed, the cheerful spark that lingered about my eye died; the dark night of slavery closed in upon me; and behold a man transformed into a brute!

Sunday was my only leisure time. I spent this in a sort of beast-like stupor, between sleep and wake, under some large tree. At times I would rise up, a flash of energetic freedom would dart through my soul, accompanied with a faint beam of hope, that flickered for a moment, and then vanished. I sank down again, mourning over my wretched condition. I was sometimes prompted to take my life, and that of Covey, but was prevented by a combination of hope and fear. My sufferings on this plantation seem now like a dream rather than a stern reality.

Our house stood within a few rods of the Chesapeake Bay, whose broad bosom was ever white with sails from every quarter of the habitable globe. Those beautiful vessels, robed in purest white, so delightful to the eye of freemen, were to me so many shrouded ghosts, to terrify and torment me with thoughts of my wretched condition. I have often, in the deep stillness of a summer’s Sabbath,

stood all alone upon the lofty banks of that noble bay, and traced, with saddened heart and tearful eye, the countless number of sails moving off to the mighty ocean. The sight of these always affected me powerfully. My thoughts would compel utterance; and there, with no audience but the Almighty, I would pour out my soul's complaint, in my rude way, with an apostrophe to the moving multitude of ships:—

"You are loosed from your moorings, and are free; I am fast in my chains, and am a slave! You move merrily before the gentle gale, and I sadly before the bloody whip! You are freedom's swift-winged angels, that fly round the world; I am confined in bands of iron! O that I were free! O, that I were on one of your gallant decks, and under your protecting wing! Alas! betwixt me and you, the turbid waters roll. Go on, go on. O that I could also go! Could I but swim! If I could fly! O, why was I born a man, of whom to make a brute! The glad ship is gone; she hides in the dim distance. I am left in the hottest hell of unending slavery. O God, save me! God, deliver me! Let me be free! Is there any God? Why am I a slave? I will run away. I will not stand it. Get caught, or get clear, I'll try it. I had as well die with ague as the fever. I have only one life to lose. I had as well be killed running as die standing. Only think of it; one hundred miles straight north, and I am free! Try it? Yes! God helping me, I will. It cannot be that I shall live and die a slave. I will take to the water. This very bay shall yet bear me into freedom. The steamboats steered in a north-east course from North Point. I will do the same; and when I get to the head of the bay, I will turn my canoe adrift, and walk straight through Delaware into Pennsylvania. When I get there, I shall not be required to have a pass; I can travel without being disturbed. Let but the first opportunity offer, and, come what will, I am off. Meanwhile, I will try to bear up under the yoke. I am not the only slave in the world. Why should I fret? I can bear as much as any of them. Besides, I am but a boy, and all boys are bound to some one. It may be that my misery in slavery will only increase my happiness when I get free. There is a better day coming."

Thus I used to think, and thus I used to speak to myself; goaded almost to madness at one moment, and at the next reconciling myself to my wretched lot.

I have already intimated that my condition was much worse, during the first six months of my stay at Mr. Covey's, than in the last six. The circumstances leading to the change in Mr. Covey's course toward me form an epoch in my humble history. You have seen how a man was made a slave; you shall see how a slave was made a man. On one of the hottest days of the month of August, 1833, Bill Smith, William Hughes, a slave named Eli, and myself, were engaged in fanning wheat. Hughes was clearing the fanned wheat from before the fan. Eli was turning, Smith was feeding, and I was carrying wheat to the fan. The work was simple, requiring strength rather than intellect; yet, to one entirely unused to such work, it came very hard. About three o'clock of that day, I broke down; my strength failed me; I was seized with a violent aching of the head, attended with extreme dizziness; I trembled in every limb. Finding what was coming, I nerved myself up, feeling it would never do to stop work. I stood as long as I could stagger to the hopper with grain. When I could stand no longer, I fell, and felt as if held down by an immense weight. The fan of course stopped; every one had his own work to do; and no one could do the work of the other, and have his own go on at the same time.

Mr. Covey was at the house, about one hundred yards from the treading-yard where we were fanning. On hearing the fan stop, he left immediately, and came to the spot where we were. He hastily inquired what the matter was. Bill answered that I was sick, and there was no one to bring wheat to the fan. I had by this time crawled away under the side of the post and rail-fence by which the yard was enclosed, hoping to find relief by getting out of the sun. He then asked where I was. He was told by one of the hands. He came to the spot, and, after looking at me awhile, asked me what was the matter. I told him as well as I could, for I scarce had strength to speak. He then gave me a savage kick in the side, and told me to get up. I tried to do so, but fell back in the attempt. He gave me another kick, and again told me to rise. I again tried, and succeeded in gaining my feet; but, stooping to get the tub with which I was feeding the fan, I again staggered and fell. While down in this situation, Mr. Covey took up the hickory slat with which Hughes had been striking off the half-bushel measure, and with it gave me a heavy blow upon the head, making a large wound, and the blood ran freely; and with this again told me to get up. I made no effort to comply, having now made up my mind to let him do his worst. In a short time after receiving this blow, my head grew better. Mr. Covey had now left me to my fate. At this moment I resolved, for the first time, to go to my master, enter a complaint, and ask his protection. In order to do this, I must that afternoon walk seven miles; and this, under the circumstances, was truly a severe undertaking. I was exceedingly feeble; made so as much by the kicks and blows which I received, as by the severe fit of sickness to which I had been subjected. I, however, watched my chance, while Covey was looking in an opposite direction, and started for St. Michael's. I succeeded in getting a considerable distance on my way to the woods, when Covey discovered me, and called after me to come back, threatening what he would do if I did not come. I disregarded both his calls and his threats, and made my way to the woods as fast as my feeble state would allow; and thinking I might be overhauled by him if I kept the road, I walked through the woods, keeping far enough from the road to avoid detection, and near enough to prevent losing my way. I had not gone far before my little strength again failed me. I could go no

farther. I fell down, and lay for a considerable time. The blood was yet oozing from the wound on my head. For a time I thought I should bleed to death; and think now that I should have done so, but that the blood so matted my hair as to stop the wound. After lying there about three quarters of an hour, I nerved myself up again, and started on my way, through bogs and briers, barefooted and bareheaded, tearing my feet sometimes at nearly every step; and after a journey of about seven miles, occupying some five hours to perform it, I arrived at master's store. I then presented an appearance enough to affect any but a heart of iron. From the crown of my head to my feet, I was covered with blood. My hair was all clotted with dust and blood; my shirt was stiff with blood. I suppose I looked like a man who had escaped a den of wild beasts, and barely escaped them. In this state I appeared before my master, humbly entreating him to interpose his authority for my protection. I told him all the circumstances as well as I could, and it seemed, as I spoke, at times to affect him. He would then walk the floor, and seek to justify Covey by saying he expected I deserved it. He asked me what I wanted. I told him, to let me get a new home; that as sure as I lived with Mr. Covey again, I should live with but to die with him; that Covey would surely kill me; he was in a fair way for it. Master Thomas ridiculed the idea that there was any danger of Mr. Covey's killing me, and said that he knew Mr. Covey; that he was a good man, and that he could not think of taking me from him; that, should he do so, he would lose the whole year's wages; that I belonged to Mr. Covey for one year, and that I must go back to him, come what might; and that I must not trouble him with any more stories, or that he would himself _get hold of me_. After threatening me thus, he gave me a very large dose of salts, telling me that I might remain in St. Michael's that night, (it being quite late,) but that I must be off back to Mr. Covey's early in the morning; and that if I did not, he would _get hold of me,_ which meant that he would whip me. I remained all night, and, according to his orders, I started off to Covey's in the morning, (Saturday morning,) wearied in body and broken in spirit. I got no supper that night, or breakfast that morning. I reached Covey's about nine o'clock; and just as I was getting over the fence that divided Mrs. Kemp's fields from ours, out ran Covey with his cowskin, to give me another whipping. Before he could reach me, I succeeded in getting to the cornfield; and as the corn was very high, it afforded me the means of hiding. He seemed very angry, and searched for me a long time. My behavior was altogether unaccountable. He finally gave up the chase, thinking, I suppose, that I must come home for something to eat; he would give himself no further trouble in looking for me. I spent that day mostly in the woods, having the alternative before me,—to go home and be whipped to death, or stay in the woods and be starved to death. That night, I fell in with Sandy Jenkins, a slave with whom I was somewhat acquainted. Sandy had a free wife who lived about four miles from Mr. Covey's; and it being Saturday, he was on his way to see her. I told him my circumstances, and he very kindly invited me to go home with him. I went home with him, and talked this whole matter over, and got his advice as to what course it was best for me to pursue. I found Sandy an old adviser. He told me, with great solemnity, I must go back to Covey; but that before I went, I must go with him into another part of the woods, where there was a certain _root,_ which, if I would take some of it with me, carrying it _always on my right side,_ would render it impossible for Mr. Covey, or any other white man, to whip me. He said he had carried it for years; and since he had done so, he had never received a blow, and never expected to while he carried it. I at first rejected the idea, that the simple carrying of a root in my pocket would have any such effect as he had said, and was not disposed to take it; but Sandy impressed the necessity with much earnestness, telling me it could do no harm, if it did no good. To please him, I at length took the root, and, according to his direction, carried it upon my right side. This was Sunday morning. I immediately started for home; and upon entering the yard gate, out came Mr. Covey on his way to meeting. He spoke to me very kindly, bade me drive the pigs from a lot near by, and passed on towards the church. Now, this singular conduct of Mr. Covey really made me begin to think that there was something in the _root_ which Sandy had given me; and had it been on any other day than Sunday, I could have attributed the conduct to no other cause than the influence of that root; and as it was, I was half inclined to think the _root_ to be something more than I at first had taken it to be. All went well till Monday morning. On this morning, the virtue of the _root_ was fully tested. Long before daylight, I was called to go and rub, curry, and feed, the horses. I obeyed, and was glad to obey. But whilst thus engaged, whilst in the act of throwing down some blades from the loft, Mr. Covey entered the stable with a long rope; and just as I was half out of the loft, he caught hold of my legs, and was about tying me. As soon as I found what he was up to, I gave a sudden spring, and as I did so, he holding to my legs, I was brought sprawling on the stable floor. Mr. Covey seemed now to think he had me, and could do what he pleased; but at this moment—from whence came the spirit I don't know—I resolved to fight; and, suiting my action to the resolution, I seized Covey hard by the throat; and as I did so, I rose. He held on to me, and I to him. My resistance was so entirely unexpected that Covey seemed taken all aback. He trembled like a leaf. This gave me assurance, and I held him uneasy, causing the blood to run where I touched him with the ends of my fingers. Mr. Covey soon called out to Hughes for help. Hughes came, and, while Covey held me, attempted to tie my right hand. While he was in the act of doing so, I watched my chance, and gave him a heavy kick close under the ribs. This kick fairly sickened Hughes, so that he left me in the hands of Mr. Covey. This kick had the effect of not only weakening Hughes, but Covey also. When he saw Hughes bending over with pain, his courage quailed. He asked me if I meant to persist in my resistance. I told him I did, come what might; that he had used me like a brute for six months, and that I was

determined to be used so no longer. With that, he strove to drag me to a stick that was lying just out of the stable door. He meant to knock me down. But just as he was leaning over to get the stick, I seized him with both hands by his collar, and brought him by a sudden snatch to the ground. By this time, Bill came. Covey called upon him for assistance. Bill wanted to know what he could do. Covey said, “Take hold of him, take hold of him!” Bill said his master hired him out to work, and not to help to whip me; so he left Covey and myself to fight our own battle out. We were at it for nearly two hours. Covey at length let me go, puffing and blowing at a great rate, saying that if I had not resisted, he would not have whipped me half so much. The truth was, that he had not whipped me at all. I considered him as getting entirely the worst end of the bargain; for he had drawn no blood from me, but I had from him. The whole six months afterwards, that I spent with Mr. Covey, he never laid the weight of his finger upon me in anger. He would occasionally say, he didn’t want to get hold of me again. “No,” thought I, “you need not; for you will come off worse than you did before.”

This battle with Mr. Covey was the turning-point in my career as a slave. It rekindled the few expiring embers of freedom, and revived within me a sense of my own manhood. It recalled the departed self-confidence, and inspired me again with a determination to be free. The gratification afforded by the triumph was a full compensation for whatever else might follow, even death itself. He only can understand the deep satisfaction which I experienced, who has himself repelled by force the bloody arm of slavery. I felt as I never felt before. It was a glorious resurrection, from the tomb of slavery, to the heaven of freedom. My long-crushed spirit rose, cowardice departed, bold defiance took its place; and I now resolved that, however long I might remain a slave in form, the day had passed forever when I could be a slave in fact. I did not hesitate to let it be known of me, that the white man who expected to succeed in whipping, must also succeed in killing me.

From this time I was never again what might be called fairly whipped, though I remained a slave four years afterwards. I had several fights, but was never whipped.

It was for a long time a matter of surprise to me why Mr. Covey did not immediately have me taken by the constable to the whipping-post, and there regularly whipped for the crime of raising my hand against a white man in defence of myself. And the only explanation I can now think of does not entirely satisfy me; but such as it is, I will give it. Mr. Covey enjoyed the most unbounded reputation for being a first-rate overseer and negro-breaker. It was of considerable importance to him. That reputation was at stake; and had he sent me—a boy about sixteen years old—to the public whipping-post, his reputation would have been lost; so, to save his reputation, he suffered me to go unpunished.

My term of actual service to Mr. Edward Covey ended on Christmas day, 1833. The days between Christmas and New Year’s day are allowed as holidays; and, accordingly, we were not required to perform any labor, more than to feed and take care of the stock. This time we regarded as our own, by the grace of our masters; and we therefore used or abused it nearly as we pleased. Those of us who had families at a distance, were generally allowed to spend the whole six days in their society. This time, however, was spent in various ways. The staid, sober, thinking and industrious ones of our number would employ themselves in making corn-brooms, mats, horse-collars, and baskets; and another class of us would spend the time in hunting opossums, hares, and coons. But by far the larger part engaged in such sports and merriments as playing ball, wrestling, running foot-races, fiddling, dancing, and drinking whisky; and this latter mode of spending the time was by far the most agreeable to the feelings of our masters. A slave who would work during the holidays was considered by our masters as scarcely deserving them. He was regarded as one who rejected the favor of his master. It was deemed a disgrace not to get drunk at Christmas; and he was regarded as lazy indeed, who had not provided himself with the necessary means, during the year, to get whisky enough to last him through Christmas.

From what I know of the effect of these holidays upon the slave, I believe them to be among the most effective means in the hands of the slaveholder in keeping down the spirit of insurrection. Were the slaveholders at once to abandon this practice, I have not the slightest doubt it would lead to an immediate insurrection among the slaves. These holidays serve as conductors, or safety-valves, to carry off the rebellious spirit of enslaved humanity. But for these, the slave would be forced up to the wildest desperation; and woe betide the slaveholder, the day he ventures to remove or hinder the operation of those conductors! I warn him that, in such an event, a spirit will go forth in their midst, more to be dreaded than the most appalling earthquake.

The holidays are part and parcel of the gross fraud, wrong, and inhumanity of slavery. They are professedly a custom established by the benevolence of the slaveholders; but I undertake to say, it is the result of selfishness, and one of the grossest frauds committed upon the down-trodden slave. They do not give the slaves this time because they would not like to have their work during its continuance, but because they know it would be unsafe to deprive them of it. This will be seen by the fact, that the

slaveholders like to have their slaves spend those days just in such a manner as to make them as glad of their ending as of their beginning. Their object seems to be, to disgust their slaves with freedom, by plunging them into the lowest depths of dissipation. For instance, the slaveholders not only like to see the slave drink of his own accord, but will adopt various plans to make him drunk. One plan is, to make bets on their slaves, as to who can drink the most whisky without getting drunk; and in this way they succeed in getting whole multitudes to drink to excess. Thus, when the slave asks for virtuous freedom, the cunning slaveholder, knowing his ignorance, cheats him with a dose of vicious dissipation, artfully labelled with the name of liberty. The most of us used to drink it down, and the result was just what might be supposed; many of us were led to think that there was little to choose between liberty and slavery. We felt, and very properly too, that we had almost as well be slaves to man as to rum. So, when the holidays ended, we staggered up from the filth of our wallowing, took a long breath, and marched to the field,—feeling, upon the whole, rather glad to go, from what our master had deceived us into a belief was freedom, back to the arms of slavery.

I have said that this mode of treatment is a part of the whole system of fraud and inhumanity of slavery. It is so. The mode here adopted to disgust the slave with freedom, by allowing him to see only the abuse of it, is carried out in other things. For instance, a slave loves molasses; he steals some. His master, in many cases, goes off to town, and buys a large quantity; he returns, takes his whip, and commands the slave to eat the molasses, until the poor fellow is made sick at the very mention of it. The same mode is sometimes adopted to make the slaves refrain from asking for more food than their regular allowance. A slave runs through his allowance, and applies for more. His master is enraged at him; but, not willing to send him off without food, gives him more than is necessary, and compels him to eat it within a given time. Then, if he complains that he cannot eat it, he is said to be satisfied neither full nor fasting, and is whipped for being hard to please! I have an abundance of such illustrations of the same principle, drawn from my own observation, but think the cases I have cited sufficient. The practice is a very common one.

On the first of January, 1834, I left Mr. Covey, and went to live with Mr. William Freeland, who lived about three miles from St. Michael's. I soon found Mr. Freeland a very different man from Mr. Covey. Though not rich, he was what would be called an educated southern gentleman. Mr. Covey, as I have shown, was a well-trained negro-breaker and slave-driver. The former (slaveholder though he was) seemed to possess some regard for honor, some reverence for justice, and some respect for humanity. The latter seemed totally insensible to all such sentiments. Mr. Freeland had many of the faults peculiar to slaveholders, such as being very passionate and fretful; but I must do him the justice to say, that he was exceedingly free from those degrading vices to which Mr. Covey was constantly addicted. The one was open and frank, and we always knew where to find him. The other was a most artful deceiver, and could be understood only by such as were skilful enough to detect his cunningly-devised frauds. Another advantage I gained in my new master was, he made no pretensions to, or profession of, religion; and this, in my opinion, was truly a great advantage. I assert most unhesitatingly, that the religion of the south is a mere covering for the most horrid crimes,—a justifier of the most appalling barbarity,—a sanctifier of the most hateful frauds,—and a dark shelter under, which the darkest, foulest, grossest, and most infernal deeds of slaveholders find the strongest protection. Were I to be again reduced to the chains of slavery, next to that enslavement, I should regard being the slave of a religious master the greatest calamity that could befall me. For of all slaveholders with whom I have ever met, religious slaveholders are the worst. I have ever found them the meanest and basest, the most cruel and cowardly, of all others. It was my unhappy lot not only to belong to a religious slaveholder, but to live in a community of such religionists. Very near Mr. Freeland lived the Rev. Daniel Weeden, and in the same neighborhood lived the Rev. Rigby Hopkins. These were members and ministers in the Reformed Methodist Church. Mr. Weeden owned, among others, a woman slave, whose name I have forgotten. This woman's back, for weeks, was kept literally raw, made so by the lash of this merciless, _religious_ wretch. He used to hire hands. His maxim was, Behave well or behave ill, it is the duty of a master occasionally to whip a slave, to remind him of his master's authority. Such was his theory, and such his practice.

Mr. Hopkins was even worse than Mr. Weeden. His chief boast was his ability to manage slaves. The peculiar feature of his government was that of whipping slaves in advance of deserving it. He always managed to have one or more of his slaves to whip every Monday morning. He did this to alarm their fears, and strike terror into those who escaped. His plan was to whip for the smallest offences, to prevent the commission of large ones. Mr. Hopkins could always find some excuse for whipping a slave. It would astonish one, unaccustomed to a slaveholding life, to see with what wonderful ease a slaveholder can find things, of which to make occasion to whip a slave. A mere look, word, or motion,—a mistake, accident, or want of power,—are all matters for which a slave may be whipped at any time. Does a slave look dissatisfied? It is said, he has the devil in him, and it must be whipped out. Does he speak loudly when spoken to by his master? Then he is getting high-minded, and should be taken down a button-hole lower. Does he forget to pull off his hat at the approach of a white person? Then he is wanting in reverence, and should be whipped for it. Does he ever venture to vindicate his conduct, when censured for it? Then he is guilty of impudence,—one of the greatest crimes of which a slave can be guilty. Does he ever venture to suggest a different mode of doing things from that pointed out by his

master? He is indeed presumptuous, and getting above himself; and nothing less than a flogging will do for him. Does he, while ploughing, break a plough,—or, while hoeing, break a hoe? It is owing to his carelessness, and for it a slave must always be whipped. Mr. Hopkins could always find something of this sort to justify the use of the lash, and he seldom failed to embrace such opportunities. There was not a man in the whole county, with whom the slaves who had the getting their own home, would not prefer to live, rather than with this Rev. Mr. Hopkins. And yet there was not a man any where round, who made higher professions of religion, or was more active in revivals,—more attentive to the class, love-feast, prayer and preaching meetings, or more devotional in his family,—that prayed earlier, later, louder, and longer,—than this same reverend slave-driver, Rigby Hopkins.

But to return to Mr. Freeland, and to my experience while in his employment. He, like Mr. Covey, gave us enough to eat; but, unlike Mr. Covey, he also gave us sufficient time to take our meals. He worked us hard, but always between sunrise and sunset. He required a good deal of work to be done, but gave us good tools with which to work. His farm was large, but he employed hands enough to work it, and with ease, compared with many of his neighbors. My treatment, while in his employment, was heavenly, compared with what I experienced at the hands of Mr. Edward Covey.

Mr. Freeland was himself the owner of but two slaves. Their names were Henry Harris and John Harris. The rest of his hands he hired. These consisted of myself, Sandy Jenkins,[1] and Handy Caldwell.

[1] This is the same man who gave me the roots to prevent my being whipped by Mr. Covey. He was “a clever soul.” We used frequently to talk about the fight with Covey, and as often as we did so, he would claim my success as the result of the roots which he gave me. This superstition is very common among the more ignorant slaves. A slave seldom dies but that his death is attributed to trickery.

Henry and John were quite intelligent, and in a very little while after I went there, I succeeded in creating in them a strong desire to learn how to read. This desire soon sprang up in the others also. They very soon mustered up some old spelling-books, and nothing would do but that I must keep a Sabbath school. I agreed to do so, and accordingly devoted my Sundays to teaching these my loved fellow-slaves how to read. Neither of them knew his letters when I went there. Some of the slaves of the neighboring farms found what was going on, and also availed themselves of this little opportunity to learn to read. It was understood, among all who came, that there must be as little display about it as possible. It was necessary to keep our religious masters at St. Michael’s unacquainted with the fact, that, instead of spending the Sabbath in wrestling, boxing, and drinking whisky, we were trying to learn how to read the will of God; for they had much rather see us engaged in those degrading sports, than to see us behaving like intellectual, moral, and accountable beings. My blood boils as I think of the bloody manner in which Messrs. Wright Fairbanks and Garrison West, both class-leaders, in connection with many others, rushed in upon us with sticks and stones, and broke up our virtuous little Sabbath school, at St. Michael’s—all calling themselves Christians! humble followers of the Lord Jesus Christ! But I am again digressing.

I held my Sabbath school at the house of a free colored man, whose name I deem it imprudent to mention; for should it be known, it might embarrass him greatly, though the crime of holding the school was committed ten years ago. I had at one time over forty scholars, and those of the right sort, ardently desiring to learn. They were of all ages, though mostly men and women. I look back to those Sundays with an amount of pleasure not to be expressed. They were great days to my soul. The work of instructing my dear fellow-slaves was the sweetest engagement with which I was ever blessed. We loved each other, and to leave them at the close of the Sabbath was a severe cross indeed. When I think that these precious souls are to-day shut up in the prison-house of slavery, my feelings overcome me, and I am almost ready to ask, “Does a righteous God govern the universe? and for what does he hold the thunders in his right hand, if not to smite the oppressor, and deliver the spoiled out of the hand of the spoiler?” These dear souls came not to Sabbath school because it was popular to do so, nor did I teach them because it was reputable to be thus engaged. Every moment they spent in that school, they were liable to be taken up, and given thirty-nine lashes. They came because they wished to learn. Their minds had been starved by their cruel masters. They had been shut up in mental darkness. I taught them, because it was the delight of my soul to be doing something that looked like bettering the condition of my race. I kept up my school nearly the whole year I lived with Mr. Freeland; and, beside my Sabbath school, I devoted three evenings in the week, during the winter, to teaching the slaves at home. And I have the happiness to know, that several of those who came to Sabbath school learned how to read; and that one, at least, is now free through my agency.

The year passed off smoothly. It seemed only about half as long as the year which preceded it. I went through it without receiving a single blow. I will give Mr. Freeland the credit of being the best master I ever had, _till I became my own master._ For the ease with which I passed the year, I was, however, somewhat indebted to the society of my fellow-slaves. They were noble souls; they not

only possessed loving hearts, but brave ones. We were linked and interlinked with each other. I loved them with a love stronger than any thing I have experienced since. It is sometimes said that we slaves do not love and confide in each other. In answer to this assertion, I can say, I never loved any or confided in any people more than my fellow-slaves, and especially those with whom I lived at Mr. Freeland's. I believe we would have died for each other. We never undertook to do any thing, of any importance, without a mutual consultation. We never moved separately. We were one; and as much so by our tempers and dispositions, as by the mutual hardships to which we were necessarily subjected by our condition as slaves.

At the close of the year 1834, Mr. Freeland again hired me of my master, for the year 1835. But, by this time, I began to want to live _upon free land_ as well as _with Freeland;_ and I was no longer content, therefore, to live with him or any other slaveholder. I began, with the commencement of the year, to prepare myself for a final struggle, which should decide my fate one way or the other. My tendency was upward. I was fast approaching manhood, and year after year had passed, and I was still a slave. These thoughts roused me—I must do something. I therefore resolved that 1835 should not pass without witnessing an attempt, on my part, to secure my liberty. But I was not willing to cherish this determination alone. My fellow-slaves were dear to me. I was anxious to have them participate with me in this, my life-giving determination. I therefore, though with great prudence, commenced early to ascertain their views and feelings in regard to their condition, and to imbue their minds with thoughts of freedom. I bent myself to devising ways and means for our escape, and meanwhile strove, on all fitting occasions, to impress them with the gross fraud and inhumanity of slavery. I went first to Henry, next to John, then to the others. I found, in them all, warm hearts and noble spirits. They were ready to hear, and ready to act when a feasible plan should be proposed. This was what I wanted. I talked to them of our want of manhood, if we submitted to our enslavement without at least one noble effort to be free. We met often, and consulted frequently, and told our hopes and fears, recounted the difficulties, real and imagined, which we should be called on to meet. At times we were almost disposed to give up, and try to content ourselves with our wretched lot; at others, we were firm and unbending in our determination to go. Whenever we suggested any plan, there was shrinking—the odds were fearful. Our path was beset with the greatest obstacles; and if we succeeded in gaining the end of it, our right to be free was yet questionable—we were yet liable to be returned to bondage. We could see no spot, this side of the ocean, where we could be free. We knew nothing about Canada. Our knowledge of the north did not extend farther than New York; and to go there, and be forever harassed with the frightful liability of being returned to slavery—with the certainty of being treated tenfold worse than before—the thought was truly a horrible one, and one which it was not easy to overcome. The case sometimes stood thus: At every gate through which we were to pass, we saw a watchman—at every ferry a guard—on every bridge a sentinel—and in every wood a patrol. We were hemmed in upon every side. Here were the difficulties, real or imagined—the good to be sought, and the evil to be shunned. On the one hand, there stood slavery, a stern reality, glaring frightfully upon us,—its robes already crimsoned with the blood of millions, and even now feasting itself greedily upon our own flesh. On the other hand, away back in the dim distance, under the flickering light of the north star, behind some craggy hill or snow-covered mountain, stood a doubtful freedom—half frozen—beckoning us to come and share its hospitality. This in itself was sometimes enough to stagger us; but when we permitted ourselves to survey the road, we were frequently appalled. Upon either side we saw grim death, assuming the most horrid shapes. Now it was starvation, causing us to eat our own flesh;—now we were contending with the waves, and were drowned;—now we were overtaken, and torn to pieces by the fangs of the terrible bloodhound. We were stung by scorpions, chased by wild beasts, bitten by snakes, and finally, after having nearly reached the desired spot,—after swimming rivers, encountering wild beasts, sleeping in the woods, suffering hunger and nakedness,—we were overtaken by our pursuers, and, in our resistance, we were shot dead upon the spot! I say, this picture sometimes appalled us, and made us

"rather bear those ills we had, Than fly to others, that we knew not of."

In coming to a fixed determination to run away, we did more than Patrick Henry, when he resolved upon liberty or death. With us it was a doubtful liberty at most, and almost certain death if we failed. For my part, I should prefer death to hopeless bondage.

Sandy, one of our number, gave up the notion, but still encouraged us. Our company then consisted of Henry Harris, John Harris, Henry Bailey, Charles Roberts, and myself. Henry Bailey was my uncle, and belonged to my master. Charles married my aunt: he belonged to my master's father-in-law, Mr. William Hamilton.

The plan we finally concluded upon was, to get a large canoe belonging to Mr. Hamilton, and upon the Saturday night previous to Easter holidays, paddle directly up the Chesapeake Bay. On our arrival at the head of the bay, a distance of seventy or eighty miles from where we lived, it was our purpose to turn our canoe adrift, and follow the guidance of the north star till we got beyond the limits of Maryland. Our reason for taking the water route was, that we were less liable to be suspected as runaways; we hoped to

be regarded as fishermen; whereas, if we should take the land route, we should be subjected to interruptions of almost every kind. Any one having a white face, and being so disposed, could stop us, and subject us to examination.

The week before our intended start, I wrote several protections, one for each of us. As well as I can remember, they were in the following words, to wit:—

“This is to certify that I, the undersigned, have given the bearer, my servant, full liberty to go to Baltimore, and spend the Easter holidays. Written with mine own hand, &c., 1835.

“WILLIAM HAMILTON, “Near St. Michael’s, in Talbot county, Maryland.”

We were not going to Baltimore; but, in going up the bay, we went toward Baltimore, and these protections were only intended to protect us while on the bay.

As the time drew near for our departure, our anxiety became more and more intense. It was truly a matter of life and death with us. The strength of our determination was about to be fully tested. At this time, I was very active in explaining every difficulty, removing every doubt, dispelling every fear, and inspiring all with the firmness indispensable to success in our undertaking; assuring them that half was gained the instant we made the move; we had talked long enough; we were now ready to move; if not now, we never should be; and if we did not intend to move now, we had as well fold our arms, sit down, and acknowledge ourselves fit only to be slaves. This, none of us were prepared to acknowledge. Every man stood firm; and at our last meeting, we pledged ourselves afresh, in the most solemn manner, that, at the time appointed, we would certainly start in pursuit of freedom. This was in the middle of the week, at the end of which we were to be off. We went, as usual, to our several fields of labor, but with bosoms highly agitated with thoughts of our truly hazardous undertaking. We tried to conceal our feelings as much as possible; and I think we succeeded very well.

After a painful waiting, the Saturday morning, whose night was to witness our departure, came. I hailed it with joy, bring what of sadness it might. Friday night was a sleepless one for me. I probably felt more anxious than the rest, because I was, by common consent, at the head of the whole affair. The responsibility of success or failure lay heavily upon me. The glory of the one, and the confusion of the other, were alike mine. The first two hours of that morning were such as I never experienced before, and hope never to again. Early in the morning, we went, as usual, to the field. We were spreading manure; and all at once, while thus engaged, I was overwhelmed with an indescribable feeling, in the fulness of which I turned to Sandy, who was near by, and said, “We are betrayed!” “Well,” said he, “that thought has this moment struck me.” We said no more. I was never more certain of any thing.

The horn was blown as usual, and we went up from the field to the house for breakfast. I went for the form, more than for want of any thing to eat that morning. Just as I got to the house, in looking out at the lane gate, I saw four white men, with two colored men. The white men were on horseback, and the colored ones were walking behind, as if tied. I watched them a few moments till they got up to our lane gate. Here they halted, and tied the colored men to the gate-post. I was not yet certain as to what the matter was. In a few moments, in rode Mr. Hamilton, with a speed betokening great excitement. He came to the door, and inquired if Master William was in. He was told he was at the barn. Mr. Hamilton, without dismounting, rode up to the barn with extraordinary speed. In a few moments, he and Mr. Freeland returned to the house. By this time, the three constables rode up, and in great haste dismounted, tied their horses, and met Master William and Mr. Hamilton returning from the barn; and after talking awhile, they all walked up to the kitchen door. There was no one in the kitchen but myself and John. Henry and Sandy were up at the barn. Mr. Freeland put his head in at the door, and called me by name, saying, there were some gentlemen at the door who wished to see me. I stepped to the door, and inquired what they wanted. They at once seized me, and, without giving me any satisfaction, tied me—lashing my hands closely together. I insisted upon knowing what the matter was. They at length said, that they had learned I had been in a “scrape,” and that I was to be examined before my master; and if their information proved false, I should not be hurt.

In a few moments, they succeeded in tying John. They then turned to Henry, who had by this time returned, and commanded him to cross his hands. “I won’t!” said Henry, in a firm tone, indicating his readiness to meet the consequences of his refusal. “Won’t you?” said Tom Graham, the constable. “No, I won’t!” said Henry, in a still stronger tone. With this, two of the constables pulled out their shining pistols, and swore, by their Creator, that they would make him cross his hands or kill him. Each cocked his pistol, and, with fingers on the trigger, walked up to Henry, saying, at the same time, if he did not cross his hands, they would blow his damned heart out. “Shoot me, shoot me!” said Henry; “you can’t kill me but once. Shoot, shoot,—and be damned! _I won’t be tied!_” This he

said in a tone of loud defiance; and at the same time, with a motion as quick as lightning, he with one single stroke dashed the pistols from the hand of each constable. As he did this, all hands fell upon him, and, after beating him some time, they finally overpowered him, and got him tied.

During the scuffle, I managed, I know not how, to get my pass out, and, without being discovered, put it into the fire. We were all now tied; and just as we were to leave for Easton jail, Betsy Freeland, mother of William Freeland, came to the door with her hands full of biscuits, and divided them between Henry and John. She then delivered herself of a speech, to the following effect:—addressing herself to me, she said, "_You devil! You yellow devil!_ it was you that put it into the heads of Henry and John to run away. But for you, you long-legged mulatto devil! Henry nor John would never have thought of such a thing." I made no reply, and was immediately hurried off towards St. Michael's. Just a moment previous to the scuffle with Henry, Mr. Hamilton suggested the propriety of making a search for the protections which he had understood Frederick had written for himself and the rest. But, just at the moment he was about carrying his proposal into effect, his aid was needed in helping to tie Henry; and the excitement attending the scuffle caused them either to forget, or to deem it unsafe, under the circumstances, to search. So we were not yet convicted of the intention to run away.

When we got about half way to St. Michael's, while the constables having us in charge were looking ahead, Henry inquired of me what he should do with his pass. I told him to eat it with his biscuit, and own nothing; and we passed the word around, "_Own nothing;_" and "_Own nothing!_" said we all. Our confidence in each other was unshaken. We were resolved to succeed or fail together, after the calamity had befallen us as much as before. We were now prepared for any thing. We were to be dragged that morning fifteen miles behind horses, and then to be placed in the Easton jail. When we reached St. Michael's, we underwent a sort of examination. We all denied that we ever intended to run away. We did this more to bring out the evidence against us, than from any hope of getting clear of being sold; for, as I have said, we were ready for that. The fact was, we cared but little where we went, so we went together. Our greatest concern was about separation. We dreaded that more than any thing this side of death. We found the evidence against us to be the testimony of one person; our master would not tell who it was; but we came to a unanimous decision among ourselves as to who their informant was. We were sent off to the jail at Easton. When we got there, we were delivered up to the sheriff, Mr. Joseph Graham, and by him placed in jail. Henry, John, and myself, were placed in one room together—Charles, and Henry Bailey, in another. Their object in separating us was to hinder concert.

We had been in jail scarcely twenty minutes, when a swarm of slave traders, and agents for slave traders, flocked into jail to look at us, and to ascertain if we were for sale. Such a set of beings I never saw before! I felt myself surrounded by so many fiends from perdition. A band of pirates never looked more like their father, the devil. They laughed and grinned over us, saying, "Ah, my boys! we have got you, haven't we?" And after taunting us in various ways, they one by one went into an examination of us, with intent to ascertain our value. They would impudently ask us if we would not like to have them for our masters. We would make them no answer, and leave them to find out as best they could. Then they would curse and swear at us, telling us that they could take the devil out of us in a very little while, if we were only in their hands.

While in jail, we found ourselves in much more comfortable quarters than we expected when we went there. We did not get much to eat, nor that which was very good; but we had a good clean room, from the windows of which we could see what was going on in the street, which was very much better than though we had been placed in one of the dark, damp cells. Upon the whole, we got along very well, so far as the jail and its keeper were concerned. Immediately after the holidays were over, contrary to all our expectations, Mr. Hamilton and Mr. Freeland came up to Easton, and took Charles, the two Henrys, and John, out of jail, and carried them home, leaving me alone. I regarded this separation as a final one. It caused me more pain than any thing else in the whole transaction. I was ready for any thing rather than separation. I supposed that they had consulted together, and had decided that, as I was the whole cause of the intention of the others to run away, it was hard to make the innocent suffer with the guilty; and that they had, therefore, concluded to take the others home, and sell me, as a warning to the others that remained. It is due to the noble Henry to say, he seemed almost as reluctant at leaving the prison as at leaving home to come to the prison. But we knew we should, in all probability, be separated, if we were sold; and since he was in their hands, he concluded to go peaceably home.

I was now left to my fate. I was all alone, and within the walls of a stone prison. But a few days before, and I was full of hope. I expected to have been safe in a land of freedom; but now I was covered with gloom, sunk down to the utmost despair. I thought the possibility of freedom was gone. I was kept in this way about one week, at the end of which, Captain Auld, my master, to my surprise and utter astonishment, came up, and took me out, with the intention of sending me, with a gentleman of his acquaintance, into Alabama. But, from some cause or other, he did not send me to Alabama, but concluded to send me back to Baltimore, to live again with his brother Hugh, and to learn a trade.

Thus, after an absence of three years and one month, I was once more permitted to return to my old home at Baltimore. My master sent me away, because there existed against me a very great prejudice in the community, and he feared I might be killed.

In a few weeks after I went to Baltimore, Master Hugh hired me to Mr. William Gardner, an extensive ship-builder, on Fell's Point. I was put there to learn how to calk. It, however, proved a very unfavorable place for the accomplishment of this object. Mr. Gardner was engaged that spring in building two large man-of-war brigs, professedly for the Mexican government. The vessels were to be launched in the July of that year, and in failure thereof, Mr. Gardner was to lose a considerable sum; so that when I entered, all was hurry. There was no time to learn any thing. Every man had to do that which he knew how to do. In entering the shipyard, my orders from Mr. Gardner were, to do whatever the carpenters commanded me to do. This was placing me at the beck and call of about seventy-five men. I was to regard all these as masters. Their word was to be my law. My situation was a most trying one. At times I needed a dozen pair of hands. I was called a dozen ways in the space of a single minute. Three or four voices would strike my ear at the same moment. It was—"Fred., come help me to cant this timber here."—"Fred., come carry this timber yonder."—"Fred., bring that roller here."—"Fred., go get a fresh can of water."—"Fred., come help saw off the end of this timber."—"Fred., go quick, and get the crowbar."—"Fred., hold on the end of this fall."—"Fred., go to the blacksmith's shop, and get a new punch."—"Hurra, Fred! run and bring me a cold chisel."—"I say, Fred., bear a hand, and get up a fire as quick as lightning under that steam-box."—"Halloo, nigger! come, turn this grindstone."—"Come, come! move, move! and _bowse_ this timber forward."—"I say, darky, blast your eyes, why don't you heat up some pitch?"—"Halloo! halloo! halloo!" (Three voices at the same time.) "Come here!—Go there!—Hold on where you are! Damn you, if you move, I'll knock your brains out!"

This was my school for eight months; and I might have remained there longer, but for a most horrid fight I had with four of the white apprentices, in which my left eye was nearly knocked out, and I was horribly mangled in other respects. The facts in the case were these: Until a very little while after I went there, white and black ship-carpenters worked side by side, and no one seemed to see any impropriety in it. All hands seemed to be very well satisfied. Many of the black carpenters were freemen. Things seemed to be going on very well. All at once, the white carpenters knocked off, and said they would not work with free colored workmen. Their reason for this, as alleged, was, that if free colored carpenters were encouraged, they would soon take the trade into their own hands, and poor white men would be thrown out of employment. They therefore felt called upon at once to put a stop to it. And, taking advantage of Mr. Gardner's necessities, they broke off, swearing they would work no longer, unless he would discharge his black carpenters. Now, though this did not extend to me in form, it did reach me in fact. My fellow-apprentices very soon began to feel it degrading to them to work with me. They began to put on airs, and talk about the "niggers" taking the country, saying we all ought to be killed; and, being encouraged by the journeymen, they commenced making my condition as hard as they could, by hectoring me around, and sometimes striking me. I, of course, kept the vow I made after the fight with Mr. Covey, and struck back again, regardless of consequences; and while I kept them from combining, I succeeded very well; for I could whip the whole of them, taking them separately. They, however, at length combined, and came upon me, armed with sticks, stones, and heavy handspikes. One came in front with a half brick. There was one at each side of me, and one behind me. While I was attending to those in front, and on either side, the one behind ran up with the handspike, and struck me a heavy blow upon the head. It stunned me. I fell, and with this they all ran upon me, and fell to beating me with their fists. I let them lay on for a while, gathering strength. In an instant, I gave a sudden surge, and rose to my hands and knees. Just as I did that, one of their number gave me, with his heavy boot, a powerful kick in the left eye. My eyeball seemed to have burst. When they saw my eye closed, and badly swollen, they left me. With this I seized the handspike, and for a time pursued them. But here the carpenters interfered, and I thought I might as well give it up. It was impossible to stand my hand against so many. All this took place in sight of not less than fifty white ship-carpenters, and not one interposed a friendly word; but some cried, "Kill the damned nigger! Kill him! kill him! He struck a white person." I found my only chance for life was in flight. I succeeded in getting away without an additional blow, and barely so; for to strike a white man is death by Lynch law,—and that was the law in Mr. Gardner's ship-yard; nor is there much of any other out of Mr. Gardner's ship-yard.

I went directly home, and told the story of my wrongs to Master Hugh; and I am happy to say of him, irreligious as he was, his conduct was heavenly, compared with that of his brother Thomas under similar circumstances. He listened attentively to my narration of the circumstances leading to the savage outrage, and gave many proofs of his strong indignation at it. The heart of my once overkind mistress was again melted into pity. My puffed-out eye and blood-covered face moved her to tears. She took a chair by me, washed the blood from my face, and, with a mother's tenderness, bound up my head, covering the wounded eye with a lean piece of fresh beef. It was almost compensation for my suffering to witness, once more, a manifestation of kindness from this, my once affectionate old mistress. Master Hugh was very much enraged. He gave expression to his feelings by pouring out curses

upon the heads of those who did the deed. As soon as I got a little the better of my bruises, he took me with him to Esquire Watson's, on Bond Street, to see what could be done about the matter. Mr. Watson inquired who saw the assault committed. Master Hugh told him it was done in Mr. Gardner's ship-yard at midday, where there were a large company of men at work. "As to that," he said, "the deed was done, and there was no question as to who did it." His answer was, he could do nothing in the case, unless some white man would come forward and testify. He could issue no warrant on my word. If I had been killed in the presence of a thousand colored people, their testimony combined would have been insufficient to have arrested one of the murderers. Master Hugh, for once, was compelled to say this state of things was too bad. Of course, it was impossible to get any white man to volunteer his testimony in my behalf, and against the white young men. Even those who may have sympathized with me were not prepared to do this. It required a degree of courage unknown to them to do so; for just at that time, the slightest manifestation of humanity toward a colored person was denounced as abolitionism, and that name subjected its bearer to frightful liabilities. The watchwords of the bloody-minded in that region, and in those days, were, "Damn the abolitionists!" and "Damn the niggers!" There was nothing done, and probably nothing would have been done if I had been killed. Such was, and such remains, the state of things in the Christian city of Baltimore.

Master Hugh, finding he could get no redress, refused to let me go back again to Mr. Gardner. He kept me himself, and his wife dressed my wound till I was again restored to health. He then took me into the ship-yard of which he was foreman, in the employment of Mr. Walter Price. There I was immediately set to calking, and very soon learned the art of using my mallet and irons. In the course of one year from the time I left Mr. Gardner's, I was able to command the highest wages given to the most experienced calkers. I was now of some importance to my master. I was bringing him from six to seven dollars per week. I sometimes brought him nine dollars per week: my wages were a dollar and a half a day. After learning how to calk, I sought my own employment, made my own contracts, and collected the money which I earned. My pathway became much more smooth than before; my condition was now much more comfortable. When I could get no calking to do, I did nothing. During these leisure times, those old notions about freedom would steal over me again. When in Mr. Gardner's employment, I was kept in such a perpetual whirl of excitement, I could think of nothing, scarcely, but my life; and in thinking of my life, I almost forgot my liberty. I have observed this in my experience of slavery,—that whenever my condition was improved, instead of its increasing my contentment, it only increased my desire to be free, and set me to thinking of plans to gain my freedom. I have found that, to make a contented slave, it is necessary to make a thoughtless one. It is necessary to darken his moral and mental vision, and, as far as possible, to annihilate the power of reason. He must be able to detect no inconsistencies in slavery; he must be made to feel that slavery is right; and he can be brought to that only when he ceases to be a man.

I was now getting, as I have said, one dollar and fifty cents per day. I contracted for it; I earned it; it was paid to me; it was rightfully my own; yet, upon each returning Saturday night, I was compelled to deliver every cent of that money to Master Hugh. And why? Not because he earned it,—not because he had any hand in earning it,—not because I owed it to him,—nor because he possessed the slightest shadow of a right to it; but solely because he had the power to compel me to give it up. The right of the grim-visaged pirate upon the high seas is exactly the same.

CHAPTER XI

I now come to that part of my life during which I planned, and finally succeeded in making, my escape from slavery. But before narrating any of the peculiar circumstances, I deem it proper to make known my intention not to state all the facts connected with the transaction. My reasons for pursuing this course may be understood from the following: First, were I to give a minute statement of all the facts, it is not only possible, but quite probable, that others would thereby be involved in the most embarrassing difficulties. Secondly, such a statement would most undoubtedly induce greater vigilance on the part of slaveholders than has existed heretofore among them; which would, of course, be the means of guarding a door whereby some dear brother bondman might escape his galling chains. I deeply regret the necessity that impels me to suppress any thing of importance connected with my experience in slavery. It would afford me great pleasure indeed, as well as materially add to the interest of my narrative, were I at liberty to gratify a curiosity, which I know exists in the minds of many, by an accurate statement of all the facts pertaining to my most fortunate escape. But I must deprive myself of this pleasure, and the curious of the gratification which such a statement would afford. I would allow myself to suffer under the greatest imputations which evil-minded men might suggest, rather than exculpate myself, and thereby run the hazard of closing the slightest avenue by which a brother slave might clear himself of the chains and fetters of slavery.

I have never approved of the very public manner in which some of our western friends have conducted what they call the _underground railroad,_ but which I think, by their open declarations, has been made most emphatically the _upperground railroad._ I honor those good men and women for their noble daring, and applaud them for willingly subjecting themselves to bloody persecution, by openly avowing their participation in the escape of slaves. I, however, can see very little good resulting from such a course, either to themselves or the slaves escaping; while, upon the other hand, I see and feel assured that those open declarations are a positive evil to the slaves remaining, who are seeking to escape. They do nothing towards enlightening the slave, whilst they do much towards enlightening the master. They stimulate him to greater watchfulness, and enhance his power to capture his slave. We owe something to the slave south of the line as well as to those north of it; and in aiding the latter on their way to freedom, we should be careful to do nothing which would be likely to hinder the former from escaping from slavery. I would keep the merciless slaveholder profoundly ignorant of the means of flight adopted by the slave. I would leave him to imagine himself surrounded by myriads of invisible tormentors, ever ready to snatch from his infernal grasp his trembling prey. Let him be left to feel his way in the dark; let darkness commensurate with his crime hover over him; and let him feel that at every step he takes, in pursuit of the flying bondman, he is running the frightful risk of having his hot brains dashed out by an invisible agency. Let us render the tyrant no aid; let us not hold the light by which he can trace the footprints of our flying brother. But enough of this. I will now proceed to the statement of those facts, connected with my escape, for which I am alone responsible, and for which no one can be made to suffer but myself.

In the early part of the year 1838, I became quite restless. I could see no reason why I should, at the end of each week, pour the reward of my toil into the purse of my master. When I carried to him my weekly wages, he would, after counting the money, look me in the face with a robber-like fierceness, and ask, “Is this all?” He was satisfied with nothing less than the last cent. He would, however, when I made him six dollars, sometimes give me six cents, to encourage me. It had the opposite effect. I regarded it as a sort of admission of my right to the whole. The fact that he gave me any part of my wages was proof, to my mind, that he believed me entitled to the whole of them. I always felt worse for having received any thing; for I feared that the giving me a few cents would ease his conscience, and make him feel himself to be a pretty honorable sort of robber. My discontent grew upon me. I was ever on the look-out for means of escape; and, finding no direct means, I determined to try to hire my time, with a view of getting money with which to make my escape. In the spring of 1838, when Master Thomas came to Baltimore to purchase his spring goods, I got an opportunity, and applied to him to allow me to hire my time. He unhesitatingly refused my request, and told me this was another stratagem by which to escape. He told me I could go nowhere but that he could get me; and that, in the event of my running away, he should spare no pains in his efforts to catch me. He exhorted me to content myself, and be obedient. He told me, if I would be happy, I must lay out no plans for the future. He said, if I behaved myself properly, he would take care of me. Indeed, he advised me to complete thoughtlessness of the future, and taught me to depend solely upon him for happiness. He seemed to see fully the pressing necessity of setting aside my intellectual nature, in order to contentment in slavery. But in spite of him, and even in spite of myself, I continued to think, and to think about the injustice of my enslavement, and the means of escape.

About two months after this, I applied to Master Hugh for the privilege of hiring my time. He was not acquainted with the fact that I had applied to Master Thomas, and had been refused. He too, at first, seemed disposed to refuse; but, after some reflection, he granted me the privilege, and proposed the following terms: I was to be allowed all my time, make all contracts with those for whom I worked, and find my own employment; and, in return for this liberty, I was to pay him three dollars at the end of each week; find myself in calking tools, and in board and clothing. My board was two dollars and a half per week. This, with the wear and tear of clothing and calking tools, made my regular expenses about six dollars per week. This amount I was compelled to make up, or relinquish the privilege of hiring my time. Rain or shine, work or no work, at the end of each week the money must be forthcoming, or I must give up my privilege. This arrangement, it will be perceived, was decidedly in my master’s favor. It relieved him of all need of looking after me. His money was sure. He received all the benefits of slaveholding without its evils; while I endured all the evils of a slave, and suffered all the care and anxiety of a freeman. I found it a hard bargain. But, hard as it was, I thought it better than the old mode of getting along. It was a step towards freedom to be allowed to bear the responsibilities of a freeman, and I was determined to hold on upon it. I bent myself to the work of making money. I was ready to work at night as well as day, and by the most untiring perseverance and industry, I made enough to meet my expenses, and lay up a little money every week. I went on thus from May till August. Master Hugh then refused to allow me to hire my time longer. The ground for his refusal was a failure on my part, one Saturday night, to pay him for my week’s time. This failure was occasioned by my attending a camp meeting about ten miles from Baltimore. During the week, I had entered into an engagement with a number of young friends to start from Baltimore to the camp ground early Saturday evening; and being detained by my employer, I was unable to get down to Master Hugh’s without disappointing the company. I knew that Master Hugh was in no special need of the money that night. I therefore decided to go to

camp meeting, and upon my return pay him the three dollars. I staid at the camp meeting one day longer than I intended when I left. But as soon as I returned, I called upon him to pay him what he considered his due. I found him very angry; he could scarce restrain his wrath. He said he had a great mind to give me a severe whipping. He wished to know how I dared go out of the city without asking his permission. I told him I hired my time and while I paid him the price which he asked for it, I did not know that I was bound to ask him when and where I should go. This reply troubled him; and, after reflecting a few moments, he turned to me, and said I should hire my time no longer; that the next thing he should know of, I would be running away. Upon the same plea, he told me to bring my tools and clothing home forthwith. I did so; but instead of seeking work, as I had been accustomed to do previously to hiring my time, I spent the whole week without the performance of a single stroke of work. I did this in retaliation. Saturday night, he called upon me as usual for my week's wages. I told him I had no wages; I had done no work that week. Here we were upon the point of coming to blows. He raved, and swore his determination to get hold of me. I did not allow myself a single word; but was resolved, if he laid the weight of his hand upon me, it should be blow for blow. He did not strike me, but told me that he would find me in constant employment in future. I thought the matter over during the next day, Sunday, and finally resolved upon the third day of September, as the day upon which I would make a second attempt to secure my freedom. I now had three weeks during which to prepare for my journey. Early on Monday morning, before Master Hugh had time to make any engagement for me, I went out and got employment of Mr. Butler, at his ship-yard near the drawbridge, upon what is called the City Block, thus making it unnecessary for him to seek employment for me. At the end of the week, I brought him between eight and nine dollars. He seemed very well pleased, and asked why I did not do the same the week before. He little knew what my plans were. My object in working steadily was to remove any suspicion he might entertain of my intent to run away; and in this I succeeded admirably. I suppose he thought I was never better satisfied with my condition than at the very time during which I was planning my escape. The second week passed, and again I carried him my full wages; and so well pleased was he, that he gave me twenty-five cents, (quite a large sum for a slaveholder to give a slave,) and bade me to make a good use of it. I told him I would.

Things went on without very smoothly indeed, but within there was trouble. It is impossible for me to describe my feelings as the time of my contemplated start drew near. I had a number of warmhearted friends in Baltimore,—friends that I loved almost as I did my life,—and the thought of being separated from them forever was painful beyond expression. It is my opinion that thousands would escape from slavery, who now remain, but for the strong cords of affection that bind them to their friends. The thought of leaving my friends was decidedly the most painful thought with which I had to contend. The love of them was my tender point, and shook my decision more than all things else. Besides the pain of separation, the dread and apprehension of a failure exceeded what I had experienced at my first attempt. The appalling defeat I then sustained returned to torment me. I felt assured that, if I failed in this attempt, my case would be a hopeless one—it would seal my fate as a slave forever. I could not hope to get off with any thing less than the severest punishment, and being placed beyond the means of escape. It required no very vivid imagination to depict the most frightful scenes through which I should have to pass, in case I failed. The wretchedness of slavery, and the blessedness of freedom, were perpetually before me. It was life and death with me. But I remained firm, and, according to my resolution, on the third day of September, 1838, I left my chains, and succeeded in reaching New York without the slightest interruption of any kind. How I did so,—what means I adopted,—what direction I travelled, and by what mode of conveyance,—I must leave unexplained, for the reasons before mentioned.

I have been frequently asked how I felt when I found myself in a free State. I have never been able to answer the question with any satisfaction to myself. It was a moment of the highest excitement I ever experienced. I suppose I felt as one may imagine the unarmed mariner to feel when he is rescued by a friendly man-of-war from the pursuit of a pirate. In writing to a dear friend, immediately after my arrival at New York, I said I felt like one who had escaped a den of hungry lions. This state of mind, however, very soon subsided; and I was again seized with a feeling of great insecurity and loneliness. I was yet liable to be taken back, and subjected to all the tortures of slavery. This in itself was enough to damp the ardor of my enthusiasm. But the loneliness overcame me. There I was in the midst of thousands, and yet a perfect stranger; without home and without friends, in the midst of thousands of my own brethren—children of a common Father, and yet I dared not to unfold to any one of them my sad condition. I was afraid to speak to any one for fear of speaking to the wrong one, and thereby falling into the hands of money-loving kidnappers, whose business it was to lie in wait for the panting fugitive, as the ferocious beasts of the forest lie in wait for their prey. The motto which I adopted when I started from slavery was this—"Trust no man!" I saw in every white man an enemy, and in almost every colored man cause for distrust. It was a most painful situation; and, to understand it, one must needs experience it, or imagine himself in similar circumstances. Let him be a fugitive slave in a strange land—a land given up to be the hunting-ground for slaveholders—whose inhabitants are legalized kidnappers—where he is every moment subjected to the terrible liability of being seized upon by his fellowmen, as the hideous crocodile seizes upon his prey!—I say, let him place himself in my situation—without

home or friends—without money or credit—wanting shelter, and no one to give it—wanting bread, and no money to buy it,—and at the same time let him feel that he is pursued by merciless men-hunters, and in total darkness as to what to do, where to go, or where to stay,—perfectly helpless both as to the means of defence and means of escape,—in the midst of plenty, yet suffering the terrible gnawings of hunger,—in the midst of houses, yet having no home,—among fellow-men, yet feeling as if in the midst of wild beasts, whose greediness to swallow up the trembling and half-famished fugitive is only equalled by that with which the monsters of the deep swallow up the helpless fish upon which they subsist,—I say, let him be placed in this most trying situation,—the situation in which I was placed,—then, and not till then, will he fully appreciate the hardships of, and know how to sympathize with, the toil-worn and whip-scarred fugitive slave.

Thank Heaven, I remained but a short time in this distressed situation. I was relieved from it by the humane hand of _Mr. David Ruggles_, whose vigilance, kindness, and perseverance, I shall never forget. I am glad of an opportunity to express, as far as words can, the love and gratitude I bear him. Mr. Ruggles is now afflicted with blindness, and is himself in need of the same kind offices which he was once so forward in the performance of toward others. I had been in New York but a few days, when Mr. Ruggles sought me out, and very kindly took me to his boarding-house at the corner of Church and Lespenard Streets. Mr. Ruggles was then very deeply engaged in the memorable _Darg_ case, as well as attending to a number of other fugitive slaves, devising ways and means for their successful escape; and, though watched and hemmed in on almost every side, he seemed to be more than a match for his enemies.

Very soon after I went to Mr. Ruggles, he wished to know of me where I wanted to go; as he deemed it unsafe for me to remain in New York. I told him I was a calker, and should like to go where I could get work. I thought of going to Canada; but he decided against it, and in favor of my going to New Bedford, thinking I should be able to get work there at my trade. At this time, Anna,[2] my intended wife, came on; for I wrote to her immediately after my arrival at New York, (notwithstanding my homeless, houseless, and helpless condition,) informing her of my successful flight, and wishing her to come on forthwith. In a few days after her arrival, Mr. Ruggles called in the Rev. J. W. C. Pennington, who, in the presence of Mr. Ruggles, Mrs. Michaels, and two or three others, performed the marriage ceremony, and gave us a certificate, of which the following is an exact copy:—

“This may certify, that I joined together in holy matrimony Frederick Johnson[3] and Anna Murray, as man and wife, in the presence of Mr. David Ruggles and Mrs. Michaels.

“JAMES W. C. PENNINGTON “_New York, Sept_. 15, 1838”

[2] She was free.

[3] I had changed my name from Frederick _Bailey_ to that of _Johnson_.

Upon receiving this certificate, and a five-dollar bill from Mr. Ruggles, I shouldered one part of our baggage, and Anna took up the other, and we set out forthwith to take passage on board of the steamboat John W. Richmond for Newport, on our way to New Bedford. Mr. Ruggles gave me a letter to a Mr. Shaw in Newport, and told me, in case my money did not serve me to New Bedford, to stop in Newport and obtain further assistance; but upon our arrival at Newport, we were so anxious to get to a place of safety, that, notwithstanding we lacked the necessary money to pay our fare, we decided to take seats in the stage, and promise to pay when we got to New Bedford. We were encouraged to do this by two excellent gentlemen, residents of New Bedford, whose names I afterward ascertained to be Joseph Ricketson and William C. Taber. They seemed at once to understand our circumstances, and gave us such assurance of their friendliness as put us fully at ease in their presence.

It was good indeed to meet with such friends, at such a time. Upon reaching New Bedford, we were directed to the house of Mr. Nathan Johnson, by whom we were kindly received, and hospitably provided for. Both Mr. and Mrs. Johnson took a deep and lively interest in our welfare. They proved themselves quite worthy of the name of abolitionists. When the stage-driver found us unable to pay our fare, he held on upon our baggage as security for the debt. I had but to mention the fact to Mr. Johnson, and he forthwith advanced the money.

We now began to feel a degree of safety, and to prepare ourselves for the duties and responsibilities of a life of freedom. On the morning after our arrival at New Bedford, while at the breakfast-table, the question arose as to what name I should be called by. The name given me by my mother was, “Frederick Augustus Washington Bailey.” I, however, had dispensed with the two middle names long before I left Maryland so that I was generally known by the name of “Frederick Bailey.” I started from Baltimore bearing

the name of “Stanley.” When I got to New York, I again changed my name to “Frederick Johnson,” and thought that would be the last change. But when I got to New Bedford, I found it necessary again to change my name. The reason of this necessity was, that there were so many Johnsons in New Bedford, it was already quite difficult to distinguish between them. I gave Mr. Johnson the privilege of choosing me a name, but told him he must not take from me the name of “Frederick.” I must hold on to that, to preserve a sense of my identity. Mr. Johnson had just been reading the “Lady of the Lake,” and at once suggested that my name be “Douglass.” From that time until now I have been called “Frederick Douglass;” and as I am more widely known by that name than by either of the others, I shall continue to use it as my own.

I was quite disappointed at the general appearance of things in New Bedford. The impression which I had received respecting the character and condition of the people of the north, I found to be singularly erroneous. I had very strangely supposed, while in slavery, that few of the comforts, and scarcely any of the luxuries, of life were enjoyed at the north, compared with what were enjoyed by the slaveholders of the south. I probably came to this conclusion from the fact that northern people owned no slaves. I supposed that they were about upon a level with the non-slaveholding population of the south. I knew _they_ were exceedingly poor, and I had been accustomed to regard their poverty as the necessary consequence of their being non-slaveholders. I had somehow imbibed the opinion that, in the absence of slaves, there could be no wealth, and very little refinement. And upon coming to the north, I expected to meet with a rough, hard-handed, and uncultivated population, living in the most Spartan-like simplicity, knowing nothing of the ease, luxury, pomp, and grandeur of southern slaveholders. Such being my conjectures, any one acquainted with the appearance of New Bedford may very readily infer how palpably I must have seen my mistake.

In the afternoon of the day when I reached New Bedford, I visited the wharves, to take a view of the shipping. Here I found myself surrounded with the strongest proofs of wealth. Lying at the wharves, and riding in the stream, I saw many ships of the finest model, in the best order, and of the largest size. Upon the right and left, I was walled in by granite warehouses of the widest dimensions, stowed to their utmost capacity with the necessaries and comforts of life. Added to this, almost every body seemed to be at work, but noiselessly so, compared with what I had been accustomed to in Baltimore. There were no loud songs heard from those engaged in loading and unloading ships. I heard no deep oaths or horrid curses on the laborer. I saw no whipping of men; but all seemed to go smoothly on. Every man appeared to understand his work, and went at it with a sober, yet cheerful earnestness, which betokened the deep interest which he felt in what he was doing, as well as a sense of his own dignity as a man. To me this looked exceedingly strange. From the wharves I strolled around and over the town, gazing with wonder and admiration at the splendid churches, beautiful dwellings, and finely-cultivated gardens; evincing an amount of wealth, comfort, taste, and refinement, such as I had never seen in any part of slaveholding Maryland.

Every thing looked clean, new, and beautiful. I saw few or no dilapidated houses, with poverty-stricken inmates; no half-naked children and barefooted women, such as I had been accustomed to see in Hillsborough, Easton, St. Michael’s, and Baltimore. The people looked more able, stronger, healthier, and happier, than those of Maryland. I was for once made glad by a view of extreme wealth, without being saddened by seeing extreme poverty. But the most astonishing as well as the most interesting thing to me was the condition of the colored people, a great many of whom, like myself, had escaped thither as a refuge from the hunters of men. I found many, who had not been seven years out of their chains, living in finer houses, and evidently enjoying more of the comforts of life, than the average of slaveholders in Maryland. I will venture to assert, that my friend Mr. Nathan Johnson (of whom I can say with a grateful heart, “I was hungry, and he gave me meat; I was thirsty, and he gave me drink; I was a stranger, and he took me in”) lived in a neater house; dined at a better table; took, paid for, and read, more newspapers; better understood the moral, religious, and political character of the nation,—than nine tenths of the slaveholders in Talbot county Maryland. Yet Mr. Johnson was a working man. His hands were hardened by toil, and not his alone, but those also of Mrs. Johnson. I found the colored people much more spirited than I had supposed they would be. I found among them a determination to protect each other from the blood-thirsty kidnapper, at all hazards. Soon after my arrival, I was told of a circumstance which illustrated their spirit. A colored man and a fugitive slave were on unfriendly terms. The former was heard to threaten the latter with informing his master of his whereabouts. Straightway a meeting was called among the colored people, under the stereotyped notice, “Business of importance!” The betrayer was invited to attend. The people came at the appointed hour, and organized the meeting by appointing a very religious old gentleman as president, who, I believe, made a prayer, after which he addressed the meeting as follows: “_Friends, we have got him here, and I would recommend that you young men just take him outside the door, and kill him!_” With this, a number of them bolted at him; but they were intercepted by some more timid than themselves, and the betrayer escaped their vengeance, and has not been seen in New Bedford since. I believe there have been no more such threats, and should there be hereafter, I doubt not that death would be the consequence.

I found employment, the third day after my arrival, in stowing a sloop with a load of oil. It was new, dirty, and hard work for me; but I went at it with a glad heart and a willing hand. I was now my own master. It was a happy moment, the rapture of which can be understood only by those who have been slaves. It was the first work, the reward of which was to be entirely my own. There was no Master Hugh standing ready, the moment I earned the money, to rob me of it. I worked that day with a pleasure I had never before experienced. I was at work for myself and newly-married wife. It was to me the starting-point of a new existence. When I got through with that job, I went in pursuit of a job of calking; but such was the strength of prejudice against color, among the white calkers, that they refused to work with me, and of course I could get no employment.[4] Finding my trade of no immediate benefit, I threw off my calking habiliments, and prepared myself to do any kind of work I could get to do. Mr. Johnson kindly let me have his wood-horse and saw, and I very soon found myself a plenty of work. There was no work too hard—none too dirty. I was ready to saw wood, shovel coal, carry wood, sweep the chimney, or roll oil casks,—all of which I did for nearly three years in New Bedford, before I became known to the anti-slavery world.

[4] I am told that colored persons can now get employment at calking in New Bedford—a result of anti-slavery effort.

In about four months after I went to New Bedford, there came a young man to me, and inquired if I did not wish to take the “Liberator.” I told him I did; but, just having made my escape from slavery, I remarked that I was unable to pay for it then. I, however, finally became a subscriber to it. The paper came, and I read it from week to week with such feelings as it would be quite idle for me to attempt to describe. The paper became my meat and my drink. My soul was set all on fire. Its sympathy for my brethren in bonds—its scathing denunciations of slaveholders—its faithful exposures of slavery—and its powerful attacks upon the upholders of the institution—sent a thrill of joy through my soul, such as I had never felt before!

I had not long been a reader of the “Liberator,” before I got a pretty correct idea of the principles, measures and spirit of the anti-slavery reform. I took right hold of the cause. I could do but little; but what I could, I did with a joyful heart, and never felt happier than when in an anti-slavery meeting. I seldom had much to say at the meetings, because what I wanted to say was said so much better by others. But, while attending an anti-slavery convention at Nantucket, on the 11th of August, 1841, I felt strongly moved to speak, and was at the same time much urged to do so by Mr. William C. Coffin, a gentleman who had heard me speak in the colored people’s meeting at New Bedford. It was a severe cross, and I took it up reluctantly. The truth was, I felt myself a slave, and the idea of speaking to white people weighed me down. I spoke but a few moments, when I felt a degree of freedom, and said what I desired with considerable ease. From that time until now, I have been engaged in pleading the cause of my brethren—with what success, and with what devotion, I leave those acquainted with my labors to decide.

APPENDIX

I find, since reading over the foregoing Narrative, that I have, in several instances, spoken in such a tone and manner, respecting religion, as may possibly lead those unacquainted with my religious views to suppose me an opponent of all religion. To remove the liability of such misapprehension, I deem it proper to append the following brief explanation. What I have said respecting and against religion, I mean strictly to apply to the _slaveholding religion_ of this land, and with no possible reference to Christianity proper; for, between the Christianity of this land, and the Christianity of Christ, I recognize the widest possible difference—so wide, that to receive the one as good, pure, and holy, is of necessity to reject the other as bad, corrupt, and wicked. To be the friend of the one, is of necessity to be the enemy of the other. I love the pure, peaceable, and impartial Christianity of Christ: I therefore hate the corrupt, slaveholding, women-whipping, cradle-plundering, partial and hypocritical Christianity of this land. Indeed, I can see no reason, but the most deceitful one, for calling the religion of this land Christianity. I look upon it as the climax of all misnomers, the boldest of all frauds, and the grossest of all libels. Never was there a clearer case of “stealing the livery of the court of heaven to serve the devil in.” I am filled with unutterable loathing when I contemplate the religious pomp and show, together with the horrible inconsistencies, which every where surround me. We have men-stealers for ministers, women-whippers for missionaries, and cradle-plunderers for church members. The man who wields the blood-clotted cowskin during the week fills the pulpit on Sunday, and claims to be a minister of the meek and lowly Jesus. The man who robs me of my earnings at the end of each week meets me as a class-leader on Sunday morning, to show me the way of life, and the path of salvation. He who sells my sister, for purposes of prostitution, stands forth as the pious advocate of purity. He who proclaims it a religious duty to read the Bible denies me the right of learning to read the name of the God who made me. He who is the religious advocate of marriage robs whole millions of its sacred influence, and leaves them to the ravages of wholesale pollution. The warm defender of the sacredness of the family relation is the same that scatters whole families,—sundering husbands and wives, parents and children, sisters and brothers,—leaving the hut vacant, and the hearth desolate. We see the thief preaching against theft, and the adulterer against

adultery. We have men sold to build churches, women sold to support the gospel, and babes sold to purchase Bibles for the _Poor Heathen! All For The Glory Of God And The Good Of Souls!_ The slave auctioneer's bell and the church-going bell chime in with each other, and the bitter cries of the heart-broken slave are drowned in the religious shouts of his pious master. Revivals of religion and revivals in the slave-trade go hand in hand together. The slave prison and the church stand near each other. The clanking of fetters and the rattling of chains in the prison, and the pious psalm and solemn prayer in the church, may be heard at the same time. The dealers in the bodies and souls of men erect their stand in the presence of the pulpit, and they mutually help each other. The dealer gives his blood-stained gold to support the pulpit, and the pulpit, in return, covers his infernal business with the garb of Christianity. Here we have religion and robbery the allies of each other—devils dressed in angels' robes, and hell presenting the semblance of paradise.

"Just God! and these are they,v Who minister at thine altar, God of right! Men who their hands, with prayer and blessing, lay On Israel's ark of light.

"What! preach, and kidnap men? Give thanks, and rob thy own afflicted poor? Talk of thy glorious liberty, and then Bolt hard the captive's door?

"What! servants of thy own Merciful Son, who came to seek and save The homeless and the outcast, fettering down The tasked and plundered slave!

"Pilate and Herod friends! Chief priests and rulers, as of old, combine! Just God and holy! is that church which lends Strength to the spoiler thine?"

The Christianity of America is a Christianity, of whose votaries it may be as truly said, as it was of the ancient scribes and Pharisees, "They bind heavy burdens, and grievous to be borne, and lay them on men's shoulders, but they themselves will not move them with one of their fingers. All their works they do for to be seen of men.—They love the uppermost rooms at feasts, and the chief seats in the synagogues, ... and to be called of men, Rabbi, Rabbi.—But woe unto you, scribes and Pharisees, hypocrites! for ye shut up the kingdom of heaven against men; for ye neither go in yourselves, neither suffer ye them that are entering to go in. Ye devour widows' houses, and for a pretence make long prayers; therefore ye shall receive the greater damnation. Ye compass sea and land to make one proselyte, and when he is made, ye make him twofold more the child of hell than yourselves.—Woe unto you, scribes and Pharisees, hypocrites! for ye pay tithe of mint, and anise, and cumin, and have omitted the weightier matters of the law, judgment, mercy, and faith; these ought ye to have done, and not to leave the other undone. Ye blind guides! which strain at a gnat, and swallow a camel. Woe unto you, scribes and Pharisees, hypocrites! for ye make clean the outside of the cup and of the platter; but within, they are full of extortion and excess.—Woe unto you, scribes and Pharisees, hypocrites! for ye are like unto whited sepulchres, which indeed appear beautiful outward, but are within full of dead men's bones, and of all uncleanness. Even so ye also outwardly appear righteous unto men, but within ye are full of hypocrisy and iniquity."

Dark and terrible as is this picture, I hold it to be strictly true of the overwhelming mass of professed Christians in America. They strain at a gnat, and swallow a camel. Could any thing be more true of our churches? They would be shocked at the proposition of fellowshipping a _sheep_-stealer; and at the same time they hug to their communion a _man_-stealer, and brand me with being an infidel, if I find fault with them for it. They attend with Pharisaical strictness to the outward forms of religion, and at the same time neglect the weightier matters of the law, judgment, mercy, and faith. They are always ready to sacrifice, but seldom to show mercy. They are they who are represented as professing to love God whom they have not seen, whilst they hate their brother whom they have seen. They love the heathen on the other side of the globe. They can pray for him, pay money to have the Bible put into his hand, and missionaries to instruct him; while they despise and totally neglect the heathen at their own doors.

Such is, very briefly, my view of the religion of this land; and to avoid any misunderstanding, growing out of the use of general terms, I mean by the religion of this land, that which is revealed in the words, deeds, and actions, of those bodies, north and south, calling themselves Christian churches, and yet in union with slaveholders. It is against religion, as presented by these bodies, that I have felt it my duty to testify.

I conclude these remarks by copying the following portrait of the religion of the south, (which is, by communion and fellowship, the religion of the north,) which I soberly affirm is "true to the life," and without caricature or the slightest exaggeration. It is said to have been drawn, several years before the present anti-slavery agitation began, by a northern Methodist preacher, who, while residing at the south, had an opportunity to see slaveholding morals, manners, and piety, with his own eyes. "Shall I not visit for these things?

saith the Lord. Shall not my soul be avenged on such a nation as this?”

A PARODY

“Come, saints and sinners, hear me tell How pious priests whip Jack and Nell, And women buy and children sell, And preach all sinners down to hell, And sing of heavenly union.

“They’ll bleat and baa, dona like goats, Gorge down black sheep, and strain at motes, Array their backs in fine black coats, Then seize their negroes by their throats, And choke, for heavenly union.

“They’ll church you if you sip a dram, And damn you if you steal a lamb; Yet rob old Tony, Doll, and Sam, Of human rights, and bread and ham; Kidnapper’s heavenly union.

“They’ll loudly talk of Christ’s reward, And bind his image with a cord, And scold, and swing the lash abhorred, And sell their brother in the Lord To handcuffed heavenly union.

“They’ll read and sing a sacred song, And make a prayer both loud and long, And teach the right and do the wrong, Hailing the brother, sister throng, With words of heavenly union.

“We wonder how such saints can sing, Or praise the Lord upon the wing, Who roar, and scold, and whip, and sting, And to their slaves and mammon cling, In guilty conscience union.

“They’ll raise tobacco, corn, and rye, And drive, and thieve, and cheat, and lie, And lay up treasures in the sky, By making switch and cowskin fly, In hope of heavenly union.

“They’ll crack old Tony on the skull, And preach and roar like Bashan bull, Or braying ass, of mischief full, Then seize old Jacob by the wool, And pull for heavenly union.

“A roaring, ranting, sleek man-thief, Who lived on mutton, veal, and beef, Yet never would afford relief To needy, sable sons of grief, Was big with heavenly union.

“‘Love not the world,’ the preacher said, And winked his eye, and shook his head; He seized on Tom, and Dick, and Ned, Cut short their meat, and clothes, and bread, Yet still loved heavenly union.

“Another preacher whining spoke Of One whose heart for sinners broke: He tied old Nanny to an oak, And drew the blood at every stroke, And prayed for heavenly union.

“Two others oped their iron jaws, And waved their children-stealing paws; There sat their children in gewgaws; By stinting negroes’ backs and maws, They kept up heavenly union.

“All good from Jack another takes, And entertains their flirts and rakes, Who dress as sleek as glossy snakes, And cram their mouths with sweetened cakes; And this goes down for union.”

Sincerely and earnestly hoping that this little book may do something toward throwing light on the American slave system, and hastening the glad day of deliverance to the millions of my brethren in bonds—faithfully relying upon the power of truth, love, and justice, for success in my humble efforts—and solemnly pledging my self anew to the sacred cause,—I subscribe myself,

FREDERICK DOUGLASS.

LYNN, _Mass., April_ 28, 1845.

CHAPTER I In Which the Reader Is Introduced to a Man of Humanity

Late in the afternoon of a chilly day in February, two gentlemen were sitting alone over their wine, in a well-furnished dining parlor, in the town of P——, in Kentucky. There were no servants present, and the gentlemen, with chairs closely approaching, seemed to be discussing some subject with great earnestness.

For convenience sake, we have said, hitherto, two _gentlemen_. One of the parties, however, when critically examined, did not seem, strictly speaking, to come under the species. He was a short, thick-set man, with coarse, commonplace features, and that swaggering air of pretension which marks a low man who is trying to elbow his way upward in the world. He was much over-dressed, in a gaudy vest of many colors, a blue neckerchief, bedropped gayly with yellow spots, and arranged with a flaunting tie, quite in keeping with the general air of the man. His hands, large and coarse, were plentifully bedecked with rings; and he wore a heavy gold watch-chain, with a bundle of seals of portentous size, and a great variety of colors, attached to it,—which, in the ardor of conversation, he was in the habit of flourishing and jingling with evident satisfaction. His conversation was in free and easy defiance of Murray’s Grammar,[1] and was garnished at convenient intervals with various profane expressions, which not even the desire to be graphic in our account shall induce us to transcribe.

[1] English Grammar (1795), by Lindley Murray (1745-1826), the most authoritative American grammarian of his day.

His companion, Mr. Shelby, had the appearance of a gentleman; and the arrangements of the house, and the general air of the housekeeping, indicated easy, and even opulent circumstances. As we before stated, the two were in the midst of an earnest conversation.

“That is the way I should arrange the matter,” said Mr. Shelby.

“I can’t make trade that way—I positively can’t, Mr. Shelby,” said the other, holding up a glass of wine between his eye and the light.

“Why, the fact is, Haley, Tom is an uncommon fellow; he is certainly worth that sum anywhere,—steady, honest, capable, manages my whole farm like a clock.”

“You mean honest, as niggers go,” said Haley, helping himself to a glass of brandy.

“No; I mean, really, Tom is a good, steady, sensible, pious fellow. He got religion at a camp-meeting, four years ago; and I believe he really _did_ get it. I’ve trusted him, since then, with everything I have,—money, house, horses,—and let him come and go round the country; and I always found him true and square in everything.”

“Some folks don’t believe there is pious niggers Shelby,” said Haley, with a candid flourish of his hand, “but _I do_. I had a fellow, now, in this yer last lot I took to Orleans—’t was as good as a meetin’, now, really, to hear that critter pray; and he was quite gentle and quiet like. He fetched me a good sum, too, for I bought him cheap of a man that was ’bliged to sell out; so I realized six hundred on him. Yes, I consider religion a valeyable thing in a nigger, when it’s the genuine article, and no mistake.”

“Well, Tom’s got the real article, if ever a fellow had,” rejoined the other. “Why, last fall, I let him go to Cincinnati alone, to do business for me, and bring home five hundred dollars. ‘Tom,’ says I to him, ‘I trust you, because I think you’re a Christian—I know you wouldn’t cheat.’ Tom comes back, sure enough; I knew he would. Some low fellows, they say, said to him—‘Tom, why don’t you make tracks for Canada?’ ‘Ah, master trusted me, and I couldn’t,’—they told me about it. I am sorry to part with Tom, I must say. You ought to let him cover the whole balance of the debt; and you would, Haley, if you had any conscience.”

“Well, I’ve got just as much conscience as any man in business can afford to keep,—just a little, you know, to swear by, as ’t were,” said the trader, jocularly; “and then, I’m ready to do anything in reason to ’blige friends; but this yer, you see, is a leetle too hard on a fellow—a leetle too hard.” The trader sighed contemplatively, and poured out some more brandy.

“Well, then, Haley, how will you trade?” said Mr. Shelby, after an uneasy interval of silence.

“Well, haven’t you a boy or gal that you could throw in with Tom?”

“Hum!—none that I could well spare; to tell the truth, it’s only hard necessity makes me willing to sell at all. I don’t like parting with any of my hands, that’s a fact.”

Here the door opened, and a small quadroon boy, between four and five years of age, entered the room. There was something in his appearance remarkably beautiful and engaging. His black hair, fine as floss silk, hung in glossy curls about his round, dimpled face, while a pair of large dark eyes, full of fire and softness, looked out from beneath the rich, long lashes, as he peered curiously into the apartment. A gay robe of scarlet and yellow plaid, carefully made and neatly fitted, set off to advantage the dark and rich style of his beauty; and a certain comic air of assurance, blended with bashfulness, showed that he had been not unused to being petted and noticed by his master.

“Hulloa, Jim Crow!” said Mr. Shelby, whistling, and snapping a bunch of raisins towards him, “pick that up, now!”

The child scampered, with all his little strength, after the prize, while his master laughed.

“Come here, Jim Crow,” said he. The child came up, and the master patted the curly head, and chucked him under the chin.

“Now, Jim, show this gentleman how you can dance and sing.” The boy commenced one of those wild, grotesque songs common among the negroes, in a rich, clear voice, accompanying his singing with many comic evolutions of the hands, feet, and whole body, all in perfect time to the music.

“Bravo!” said Haley, throwing him a quarter of an orange.

“Now, Jim, walk like old Uncle Cudjoe, when he has the rheumatism,” said his master.

Instantly the flexible limbs of the child assumed the appearance of deformity and distortion, as, with his back humped up, and his master's stick in his hand, he hobbled about the room, his childish face drawn into a doleful pucker, and spitting from right to left, in imitation of an old man.

Both gentlemen laughed uproariously.

"Now, Jim," said his master, "show us how old Elder Robbins leads the psalm." The boy drew his chubby face down to a formidable length, and commenced toning a psalm tune through his nose, with imperturbable gravity.

"Hurrah! bravo! what a young 'un!" said Haley; "that chap's a case, I'll promise. Tell you what," said he, suddenly clapping his hand on Mr. Shelby's shoulder, "fling in that chap, and I'll settle the business—I will. Come, now, if that ain't doing the thing up about the rightest!"

At this moment, the door was pushed gently open, and a young quadroon woman, apparently about twenty-five, entered the room.

There needed only a glance from the child to her, to identify her as its mother. There was the same rich, full, dark eye, with its long lashes; the same ripples of silky black hair. The brown of her complexion gave way on the cheek to a perceptible flush, which deepened as she saw the gaze of the strange man fixed upon her in bold and undisguised admiration. Her dress was of the neatest possible fit, and set off to advantage her finely moulded shape;—a delicately formed hand and a trim foot and ankle were items of appearance that did not escape the quick eye of the trader, well used to run up at a glance the points of a fine female article.

"Well, Eliza?" said her master, as she stopped and looked hesitatingly at him.

"I was looking for Harry, please, sir;" and the boy bounded toward her, showing his spoils, which he had gathered in the skirt of his robe.

"Well, take him away, then," said Mr. Shelby; and hastily she withdrew, carrying the child on her arm.

"By Jupiter," said the trader, turning to him in admiration, "there's an article, now! You might make your fortune on that ar gal in Orleans, any day. I've seen over a thousand, in my day, paid down for gals not a bit handsomer."

"I don't want to make my fortune on her," said Mr. Shelby, dryly; and, seeking to turn the conversation, he uncorked a bottle of fresh wine, and asked his companion's opinion of it.

"Capital, sir,—first chop!" said the trader; then turning, and slapping his hand familiarly on Shelby's shoulder, he added—

"Come, how will you trade about the gal?—what shall I say for her—what'll you take?"

"Mr. Haley, she is not to be sold," said Shelby. "My wife would not part with her for her weight in gold."

"Ay, ay! women always say such things, cause they ha'nt no sort of calculation. Just show 'em how many watches, feathers, and trinkets, one's weight in gold would buy, and that alters the case, _I_ reckon."

"I tell you, Haley, this must not be spoken of; I say no, and I mean no," said Shelby, decidedly.

"Well, you'll let me have the boy, though," said the trader; "you must own I've come down pretty handsomely for him."

"What on earth can you want with the child?" said Shelby.

"Why, I've got a friend that's going into this yer branch of the business—wants to buy up handsome boys to raise for the market. Fancy articles entirely—sell for waiters, and so on, to rich 'uns, that can pay for handsome 'uns. It sets off one of yer great places—a real handsome boy to open door, wait, and tend. They fetch a good sum; and this little devil is such a comical, musical concern, he's just the article."

"I would rather not sell him," said Mr. Shelby, thoughtfully; "the fact is, sir, I'm a humane man, and I hate to take the boy from his mother, sir."

"O, you do?—La! yes—something of that ar natur. I understand, perfectly. It is mighty onpleasant getting on with women, sometimes. I al'ays hates these yer screechin', screamin' times. They are _mighty_ onpleasant; but, as I manages business, I generally avoids 'em, sir. Now, what if you get the girl off for a day, or a week, or so; then the thing's done quietly,—all over before

she comes home. Your wife might get her some ear-rings, or a new gown, or some such truck, to make up with her."

"I'm afraid not."

"Lor bless ye, yes! These critters an't like white folks, you know; they gets over things, only manage right. Now, they say," said Haley, assuming a candid and confidential air, "that this kind o' trade is hardening to the feelings; but I never found it so. Fact is, I never could do things up the way some fellers manage the business. I've seen 'em as would pull a woman's child out of her arms, and set him up to sell, and she screechin' like mad all the time;—very bad policy—damages the article—makes 'em quite unfit for service sometimes. I knew a real handsome gal once, in Orleans, as was entirely ruined by this sort o' handling. The fellow that was trading for her didn't want her baby; and she was one of your real high sort, when her blood was up. I tell you, she squeezed up her child in her arms, and talked, and went on real awful. It kinder makes my blood run cold to think on't; and when they carried off the child, and locked her up, she jest went ravin' mad, and died in a week. Clear waste, sir, of a thousand dollars, just for want of management,—there's where 't is. It's always best to do the humane thing, sir; that's been _my_ experience." And the trader leaned back in his chair, and folded his arms, with an air of virtuous decision, apparently considering himself a second Wilberforce.

The subject appeared to interest the gentleman deeply; for while Mr. Shelby was thoughtfully peeling an orange, Haley broke out afresh, with becoming diffidence, but as if actually driven by the force of truth to say a few words more.

"It don't look well, now, for a feller to be praisin' himself; but I say it jest because it's the truth. I believe I'm reckoned to bring in about the finest droves of niggers that is brought in,—at least, I've been told so; if I have once, I reckon I have a hundred times,—all in good case,—fat and likely, and I lose as few as any man in the business. And I lays it all to my management, sir; and humanity, sir, I may say, is the great pillar of _my_ management."

Mr. Shelby did not know what to say, and so he said, "Indeed!"

"Now, I've been laughed at for my notions, sir, and I've been talked to. They an't pop'lar, and they an't common; but I stuck to 'em, sir; I've stuck to 'em, and realized well on 'em; yes, sir, they have paid their passage, I may say," and the trader laughed at his joke.

There was something so piquant and original in these elucidations of humanity, that Mr. Shelby could not help laughing in company. Perhaps you laugh too, dear reader; but you know humanity comes out in a variety of strange forms now-a-days, and there is no end to the odd things that humane people will say and do.

Mr. Shelby's laugh encouraged the trader to proceed.

"It's strange, now, but I never could beat this into people's heads. Now, there was Tom Loker, my old partner, down in Natchez; he was a clever fellow, Tom was, only the very devil with niggers,—on principle 't was, you see, for a better hearted feller never broke bread; 't was his _system_, sir. I used to talk to Tom. 'Why, Tom,' I used to say, 'when your gals takes on and cry, what's the use o' crackin on 'em over the head, and knockin' on 'em round? It's ridiculous,' says I, 'and don't do no sort o' good. Why, I don't see no harm in their cryin',' says I; 'it's natur,' says I, 'and if natur can't blow off one way, it will another. Besides, Tom,' says I, 'it jest spiles your gals; they get sickly, and down in the mouth; and sometimes they gets ugly,—particular yallow gals do,—and it's the devil and all gettin' on 'em broke in. Now,' says I, 'why can't you kinder coax 'em up, and speak 'em fair? Depend on it, Tom, a little humanity, thrown in along, goes a heap further than all your jawin' and crackin'; and it pays better,' says I, 'depend on 't.' But Tom couldn't get the hang on 't; and he spiled so many for me, that I had to break off with him, though he was a good-hearted fellow, and as fair a business hand as is goin'."

"And do you find your ways of managing do the business better than Tom's?" said Mr. Shelby.

"Why, yes, sir, I may say so. You see, when I any ways can, I takes a leetle care about the onpleasant parts, like selling young uns and that,—get the gals out of the way—out of sight, out of mind, you know,—and when it's clean done, and can't be helped, they naturally gets used to it. 'Tan't, you know, as if it was white folks, that's brought up in the way of 'spectin' to keep their children and wives, and all that. Niggers, you know, that's fetched up properly, ha'n't no kind of 'spectations of no kind; so all these things comes easier."

"I'm afraid mine are not properly brought up, then," said Mr. Shelby.

"S'pose not; you Kentucky folks spile your niggers. You mean well by 'em, but 'tan't no real kindness, arter all. Now, a nigger, you see, what's got to be hacked and tumbled round the world, and sold to Tom, and Dick, and the Lord knows who, 'tan't no kindness

to be givin' on him notions and expectations, and bringin' on him up too well, for the rough and tumble comes all the harder on him arter. Now, I venture to say, your niggers would be quite chop-fallen in a place where some of your plantation niggers would be singing and whooping like all possessed. Every man, you know, Mr. Shelby, naturally thinks well of his own ways; and I think I treat niggers just about as well as it's ever worth while to treat 'em."

"It's a happy thing to be satisfied," said Mr. Shelby, with a slight shrug, and some perceptible feelings of a disagreeable nature.

"Well," said Haley, after they had both silently picked their nuts for a season, "what do you say?"

"I'll think the matter over, and talk with my wife," said Mr. Shelby. "Meantime, Haley, if you want the matter carried on in the quiet way you speak of, you'd best not let your business in this neighborhood be known. It will get out among my boys, and it will not be a particularly quiet business getting away any of my fellows, if they know it, I'll promise you."

"O! certainly, by all means, mum! of course. But I'll tell you, I'm in a devil of a hurry, and shall want to know, as soon as possible, what I may depend on," said he, rising and putting on his overcoat.

"Well, call up this evening, between six and seven, and you shall have my answer," said Mr. Shelby, and the trader bowed himself out of the apartment.

"I'd like to have been able to kick the fellow down the steps," said he to himself, as he saw the door fairly closed, "with his impudent assurance; but he knows how much he has me at advantage. If anybody had ever said to me that I should sell Tom down south to one of those rascally traders, I should have said, 'Is thy servant a dog, that he should do this thing?' And now it must come, for aught I see. And Eliza's child, too! I know that I shall have some fuss with wife about that; and, for that matter, about Tom, too. So much for being in debt,—heigho! The fellow sees his advantage, and means to push it."

Perhaps the mildest form of the system of slavery is to be seen in the State of Kentucky. The general prevalence of agricultural pursuits of a quiet and gradual nature, not requiring those periodic seasons of hurry and pressure that are called for in the business of more southern districts, makes the task of the negro a more healthful and reasonable one; while the master, content with a more gradual style of acquisition, has not those temptations to hardheartedness which always overcome frail human nature when the prospect of sudden and rapid gain is weighed in the balance, with no heavier counterpoise than the interests of the helpless and unprotected.

Whoever visits some estates there, and witnesses the good-humored indulgence of some masters and mistresses, and the affectionate loyalty of some slaves, might be tempted to dream the oft-fabled poetic legend of a patriarchal institution, and all that; but over and above the scene there broods a portentous shadow—the shadow of _law_. So long as the law considers all these human beings, with beating hearts and living affections, only as so many _things_ belonging to a master,—so long as the failure, or misfortune, or imprudence, or death of the kindest owner, may cause them any day to exchange a life of kind protection and indulgence for one of hopeless misery and toil,—so long it is impossible to make anything beautiful or desirable in the best regulated administration of slavery.

Mr. Shelby was a fair average kind of man, good-natured and kindly, and disposed to easy indulgence of those around him, and there had never been a lack of anything which might contribute to the physical comfort of the negroes on his estate. He had, however, speculated largely and quite loosely; had involved himself deeply, and his notes to a large amount had come into the hands of Haley; and this small piece of information is the key to the preceding conversation.

Now, it had so happened that, in approaching the door, Eliza had caught enough of the conversation to know that a trader was making offers to her master for somebody.

She would gladly have stopped at the door to listen, as she came out; but her mistress just then calling, she was obliged to hasten away.

Still she thought she heard the trader make an offer for her boy;—could she be mistaken? Her heart swelled and throbbed, and she involuntarily strained him so tight that the little fellow looked up into her face in astonishment.

"Eliza, girl, what ails you today?" said her mistress, when Eliza had upset the wash-pitcher, knocked down the workstand, and finally was abstractedly offering her mistress a long nightgown in place of the silk dress she had ordered her to bring from the wardrobe.

Eliza started. “O, missis!” she said, raising her eyes; then, bursting into tears, she sat down in a chair, and began sobbing.

“Why, Eliza, child, what ails you?” said her mistress.

“O! missis, missis,” said Eliza, “there’s been a trader talking with master in the parlor! I heard him.”

“Well, silly child, suppose there has.”

“O, missis, _do_ you suppose mas’r would sell my Harry?” And the poor creature threw herself into a chair, and sobbed convulsively.

“Sell him! No, you foolish girl! You know your master never deals with those southern traders, and never means to sell any of his servants, as long as they behave well. Why, you silly child, who do you think would want to buy your Harry? Do you think all the world are set on him as you are, you goosie? Come, cheer up, and hook my dress. There now, put my back hair up in that pretty braid you learnt the other day, and don’t go listening at doors any more.”

“Well, but, missis, _you_ never would give your consent—to—to—”

“Nonsense, child! to be sure, I shouldn’t. What do you talk so for? I would as soon have one of my own children sold. But really, Eliza, you are getting altogether too proud of that little fellow. A man can’t put his nose into the door, but you think he must be coming to buy him.”

Reassured by her mistress’ confident tone, Eliza proceeded nimbly and adroitly with her toilet, laughing at her own fears, as she proceeded.

Mrs. Shelby was a woman of a high class, both intellectually and morally. To that natural magnanimity and generosity of mind which one often marks as characteristic of the women of Kentucky, she added high moral and religious sensibility and principle, carried out with great energy and ability into practical results. Her husband, who made no professions to any particular religious character, nevertheless reverenced and respected the consistency of hers, and stood, perhaps, a little in awe of her opinion. Certain it was that he gave her unlimited scope in all her benevolent efforts for the comfort, instruction, and improvement of her servants, though he never took any decided part in them himself. In fact, if not exactly a believer in the doctrine of the efficiency of the extra good works of saints, he really seemed somehow or other to fancy that his wife had piety and benevolence enough for two—to indulge a shadowy expectation of getting into heaven through her superabundance of qualities to which he made no particular pretension.

The heaviest load on his mind, after his conversation with the trader, lay in the foreseen necessity of breaking to his wife the arrangement contemplated,—meeting the importunities and opposition which he knew he should have reason to encounter.

Mrs. Shelby, being entirely ignorant of her husband’s embarrassments, and knowing only the general kindliness of his temper, had been quite sincere in the entire incredulity with which she had met Eliza’s suspicions. In fact, she dismissed the matter from her mind, without a second thought; and being occupied in preparations for an evening visit, it passed out of her thoughts entirely.

CHAPTER II The Mother

Eliza had been brought up by her mistress, from girlhood, as a petted and indulged favorite.

The traveller in the south must often have remarked that peculiar air of refinement, that softness of voice and manner, which seems in many cases to be a particular gift to the quadroon and mulatto women. These natural graces in the quadroon are often united with beauty of the most dazzling kind, and in almost every case with a personal appearance prepossessing and agreeable. Eliza, such as we have described her, is not a fancy sketch, but taken from remembrance, as we saw her, years ago, in Kentucky. Safe under the protecting care of her mistress, Eliza had reached maturity without those temptations which make beauty so fatal an inheritance to a slave. She had been married to a bright and talented young mulatto man, who was a slave on a neighboring estate, and bore the name of George Harris.

This young man had been hired out by his master to work in a bagging factory, where his adroitness and ingenuity caused him to be considered the first hand in the place. He had invented a machine for the cleaning of the hemp, which, considering the education and circumstances of the inventor, displayed quite as much mechanical genius as Whitney’s cotton-gin.[1]

[2] A machine of this description was really the invention of a young colored man in Kentucky. [Mrs. Stowe's note.]

He was possessed of a handsome person and pleasing manners, and was a general favorite in the factory. Nevertheless, as this young man was in the eye of the law not a man, but a thing, all these superior qualifications were subject to the control of a vulgar, narrow-minded, tyrannical master. This same gentleman, having heard of the fame of George's invention, took a ride over to the factory, to see what this intelligent chattel had been about. He was received with great enthusiasm by the employer, who congratulated him on possessing so valuable a slave.

He was waited upon over the factory, shown the machinery by George, who, in high spirits, talked so fluently, held himself so erect, looked so handsome and manly, that his master began to feel an uneasy consciousness of inferiority. What business had his slave to be marching round the country, inventing machines, and holding up his head among gentlemen? He'd soon put a stop to it. He'd take him back, and put him to hoeing and digging, and "see if he'd step about so smart." Accordingly, the manufacturer and all hands concerned were astounded when he suddenly demanded George's wages, and announced his intention of taking him home.

"But, Mr. Harris," remonstrated the manufacturer, "isn't this rather sudden?"

"What if it is?—isn't the man _mine_?"

"We would be willing, sir, to increase the rate of compensation."

"No object at all, sir. I don't need to hire any of my hands out, unless I've a mind to."

"But, sir, he seems peculiarly adapted to this business."

"Dare say he may be; never was much adapted to anything that I set him about, I'll be bound."

"But only think of his inventing this machine," interposed one of the workmen, rather unluckily.

"O yes!—a machine for saving work, is it? He'd invent that, I'll be bound; let a nigger alone for that, any time. They are all labor-saving machines themselves, every one of 'em. No, he shall tramp!"

George had stood like one transfixed, at hearing his doom thus suddenly pronounced by a power that he knew was irresistible. He folded his arms, tightly pressed in his lips, but a whole volcano of bitter feelings burned in his bosom, and sent streams of fire through his veins. He breathed short, and his large dark eyes flashed like live coals; and he might have broken out into some dangerous ebullition, had not the kindly manufacturer touched him on the arm, and said, in a low tone,

"Give way, George; go with him for the present. We'll try to help you, yet."

The tyrant observed the whisper, and conjectured its import, though he could not hear what was said; and he inwardly strengthened himself in his determination to keep the power he possessed over his victim.

George was taken home, and put to the meanest drudgery of the farm. He had been able to repress every disrespectful word; but the flashing eye, the gloomy and troubled brow, were part of a natural language that could not be repressed,—indubitable signs, which showed too plainly that the man could not become a thing.

It was during the happy period of his employment in the factory that George had seen and married his wife. During that period,—being much trusted and favored by his employer,—he had free liberty to come and go at discretion. The marriage was highly approved of by Mrs. Shelby, who, with a little womanly complacency in match-making, felt pleased to unite her handsome favorite with one of her own class who seemed in every way suited to her; and so they were married in her mistress' great parlor, and her mistress herself adorned the bride's beautiful hair with orange-blossoms, and threw over it the bridal veil, which certainly could scarce have rested on a fairer head; and there was no lack of white gloves, and cake and wine,—of admiring guests to praise the bride's beauty, and her mistress' indulgence and liberality. For a year or two Eliza saw her husband frequently, and there was nothing to interrupt their happiness, except the loss of two infant children, to whom she was passionately attached, and whom she mourned with a grief so intense as to call for gentle remonstrance from her mistress, who sought, with maternal anxiety, to direct her naturally passionate feelings within the bounds of reason and religion.

After the birth of little Harry, however, she had gradually become tranquillized and settled; and every bleeding tie and throbbing nerve, once more entwined with that little life, seemed to become sound and healthful, and Eliza was a happy woman up to the time

that her husband was rudely torn from his kind employer, and brought under the iron sway of his legal owner.

The manufacturer, true to his word, visited Mr. Harris a week or two after George had been taken away, when, as he hoped, the heat of the occasion had passed away, and tried every possible inducement to lead him to restore him to his former employment.

“You needn’t trouble yourself to talk any longer,” said he, doggedly; “I know my own business, sir.”

“I did not presume to interfere with it, sir. I only thought that you might think it for your interest to let your man to us on the terms proposed.”

“O, I understand the matter well enough. I saw your winking and whispering, the day I took him out of the factory; but you don’t come it over me that way. It’s a free country, sir; the man’s _mine_, and I do what I please with him,—that’s it!”

And so fell George’s last hope;—nothing before him but a life of toil and drudgery, rendered more bitter by every little smarting vexation and indignity which tyrannical ingenuity could devise.

A very humane jurist once said, The worst use you can put a man to is to hang him. No; there is another use that a man can be put to that is WORSE!

CHAPTER III The Husband and Father

Mrs. Shelby had gone on her visit, and Eliza stood in the verandah, rather dejectedly looking after the retreating carriage, when a hand was laid on her shoulder. She turned, and a bright smile lighted up her fine eyes.

“George, is it you? How you frightened me! Well; I am so glad you ’s come! Missis is gone to spend the afternoon; so come into my little room, and we’ll have the time all to ourselves.”

Saying this, she drew him into a neat little apartment opening on the verandah, where she generally sat at her sewing, within call of her mistress.

“How glad I am!—why don’t you smile?—and look at Harry—how he grows.” The boy stood shyly regarding his father through his curls, holding close to the skirts of his mother’s dress. “Isn’t he beautiful?” said Eliza, lifting his long curls and kissing him.

“I wish he’d never been born!” said George, bitterly. “I wish I’d never been born myself!”

Surprised and frightened, Eliza sat down, leaned her head on her husband’s shoulder, and burst into tears.

“There now, Eliza, it’s too bad for me to make you feel so, poor girl!” said he, fondly; “it’s too bad. O, how I wish you never had seen me—you might have been happy!”

“George! George! how can you talk so? What dreadful thing has happened, or is going to happen? I’m sure we’ve been very happy, till lately.”

“So we have, dear,” said George. Then drawing his child on his knee, he gazed intently on his glorious dark eyes, and passed his hands through his long curls.

“Just like you, Eliza; and you are the handsomest woman I ever saw, and the best one I ever wish to see; but, oh, I wish I’d never seen you, nor you me!”

“O, George, how can you!”

“Yes, Eliza, it’s all misery, misery, misery! My life is bitter as wormwood; the very life is burning out of me. I’m a poor, miserable, forlorn drudge; I shall only drag you down with me, that’s all. What’s the use of our trying to do anything, trying to know anything, trying to be anything? What’s the use of living? I wish I was dead!”

“O, now, dear George, that is really wicked! I know how you feel about losing your place in the factory, and you have a hard master; but pray be patient, and perhaps something—”

“Patient!” said he, interrupting her; “haven’t I been patient? Did I say a word when he came and took me away, for no earthly reason, from the place where everybody was kind to me? I’d paid him truly every cent of my earnings,—and they all say I worked

well."

"Well, it _is_ dreadful," said Eliza; "but, after all, he is your master, you know."

"My master! and who made him my master? That's what I think of—what right has he to me? I'm a man as much as he is. I'm a better man than he is. I know more about business than he does; I am a better manager than he is; I can read better than he can; I can write a better hand,—and I've learned it all myself, and no thanks to him,—I've learned it in spite of him; and now what right has he to make a dray-horse of me?—to take me from things I can do, and do better than he can, and put me to work that any horse can do? He tries to do it; he says he'll bring me down and humble me, and he puts me to just the hardest, meanest and dirtiest work, on purpose!"

"O, George! George! you frighten me! Why, I never heard you talk so; I'm afraid you'll do something dreadful. I don't wonder at your feelings, at all; but oh, do be careful—do, do—for my sake—for Harry's!"

"I have been careful, and I have been patient, but it's growing worse and worse; flesh and blood can't bear it any longer;—every chance he can get to insult and torment me, he takes. I thought I could do my work well, and keep on quiet, and have some time to read and learn out of work hours; but the more he sees I can do, the more he loads on. He says that though I don't say anything, he sees I've got the devil in me, and he means to bring it out; and one of these days it will come out in a way that he won't like, or I'm mistaken!"

"O dear! what shall we do?" said Eliza, mournfully.

"It was only yesterday," said George, "as I was busy loading stones into a cart, that young Mas'r Tom stood there, slashing his whip so near the horse that the creature was frightened. I asked him to stop, as pleasant as I could,—he just kept right on. I begged him again, and then he turned on me, and began striking me. I held his hand, and then he screamed and kicked and ran to his father, and told him that I was fighting him. He came in a rage, and said he'd teach me who was my master; and he tied me to a tree, and cut switches for young master, and told him that he might whip me till he was tired;—and he did do it! If I don't make him remember it, some time!" and the brow of the young man grew dark, and his eyes burned with an expression that made his young wife tremble. "Who made this man my master? That's what I want to know!" he said.

"Well," said Eliza, mournfully, "I always thought that I must obey my master and mistress, or I couldn't be a Christian."

"There is some sense in it, in your case; they have brought you up like a child, fed you, clothed you, indulged you, and taught you, so that you have a good education; that is some reason why they should claim you. But I have been kicked and cuffed and sworn at, and at the best only let alone; and what do I owe? I've paid for all my keeping a hundred times over. I _won't_ bear it. No, I _won't_!" he said, clenching his hand with a fierce frown.

Eliza trembled, and was silent. She had never seen her husband in this mood before; and her gentle system of ethics seemed to bend like a reed in the surges of such passions.

"You know poor little Carlo, that you gave me," added George; "the creature has been about all the comfort that I've had. He has slept with me nights, and followed me around days, and kind o' looked at me as if he understood how I felt. Well, the other day I was just feeding him with a few old scraps I picked up by the kitchen door, and Mas'r came along, and said I was feeding him up at his expense, and that he couldn't afford to have every nigger keeping his dog, and ordered me to tie a stone to his neck and throw him in the pond."

"O, George, you didn't do it!"

"Do it? not I!—but he did. Mas'r and Tom pelted the poor drowning creature with stones. Poor thing! he looked at me so mournful, as if he wondered why I didn't save him. I had to take a flogging because I wouldn't do it myself. I don't care. Mas'r will find out that I'm one that whipping won't tame. My day will come yet, if he don't look out."

"What are you going to do? O, George, don't do anything wicked; if you only trust in God, and try to do right, he'll deliver you."

"I an't a Christian like you, Eliza; my heart's full of bitterness; I can't trust in God. Why does he let things be so?"

"O, George, we must have faith. Mistress says that when all things go wrong to us, we must believe that God is doing the very best."

“That’s easy to say for people that are sitting on their sofas and riding in their carriages; but let ’em be where I am, I guess it would come some harder. I wish I could be good; but my heart burns, and can’t be reconciled, anyhow. You couldn’t in my place,—you can’t now, if I tell you all I’ve got to say. You don’t know the whole yet.”

“What can be coming now?”

“Well, lately Mas’r has been saying that he was a fool to let me marry off the place; that he hates Mr. Shelby and all his tribe, because they are proud, and hold their heads up above him, and that I’ve got proud notions from you; and he says he won’t let me come here any more, and that I shall take a wife and settle down on his place. At first he only scolded and grumbled these things; but yesterday he told me that I should take Mina for a wife, and settle down in a cabin with her, or he would sell me down river.”

“Why—but you were married to _me_, by the minister, as much as if you’d been a white man!” said Eliza, simply.

“Don’t you know a slave can’t be married? There is no law in this country for that; I can’t hold you for my wife, if he chooses to part us. That’s why I wish I’d never seen you,—why I wish I’d never been born; it would have been better for us both,—it would have been better for this poor child if he had never been born. All this may happen to him yet!”

“O, but master is so kind!”

“Yes, but who knows?—he may die—and then he may be sold to nobody knows who. What pleasure is it that he is handsome, and smart, and bright? I tell you, Eliza, that a sword will pierce through your soul for every good and pleasant thing your child is or has; it will make him worth too much for you to keep.”

The words smote heavily on Eliza’s heart; the vision of the trader came before her eyes, and, as if some one had struck her a deadly blow, she turned pale and gasped for breath. She looked nervously out on the verandah, where the boy, tired of the grave conversation, had retired, and where he was riding triumphantly up and down on Mr. Shelby’s walking-stick. She would have spoken to tell her husband her fears, but checked herself.

“No, no,—he has enough to bear, poor fellow!” she thought. “No, I won’t tell him; besides, it an’t true; Missis never deceives us.”

“So, Eliza, my girl,” said the husband, mournfully, “bear up, now; and good-by, for I’m going.”

“Going, George! Going where?”

“To Canada,” said he, straightening himself up; “and when I’m there, I’ll buy you; that’s all the hope that’s left us. You have a kind master, that won’t refuse to sell you. I’ll buy you and the boy;—God helping me, I will!”

“O, dreadful! if you should be taken?”

“I won’t be taken, Eliza; I’ll _die_ first! I’ll be free, or I’ll die!”

“You won’t kill yourself!”

“No need of that. They will kill me, fast enough; they never will get me down the river alive!”

“O, George, for my sake, do be careful! Don’t do anything wicked; don’t lay hands on yourself, or anybody else! You are tempted too much—too much; but don’t—go you must—but go carefully, prudently; pray God to help you.”

“Well, then, Eliza, hear my plan. Mas’r took it into his head to send me right by here, with a note to Mr. Symmes, that lives a mile past. I believe he expected I should come here to tell you what I have. It would please him, if he thought it would aggravate ‘Shelby’s folks,’ as he calls ’em. I’m going home quite resigned, you understand, as if all was over. I’ve got some preparations made,—and there are those that will help me; and, in the course of a week or so, I shall be among the missing, some day. Pray for me, Eliza; perhaps the good Lord will hear _you_.”

“O, pray yourself, George, and go trusting in him; then you won’t do anything wicked.”

“Well, now, _good-by_,” said George, holding Eliza’s hands, and gazing into her eyes, without moving. They stood silent; then there were last words, and sobs, and bitter weeping,—such parting as those may make whose hope to meet again is as the spider’s web,—and the husband and wife were parted.

CHAPTER IV An Evening in Uncle Tom’s Cabin

The cabin of Uncle Tom was a small log building, close adjoining to “the house,” as the negro _par excellence_ designates his master’s dwelling. In front it had a neat garden-patch, where, every summer, strawberries, raspberries, and a variety of fruits and vegetables, flourished under careful tending. The whole front of it was covered by a large scarlet bignonia and a native multiflora rose, which, entwisting and interlacing, left scarce a vestige of the rough logs to be seen. Here, also, in summer, various brilliant annuals, such as marigolds, petunias, four-o’clocks, found an indulgent corner in which to unfold their splendors, and were the delight and pride of Aunt Chloe’s heart.

Let us enter the dwelling. The evening meal at the house is over, and Aunt Chloe, who presided over its preparation as head cook, has left to inferior officers in the kitchen the business of clearing away and washing dishes, and come out into her own snug territories, to “get her ole man’s supper”; therefore, doubt not that it is her you see by the fire, presiding with anxious interest over certain frizzling items in a stew-pan, and anon with grave consideration lifting the cover of a bake-kettle, from whence steam forth indubitable intimations of “something good.” A round, black, shining face is hers, so glossy as to suggest the idea that she might have been washed over with white of eggs, like one of her own tea rusks. Her whole plump countenance beams with satisfaction and contentment from under her well-starched checked turban, bearing on it, however, if we must confess it, a little of that tinge of self-consciousness which becomes the first cook of the neighborhood, as Aunt Chloe was universally held and acknowledged to be.

A cook she certainly was, in the very bone and centre of her soul. Not a chicken or turkey or duck in the barn-yard but looked grave when they saw her approaching, and seemed evidently to be reflecting on their latter end; and certain it was that she was always meditating on trussing, stuffing and roasting, to a degree that was calculated to inspire terror in any reflecting fowl living. Her corn-cake, in all its varieties of hoe-cake, dodgers, muffins, and other species too numerous to mention, was a sublime mystery to all less practised compounders; and she would shake her fat sides with honest pride and merriment, as she would narrate the fruitless efforts that one and another of her compeers had made to attain to her elevation.

The arrival of company at the house, the arranging of dinners and suppers “in style,” awoke all the energies of her soul; and no sight was more welcome to her than a pile of travelling trunks launched on the verandah, for then she foresaw fresh efforts and fresh triumphs.

Just at present, however, Aunt Chloe is looking into the bake-pan; in which congenial operation we shall leave her till we finish our picture of the cottage.

In one corner of it stood a bed, covered neatly with a snowy spread; and by the side of it was a piece of carpeting, of some considerable size. On this piece of carpeting Aunt Chloe took her stand, as being decidedly in the upper walks of life; and it and the bed by which it lay, and the whole corner, in fact, were treated with distinguished consideration, and made, so far as possible, sacred from the marauding inroads and desecrations of little folks. In fact, that corner was the _drawing-room_ of the establishment. In the other corner was a bed of much humbler pretensions, and evidently designed for _use_. The wall over the fireplace was adorned with some very brilliant scriptural prints, and a portrait of General Washington, drawn and colored in a manner which would certainly have astonished that hero, if ever he had happened to meet with its like.

On a rough bench in the corner, a couple of woolly-headed boys, with glistening black eyes and fat shining cheeks, were busy in superintending the first walking operations of the baby, which, as is usually the case, consisted in getting up on its feet, balancing a moment, and then tumbling down,—each successive failure being violently cheered, as something decidedly clever.

A table, somewhat rheumatic in its limbs, was drawn out in front of the fire, and covered with a cloth, displaying cups and saucers of a decidedly brilliant pattern, with other symptoms of an approaching meal. At this table was seated Uncle Tom, Mr. Shelby’s best hand, who, as he is to be the hero of our story, we must daguerreotype for our readers. He was a large, broad-chested, powerfully-made man, of a full glossy black, and a face whose truly African features were characterized by an expression of grave and steady good sense, united with much kindliness and benevolence. There was something about his whole air self-respecting and dignified, yet united with a confiding and humble simplicity.

He was very busily intent at this moment on a slate lying before him, on which he was carefully and slowly endeavoring to accomplish a copy of some letters, in which operation he was overlooked by young Mas’r George, a smart, bright boy of thirteen, who appeared fully to realize the dignity of his position as instructor.

“Not that way, Uncle Tom,—not that way,” said he, briskly, as Uncle Tom laboriously brought up the tail of his _g_ the wrong side out; “that makes a _q_, you see.”

“La sakes, now, does it?” said Uncle Tom, looking with a respectful, admiring air, as his young teacher flourishingly scrawled _q_’s and _g_’s innumerable for his edification; and then, taking the pencil in his big, heavy fingers, he patiently recommenced.

“How easy white folks al’us does things!” said Aunt Chloe, pausing while she was greasing a griddle with a scrap of bacon on her fork, and regarding young Master George with pride. “The way he can write, now! and read, too! and then to come out here evenings and read his lessons to us,—it’s mighty interestin’!”

“But, Aunt Chloe, I’m getting mighty hungry,” said George. “Isn’t that cake in the skillet almost done?”

“Mose done, Mas’r George,” said Aunt Chloe, lifting the lid and peeping in,—“browning beautiful—a real lovely brown. Ah! let me alone for dat. Missis let Sally try to make some cake, t’other day, jes to _larn_ her, she said. ‘O, go way, Missis,’ said I; ‘it really hurts my feelin’s, now, to see good vittles spiled dat ar way! Cake ris all to one side—no shape at all; no more than my shoe; go way!’”

And with this final expression of contempt for Sally’s greenness, Aunt Chloe whipped the cover off the bake-kettle, and disclosed to view a neatly-baked pound-cake, of which no city confectioner need to have been ashamed. This being evidently the central point of the entertainment, Aunt Chloe began now to bustle about earnestly in the supper department.

“Here you, Mose and Pete! get out de way, you niggers! Get away, Polly, honey,—mammy’ll give her baby somefin, by and by. Now, Mas’r George, you jest take off dem books, and set down now with my old man, and I’ll take up de sausages, and have de first griddle full of cakes on your plates in less dan no time.”

“They wanted me to come to supper in the house,” said George; “but I knew what was what too well for that, Aunt Chloe.”

“So you did—so you did, honey,” said Aunt Chloe, heaping the smoking batter-cakes on his plate; “you know’d your old aunty’d keep the best for you. O, let you alone for dat! Go way!” And, with that, aunty gave George a nudge with her finger, designed to be immensely facetious, and turned again to her griddle with great briskness.

“Now for the cake,” said Mas’r George, when the activity of the griddle department had somewhat subsided; and, with that, the youngster flourished a large knife over the article in question.

“La bless you, Mas’r George!” said Aunt Chloe, with earnestness, catching his arm, “you wouldn’t be for cuttin’ it wid dat ar great heavy knife! Smash all down—spile all de pretty rise of it. Here, I’ve got a thin old knife, I keeps sharp a purpose. Dar now, see! comes apart light as a feather! Now eat away—you won’t get anything to beat dat ar.”

“Tom Lincon says,” said George, speaking with his mouth full, “that their Jinny is a better cook than you.”

“Dem Lincons an’t much count, no way!” said Aunt Chloe, contemptuously; “I mean, set along side _our_ folks. They ’s ’spectable folks enough in a kinder plain way; but, as to gettin’ up anything in style, they don’t begin to have a notion on ’t. Set Mas’r Lincon, now, alongside Mas’r Shelby! Good Lor! and Missis Lincon,—can she kinder sweep it into a room like my missis,—so kinder splendid, yer know! O, go way! don’t tell me nothin’ of dem Lincons!”—and Aunt Chloe tossed her head as one who hoped she did know something of the world.

“Well, though, I’ve heard you say,” said George, “that Jinny was a pretty fair cook.”

“So I did,” said Aunt Chloe,—“I may say dat. Good, plain, common cookin’, Jinny’ll do;—make a good pone o’ bread,—bile her taters _far_,—her corn cakes isn’t extra, not extra now, Jinny’s corn cakes isn’t, but then they’s far,—but, Lor, come to de higher branches, and what _can_ she do? Why, she makes pies—sartin she does; but what kinder crust? Can she make your real flecky paste, as melts in your mouth, and lies all up like a puff? Now, I went over thar when Miss Mary was gwine to be married, and Jinny she jest showed me de weddin’ pies. Jinny and I is good friends, ye know. I never said nothin’; but go ’long, Mas’r George! Why, I shouldn’t sleep a wink for a week, if I had a batch of pies like dem ar. Why, dey wan’t no ’count ’t all.”

“I suppose Jinny thought they were ever so nice,” said George.

“Thought so!—didn’t she? Thar she was, showing ’em, as innocent—ye see, it’s jest here, Jinny _don’t know_. Lor, the family an’t nothing! She can’t be spected to know! ’Ta’nt no fault o’ hern. Ah, Mas’r George, you doesn’t know half your privileges in yer family

and bringin' up!" Here Aunt Chloe sighed, and rolled up her eyes with emotion.

"I'm sure, Aunt Chloe, I understand all my pie and pudding privileges," said George. "Ask Tom Lincon if I don't crow over him, every time I meet him."

Aunt Chloe sat back in her chair, and indulged in a hearty guffaw of laughter, at this witticism of young Mas'r's, laughing till the tears rolled down her black, shining cheeks, and varying the exercise with playfully slapping and poking Mas'r Georgey, and telling him to go way, and that he was a case—that he was fit to kill her, and that he sartin would kill her, one of these days; and, between each of these sanguinary predictions, going off into a laugh, each longer and stronger than the other, till George really began to think that he was a very dangerously witty fellow, and that it became him to be careful how he talked "as funny as he could."

"And so ye telled Tom, did ye? O, Lor! what young uns will be up ter! Ye crowed over Tom? O, Lor! Mas'r George, if ye wouldn't make a hornbug laugh!"

"Yes," said George, "I says to him, 'Tom, you ought to see some of Aunt Chloe's pies; they're the right sort,' says I."

"Pity, now, Tom couldn't," said Aunt Chloe, on whose benevolent heart the idea of Tom's benighted condition seemed to make a strong impression. "Ye oughter just ask him here to dinner, some o' these times, Mas'r George," she added; "it would look quite pretty of ye. Ye know, Mas'r George, ye oughtenter feel 'bove nobody, on 'count yer privileges, 'cause all our privileges is gi'n to us; we ought al'ays to 'member that," said Aunt Chloe, looking quite serious.

"Well, I mean to ask Tom here, some day next week," said George; "and you do your prettiest, Aunt Chloe, and we'll make him stare. Won't we make him eat so he won't get over it for a fortnight?"

"Yes, yes—sartin," said Aunt Chloe, delighted; "you'll see. Lor! to think of some of our dinners! Yer mind dat ar great chicken pie I made when we guv de dinner to General Knox? I and Missis, we come pretty near quarrelling about dat ar crust. What does get into ladies sometimes, I don't know; but, sometimes, when a body has de heaviest kind o' 'sponsibility on 'em, as ye may say, and is all kinder _'seris'_ and taken up, dey takes dat ar time to be hangin' round and kinder interferin'! Now, Missis, she wanted me to do dis way, and she wanted me to do dat way; and, finally, I got kinder sarcy, and, says I, 'Now, Missis, do jist look at dem beautiful white hands o' yourn with long fingers, and all a sparkling with rings, like my white lilies when de dew 's on 'em; and look at my great black stumpin hands. Now, don't ye think dat de Lord must have meant _me_ to make de pie-crust, and you to stay in de parlor?' Dar! I was jist so sarcy, Mas'r George."

"And what did mother say?" said George.

"Say?—why, she kinder larfed in her eyes—dem great handsome eyes o' hern; and, says she, 'Well, Aunt Chloe, I think you are about in the right on 't,' says she; and she went off in de parlor. She oughter cracked me over de head for bein' so sarcy; but dar's whar 't is—I can't do nothin' with ladies in de kitchen!"

"Well, you made out well with that dinner,—I remember everybody said so," said George.

"Didn't I? And wan't I behind de dinin'-room door dat bery day? and didn't I see de General pass his plate three times for some more dat bery pie?—and, says he, 'You must have an uncommon cook, Mrs. Shelby.' Lor! I was fit to split myself.

"And de Gineral, he knows what cookin' is," said Aunt Chloe, drawing herself up with an air. "Bery nice man, de Gineral! He comes of one of de bery _fustest_ families in Old Virginny! He knows what's what, now, as well as I do—de Gineral. Ye see, there's _pints_ in all pies, Mas'r George; but tan't everybody knows what they is, or orter be. But the Gineral, he knows; I knew by his 'marks he made. Yes, he knows what de pints is!"

By this time, Master George had arrived at that pass to which even a boy can come (under uncommon circumstances), when he really could not eat another morsel, and, therefore, he was at leisure to notice the pile of woolly heads and glistening eyes which were regarding their operations hungrily from the opposite corner.

"Here, you Mose, Pete," he said, breaking off liberal bits, and throwing it at them; "you want some, don't you? Come, Aunt Chloe, bake them some cakes."

And George and Tom moved to a comfortable seat in the chimney-corner, while Aunt Chloe, after baking a goodly pile of cakes, took her baby on her lap, and began alternately filling its mouth and her own, and distributing to Mose and Pete, who seemed rather

to prefer eating theirs as they rolled about on the floor under the table, tickling each other, and occasionally pulling the baby's toes.

"O! go long, will ye?" said the mother, giving now and then a kick, in a kind of general way, under the table, when the movement became too obstreperous. "Can't ye be decent when white folks comes to see ye? Stop dat ar, now, will ye? Better mind yerselves, or I'll take ye down a button-hole lower, when Mas'r George is gone!"

What meaning was couched under this terrible threat, it is difficult to say; but certain it is that its awful indistinctness seemed to produce very little impression on the young sinners addressed.

"La, now!" said Uncle Tom, "they are so full of tickle all the while, they can't behave theirselves."

Here the boys emerged from under the table, and, with hands and faces well plastered with molasses, began a vigorous kissing of the baby.

"Get along wid ye!" said the mother, pushing away their woolly heads. "Ye'll all stick together, and never get clar, if ye do dat fashion. Go long to de spring and wash yerselves!" she said, seconding her exhortations by a slap, which resounded very formidably, but which seemed only to knock out so much more laugh from the young ones, as they tumbled precipitately over each other out of doors, where they fairly screamed with merriment.

"Did ye ever see such aggravating young uns?" said Aunt Chloe, rather complacently, as, producing an old towel, kept for such emergencies, she poured a little water out of the cracked tea-pot on it, and began rubbing off the molasses from the baby's face and hands; and, having polished her till she shone, she set her down in Tom's lap, while she busied herself in clearing away supper. The baby employed the intervals in pulling Tom's nose, scratching his face, and burying her fat hands in his woolly hair, which last operation seemed to afford her special content.

"Aint she a peart young un?" said Tom, holding her from him to take a full-length view; then, getting up, he set her on his broad shoulder, and began capering and dancing with her, while Mas'r George snapped at her with his pocket-handkerchief, and Mose and Pete, now returned again, roared after her like bears, till Aunt Chloe declared that they "fairly took her head off" with their noise. As, according to her own statement, this surgical operation was a matter of daily occurrence in the cabin, the declaration no whit abated the merriment, till every one had roared and tumbled and danced themselves down to a state of composure.

"Well, now, I hopes you're done," said Aunt Chloe, who had been busy in pulling out a rude box of a trundle-bed; "and now, you Mose and you Pete, get into thar; for we's goin' to have the meetin'."

"O mother, we don't wanter. We wants to sit up to meetin',—meetin's is so curis. We likes 'em."

"La, Aunt Chloe, shove it under, and let 'em sit up," said Mas'r George, decisively, giving a push to the rude machine.

Aunt Chloe, having thus saved appearances, seemed highly delighted to push the thing under, saying, as she did so, "Well, mebbe 't will do 'em some good."

The house now resolved itself into a committee of the whole, to consider the accommodations and arrangements for the meeting.

"What we's to do for cheers, now, _I_ declar I don't know," said Aunt Chloe. As the meeting had been held at Uncle Tom's weekly, for an indefinite length of time, without any more "cheers," there seemed some encouragement to hope that a way would be discovered at present.

"Old Uncle Peter sung both de legs out of dat oldest cheer, last week," suggested Mose.

"You go long! I'll boun' you pulled 'em out; some o' your shines," said Aunt Chloe.

"Well, it'll stand, if it only keeps jam up agin de wall!" said Mose.

"Den Uncle Peter mus'n't sit in it, cause he al'ays hitches when he gets a singing. He hitched pretty nigh across de room, t' other night," said Pete.

"Good Lor! get him in it, then," said Mose, "and den he'd begin, 'Come saints and sinners, hear me tell,' and den down he'd go,"—and Mose imitated precisely the nasal tones of the old man, tumbling on the floor, to illustrate the supposed catastrophe.

"Come now, be decent, can't ye?" said Aunt Chloe; "an't yer shamed?"

Mas'r George, however, joined the offender in the laugh, and declared decidedly that Mose was a "buster." So the maternal admonition seemed rather to fail of effect.

"Well, ole man," said Aunt Chloe, "you'll have to tote in them ar bar'ls."

"Mother's bar'ls is like dat ar widder's, Mas'r George was reading 'bout, in de good book,—dey never fails," said Mose, aside to Pete.

"I'm sure one on 'em caved in last week," said Pete, "and let 'em all down in de middle of de singin'; dat ar was failin', warnt it?"

During this aside between Mose and Pete, two empty casks had been rolled into the cabin, and being secured from rolling, by stones on each side, boards were laid across them, which arrangement, together with the turning down of certain tubs and pails, and the disposing of the rickety chairs, at last completed the preparation.

"Mas'r George is such a beautiful reader, now, I know he'll stay to read for us," said Aunt Chloe; "'pears like 't will be so much more interestin'."

George very readily consented, for your boy is always ready for anything that makes him of importance.

The room was soon filled with a motley assemblage, from the old gray-headed patriarch of eighty, to the young girl and lad of fifteen. A little harmless gossip ensued on various themes, such as where old Aunt Sally got her new red headkerchief, and how "Missis was a going to give Lizzy that spotted muslin gown, when she'd got her new berage made up;" and how Mas'r Shelby was thinking of buying a new sorrel colt, that was going to prove an addition to the glories of the place. A few of the worshippers belonged to families hard by, who had got permission to attend, and who brought in various choice scraps of information, about the sayings and doings at the house and on the place, which circulated as freely as the same sort of small change does in higher circles.

After a while the singing commenced, to the evident delight of all present. Not even all the disadvantage of nasal intonation could prevent the effect of the naturally fine voices, in airs at once wild and spirited. The words were sometimes the well-known and common hymns sung in the churches about, and sometimes of a wilder, more indefinite character, picked up at camp-meetings.

The chorus of one of them, which ran as follows, was sung with great energy and unction:

"Die on the field of battle, Die on the field of battle, Glory in my soul."

Another special favorite had oft repeated the words—

"O, I'm going to glory,—won't you come along with me? Don't you see the angels beck'ning, and a calling me away? Don't you see the golden city and the everlasting day?"

There were others, which made incessant mention of "Jordan's banks," and "Canaan's fields," and the "New Jerusalem;" for the negro mind, impassioned and imaginative, always attaches itself to hymns and expressions of a vivid and pictorial nature; and, as they sung, some laughed, and some cried, and some clapped hands, or shook hands rejoicingly with each other, as if they had fairly gained the other side of the river.

Various exhortations, or relations of experience, followed, and intermingled with the singing. One old gray-headed woman, long past work, but much revered as a sort of chronicle of the past, rose, and leaning on her staff, said—

"Well, chil'en! Well, I'm mighty glad to hear ye all and see ye all once more, 'cause I don't know when I'll be gone to glory; but I've done got ready, chil'en; 'pears like I'd got my little bundle all tied up, and my bonnet on, jest a waitin' for the stage to come along and take me home; sometimes, in the night, I think I hear the wheels a rattlin', and I'm lookin' out all the time; now, you jest be ready too, for I tell ye all, chil'en," she said, striking her staff hard on the floor, "dat ar _glory_ is a mighty thing! It's a mighty thing, chil'en,—you don'no nothing about it,—it's _wonderful_." And the old creature sat down, with streaming tears, as wholly overcome, while the whole circle struck up—

"O Canaan, bright Canaan, I'm bound for the land of Canaan."

Mas'r George, by request, read the last chapters of Revelation, often interrupted by such exclamations as "The _sakes_ now!" "Only hear that!" "Jest think on 't!" "Is all that a comin' sure enough?"

George, who was a bright boy, and well trained in religious things by his mother, finding himself an object of general admiration, threw in expositions of his own, from time to time, with a commendable seriousness and gravity, for which he was admired by the young and blessed by the old; and it was agreed, on all hands, that "a minister couldn't lay it off better than he did;" that "'t was reely 'mazin'!"

Uncle Tom was a sort of patriarch in religious matters, in the neighborhood. Having, naturally, an organization in which the _morale_ was strongly predominant, together with a greater breadth and cultivation of mind than obtained among his companions, he was looked up to with great respect, as a sort of minister among them; and the simple, hearty, sincere style of his exhortations might have edified even better educated persons. But it was in prayer that he especially excelled. Nothing could exceed the touching simplicity, the childlike earnestness, of his prayer, enriched with the language of Scripture, which seemed so entirely to have wrought itself into his being, as to have become a part of himself, and to drop from his lips unconsciously; in the language of a pious old negro, he "prayed right up." And so much did his prayer always work on the devotional feelings of his audiences, that there seemed often a danger that it would be lost altogether in the abundance of the responses which broke out everywhere around him.

While this scene was passing in the cabin of the man, one quite otherwise passed in the halls of the master.

The trader and Mr. Shelby were seated together in the dining room afore-named, at a table covered with papers and writing utensils.

Mr. Shelby was busy in counting some bundles of bills, which, as they were counted, he pushed over to the trader, who counted them likewise.

"All fair," said the trader; "and now for signing these yer."

Mr. Shelby hastily drew the bills of sale towards him, and signed them, like a man that hurries over some disagreeable business, and then pushed them over with the money. Haley produced, from a well-worn valise, a parchment, which, after looking over it a moment, he handed to Mr. Shelby, who took it with a gesture of suppressed eagerness.

"Wal, now, the thing's _done_!" said the trader, getting up.

"It's _done!_" said Mr. Shelby, in a musing tone; and, fetching a long breath, he repeated, _"It's done!"_

"Yer don't seem to feel much pleased with it, 'pears to me," said the trader.

"Haley," said Mr. Shelby, "I hope you'll remember that you promised, on your honor, you wouldn't sell Tom, without knowing what sort of hands he's going into."

"Why, you've just done it, sir," said the trader.

"Circumstances, you well know, _obliged_ me," said Shelby, haughtily.

"Wal, you know, they may 'blige _me_, too," said the trader. "Howsomever, I'll do the very best I can in gettin' Tom a good berth; as to my treatin' on him bad, you needn't be a grain afeard. If there's anything that I thank the Lord for, it is that I'm never noways cruel."

After the expositions which the trader had previously given of his humane principles, Mr. Shelby did not feel particularly reassured by these declarations; but, as they were the best comfort the case admitted of, he allowed the trader to depart in silence, and betook himself to a solitary cigar.

CHAPTER V Showing the Feelings of Living Property on Changing Owners

Mr. and Mrs. Shelby had retired to their apartment for the night. He was lounging in a large easy-chair, looking over some letters that had come in the afternoon mail, and she was standing before her mirror, brushing out the complicated braids and curls in which Eliza had arranged her hair; for, noticing her pale cheeks and haggard eyes, she had excused her attendance that night, and

ordered her to bed. The employment, naturally enough, suggested her conversation with the girl in the morning; and turning to her husband, she said, carelessly,

“By the by, Arthur, who was that low-bred fellow that you lugged in to our dinner-table today?”

“Haley is his name,” said Shelby, turning himself rather uneasily in his chair, and continuing with his eyes fixed on a letter.

“Haley! Who is he, and what may be his business here, pray?”

“Well, he’s a man that I transacted some business with, last time I was at Natchez,” said Mr. Shelby.

“And he presumed on it to make himself quite at home, and call and dine here, ay?”

“Why, I invited him; I had some accounts with him,” said Shelby.

“Is he a negro-trader?” said Mrs. Shelby, noticing a certain embarrassment in her husband’s manner.

“Why, my dear, what put that into your head?” said Shelby, looking up.

“Nothing,—only Eliza came in here, after dinner, in a great worry, crying and taking on, and said you were talking with a trader, and that she heard him make an offer for her boy—the ridiculous little goose!”

“She did, hey?” said Mr. Shelby, returning to his paper, which he seemed for a few moments quite intent upon, not perceiving that he was holding it bottom upwards.

“It will have to come out,” said he, mentally; “as well now as ever.”

“I told Eliza,” said Mrs. Shelby, as she continued brushing her hair, “that she was a little fool for her pains, and that you never had anything to do with that sort of persons. Of course, I knew you never meant to sell any of our people,—least of all, to such a fellow.”

“Well, Emily,” said her husband, “so I have always felt and said; but the fact is that my business lies so that I cannot get on without. I shall have to sell some of my hands.”

“To that creature? Impossible! Mr. Shelby, you cannot be serious.”

“I’m sorry to say that I am,” said Mr. Shelby. “I’ve agreed to sell Tom.”

“What! our Tom?—that good, faithful creature!—been your faithful servant from a boy! O, Mr. Shelby!—and you have promised him his freedom, too,—you and I have spoken to him a hundred times of it. Well, I can believe anything now,—I can believe _now_ that you could sell little Harry, poor Eliza’s only child!” said Mrs. Shelby, in a tone between grief and indignation.

“Well, since you must know all, it is so. I have agreed to sell Tom and Harry both; and I don’t know why I am to be rated, as if I were a monster, for doing what every one does every day.”

“But why, of all others, choose these?” said Mrs. Shelby. “Why sell them, of all on the place, if you must sell at all?”

“Because they will bring the highest sum of any,—that’s why. I could choose another, if you say so. The fellow made me a high bid on Eliza, if that would suit you any better,” said Mr. Shelby.

“The wretch!” said Mrs. Shelby, vehemently.

“Well, I didn’t listen to it, a moment,—out of regard to your feelings, I wouldn’t;—so give me some credit.”

“My dear,” said Mrs. Shelby, recollecting herself, “forgive me. I have been hasty. I was surprised, and entirely unprepared for this;—but surely you will allow me to intercede for these poor creatures. Tom is a noble-hearted, faithful fellow, if he is black. I do believe, Mr. Shelby, that if he were put to it, he would lay down his life for you.”

“I know it,—I dare say;—but what’s the use of all this?—I can’t help myself.”

“Why not make a pecuniary sacrifice? I’m willing to bear my part of the inconvenience. O, Mr. Shelby, I have tried—tried most faithfully, as a Christian woman should—to do my duty to these poor, simple, dependent creatures. I have cared for them, instructed them, watched over them, and known all their little cares and joys, for years; and how can I ever hold up my head again

among them, if, for the sake of a little paltry gain, we sell such a faithful, excellent, confiding creature as poor Tom, and tear from him in a moment all we have taught him to love and value? I have taught them the duties of the family, of parent and child, and husband and wife; and how can I bear to have this open acknowledgment that we care for no tie, no duty, no relation, however sacred, compared with money? I have talked with Eliza about her boy—her duty to him as a Christian mother, to watch over him, pray for him, and bring him up in a Christian way; and now what can I say, if you tear him away, and sell him, soul and body, to a profane, unprincipled man, just to save a little money? I have told her that one soul is worth more than all the money in the world; and how will she believe me when she sees us turn round and sell her child?—sell him, perhaps, to certain ruin of body and soul!"

"I'm sorry you feel so about it, Emily,—indeed I am," said Mr. Shelby; "and I respect your feelings, too, though I don't pretend to share them to their full extent; but I tell you now, solemnly, it's of no use—I can't help myself. I didn't mean to tell you this Emily; but, in plain words, there is no choice between selling these two and selling everything. Either they must go, or _all_ must. Haley has come into possession of a mortgage, which, if I don't clear off with him directly, will take everything before it. I've raked, and scraped, and borrowed, and all but begged,—and the price of these two was needed to make up the balance, and I had to give them up. Haley fancied the child; he agreed to settle the matter that way, and no other. I was in his power, and _had_ to do it. If you feel so to have them sold, would it be any better to have _all_ sold?"

Mrs. Shelby stood like one stricken. Finally, turning to her toilet, she rested her face in her hands, and gave a sort of groan.

"This is God's curse on slavery!—a bitter, bitter, most accursed thing!—a curse to the master and a curse to the slave! I was a fool to think I could make anything good out of such a deadly evil. It is a sin to hold a slave under laws like ours,—I always felt it was,—I always thought so when I was a girl,—I thought so still more after I joined the church; but I thought I could gild it over,—I thought, by kindness, and care, and instruction, I could make the condition of mine better than freedom—fool that I was!"

"Why, wife, you are getting to be an abolitionist, quite."

"Abolitionist! if they knew all I know about slavery, they _might_ talk! We don't need them to tell us; you know I never thought that slavery was right—never felt willing to own slaves."

"Well, therein you differ from many wise and pious men," said Mr. Shelby. "You remember Mr. B.'s sermon, the other Sunday?"

"I don't want to hear such sermons; I never wish to hear Mr. B. in our church again. Ministers can't help the evil, perhaps,—can't cure it, any more than we can,—but defend it!—it always went against my common sense. And I think you didn't think much of that sermon, either."

"Well," said Shelby, "I must say these ministers sometimes carry matters further than we poor sinners would exactly dare to do. We men of the world must wink pretty hard at various things, and get used to a deal that isn't the exact thing. But we don't quite fancy, when women and ministers come out broad and square, and go beyond us in matters of either modesty or morals, that's a fact. But now, my dear, I trust you see the necessity of the thing, and you see that I have done the very best that circumstances would allow."

"O yes, yes!" said Mrs. Shelby, hurriedly and abstractedly fingering her gold watch,—"I haven't any jewelry of any amount," she added, thoughtfully; "but would not this watch do something?—it was an expensive one, when it was bought. If I could only at least save Eliza's child, I would sacrifice anything I have."

"I'm sorry, very sorry, Emily," said Mr. Shelby, "I'm sorry this takes hold of you so; but it will do no good. The fact is, Emily, the thing's done; the bills of sale are already signed, and in Haley's hands; and you must be thankful it is no worse. That man has had it in his power to ruin us all,—and now he is fairly off. If you knew the man as I do, you'd think that we had had a narrow escape."

"Is he so hard, then?"

"Why, not a cruel man, exactly, but a man of leather,—a man alive to nothing but trade and profit,—cool, and unhesitating, and unrelenting, as death and the grave. He'd sell his own mother at a good percentage—not wishing the old woman any harm, either."

"And this wretch owns that good, faithful Tom, and Eliza's child!"

"Well, my dear, the fact is that this goes rather hard with me; it's a thing I hate to think of. Haley wants to drive matters, and take possession tomorrow. I'm going to get out my horse bright and early, and be off. I can't see Tom, that's a fact; and you had better arrange a drive somewhere, and carry Eliza off. Let the thing be done when she is out of sight."

“No, no,” said Mrs. Shelby; “I’ll be in no sense accomplice or help in this cruel business. I’ll go and see poor old Tom, God help him, in his distress! They shall see, at any rate, that their mistress can feel for and with them. As to Eliza, I dare not think about it. The Lord forgive us! What have we done, that this cruel necessity should come on us?”

There was one listener to this conversation whom Mr. and Mrs. Shelby little suspected.

Communicating with their apartment was a large closet, opening by a door into the outer passage. When Mrs. Shelby had dismissed Eliza for the night, her feverish and excited mind had suggested the idea of this closet; and she had hidden herself there, and, with her ear pressed close against the crack of the door, had lost not a word of the conversation.

When the voices died into silence, she rose and crept stealthily away. Pale, shivering, with rigid features and compressed lips, she looked an entirely altered being from the soft and timid creature she had been hitherto. She moved cautiously along the entry, paused one moment at her mistress’ door, and raised her hands in mute appeal to Heaven, and then turned and glided into her own room. It was a quiet, neat apartment, on the same floor with her mistress. There was the pleasant sunny window, where she had often sat singing at her sewing; there a little case of books, and various little fancy articles, ranged by them, the gifts of Christmas holidays; there was her simple wardrobe in the closet and in the drawers:—here was, in short, her home; and, on the whole, a happy one it had been to her. But there, on the bed, lay her slumbering boy, his long curls falling negligently around his unconscious face, his rosy mouth half open, his little fat hands thrown out over the bedclothes, and a smile spread like a sunbeam over his whole face.

“Poor boy! poor fellow!” said Eliza; “they have sold you! but your mother will save you yet!”

No tear dropped over that pillow; in such straits as these, the heart has no tears to give,—it drops only blood, bleeding itself away in silence. She took a piece of paper and a pencil, and wrote, hastily,

“O, Missis! dear Missis! don’t think me ungrateful,—don’t think hard of me, any way,—I heard all you and master said tonight. I am going to try to save my boy—you will not blame me! God bless and reward you for all your kindness!”

Hastily folding and directing this, she went to a drawer and made up a little package of clothing for her boy, which she tied with a handkerchief firmly round her waist; and, so fond is a mother’s remembrance, that, even in the terrors of that hour, she did not forget to put in the little package one or two of his favorite toys, reserving a gayly painted parrot to amuse him, when she should be called on to awaken him. It was some trouble to arouse the little sleeper; but, after some effort, he sat up, and was playing with his bird, while his mother was putting on her bonnet and shawl.

“Where are you going, mother?” said he, as she drew near the bed, with his little coat and cap.

His mother drew near, and looked so earnestly into his eyes, that he at once divined that something unusual was the matter.

“Hush, Harry,” she said; “mustn’t speak loud, or they will hear us. A wicked man was coming to take little Harry away from his mother, and carry him ’way off in the dark; but mother won’t let him—she’s going to put on her little boy’s cap and coat, and run off with him, so the ugly man can’t catch him.”

Saying these words, she had tied and buttoned on the child’s simple outfit, and, taking him in her arms, she whispered to him to be very still; and, opening a door in her room which led into the outer verandah, she glided noiselessly out.

It was a sparkling, frosty, starlight night, and the mother wrapped the shawl close round her child, as, perfectly quiet with vague terror, he clung round her neck.

Old Bruno, a great Newfoundland, who slept at the end of the porch, rose, with a low growl, as she came near. She gently spoke his name, and the animal, an old pet and playmate of hers, instantly, wagging his tail, prepared to follow her, though apparently revolving much, in his simple dog’s head, what such an indiscreet midnight promenade might mean. Some dim ideas of imprudence or impropriety in the measure seemed to embarrass him considerably; for he often stopped, as Eliza glided forward, and looked wistfully, first at her and then at the house, and then, as if reassured by reflection, he pattered along after her again. A few minutes brought them to the window of Uncle Tom’s cottage, and Eliza, stopping, tapped lightly on the window-pane.

The prayer-meeting at Uncle Tom’s had, in the order of hymn-singing, been protracted to a very late hour; and, as Uncle Tom had indulged himself in a few lengthy solos afterwards, the consequence was, that, although it was now between twelve and one

o’clock, he and his worthy helpmeet were not yet asleep.

“Good Lord! what’s that?” said Aunt Chloe, starting up and hastily drawing the curtain. “My sakes alive, if it an’t Lizy! Get on your clothes, old man, quick!—there’s old Bruno, too, a pawin’ round; what on airth! I’m gwine to open the door.”

And suiting the action to the word, the door flew open, and the light of the tallow candle, which Tom had hastily lighted, fell on the haggard face and dark, wild eyes of the fugitive.

“Lord bless you!—I’m skeered to look at ye, Lizy! Are ye tuck sick, or what’s come over ye?”

“I’m running away—Uncle Tom and Aunt Chloe—carrying off my child—Master sold him!”

[Illustration: Eliza comes to tell Uncle Tom that he is sold, and that she is running away to save her child.]

“Sold him?” echoed both, lifting up their hands in dismay.

“Yes, sold him!” said Eliza, firmly; “I crept into the closet by Mistress’ door tonight, and I heard Master tell Missis that he had sold my Harry, and you, Uncle Tom, both, to a trader; and that he was going off this morning on his horse, and that the man was to take possession today.”

Tom had stood, during this speech, with his hands raised, and his eyes dilated, like a man in a dream. Slowly and gradually, as its meaning came over him, he collapsed, rather than seated himself, on his old chair, and sunk his head down upon his knees.

“The good Lord have pity on us!” said Aunt Chloe. “O! it don’t seem as if it was true! What has he done, that Mas’r should sell _him_?”

“He hasn’t done anything,—it isn’t for that. Master don’t want to sell, and Missis—she’s always good. I heard her plead and beg for us; but he told her ’t was no use; that he was in this man’s debt, and that this man had got the power over him; and that if he didn’t pay him off clear, it would end in his having to sell the place and all the people, and move off. Yes, I heard him say there was no choice between selling these two and selling all, the man was driving him so hard. Master said he was sorry; but oh, Missis—you ought to have heard her talk! If she an’t a Christian and an angel, there never was one. I’m a wicked girl to leave her so; but, then, I can’t help it. She said, herself, one soul was worth more than the world; and this boy has a soul, and if I let him be carried off, who knows what’ll become of it? It must be right: but, if it an’t right, the Lord forgive me, for I can’t help doing it!”

“Well, old man!” said Aunt Chloe, “why don’t you go, too? Will you wait to be toted down river, where they kill niggers with hard work and starving? I’d a heap rather die than go there, any day! There’s time for ye,—be off with Lizy,—you’ve got a pass to come and go any time. Come, bustle up, and I’ll get your things together.”

Tom slowly raised his head, and looked sorrowfully but quietly around, and said,

“No, no—I an’t going. Let Eliza go—it’s her right! I wouldn’t be the one to say no—’t an’t in _natur_ for her to stay; but you heard what she said! If I must be sold, or all the people on the place, and everything go to rack, why, let me be sold. I s’pose I can b’ar it as well as any on ’em,” he added, while something like a sob and a sigh shook his broad, rough chest convulsively. “Mas’r always found me on the spot—he always will. I never have broke trust, nor used my pass no ways contrary to my word, and I never will. It’s better for me alone to go, than to break up the place and sell all. Mas’r an’t to blame, Chloe, and he’ll take care of you and the poor—”

Here he turned to the rough trundle bed full of little woolly heads, and broke fairly down. He leaned over the back of the chair, and covered his face with his large hands. Sobs, heavy, hoarse and loud, shook the chair, and great tears fell through his fingers on the floor; just such tears, sir, as you dropped into the coffin where lay your first-born son; such tears, woman, as you shed when you heard the cries of your dying babe. For, sir, he was a man,—and you are but another man. And, woman, though dressed in silk and jewels, you are but a woman, and, in life’s great straits and mighty griefs, ye feel but one sorrow!

“And now,” said Eliza, as she stood in the door, “I saw my husband only this afternoon, and I little knew then what was to come. They have pushed him to the very last standing place, and he told me, today, that he was going to run away. Do try, if you can, to get word to him. Tell him how I went, and why I went; and tell him I’m going to try and find Canada. You must give my love to him, and tell him, if I never see him again,” she turned away, and stood with her back to them for a moment, and then added, in a husky voice, “tell him to be as good as he can, and try and meet me in the kingdom of heaven.”

“Call Bruno in there,” she added. “Shut the door on him, poor beast! He mustn’t go with me!”

A few last words and tears, a few simple adieus and blessings, and clasping her wondering and affrighted child in her arms, she glided noiselessly away.

CHAPTER VI Discovery

Mr. and Mrs. Shelby, after their protracted discussion of the night before, did not readily sink to repose, and, in consequence, slept somewhat later than usual, the ensuing morning.

“I wonder what keeps Eliza,” said Mrs. Shelby, after giving her bell repeated pulls, to no purpose.

Mr. Shelby was standing before his dressing-glass, sharpening his razor; and just then the door opened, and a colored boy entered, with his shaving-water.

“Andy,” said his mistress, “step to Eliza’s door, and tell her I have rung for her three times. Poor thing!” she added, to herself, with a sigh.

Andy soon returned, with eyes very wide in astonishment.

“Lor, Missis! Lizy’s drawers is all open, and her things all lying every which way; and I believe she’s just done clared out!”

The truth flashed upon Mr. Shelby and his wife at the same moment. He exclaimed,

“Then she suspected it, and she’s off!”

“The Lord be thanked!” said Mrs. Shelby. “I trust she is.”

“Wife, you talk like a fool! Really, it will be something pretty awkward for me, if she is. Haley saw that I hesitated about selling this child, and he’ll think I connived at it, to get him out of the way. It touches my honor!” And Mr. Shelby left the room hastily.

There was great running and ejaculating, and opening and shutting of doors, and appearance of faces in all shades of color in different places, for about a quarter of an hour. One person only, who might have shed some light on the matter, was entirely silent, and that was the head cook, Aunt Chloe. Silently, and with a heavy cloud settled down over her once joyous face, she proceeded making out her breakfast biscuits, as if she heard and saw nothing of the excitement around her.

Very soon, about a dozen young imps were roosting, like so many crows, on the verandah railings, each one determined to be the first one to apprize the strange Mas’r of his ill luck.

“He’ll be rael mad, I’ll be bound,” said Andy.

“_Won’t_ he swar!” said little black Jake.

“Yes, for he _does_ swar,” said woolly-headed Mandy. “I hearn him yesterday, at dinner. I hearn all about it then, ’cause I got into the closet where Missis keeps the great jugs, and I hearn every word.” And Mandy, who had never in her life thought of the meaning of a word she had heard, more than a black cat, now took airs of superior wisdom, and strutted about, forgetting to state that, though actually coiled up among the jugs at the time specified, she had been fast asleep all the time.

When, at last, Haley appeared, booted and spurred, he was saluted with the bad tidings on every hand. The young imps on the verandah were not disappointed in their hope of hearing him “swar,” which he did with a fluency and fervency which delighted them all amazingly, as they ducked and dodged hither and thither, to be out of the reach of his riding-whip; and, all whooping off together, they tumbled, in a pile of immeasurable giggle, on the withered turf under the verandah, where they kicked up their heels and shouted to their full satisfaction.

“If I had the little devils!” muttered Haley, between his teeth.

“But you ha’nt got ’em, though!” said Andy, with a triumphant flourish, and making a string of indescribable mouths at the unfortunate trader’s back, when he was fairly beyond hearing.

“I say now, Shelby, this yer ’s a most extro’rnary business!” said Haley, as he abruptly entered the parlor. “It seems that gal ’s off, with her young un.”

“Mr. Haley, Mrs. Shelby is present,” said Mr. Shelby.

“I beg pardon, ma’am,” said Haley, bowing slightly, with a still lowering brow; “but still I say, as I said before, this yer’s a sing’lar report. Is it true, sir?”

“Sir,” said Mr. Shelby, “if you wish to communicate with me, you must observe something of the decorum of a gentleman. Andy, take Mr. Haley’s hat and riding-whip. Take a seat, sir. Yes, sir; I regret to say that the young woman, excited by overhearing, or having reported to her, something of this business, has taken her child in the night, and made off.”

“I did expect fair dealing in this matter, I confess,” said Haley.

“Well, sir,” said Mr. Shelby, turning sharply round upon him, “what am I to understand by that remark? If any man calls my honor in question, I have but one answer for him.”

The trader cowered at this, and in a somewhat lower tone said that “it was plaguy hard on a fellow, that had made a fair bargain, to be gulled that way.”

“Mr. Haley,” said Mr. Shelby, “if I did not think you had some cause for disappointment, I should not have borne from you the rude and unceremonious style of your entrance into my parlor this morning. I say thus much, however, since appearances call for it, that I shall allow of no insinuations cast upon me, as if I were at all partner to any unfairness in this matter. Moreover, I shall feel bound to give you every assistance, in the use of horses, servants, &c., in the recovery of your property. So, in short, Haley,” said he, suddenly dropping from the tone of dignified coolness to his ordinary one of easy frankness, “the best way for you is to keep good-natured and eat some breakfast, and we will then see what is to be done.”

Mrs. Shelby now rose, and said her engagements would prevent her being at the breakfast-table that morning; and, deputing a very respectable mulatto woman to attend to the gentlemen’s coffee at the side-board, she left the room.

“Old lady don’t like your humble servant, over and above,” said Haley, with an uneasy effort to be very familiar.

“I am not accustomed to hear my wife spoken of with such freedom,” said Mr. Shelby, dryly.

“Beg pardon; of course, only a joke, you know,” said Haley, forcing a laugh.

“Some jokes are less agreeable than others,” rejoined Shelby.

“Devilish free, now I’ve signed those papers, cuss him!” muttered Haley to himself; “quite grand, since yesterday!”

Never did fall of any prime minister at court occasion wider surges of sensation than the report of Tom’s fate among his compeers on the place. It was the topic in every mouth, everywhere; and nothing was done in the house or in the field, but to discuss its probable results. Eliza’s flight—an unprecedented event on the place—was also a great accessory in stimulating the general excitement.

Black Sam, as he was commonly called, from his being about three shades blacker than any other son of ebony on the place, was revolving the matter profoundly in all its phases and bearings, with a comprehensiveness of vision and a strict lookout to his own personal well-being, that would have done credit to any white patriot in Washington.

“It’s an ill wind dat blow nowhar,—dat ar a fact,” said Sam, sententiously, giving an additional hoist to his pantaloons, and adroitly substituting a long nail in place of a missing suspender-button, with which effort of mechanical genius he seemed highly delighted.

“Yes, it’s an ill wind blows nowhar,” he repeated. “Now, dar, Tom’s down—wal, course der’s room for some nigger to be up—and why not dis nigger?—dat’s de idee. Tom, a ridin’ round de country—boots blacked—pass in his pocket—all grand as Cuffee—but who he? Now, why shouldn’t Sam?—dat’s what I want to know.”

“Halloo, Sam—O Sam! Mas’r wants you to cotch Bill and Jerry,” said Andy, cutting short Sam’s soliloquy.

“High! what’s afoot now, young un?”

“Why, you don’t know, I s’pose, that Lizy’s cut stick, and clared out, with her young un?”

“You teach your granny!” said Sam, with infinite contempt; “knowed it a heap sight sooner than you did; this nigger an’t so green, now!”

“Well, anyhow, Mas’r wants Bill and Jerry geared right up; and you and I ’s to go with Mas’r Haley, to look arter her.”

“Good, now! dat’s de time o’ day!” said Sam. “It’s Sam dat’s called for in dese yer times. He’s de nigger. See if I don’t cotch her, now; Mas’r’ll see what Sam can do!”

“Ah! but, Sam,” said Andy, “you’d better think twice; for Missis don’t want her cotched, and she’ll be in yer wool.”

“High!” said Sam, opening his eyes. “How you know dat?”

“Heard her say so, my own self, dis blessed mornin’, when I bring in Mas’r’s shaving-water. She sent me to see why Lizy didn’t come to dress her; and when I telled her she was off, she jest ris up, and ses she, ‘The Lord be praised;’ and Mas’r, he seemed rael mad, and ses he, ‘Wife, you talk like a fool.’ But Lor! she’ll bring him to! I knows well enough how that’ll be,—it’s allers best to stand Missis’ side the fence, now I tell yer.”

Black Sam, upon this, scratched his woolly pate, which, if it did not contain very profound wisdom, still contained a great deal of a particular species much in demand among politicians of all complexions and countries, and vulgarly denominated “knowing which side the bread is buttered;” so, stopping with grave consideration, he again gave a hitch to his pantaloons, which was his regularly organized method of assisting his mental perplexities.

“Der an’t no saying’—never—‘bout no kind o’ thing in _dis_ yer world,” he said, at last. Sam spoke like a philosopher, emphasizing _this_—as if he had had a large experience in different sorts of worlds, and therefore had come to his conclusions advisedly.

“Now, sartin I’d a said that Missis would a scoured the varsal world after Lizy,” added Sam, thoughtfully.

“So she would,” said Andy; “but can’t ye see through a ladder, ye black nigger? Missis don’t want dis yer Mas’r Haley to get Lizy’s boy; dat’s de go!”

“High!” said Sam, with an indescribable intonation, known only to those who have heard it among the negroes.

“And I’ll tell yer more ’n all,” said Andy; “I specs you’d better be making tracks for dem hosses,—mighty sudden, too,—-for I hearn Missis ’quirin’ arter yer,—so you’ve stood foolin’ long enough.”

Sam, upon this, began to bestir himself in real earnest, and after a while appeared, bearing down gloriously towards the house, with Bill and Jerry in a full canter, and adroitly throwing himself off before they had any idea of stopping, he brought them up alongside of the horse-post like a tornado. Haley’s horse, which was a skittish young colt, winced, and bounced, and pulled hard at his halter.

“Ho, ho!” said Sam, “skeery, ar ye?” and his black visage lighted up with a curious, mischievous gleam. “I’ll fix ye now!” said he.

There was a large beech-tree overshadowing the place, and the small, sharp, triangular beech-nuts lay scattered thickly on the ground. With one of these in his fingers, Sam approached the colt, stroked and patted, and seemed apparently busy in soothing his agitation. On pretence of adjusting the saddle, he adroitly slipped under it the sharp little nut, in such a manner that the least weight brought upon the saddle would annoy the nervous sensibilities of the animal, without leaving any perceptible graze or wound.

“Dar!” he said, rolling his eyes with an approving grin; “me fix ’em!”

At this moment Mrs. Shelby appeared on the balcony, beckoning to him. Sam approached with as good a determination to pay court as did ever suitor after a vacant place at St. James’ or Washington.

“Why have you been loitering so, Sam? I sent Andy to tell you to hurry.”

“Lord bless you, Missis!” said Sam, “horses won’t be cotched all in a minnit; they’d done clared out way down to the south pasture, and the Lord knows whar!”

“Sam, how often must I tell you not to say ‘Lord bless you, and the Lord knows,’ and such things? It’s wicked.”

“O, Lord bless my soul! I done forgot, Missis! I won’t say nothing of de sort no more.”

“Why, Sam, you just _have_ said it again.”

“Did I? O, Lord! I mean—I didn’t go fur to say it.”

“You must be _careful_, Sam.”

“Just let me get my breath, Missis, and I’ll start fair. I’ll be bery careful.”

“Well, Sam, you are to go with Mr. Haley, to show him the road, and help him. Be careful of the horses, Sam; you know Jerry was a little lame last week; _don’t ride them too fast_.”

Mrs. Shelby spoke the last words with a low voice, and strong emphasis.

“Let dis child alone for dat!” said Sam, rolling up his eyes with a volume of meaning. “Lord knows! High! Didn’t say dat!” said he, suddenly catching his breath, with a ludicrous flourish of apprehension, which made his mistress laugh, spite of herself. “Yes, Missis, I’ll look out for de hosses!”

“Now, Andy,” said Sam, returning to his stand under the beech-trees, “you see I wouldn’t be ’t all surprised if dat ar gen’lman’s crittur should gib a fling, by and by, when he comes to be a gettin’ up. You know, Andy, critturs _will_ do such things;” and therewith Sam poked Andy in the side, in a highly suggestive manner.

“High!” said Andy, with an air of instant appreciation.

“Yes, you see, Andy, Missis wants to make time,—dat ar’s clar to der most or’nary ’bserver. I jis make a little for her. Now, you see, get all dese yer hosses loose, caperin’ permiscus round dis yer lot and down to de wood dar, and I spec Mas’r won’t be off in a hurry.”

Andy grinned.

“Yer see,” said Sam, “yer see, Andy, if any such thing should happen as that Mas’r Haley’s horse _should_ begin to act contrary, and cut up, you and I jist lets go of our’n to help him, and _we’ll help him_—oh yes!” And Sam and Andy laid their heads back on their shoulders, and broke into a low, immoderate laugh, snapping their fingers and flourishing their heels with exquisite delight.

At this instant, Haley appeared on the verandah. Somewhat mollified by certain cups of very good coffee, he came out smiling and talking, in tolerably restored humor. Sam and Andy, clawing for certain fragmentary palm-leaves, which they were in the habit of considering as hats, flew to the horseposts, to be ready to “help Mas’r.”

Sam’s palm-leaf had been ingeniously disentangled from all pretensions to braid, as respects its brim; and the slivers starting apart, and standing upright, gave it a blazing air of freedom and defiance, quite equal to that of any Fejee chief; while the whole brim of Andy’s being departed bodily, he rapped the crown on his head with a dexterous thump, and looked about well pleased, as if to say, “Who says I haven’t got a hat?”

“Well, boys,” said Haley, “look alive now; we must lose no time.”

“Not a bit of him, Mas’r!” said Sam, putting Haley’s rein in his hand, and holding his stirrup, while Andy was untying the other two horses.

The instant Haley touched the saddle, the mettlesome creature bounded from the earth with a sudden spring, that threw his master sprawling, some feet off, on the soft, dry turf. Sam, with frantic ejaculations, made a dive at the reins, but only succeeded in brushing the blazing palm-leaf afore-named into the horse’s eyes, which by no means tended to allay the confusion of his nerves. So, with great vehemence, he overturned Sam, and, giving two or three contemptuous snorts, flourished his heels vigorously in the air, and was soon prancing away towards the lower end of the lawn, followed by Bill and Jerry, whom Andy had not failed to let loose, according to contract, speeding them off with various direful ejaculations. And now ensued a miscellaneous scene of confusion. Sam and Andy ran and shouted,—dogs barked here and there,—and Mike, Mose, Mandy, Fanny, and all the smaller specimens on the place, both male and female, raced, clapped hands, whooped, and shouted, with outrageous officiousness and untiring zeal.

Haley’s horse, which was a white one, and very fleet and spirited, appeared to enter into the spirit of the scene with great gusto; and having for his coursing ground a lawn of nearly half a mile in extent, gently sloping down on every side into indefinite woodland,

he appeared to take infinite delight in seeing how near he could allow his pursuers to approach him, and then, when within a hand's breadth, whisk off with a start and a snort, like a mischievous beast as he was and career far down into some alley of the wood-lot. Nothing was further from Sam's mind than to have any one of the troop taken until such season as should seem to him most befitting,—and the exertions that he made were certainly most heroic. Like the sword of Coeur De Lion, which always blazed in the front and thickest of the battle, Sam's palm-leaf was to be seen everywhere when there was the least danger that a horse could be caught; there he would bear down full tilt, shouting, "Now for it! cotch him! cotch him!" in a way that would set everything to indiscriminate rout in a moment.

Haley ran up and down, and cursed and swore and stamped miscellaneously. Mr. Shelby in vain tried to shout directions from the balcony, and Mrs. Shelby from her chamber window alternately laughed and wondered,—not without some inkling of what lay at the bottom of all this confusion.

At last, about twelve o'clock, Sam appeared triumphant, mounted on Jerry, with Haley's horse by his side, reeking with sweat, but with flashing eyes and dilated nostrils, showing that the spirit of freedom had not yet entirely subsided.

"He's cotched!" he exclaimed, triumphantly. "If 't hadn't been for me, they might a bust themselves, all on 'em; but I cotched him!"

"You!" growled Haley, in no amiable mood. "If it hadn't been for you, this never would have happened."

"Lord bless us, Mas'r," said Sam, in a tone of the deepest concern, "and me that has been racin' and chasin' till the sweat jest pours off me!"

"Well, well!" said Haley, "you've lost me near three hours, with your cursed nonsense. Now let's be off, and have no more fooling."

"Why, Mas'r," said Sam, in a deprecating tone, "I believe you mean to kill us all clar, horses and all. Here we are all just ready to drop down, and the critters all in a reek of sweat. Why, Mas'r won't think of startin' on now till arter dinner. Mas'r's hoss wants rubben down; see how he splashed hisself; and Jerry limps too; don't think Missis would be willin' to have us start dis yer way, no how. Lord bless you, Mas'r, we can ketch up, if we do stop. Lizy never was no great of a walker."

Mrs. Shelby, who, greatly to her amusement, had overheard this conversation from the verandah, now resolved to do her part. She came forward, and, courteously expressing her concern for Haley's accident, pressed him to stay to dinner, saying that the cook should bring it on the table immediately.

Thus, all things considered, Haley, with rather an equivocal grace, proceeded to the parlor, while Sam, rolling his eyes after him with unutterable meaning, proceeded gravely with the horses to the stable-yard.

"Did yer see him, Andy? _did_ yer see him?" said Sam, when he had got fairly beyond the shelter of the barn, and fastened the horse to a post. "O, Lor, if it warn't as good as a meetin', now, to see him a dancin' and kickin' and swarin' at us. Didn't I hear him? Swar away, ole fellow (says I to myself); will yer have yer hoss now, or wait till you cotch him? (says I). Lor, Andy, I think I can see him now." And Sam and Andy leaned up against the barn and laughed to their hearts' content.

"Yer oughter seen how mad he looked, when I brought the hoss up. Lord, he'd a killed me, if he durs' to; and there I was a standin' as innercent and as humble."

"Lor, I seed you," said Andy; "an't you an old hoss, Sam?"

"Rather specks I am," said Sam; "did yer see Missis up stars at the winder? I seed her laughin'."

"I'm sure, I was racin' so, I didn't see nothing," said Andy.

"Well, yer see," said Sam, proceeding gravely to wash down Haley's pony, "I 'se 'quired what yer may call a habit _o' bobservation_, Andy. It's a very 'portant habit, Andy; and I 'commend yer to be cultivatin' it, now yer young. Hist up that hind foot, Andy. Yer see, Andy, it's _bobservation_ makes all de difference in niggers. Didn't I see which way the wind blew dis yer mornin'? Didn't I see what Missis wanted, though she never let on? Dat ar's bobservation, Andy. I 'spects it's what you may call a faculty. Faculties is different in different peoples, but cultivation of 'em goes a great way."

"I guess if I hadn't helped your bobservation dis mornin', yer wouldn't have seen your way so smart," said Andy.

“Andy,” said Sam, “you’s a promisin’ child, der an’t no manner o’ doubt. I thinks lots of yer, Andy; and I don’t feel no ways ashamed to take idees from you. We oughtenter overlook nobody, Andy, cause the smartest on us gets tripped up sometimes. And so, Andy, let’s go up to the house now. I’ll be boun’ Missis’ll give us an uncommon good bite, dis yer time.”

CHAPTER VII The Mother’s Struggle

It is impossible to conceive of a human creature more wholly desolate and forlorn than Eliza, when she turned her footsteps from Uncle Tom’s cabin.

Her husband’s suffering and dangers, and the danger of her child, all blended in her mind, with a confused and stunning sense of the risk she was running, in leaving the only home she had ever known, and cutting loose from the protection of a friend whom she loved and revered. Then there was the parting from every familiar object,—the place where she had grown up, the trees under which she had played, the groves where she had walked many an evening in happier days, by the side of her young husband,—everything, as it lay in the clear, frosty starlight, seemed to speak reproachfully to her, and ask her whither could she go from a home like that?

But stronger than all was maternal love, wrought into a paroxysm of frenzy by the near approach of a fearful danger. Her boy was old enough to have walked by her side, and, in an indifferent case, she would only have led him by the hand; but now the bare thought of putting him out of her arms made her shudder, and she strained him to her bosom with a convulsive grasp, as she went rapidly forward.

The frosty ground creaked beneath her feet, and she trembled at the sound; every quaking leaf and fluttering shadow sent the blood backward to her heart, and quickened her footsteps. She wondered within herself at the strength that seemed to be come upon her; for she felt the weight of her boy as if it had been a feather, and every flutter of fear seemed to increase the supernatural power that bore her on, while from her pale lips burst forth, in frequent ejaculations, the prayer to a Friend above—“Lord, help! Lord, save me!”

If it were _your_ Harry, mother, or your Willie, that were going to be torn from you by a brutal trader, tomorrow morning,—if you had seen the man, and heard that the papers were signed and delivered, and you had only from twelve o’clock till morning to make good your escape,—how fast could _you_ walk? How many miles could you make in those few brief hours, with the darling at your bosom,—the little sleepy head on your shoulder,—the small, soft arms trustingly holding on to your neck?

For the child slept. At first, the novelty and alarm kept him waking; but his mother so hurriedly repressed every breath or sound, and so assured him that if he were only still she would certainly save him, that he clung quietly round her neck, only asking, as he found himself sinking to sleep,

“Mother, I don’t need to keep awake, do I?”

“No, my darling; sleep, if you want to.”

“But, mother, if I do get asleep, you won’t let him get me?”

“No! so may God help me!” said his mother, with a paler cheek, and a brighter light in her large dark eyes.

“You’re _sure_, an’t you, mother?”

“Yes, _sure_!” said the mother, in a voice that startled herself; for it seemed to her to come from a spirit within, that was no part of her; and the boy dropped his little weary head on her shoulder, and was soon asleep. How the touch of those warm arms, the gentle breathings that came in her neck, seemed to add fire and spirit to her movements! It seemed to her as if strength poured into her in electric streams, from every gentle touch and movement of the sleeping, confiding child. Sublime is the dominion of the mind over the body, that, for a time, can make flesh and nerve impregnable, and string the sinews like steel, so that the weak become so mighty.

The boundaries of the farm, the grove, the wood-lot, passed by her dizzily, as she walked on; and still she went, leaving one familiar object after another, slacking not, pausing not, till reddening daylight found her many a long mile from all traces of any familiar objects upon the open highway.

She had often been, with her mistress, to visit some connections, in the little village of T——, not far from the Ohio river, and knew the road well. To go thither, to escape across the Ohio river, were the first hurried outlines of her plan of escape; beyond that, she could only hope in God.

When horses and vehicles began to move along the highway, with that alert perception peculiar to a state of excitement, and which seems to be a sort of inspiration, she became aware that her headlong pace and distracted air might bring on her remark and suspicion. She therefore put the boy on the ground, and, adjusting her dress and bonnet, she walked on at as rapid a pace as she thought consistent with the preservation of appearances. In her little bundle she had provided a store of cakes and apples, which she used as expedients for quickening the speed of the child, rolling the apple some yards before them, when the boy would run with all his might after it; and this ruse, often repeated, carried them over many a half-mile.

After a while, they came to a thick patch of woodland, through which murmured a clear brook. As the child complained of hunger and thirst, she climbed over the fence with him; and, sitting down behind a large rock which concealed them from the road, she gave him a breakfast out of her little package. The boy wondered and grieved that she could not eat; and when, putting his arms round her neck, he tried to wedge some of his cake into her mouth, it seemed to her that the rising in her throat would choke her.

“No, no, Harry darling! mother can’t eat till you are safe! We must go on—on—till we come to the river!” And she hurried again into the road, and again constrained herself to walk regularly and composedly forward.

She was many miles past any neighborhood where she was personally known. If she should chance to meet any who knew her, she reflected that the well-known kindness of the family would be of itself a blind to suspicion, as making it an unlikely supposition that she could be a fugitive. As she was also so white as not to be known as of colored lineage, without a critical survey, and her child was white also, it was much easier for her to pass on unsuspected.

On this presumption, she stopped at noon at a neat farmhouse, to rest herself, and buy some dinner for her child and self; for, as the danger decreased with the distance, the supernatural tension of the nervous system lessened, and she found herself both weary and hungry.

The good woman, kindly and gossipping, seemed rather pleased than otherwise with having somebody come in to talk with; and accepted, without examination, Eliza’s statement, that she “was going on a little piece, to spend a week with her friends,”—all which she hoped in her heart might prove strictly true.

An hour before sunset, she entered the village of T——, by the Ohio river, weary and foot-sore, but still strong in heart. Her first glance was at the river, which lay, like Jordan, between her and the Canaan of liberty on the other side.

It was now early spring, and the river was swollen and turbulent; great cakes of floating ice were swinging heavily to and fro in the turbid waters. Owing to the peculiar form of the shore on the Kentucky side, the land bending far out into the water, the ice had been lodged and detained in great quantities, and the narrow channel which swept round the bend was full of ice, piled one cake over another, thus forming a temporary barrier to the descending ice, which lodged, and formed a great, undulating raft, filling up the whole river, and extending almost to the Kentucky shore.

Eliza stood, for a moment, contemplating this unfavorable aspect of things, which she saw at once must prevent the usual ferry-boat from running, and then turned into a small public house on the bank, to make a few inquiries.

The hostess, who was busy in various fizzing and stewing operations over the fire, preparatory to the evening meal, stopped, with a fork in her hand, as Eliza’s sweet and plaintive voice arrested her.

“What is it?” she said.

“Isn’t there any ferry or boat, that takes people over to B——, now?” she said.

“No, indeed!” said the woman; “the boats has stopped running.”

Eliza’s look of dismay and disappointment struck the woman, and she said, inquiringly,

“May be you’re wanting to get over?—anybody sick? Ye seem mighty anxious?”

“I’ve got a child that’s very dangerous,” said Eliza. “I never heard of it till last night, and I’ve walked quite a piece today, in hopes to get to the ferry.”

“Well, now, that’s onlucky,” said the woman, whose motherly sympathies were much aroused; “I’m re’lly consarned for ye. Solomon!” she called, from the window, towards a small back building. A man, in leather apron and very dirty hands, appeared at the door.

“I say, Sol,” said the woman, “is that ar man going to tote them bar’ls over tonight?”

“He said he should try, if ’t was any way prudent,” said the man.

“There’s a man a piece down here, that’s going over with some truck this evening, if he durs’ to; he’ll be in here to supper tonight, so you’d better set down and wait. That’s a sweet little fellow,” added the woman, offering him a cake.

But the child, wholly exhausted, cried with weariness.

“Poor fellow! he isn’t used to walking, and I’ve hurried him on so,” said Eliza.

“Well, take him into this room,” said the woman, opening into a small bed-room, where stood a comfortable bed. Eliza laid the weary boy upon it, and held his hands in hers till he was fast asleep. For her there was no rest. As a fire in her bones, the thought of the pursuer urged her on; and she gazed with longing eyes on the sullen, surging waters that lay between her and liberty.

Here we must take our leave of her for the present, to follow the course of her pursuers.

Though Mrs. Shelby had promised that the dinner should be hurried on table, yet it was soon seen, as the thing has often been seen before, that it required more than one to make a bargain. So, although the order was fairly given out in Haley’s hearing, and carried to Aunt Chloe by at least half a dozen juvenile messengers, that dignitary only gave certain very gruff snorts, and tosses of her head, and went on with every operation in an unusually leisurely and circumstantial manner.

For some singular reason, an impression seemed to reign among the servants generally that Missis would not be particularly disobliged by delay; and it was wonderful what a number of counter accidents occurred constantly, to retard the course of things. One luckless wight contrived to upset the gravy; and then gravy had to be got up _de novo_, with due care and formality, Aunt Chloe watching and stirring with dogged precision, answering shortly, to all suggestions of haste, that she “warn’t a going to have raw gravy on the table, to help nobody’s catchings.” One tumbled down with the water, and had to go to the spring for more; and another precipitated the butter into the path of events; and there was from time to time giggling news brought into the kitchen that “Mas’r Haley was mighty oneasy, and that he couldn’t sit in his cheer no ways, but was a walkin’ and stalkin’ to the winders and through the porch.”

“Sarves him right!” said Aunt Chloe, indignantly. “He’ll get wus nor oneasy, one of these days, if he don’t mend his ways. _His_ master’ll be sending for him, and then see how he’ll look!”

“He’ll go to torment, and no mistake,” said little Jake.

“He desarves it!” said Aunt Chloe, grimly; “he’s broke a many, many, many hearts,—I tell ye all!” she said, stopping, with a fork uplifted in her hands; “it’s like what Mas’r George reads in Ravelations,—souls a callin’ under the altar! and a callin’ on the Lord for vengeance on sich!—and by and by the Lord he’ll hear ’em—so he will!”

Aunt Chloe, who was much revered in the kitchen, was listened to with open mouth; and, the dinner being now fairly sent in, the whole kitchen was at leisure to gossip with her, and to listen to her remarks.

“Sich’ll be burnt up forever, and no mistake; won’t ther?” said Andy.

“I’d be glad to see it, I’ll be boun’,” said little Jake.

“Chil’en!” said a voice, that made them all start. It was Uncle Tom, who had come in, and stood listening to the conversation at the door.

“Chil’en!” he said, “I’m afeard you don’t know what ye’re sayin’. Forever is a _dre’ful_ word, chil’en; it’s awful to think on ’t. You oughtenter wish that ar to any human crittur.”

“We wouldn’t to anybody but the soul-drivers,” said Andy; “nobody can help wishing it to them, they ’s so awful wicked.”

“Don’t natur herself kinder cry out on ’em?” said Aunt Chloe. “Don’t dey tear der suckin’ baby right off his mother’s breast, and sell him, and der little children as is crying and holding on by her clothes,—don’t dey pull ’em off and sells ’em? Don’t dey tear wife and husband apart?” said Aunt Chloe, beginning to cry, “when it’s jest takin’ the very life on ’em?—and all the while does they feel one bit, don’t dey drink and smoke, and take it oncommon easy? Lor, if the devil don’t get them, what’s he good for?” And Aunt Chloe covered her face with her checked apron, and began to sob in good earnest.

“Pray for them that ’spitefully use you, the good book says,” says Tom.

“Pray for ’em!” said Aunt Chloe; “Lor, it’s too tough! I can’t pray for ’em.”

“It’s natur, Chloe, and natur ’s strong,” said Tom, “but the Lord’s grace is stronger; besides, you oughter think what an awful state a poor crittur’s soul ’s in that’ll do them ar things,—you oughter thank God that you an’t _like_ him, Chloe. I’m sure I’d rather be sold, ten thousand times over, than to have all that ar poor crittur’s got to answer for.”

“So ’d I, a heap,” said Jake. “Lor, _shouldn’t_ we cotch it, Andy?”

Andy shrugged his shoulders, and gave an acquiescent whistle.

“I’m glad Mas’r didn’t go off this morning, as he looked to,” said Tom; “that ar hurt me more than sellin’, it did. Mebbe it might have been natural for him, but ’t would have come desp’t hard on me, as has known him from a baby; but I’ve seen Mas’r, and I begin ter feel sort o’ reconciled to the Lord’s will now. Mas’r couldn’t help hisself; he did right, but I’m feared things will be kinder goin’ to rack, when I’m gone Mas’r can’t be spected to be a pryin’ round everywhar, as I’ve done, a keepin’ up all the ends. The boys all means well, but they ’s powerful car’less. That ar troubles me.”

The bell here rang, and Tom was summoned to the parlor.

“Tom,” said his master, kindly, “I want you to notice that I give this gentleman bonds to forfeit a thousand dollars if you are not on the spot when he wants you; he’s going today to look after his other business, and you can have the day to yourself. Go anywhere you like, boy.”

“Thank you, Mas’r,” said Tom.

“And mind yourself,” said the trader, “and don’t come it over your master with any o’ yer nigger tricks; for I’ll take every cent out of him, if you an’t thar. If he’d hear to me, he wouldn’t trust any on ye—slippery as eels!”

“Mas’r,” said Tom,—and he stood very straight,—“I was jist eight years old when ole Missis put you into my arms, and you wasn’t a year old. ‘Thar,’ says she, ‘Tom, that’s to be _your_ young Mas’r; take good care on him,’ says she. And now I jist ask you, Mas’r, have I ever broke word to you, or gone contrary to you, ’specially since I was a Christian?”

Mr. Shelby was fairly overcome, and the tears rose to his eyes.

“My good boy,” said he, “the Lord knows you say but the truth; and if I was able to help it, all the world shouldn’t buy you.”

“And sure as I am a Christian woman,” said Mrs. Shelby, “you shall be redeemed as soon as I can any way bring together means. Sir,” she said to Haley, “take good account of who you sell him to, and let me know.”

“Lor, yes, for that matter,” said the trader, “I may bring him up in a year, not much the wuss for wear, and trade him back.”

“I’ll trade with you then, and make it for your advantage,” said Mrs. Shelby.

“Of course,” said the trader, “all ’s equal with me; li’ves trade ’em up as down, so I does a good business. All I want is a livin’, you know, ma’am; that’s all any on us wants, I, s’pose.”

Mr. and Mrs. Shelby both felt annoyed and degraded by the familiar impudence of the trader, and yet both saw the absolute necessity of putting a constraint on their feelings. The more hopelessly sordid and insensible he appeared, the greater became Mrs. Shelby’s dread of his succeeding in recapturing Eliza and her child, and of course the greater her motive for detaining him by every female artifice. She therefore graciously smiled, assented, chatted familiarly, and did all she could to make time pass imperceptibly.

At two o’clock Sam and Andy brought the horses up to the posts, apparently greatly refreshed and invigorated by the scamper of the morning.

Sam was there new oiled from dinner, with an abundance of zealous and ready officiousness. As Haley approached, he was boasting, in flourishing style, to Andy, of the evident and eminent success of the operation, now that he had “farly come to it.”

“Your master, I s’pose, don’t keep no dogs,” said Haley, thoughtfully, as he prepared to mount.

“Heaps on ’em,” said Sam, triumphantly; “thar’s Bruno—he’s a roarer! and, besides that, ’bout every nigger of us keeps a pup of some natur or uther.”

“Poh!” said Haley,—and he said something else, too, with regard to the said dogs, at which Sam muttered,

“I don’t see no use cussin’ on ’em, no way.”

“But your master don’t keep no dogs (I pretty much know he don’t) for trackin’ out niggers.”

Sam knew exactly what he meant, but he kept on a look of earnest and desperate simplicity.

“Our dogs all smells round considable sharp. I spect they’s the kind, though they han’t never had no practice. They ’s _far_ dogs, though, at most anything, if you’d get ’em started. Here, Bruno,” he called, whistling to the lumbering Newfoundland, who came pitching tumultuously toward them.

“You go hang!” said Haley, getting up. “Come, tumble up now.”

Sam tumbled up accordingly, dexterously contriving to tickle Andy as he did so, which occasioned Andy to split out into a laugh, greatly to Haley’s indignation, who made a cut at him with his riding-whip.

“I ’s ’stonished at yer, Andy,” said Sam, with awful gravity. “This yer’s a seris bisness, Andy. Yer mustn’t be a makin’ game. This yer an’t no way to help Mas’r.”

“I shall take the straight road to the river,” said Haley, decidedly, after they had come to the boundaries of the estate. “I know the way of all of ’em,—they makes tracks for the underground.”

“Sartin,” said Sam, “dat’s de idee. Mas’r Haley hits de thing right in de middle. Now, der’s two roads to de river,—de dirt road and der pike,—which Mas’r mean to take?”

Andy looked up innocently at Sam, surprised at hearing this new geographical fact, but instantly confirmed what he said, by a vehement reiteration.

“’Cause,” said Sam, “I’d rather be ’clined to ’magine that Lizy ’d take de dirt road, bein’ it’s the least travelled.”

Haley, notwithstanding that he was a very old bird, and naturally inclined to be suspicious of chaff, was rather brought up by this view of the case.

“If yer warn’t both on yer such cussed liars, now!” he said, contemplatively as he pondered a moment.

The pensive, reflective tone in which this was spoken appeared to amuse Andy prodigiously, and he drew a little behind, and shook so as apparently to run a great risk of failing off his horse, while Sam’s face was immovably composed into the most doleful gravity.

“Course,” said Sam, “Mas’r can do as he’d ruther, go de straight road, if Mas’r thinks best,—it’s all one to us. Now, when I study ’pon it, I think de straight road de best, _deridedly_.”

“She would naturally go a lonesome way,” said Haley, thinking aloud, and not minding Sam’s remark.

“Dar an’t no sayin’,” said Sam; “gals is pecular; they never does nothin’ ye thinks they will; mose gen’lly the contrary. Gals is nat’lly made contrary; and so, if you thinks they’ve gone one road, it is sartin you’d better go t’ other, and then you’ll be sure to find ’em. Now, my private ’pinion is, Lizy took der road; so I think we’d better take de straight one.”

This profound generic view of the female sex did not seem to dispose Haley particularly to the straight road, and he announced decidedly that he should go the other, and asked Sam when they should come to it.

“A little piece ahead,” said Sam, giving a wink to Andy with the eye which was on Andy’s side of the head; and he added, gravely, “but I’ve studded on de matter, and I’m quite clar we ought not to go dat ar way. I nebber been over it no way. It’s despit lonesome, and we might lose our way,—whar we’d come to, de Lord only knows.”

“Nevertheless,” said Haley, “I shall go that way.”

“Now I think on ’t, I think I hearn ’em tell that dat ar road was all fenced up and down by der creek, and thar, an’t it, Andy?”

Andy wasn’t certain; he’d only “hearn tell” about that road, but never been over it. In short, he was strictly noncommittal.

Haley, accustomed to strike the balance of probabilities between lies of greater or lesser magnitude, thought that it lay in favor of the dirt road aforesaid. The mention of the thing he thought he perceived was involuntary on Sam’s part at first, and his confused attempts to dissuade him he set down to a desperate lying on second thoughts, as being unwilling to implicate Liza.

When, therefore, Sam indicated the road, Haley plunged briskly into it, followed by Sam and Andy.

Now, the road, in fact, was an old one, that had formerly been a thoroughfare to the river, but abandoned for many years after the laying of the new pike. It was open for about an hour’s ride, and after that it was cut across by various farms and fences. Sam knew this fact perfectly well,—indeed, the road had been so long closed up, that Andy had never heard of it. He therefore rode along with an air of dutiful submission, only groaning and vociferating occasionally that ’t was “desp’t rough, and bad for Jerry’s foot.”

“Now, I jest give yer warning,” said Haley, “I know yer; yer won’t get me to turn off this road, with all yer fussin’—so you shet up!”

“Mas’r will go his own way!” said Sam, with rueful submission, at the same time winking most portentously to Andy, whose delight was now very near the explosive point.

Sam was in wonderful spirits,—professed to keep a very brisk lookout,—at one time exclaiming that he saw “a gal’s bonnet” on the top of some distant eminence, or calling to Andy “if that thar wasn’t ‘Lizy’ down in the hollow;” always making these exclamations in some rough or craggy part of the road, where the sudden quickening of speed was a special inconvenience to all parties concerned, and thus keeping Haley in a state of constant commotion.

After riding about an hour in this way, the whole party made a precipitate and tumultuous descent into a barn-yard belonging to a large farming establishment. Not a soul was in sight, all the hands being employed in the fields; but, as the barn stood conspicuously and plainly square across the road, it was evident that their journey in that direction had reached a decided finale.

“Wan’t dat ar what I telled Mas’r?” said Sam, with an air of injured innocence. “How does strange gentleman spect to know more about a country dan de natives born and raised?”

“You rascal!” said Haley, “you knew all about this.”

“Didn’t I tell yer I _knowd_, and yer wouldn’t believe me? I telled Mas’r ’t was all shet up, and fenced up, and I didn’t spect we could get through,—Andy heard me.”

It was all too true to be disputed, and the unlucky man had to pocket his wrath with the best grace he was able, and all three faced to the right about, and took up their line of march for the highway.

In consequence of all the various delays, it was about three-quarters of an hour after Eliza had laid her child to sleep in the village tavern that the party came riding into the same place. Eliza was standing by the window, looking out in another direction, when Sam’s quick eye caught a glimpse of her. Haley and Andy were two yards behind. At this crisis, Sam contrived to have his hat blown off, and uttered a loud and characteristic ejaculation, which startled her at once; she drew suddenly back; the whole train swept by the window, round to the front door.

A thousand lives seemed to be concentrated in that one moment to Eliza. Her room opened by a side door to the river. She caught her child, and sprang down the steps towards it. The trader caught a full glimpse of her just as she was disappearing down the bank; and throwing himself from his horse, and calling loudly on Sam and Andy, he was after her like a hound after a deer. In that dizzy moment her feet to her scarce seemed to touch the ground, and a moment brought her to the water’s edge. Right on behind they came; and, nerved with strength such as God gives only to the desperate, with one wild cry and flying leap, she vaulted sheer over the turbid current by the shore, on to the raft of ice beyond. It was a desperate leap—impossible to anything but madness and despair; and Haley, Sam, and Andy, instinctively cried out, and lifted up their hands, as she did it.

The huge green fragment of ice on which she alighted pitched and creaked as her weight came on it, but she staid there not a moment. With wild cries and desperate energy she leaped to another and still another cake; stumbling—leaping—slipping—springing upwards again! Her shoes are gone—her stockings cut from her feet—while blood marked every step; but she saw nothing, felt nothing, till dimly, as in a dream, she saw the Ohio side, and a man helping her up the bank.

“Yer a brave gal, now, whoever ye ar!” said the man, with an oath.

Eliza recognized the voice and face for a man who owned a farm not far from her old home.

“O, Mr. Symmes!—save me—do save me—do hide me!” said Eliza.

“Why, what’s this?” said the man. “Why, if ’tan’t Shelby’s gal!”

“My child!—this boy!—he’d sold him! There is his Mas’r,” said she, pointing to the Kentucky shore. “O, Mr. Symmes, you’ve got a little boy!”

“So I have,” said the man, as he roughly, but kindly, drew her up the steep bank. “Besides, you’re a right brave gal. I like grit, wherever I see it.”

When they had gained the top of the bank, the man paused.

“I’d be glad to do something for ye,” said he; “but then there’s nowhar I could take ye. The best I can do is to tell ye to go _thar_,” said he, pointing to a large white house which stood by itself, off the main street of the village. “Go thar; they’re kind folks. Thar’s no kind o’ danger but they’ll help you,—they’re up to all that sort o’ thing.”

“The Lord bless you!” said Eliza, earnestly.

“No ’casion, no ’casion in the world,” said the man. “What I’ve done’s of no ’count.”

“And, oh, surely, sir, you won’t tell any one!”

“Go to thunder, gal! What do you take a feller for? In course not,” said the man. “Come, now, go along like a likely, sensible gal, as you are. You’ve arnt your liberty, and you shall have it, for all me.”

The woman folded her child to her bosom, and walked firmly and swiftly away. The man stood and looked after her.

“Shelby, now, mebbe won’t think this yer the most neighborly thing in the world; but what’s a feller to do? If he catches one of my gals in the same fix, he’s welcome to pay back. Somehow I never could see no kind o’ critter a strivin’ and pantin’, and trying to clar theirselves, with the dogs arter ’em and go agin ’em. Besides, I don’t see no kind of ’casion for me to be hunter and catcher for other folks, neither.”

So spoke this poor, heathenish Kentuckian, who had not been instructed in his constitutional relations, and consequently was betrayed into acting in a sort of Christianized manner, which, if he had been better situated and more enlightened, he would not have been left to do.

Haley had stood a perfectly amazed spectator of the scene, till Eliza had disappeared up the bank, when he turned a blank, inquiring look on Sam and Andy.

“That ar was a tolable fair stroke of business,” said Sam.

“The gal ’s got seven devils in her, I believe!” said Haley. “How like a wildcat she jumped!”

“Wal, now,” said Sam, scratching his head, “I hope Mas’r’ll ’scuse us trying dat ar road. Don’t think I feel spry enough for dat ar, no way!” and Sam gave a hoarse chuckle.

“_You_ laugh!” said the trader, with a growl.

“Lord bless you, Mas’r, I couldn’t help it now,” said Sam, giving way to the long pent-up delight of his soul. “She looked so curi’s, a leapin’ and springin’—ice a crackin’—and only to hear her,—plump! ker chunk! ker splash! Spring! Lord! how she goes it!” and Sam and Andy laughed till the tears rolled down their cheeks.

“I’ll make ye laugh t’ other side yer mouths!” said the trader, laying about their heads with his riding-whip.

Both ducked, and ran shouting up the bank, and were on their horses before he was up.

“Good-evening, Mas’r!” said Sam, with much gravity. “I berry much spect Missis be anxious ’bout Jerry. Mas’r Haley won’t want us no longer. Missis wouldn’t hear of our ridin’ the critters over Lizy’s bridge tonight;” and, with a facetious poke into Andy’s ribs, he started off, followed by the latter, at full speed,—their shouts of laughter coming faintly on the wind.

CHAPTER VIII Eliza’s Escape

Eliza made her desperate retreat across the river just in the dusk of twilight. The gray mist of evening, rising slowly from the river, enveloped her as she disappeared up the bank, and the swollen current and floundering masses of ice presented a hopeless barrier between her and her pursuer. Haley therefore slowly and discontentedly returned to the little tavern, to ponder further what was to be done. The woman opened to him the door of a little parlor, covered with a rag carpet, where stood a table with a very shining black oil-cloth, sundry lank, high-backed wood chairs, with some plaster images in resplendent colors on the mantel-shelf, above a very dimly-smoking grate; a long hard-wood settle extended its uneasy length by the chimney, and here Haley sat him down to meditate on the instability of human hopes and happiness in general.

“What did I want with the little cuss, now,” he said to himself, “that I should have got myself treed like a coon, as I am, this yer way?” and Haley relieved himself by repeating over a not very select litany of imprecations on himself, which, though there was the best possible reason to consider them as true, we shall, as a matter of taste, omit.

He was startled by the loud and dissonant voice of a man who was apparently dismounting at the door. He hurried to the window.

“By the land! if this yer an’t the nearest, now, to what I’ve heard folks call Providence,” said Haley. “I do b’lieve that ar’s Tom Loker.”

Haley hastened out. Standing by the bar, in the corner of the room, was a brawny, muscular man, full six feet in height, and broad in proportion. He was dressed in a coat of buffalo-skin, made with the hair outward, which gave him a shaggy and fierce appearance, perfectly in keeping with the whole air of his physiognomy. In the head and face every organ and lineament expressive of brutal and unhesitating violence was in a state of the highest possible development. Indeed, could our readers fancy a bull-dog come unto man’s estate, and walking about in a hat and coat, they would have no unapt idea of the general style and effect of his physique. He was accompanied by a travelling companion, in many respects an exact contrast to himself. He was short and slender, lithe and catlike in his motions, and had a peering, mousing expression about his keen black eyes, with which every feature of his face seemed sharpened into sympathy; his thin, long nose, ran out as if it was eager to bore into the nature of things in general; his sleek, thin, black hair was stuck eagerly forward, and all his motions and evolutions expressed a dry, cautious acuteness. The great man poured out a big tumbler half full of raw spirits, and gulped it down without a word. The little man stood tiptoe, and putting his head first to one side and then the other, and snuffing considerately in the directions of the various bottles, ordered at last a mint julep, in a thin and quivering voice, and with an air of great circumspection. When poured out, he took it and looked at it with a sharp, complacent air, like a man who thinks he has done about the right thing, and hit the nail on the head, and proceeded to dispose of it in short and well-advised sips.

“Wal, now, who’d a thought this yer luck ’ad come to me? Why, Loker, how are ye?” said Haley, coming forward, and extending his hand to the big man.

“The devil!” was the civil reply. “What brought you here, Haley?”

The mousing man, who bore the name of Marks, instantly stopped his sipping, and, poking his head forward, looked shrewdly on the new acquaintance, as a cat sometimes looks at a moving dry leaf, or some other possible object of pursuit.

“I say, Tom, this yer’s the luckiest thing in the world. I’m in a devil of a hobble, and you must help me out.”

“Ugh? aw! like enough!” grunted his complacent acquaintance. “A body may be pretty sure of that, when _you’re_ glad to see ’em; something to be made off of ’em. What’s the blow now?”

“You’ve got a friend here?” said Haley, looking doubtfully at Marks; “partner, perhaps?”

“Yes, I have. Here, Marks! here’s that ar feller that I was in with in Natchez.”

“Shall be pleased with his acquaintance,” said Marks, thrusting out a long, thin hand, like a raven’s claw. “Mr. Haley, I believe?”

“The same, sir,” said Haley. “And now, gentlemen, seein’ as we’ve met so happily, I think I’ll stand up to a small matter of a treat in this here parlor. So, now, old coon,” said he to the man at the bar, “get us hot water, and sugar, and cigars, and plenty of the _real stuff_ and we’ll have a blow-out.”

Behold, then, the candles lighted, the fire stimulated to the burning point in the grate, and our three worthies seated round a table, well spread with all the accessories to good fellowship enumerated before.

Haley began a pathetic recital of his peculiar troubles. Loker shut up his mouth, and listened to him with gruff and surly attention. Marks, who was anxiously and with much fidgeting compounding a tumbler of punch to his own peculiar taste, occasionally looked up from his employment, and, poking his sharp nose and chin almost into Haley’s face, gave the most earnest heed to the whole narrative. The conclusion of it appeared to amuse him extremely, for he shook his shoulders and sides in silence, and perked up his thin lips with an air of great internal enjoyment.

“So, then, ye’r fairly sewed up, an’t ye?” he said; “he! he! he! It’s neatly done, too.”

“This yer young-un business makes lots of trouble in the trade,” said Haley, dolefully.

“If we could get a breed of gals that didn’t care, now, for their young uns,” said Marks; “tell ye, I think ’t would be ’bout the greatest mod’rn improvement I knows on,”—and Marks patronized his joke by a quiet introductory sniggle.

“Jes so,” said Haley; “I never couldn’t see into it; young uns is heaps of trouble to ’em; one would think, now, they’d be glad to get clar on ’em; but they arn’t. And the more trouble a young un is, and the more good for nothing, as a gen’l thing, the tighter they sticks to ’em.”

“Wal, Mr. Haley,” said Marks, “jest pass the hot water. Yes, sir; you say jest what I feel and all’us have. Now, I bought a gal once, when I was in the trade,—a tight, likely wench she was, too, and quite considerable smart,—and she had a young un that was mis’able sickly; it had a crooked back, or something or other; and I jest gin ’t away to a man that thought he’d take his chance raising on ’t, being it didn’t cost nothin’;—never thought, yer know, of the gal’s takin’ on about it,—but, Lord, yer oughter seen how she went on. Why, re’lly, she did seem to me to valley the child more ’cause _”t was_ sickly and cross, and plagued her; and she warn’t making b’lieve, neither,—cried about it, she did, and lopped round, as if she’d lost every friend she had. It re’lly was droll to think on ’t. Lord, there ain’t no end to women’s notions.”

“Wal, jest so with me,” said Haley. “Last summer, down on Red River, I got a gal traded off on me, with a likely lookin’ child enough, and his eyes looked as bright as yourn; but, come to look, I found him stone blind. Fact—he was stone blind. Wal, ye see, I thought there warn’t no harm in my jest passing him along, and not sayin’ nothin’; and I’d got him nicely swapped off for a keg o’ whiskey; but come to get him away from the gal, she was jest like a tiger. So ’t was before we started, and I hadn’t got my gang chained up; so what should she do but ups on a cotton-bale, like a cat, ketches a knife from one of the deck hands, and, I tell ye, she made all fly for a minnit, till she saw ’t warn’t no use; and she jest turns round, and pitches head first, young un and all, into the river,—went down plump, and never ris.”

“Bah!” said Tom Loker, who had listened to these stories with ill-repressed disgust,—“shif’less, both on ye! _my_ gals don’t cut up no such shines, I tell ye!”

“Indeed! how do you help it?” said Marks, briskly.

“Help it? why, I buys a gal, and if she’s got a young un to be sold, I jest walks up and puts my fist to her face, and says, ‘Look here, now, if you give me one word out of your head, I’ll smash yer face in. I won’t hear one word—not the beginning of a word.’ I says to ’em, ‘This yer young un’s mine, and not yourn, and you’ve no kind o’ business with it. I’m going to sell it, first chance; mind, you don’t cut up none o’ yer shines about it, or I’ll make ye wish ye’d never been born.’ I tell ye, they sees it an’t no play, when I gets hold. I makes ’em as whist as fishes; and if one on ’em begins and gives a yelp, why,—” and Mr. Loker brought down his fist with a thump that fully explained the hiatus.

“That ar’s what ye may call _emphasis_,” said Marks, poking Haley in the side, and going into another small giggle. “An’t Tom peculiar? he! he! I say, Tom, I s’pect you make ’em _understand_, for all niggers’ heads is woolly. They don’t never have no doubt o’ your meaning, Tom. If you an’t the devil, Tom, you ’s his twin brother, I’ll say that for ye!”

Tom received the compliment with becoming modesty, and began to look as affable as was consistent, as John Bunyan says, “with his doggish nature.”

Haley, who had been imbibing very freely of the staple of the evening, began to feel a sensible elevation and enlargement of his moral faculties,—a phenomenon not unusual with gentlemen of a serious and reflective turn, under similar circumstances.

“Wal, now, Tom,” he said, “ye re’lly is too bad, as I al’ays have told ye; ye know, Tom, you and I used to talk over these yer matters down in Natchez, and I used to prove to ye that we made full as much, and was as well off for this yer world, by treatin’ on ’em well, besides keepin’ a better chance for comin’ in the kingdom at last, when wust comes to wust, and thar an’t nothing else left to get, ye know.”

“Boh!” said Tom, “_don’t_ I know?—don’t make me too sick with any yer stuff,—my stomach is a leetle riled now;” and Tom drank half a glass of raw brandy.

“I say,” said Haley, and leaning back in his chair and gesturing impressively, “I’ll say this now, I al’ays meant to drive my trade so as to make money on ’t _fust and foremost_, as much as any man; but, then, trade an’t everything, and money an’t everything, ’cause we ’s all got souls. I don’t care, now, who hears me say it,—and I think a cussed sight on it,—so I may as well come out with it. I b’lieve in religion, and one of these days, when I’ve got matters tight and snug, I calculates to tend to my soul and them ar matters; and so what’s the use of doin’ any more wickedness than ’s re’lly necessary?—it don’t seem to me it’s ’t all prudent.”

“Tend to yer soul!” repeated Tom, contemptuously; “take a bright lookout to find a soul in you,—save yourself any care on that score. If the devil sifts you through a hair sieve, he won’t find one.”

“Why, Tom, you’re cross,” said Haley; “why can’t ye take it pleasant, now, when a feller’s talking for your good?”

“Stop that ar jaw o’ yourn, there,” said Tom, gruffly. “I can stand most any talk o’ yourn but your pious talk,—that kills me right up. After all, what’s the odds between me and you? ’Tan’t that you care one bit more, or have a bit more feelin’—it’s clean, sheer, dog meanness, wanting to cheat the devil and save your own skin; don’t I see through it? And your ‘gettin’ religion,’ as you call it, arter all, is too p’isin mean for any crittur;—run up a bill with the devil all your life, and then sneak out when pay time comes! Bob!”

“Come, come, gentlemen, I say; this isn’t business,” said Marks. “There’s different ways, you know, of looking at all subjects. Mr. Haley is a very nice man, no doubt, and has his own conscience; and, Tom, you have your ways, and very good ones, too, Tom; but quarrelling, you know, won’t answer no kind of purpose. Let’s go to business. Now, Mr. Haley, what is it?—you want us to undertake to catch this yer gal?”

“The gal’s no matter of mine,—she’s Shelby’s; it’s only the boy. I was a fool for buying the monkey!”

“You’re generally a fool!” said Tom, gruffly.

“Come, now, Loker, none of your huffs,” said Marks, licking his lips; “you see, Mr. Haley ’s a puttin’ us in a way of a good job, I reckon; just hold still—these yer arrangements is my forte. This yer gal, Mr. Haley, how is she? what is she?”

“Wal! white and handsome—well brought up. I’d a gin Shelby eight hundred or a thousand, and then made well on her.”

“White and handsome—well brought up!” said Marks, his sharp eyes, nose and mouth, all alive with enterprise. “Look here, now, Loker, a beautiful opening. We’ll do a business here on our own account;—we does the catchin’; the boy, of course, goes to Mr. Haley,—we takes the gal to Orleans to speculate on. An’t it beautiful?”

Tom, whose great heavy mouth had stood ajar during this communication, now suddenly snapped it together, as a big dog closes on a piece of meat, and seemed to be digesting the idea at his leisure.

“Ye see,” said Marks to Haley, stirring his punch as he did so, “ye see, we has justices convenient at all p’ints along shore, that does up any little jobs in our line quite reasonable. Tom, he does the knockin’ down and that ar; and I come in all dressed up—shining boots—everything first chop, when the swearin’ ’s to be done. You oughter see, now,” said Marks, in a glow of professional pride, “how I can tone it off. One day, I’m Mr. Twickem, from New Orleans; ’nother day, I’m just come from my plantation on Pearl River, where I works seven hundred niggers; then, again, I come out a distant relation of Henry Clay, or some old cock in Kentuck. Talents is different, you know. Now, Tom’s roarer when there’s any thumping or fighting to be done; but at lying he an’t good, Tom an’t,—ye see it don’t come natural to him; but, Lord, if thar’s a feller in the country that can swear to anything and

everything, and put in all the circumstances and flourishes with a long face, and carry 't through better 'n I can, why, I'd like to see him, that's all! I b'lieve my heart, I could get along and snake through, even if justices were more particular than they is. Sometimes I rather wish they was more particular; 't would be a heap more relishin' if they was,—more fun, yer know."

Tom Loker, who, as we have made it appear, was a man of slow thoughts and movements, here interrupted Marks by bringing his heavy fist down on the table, so as to make all ring again, _"It'll do!"_ he said.

"Lord bless ye, Tom, ye needn't break all the glasses!" said Marks; "save your fist for time o' need."

"But, gentlemen, an't I to come in for a share of the profits?" said Haley.

"An't it enough we catch the boy for ye?" said Loker. "What do ye want?"

"Wal," said Haley, "if I gives you the job, it's worth something,—say ten per cent. on the profits, expenses paid."

"Now," said Loker, with a tremendous oath, and striking the table with his heavy fist, "don't I know _you_, Dan Haley? Don't you think to come it over me! Suppose Marks and I have taken up the catchin' trade, jest to 'commodate gentlemen like you, and get nothin' for ourselves?—Not by a long chalk! we'll have the gal out and out, and you keep quiet, or, ye see, we'll have both,—what's to hinder? Han't you show'd us the game? It's as free to us as you, I hope. If you or Shelby wants to chase us, look where the partridges was last year; if you find them or us, you're quite welcome."

"O, wal, certainly, jest let it go at that," said Haley, alarmed; "you catch the boy for the job;—you allers did trade _far_ with me, Tom, and was up to yer word."

"Ye know that," said Tom; "I don't pretend none of your snivelling ways, but I won't lie in my 'counts with the devil himself. What I ses I'll do, I will do,—you know _that_, Dan Haley."

"Jes so, jes so,—I said so, Tom," said Haley; "and if you'd only promise to have the boy for me in a week, at any point you'll name, that's all I want."

"But it an't all I want, by a long jump," said Tom. "Ye don't think I did business with you, down in Natchez, for nothing, Haley; I've learned to hold an eel, when I catch him. You've got to fork over fifty dollars, flat down, or this child don't start a peg. I know yer."

"Why, when you have a job in hand that may bring a clean profit of somewhere about a thousand or sixteen hundred, why, Tom, you're onreasonable," said Haley.

"Yes, and hasn't we business booked for five weeks to come,—all we can do? And suppose we leaves all, and goes to bush-whacking round arter yer young uns, and finally doesn't catch the gal,—and gals allers is the devil _to_ catch,—what's then? would you pay us a cent—would you? I think I see you a doin' it—ugh! No, no; flap down your fifty. If we get the job, and it pays, I'll hand it back; if we don't, it's for our trouble,—that's _far_, an't it, Marks?"

"Certainly, certainly," said Marks, with a conciliatory tone; "it's only a retaining fee, you see,—he! he! he!—we lawyers, you know. Wal, we must all keep good-natured,—keep easy, yer know. Tom'll have the boy for yer, anywhere ye'll name; won't ye, Tom?"

"If I find the young un, I'll bring him on to Cincinnati, and leave him at Granny Belcher's, on the landing," said Loker.

Marks had got from his pocket a greasy pocket-book, and taking a long paper from thence, he sat down, and fixing his keen black eyes on it, began mumbling over its contents: "Barnes—Shelby County—boy Jim, three hundred dollars for him, dead or alive.

"Edwards—Dick and Lucy—man and wife, six hundred dollars; wench Polly and two children—six hundred for her or her head.

"I'm jest a runnin' over our business, to see if we can take up this yer handily. Loker," he said, after a pause, "we must set Adams and Springer on the track of these yer; they've been booked some time."

"They'll charge too much," said Tom.

"I'll manage that ar; they 's young in the business, and must spect to work cheap," said Marks, as he continued to read. "Ther's three on 'em easy cases, 'cause all you've got to do is to shoot 'em, or swear they is shot; they couldn't, of course, charge much for that. Them other cases," he said, folding the paper, "will bear puttin' off a spell. So now let's come to the particulars. Now, Mr. Haley, you saw this yer gal when she landed?"

“To be sure,—plain as I see you.”

“And a man helpin’ on her up the bank?” said Loker.

“To be sure, I did.”

“Most likely,” said Marks, “she’s took in somewhere; but where, ’s a question. Tom, what do you say?”

“We must cross the river tonight, no mistake,” said Tom.

“But there’s no boat about,” said Marks. “The ice is running awfully, Tom; an’t it dangerous?”

“Don’no nothing ’bout that,—only it’s got to be done,” said Tom, decidedly.

“Dear me,” said Marks, fidgeting, “it’ll be—I say,” he said, walking to the window, “it’s dark as a wolf’s mouth, and, Tom—”

“The long and short is, you’re scared, Marks; but I can’t help that,—you’ve got to go. Suppose you want to lie by a day or two, till the gal ’s been carried on the underground line up to Sandusky or so, before you start.”

“O, no; I an’t a grain afraid,” said Marks, “only—”

“Only what?” said Tom.

“Well, about the boat. Yer see there an’t any boat.”

“I heard the woman say there was one coming along this evening, and that a man was going to cross over in it. Neck or nothing, we must go with him,” said Tom.

“I s’pose you’ve got good dogs,” said Haley.

“First rate,” said Marks. “But what’s the use? you han’t got nothin’ o’ hers to smell on.”

“Yes, I have,” said Haley, triumphantly. “Here’s her shawl she left on the bed in her hurry; she left her bonnet, too.”

“That ar’s lucky,” said Loker; “fork over.”

“Though the dogs might damage the gal, if they come on her unawars,” said Haley.

“That ar’s a consideration,” said Marks. “Our dogs tore a feller half to pieces, once, down in Mobile, ’fore we could get ’em off.”

“Well, ye see, for this sort that’s to be sold for their looks, that ar won’t answer, ye see,” said Haley.

“I do see,” said Marks. “Besides, if she’s got took in, ’tan’t no go, neither. Dogs is no ’count in these yer up states where these critters gets carried; of course, ye can’t get on their track. They only does down in plantations, where niggers, when they runs, has to do their own running, and don’t get no help.”

“Well,” said Loker, who had just stepped out to the bar to make some inquiries, “they say the man’s come with the boat; so, Marks—”

That worthy cast a rueful look at the comfortable quarters he was leaving, but slowly rose to obey. After exchanging a few words of further arrangement, Haley, with visible reluctance, handed over the fifty dollars to Tom, and the worthy trio separated for the night.

If any of our refined and Christian readers object to the society into which this scene introduces them, let us beg them to begin and conquer their prejudices in time. The catching business, we beg to remind them, is rising to the dignity of a lawful and patriotic profession. If all the broad land between the Mississippi and the Pacific becomes one great market for bodies and souls, and human property retains the locomotive tendencies of this nineteenth century, the trader and catcher may yet be among our aristocracy.

While this scene was going on at the tavern, Sam and Andy, in a state of high felicitation, pursued their way home.

Sam was in the highest possible feather, and expressed his exultation by all sorts of supernatural howls and ejaculations, by divers odd motions and contortions of his whole system. Sometimes he would sit backward, with his face to the horse’s tail and sides, and

then, with a whoop and a somerset, come right side up in his place again, and, drawing on a grave face, begin to lecture Andy in high-sounding tones for laughing and playing the fool. Anon, slapping his sides with his arms, he would burst forth in peals of laughter, that made the old woods ring as they passed. With all these evolutions, he contrived to keep the horses up to the top of their speed, until, between ten and eleven, their heels resounded on the gravel at the end of the balcony. Mrs. Shelby flew to the railings.

“Is that you, Sam? Where are they?”

“Mas’r Haley ’s a-restin’ at the tavern; he’s dreffful fatigued, Missis.”

“And Eliza, Sam?”

“Wal, she’s clar ’cross Jordan. As a body may say, in the land o’ Canaan.”

“Why, Sam, what _do_ you mean?” said Mrs. Shelby, breathless, and almost faint, as the possible meaning of these words came over her.

“Wal, Missis, de Lord he persarves his own. Lizy’s done gone over the river into ’Hio, as ’markably as if de Lord took her over in a charrit of fire and two hosses.”

Sam’s vein of piety was always uncommonly fervent in his mistress’ presence; and he made great capital of scriptural figures and images.

“Come up here, Sam,” said Mr. Shelby, who had followed on to the verandah, “and tell your mistress what she wants. Come, come, Emily,” said he, passing his arm round her, “you are cold and all in a shiver; you allow yourself to feel too much.”

“Feel too much! Am not I a woman,—a mother? Are we not both responsible to God for this poor girl? My God! lay not this sin to our charge.”

“What sin, Emily? You see yourself that we have only done what we were obliged to.”

“There’s an awful feeling of guilt about it, though,” said Mrs. Shelby. “I can’t reason it away.”

“Here, Andy, you nigger, be alive!” called Sam, under the verandah; “take these yer hosses to der barn; don’t ye hear Mas’r a callin’?” and Sam soon appeared, palm-leaf in hand, at the parlor door.

“Now, Sam, tell us distinctly how the matter was,” said Mr. Shelby. “Where is Eliza, if you know?”

“Wal, Mas’r, I saw her, with my own eyes, a crossin’ on the floatin’ ice. She crossed most ’markably; it wasn’t no less nor a miracle; and I saw a man help her up the ’Hio side, and then she was lost in the dusk.”

“Sam, I think this rather apocryphal,—this miracle. Crossing on floating ice isn’t so easily done,” said Mr. Shelby.

“Easy! couldn’t nobody a done it, without de Lord. Why, now,” said Sam, “’t was jist dis yer way. Mas’r Haley, and me, and Andy, we comes up to de little tavern by the river, and I rides a leetle ahead,—(I’s so zealous to be a cotchin’ Lizy, that I couldn’t hold in, no way),—and when I comes by the tavern winder, sure enough there she was, right in plain sight, and dey diggin’ on behind. Wal, I loses off my hat, and sings out nuff to raise the dead. Course Lizy she hars, and she dodges back, when Mas’r Haley he goes past the door; and then, I tell ye, she clared out de side door; she went down de river bank;—Mas’r Haley he seed her, and yelled out, and him, and me, and Andy, we took arter. Down she come to the river, and thar was the current running ten feet wide by the shore, and over t’ other side ice a sawin’ and a jiggling up and down, kinder as ’t were a great island. We come right behind her, and I thought my soul he’d got her sure enough,—when she gin sich a screech as I never hearn, and thar she was, clar over t’ other side of the current, on the ice, and then on she went, a screeching and a jumpin’,—the ice went crack! c’wallop! cracking! chunk! and she a boundin’ like a buck! Lord, the spring that ar gal’s got in her an’t common, I’m o’ ’pinion.”

Mrs. Shelby sat perfectly silent, pale with excitement, while Sam told his story.

“God be praised, she isn’t dead!” she said; “but where is the poor child now?”

“De Lord will pervide,” said Sam, rolling up his eyes piously. “As I’ve been a sayin’, dis yer ’s a providence and no mistake, as Missis has allers been a instructin’ on us. Thar’s allers instruments ris up to do de Lord’s will. Now, if ’t hadn’t been for me today,

she'd a been took a dozen times. Warn't it I started off de hosses, dis yer mornin' and kept 'em chasin' till nigh dinner time? And didn't I car Mas'r Haley night five miles out of de road, dis evening, or else he'd a come up with Lizy as easy as a dog arter a coon. These yer 's all providences."

"They are a kind of providences that you'll have to be pretty sparing of, Master Sam. I allow no such practices with gentlemen on my place," said Mr. Shelby, with as much sternness as he could command, under the circumstances.

Now, there is no more use in making believe be angry with a negro than with a child; both instinctively see the true state of the case, through all attempts to affect the contrary; and Sam was in no wise disheartened by this rebuke, though he assumed an air of doleful gravity, and stood with the corners of his mouth lowered in most penitential style.

"Mas'r quite right,—quite; it was ugly on me,—there's no disputin' that ar; and of course Mas'r and Missis wouldn't encourage no such works. I'm sensible of dat ar; but a poor nigger like me 's 'mazin' tempted to act ugly sometimes, when fellers will cut up such shines as dat ar Mas'r Haley; he an't no gen'l'man no way; anybody's been raised as I've been can't help a seein' dat ar."

"Well, Sam," said Mrs. Shelby, "as you appear to have a proper sense of your errors, you may go now and tell Aunt Chloe she may get you some of that cold ham that was left of dinner today. You and Andy must be hungry."

"Missis is a heap too good for us," said Sam, making his bow with alacrity, and departing.

It will be perceived, as has been before intimated, that Master Sam had a native talent that might, undoubtedly, have raised him to eminence in political life,—a talent of making capital out of everything that turned up, to be invested for his own especial praise and glory; and having done up his piety and humility, as he trusted, to the satisfaction of the parlor, he clapped his palm-leaf on his head, with a sort of rakish, free-and-easy air, and proceeded to the dominions of Aunt Chloe, with the intention of flourishing largely in the kitchen.

"I'll speechify these yer niggers," said Sam to himself, "now I've got a chance. Lord, I'll reel it off to make 'em stare!"

It must be observed that one of Sam's especial delights had been to ride in attendance on his master to all kinds of political gatherings, where, roosted on some rail fence, or perched aloft in some tree, he would sit watching the orators, with the greatest apparent gusto, and then, descending among the various brethren of his own color, assembled on the same errand, he would edify and delight them with the most ludicrous burlesques and imitations, all delivered with the most imperturbable earnestness and solemnity; and though the auditors immediately about him were generally of his own color, it not infrequently happened that they were fringed pretty deeply with those of a fairer complexion, who listened, laughing and winking, to Sam's great self-congratulation. In fact, Sam considered oratory as his vocation, and never let slip an opportunity of magnifying his office.

Now, between Sam and Aunt Chloe there had existed, from ancient times, a sort of chronic feud, or rather a decided coolness; but, as Sam was meditating something in the provision department, as the necessary and obvious foundation of his operations, he determined, on the present occasion, to be eminently conciliatory; for he well knew that although "Missis' orders" would undoubtedly be followed to the letter, yet he should gain a considerable deal by enlisting the spirit also. He therefore appeared before Aunt Chloe with a touchingly subdued, resigned expression, like one who has suffered immeasurable hardships in behalf of a persecuted fellow-creature,—enlarged upon the fact that Missis had directed him to come to Aunt Chloe for whatever might be wanting to make up the balance in his solids and fluids,—and thus unequivocally acknowledged her right and supremacy in the cooking department, and all thereto pertaining.

The thing took accordingly. No poor, simple, virtuous body was ever cajoled by the attentions of an electioneering politician with more ease than Aunt Chloe was won over by Master Sam's suavities; and if he had been the prodigal son himself, he could not have been overwhelmed with more maternal bountifulness; and he soon found himself seated, happy and glorious, over a large tin pan, containing a sort of _olla podrida_ of all that had appeared on the table for two or three days past. Savory morsels of ham, golden blocks of corn-cake, fragments of pie of every conceivable mathematical figure, chicken wings, gizzards, and drumsticks, all appeared in picturesque confusion; and Sam, as monarch of all he surveyed, sat with his palm-leaf cocked rejoicingly to one side, and patronizing Andy at his right hand.

The kitchen was full of all his compeers, who had hurried and crowded in, from the various cabins, to hear the termination of the day's exploits. Now was Sam's hour of glory. The story of the day was rehearsed, with all kinds of ornament and varnishing which might be necessary to heighten its effect; for Sam, like some of our fashionable dilettanti, never allowed a story to lose any of its

gilding by passing through his hands. Roars of laughter attended the narration, and were taken up and prolonged by all the smaller fry, who were lying, in any quantity, about on the floor, or perched in every corner. In the height of the uproar and laughter, Sam, however, preserved an immovable gravity, only from time to time rolling his eyes up, and giving his auditors divers inexpressibly droll glances, without departing from the sententious elevation of his oratory.

“Yer see, fellow-countrymen,” said Sam, elevating a turkey’s leg, with energy, “yer see, now what dis yer chile ’s up ter, for fendin’ yer all,—yes, all on yer. For him as tries to get one o’ our people is as good as tryin’ to get all; yer see the principle ’s de same,—dat ar’s clar. And any one o’ these yer drivers that comes smelling round arter any our people, why, he’s got _me_ in his way; _I’m_ the feller he’s got to set in with,—I’m the feller for yer all to come to, bredren,—I’ll stand up for yer rights,—I’ll fend ’em to the last breath!”

“Why, but Sam, yer telled me, only this mornin’, that you’d help this yer Mas’r to cotch Lizy; seems to me yer talk don’t hang together,” said Andy.

“I tell you now, Andy,” said Sam, with awful superiority, “don’t yer be a talkin’ ’bout what yer don’t know nothin’ on; boys like you, Andy, means well, but they can’t be spected to collusitate the great principles of action.”

Andy looked rebuked, particularly by the hard word collusitate, which most of the youngerly members of the company seemed to consider as a settler in the case, while Sam proceeded.

“Dat ar was _conscience_, Andy; when I thought of gwine arter Lizy, I railly spected Mas’r was sot dat way. When I found Missis was sot the contrar, dat ar was conscience _more yet_,—cause fellers allers gets more by stickin’ to Missis’ side,—so yer see I ’s persistent either way, and sticks up to conscience, and holds on to principles. Yes, _principles_,” said Sam, giving an enthusiastic toss to a chicken’s neck,—“what’s principles good for, if we isn’t persistent, I wanter know? Thar, Andy, you may have dat ar bone,—tan’t picked quite clean.”

Sam’s audience hanging on his words with open mouth, he could not but proceed.

“Dis yer matter ’bout persistence, feller-niggers,” said Sam, with the air of one entering into an abstruse subject, “dis yer ’sistency ’s a thing what an’t seed into very clar, by most anybody. Now, yer see, when a feller stands up for a thing one day and night, de contrar de next, folks ses (and nat’rally enough dey ses), why he an’t persistent,—hand me dat ar bit o’ corn-cake, Andy. But let’s look inter it. I hope the gen’lmen and der fair sex will scuse my usin’ an or’nary sort o’ ’parison. Here! I’m a trying to get top o’ der hay. Wal, I puts up my larder dis yer side; ’tan’t no go;—den, cause I don’t try dere no more, but puts my larder right de contrar side, an’t I persistent? I’m persistent in wantin’ to get up which ary side my larder is; don’t you see, all on yer?”

“It’s the only thing ye ever was persistent in, Lord knows!” muttered Aunt Chloe, who was getting rather restive; the merriment of the evening being to her somewhat after the Scripture comparison,—like “vinegar upon nitre.”

“Yes, indeed!” said Sam, rising, full of supper and glory, for a closing effort. “Yes, my feller-citizens and ladies of de other sex in general, I has principles,—I’m proud to ’oon ’em,—they ’s perquisite to dese yer times, and ter _all_ times. I has principles, and I sticks to ’em like forty,—jest anything that I thinks is principle, I goes in to ’t;—I wouldn’t mind if dey burnt me ’live,—I’d walk right up to de stake, I would, and say, here I comes to shed my last blood fur my principles, fur my country, fur de gen’l interests of society.”

“Well,” said Aunt Chloe, “one o’ yer principles will have to be to get to bed some time tonight, and not be a keepin’ everybody up till mornin’; now, every one of you young uns that don’t want to be cracked, had better be scase, mighty sudden.”

“Niggers! all on yer,” said Sam, waving his palm-leaf with benignity, “I give yer my blessin’; go to bed now, and be good boys.”

And, with this pathetic benediction, the assembly dispersed.

CHAPTER IX In Which It Appears That a Senator Is But a Man

The light of the cheerful fire shone on the rug and carpet of a cosey parlor, and glittered on the sides of the tea-cups and well-brightened tea-pot, as Senator Bird was drawing off his boots, preparatory to inserting his feet in a pair of new handsome slippers, which his wife had been working for him while away on his senatorial tour. Mrs. Bird, looking the very picture of delight, was superintending the arrangements of the table, ever and anon mingling admonitory remarks to a number of frolicsome juveniles, who were effervescing in all those modes of untold gambol and mischief that have astonished mothers ever since the flood.

“Tom, let the door-knob alone,—there’s a man! Mary! Mary! don’t pull the cat’s tail,—poor pussy! Jim, you mustn’t climb on that table,—no, no!—You don’t know, my dear, what a surprise it is to us all, to see you here tonight!” said she, at last, when she found a space to say something to her husband.

“Yes, yes, I thought I’d just make a run down, spend the night, and have a little comfort at home. I’m tired to death, and my head aches!”

Mrs. Bird cast a glance at a camphor-bottle, which stood in the half-open closet, and appeared to meditate an approach to it, but her husband interposed.

“No, no, Mary, no doctoring! a cup of your good hot tea, and some of our good home living, is what I want. It’s a tiresome business, this legislating!”

And the senator smiled, as if he rather liked the idea of considering himself a sacrifice to his country.

“Well,” said his wife, after the business of the tea-table was getting rather slack, “and what have they been doing in the Senate?”

Now, it was a very unusual thing for gentle little Mrs. Bird ever to trouble her head with what was going on in the house of the state, very wisely considering that she had enough to do to mind her own. Mr. Bird, therefore, opened his eyes in surprise, and said,

“Not very much of importance.”

“Well; but is it true that they have been passing a law forbidding people to give meat and drink to those poor colored folks that come along? I heard they were talking of some such law, but I didn’t think any Christian legislature would pass it!”

“Why, Mary, you are getting to be a politician, all at once.”

“No, nonsense! I wouldn’t give a fig for all your politics, generally, but I think this is something downright cruel and unchristian. I hope, my dear, no such law has been passed.”

“There has been a law passed forbidding people to help off the slaves that come over from Kentucky, my dear; so much of that thing has been done by these reckless Abolitionists, that our brethren in Kentucky are very strongly excited, and it seems necessary, and no more than Christian and kind, that something should be done by our state to quiet the excitement.”

“And what is the law? It don’t forbid us to shelter those poor creatures a night, does it, and to give ’em something comfortable to eat, and a few old clothes, and send them quietly about their business?”

“Why, yes, my dear; that would be aiding and abetting, you know.”

Mrs. Bird was a timid, blushing little woman, of about four feet in height, and with mild blue eyes, and a peach-blow complexion, and the gentlest, sweetest voice in the world;—as for courage, a moderate-sized cock-turkey had been known to put her to rout at the very first gobble, and a stout house-dog, of moderate capacity, would bring her into subjection merely by a show of his teeth. Her husband and children were her entire world, and in these she ruled more by entreaty and persuasion than by command or argument. There was only one thing that was capable of arousing her, and that provocation came in on the side of her unusually gentle and sympathetic nature;—anything in the shape of cruelty would throw her into a passion, which was the more alarming and inexplicable in proportion to the general softness of her nature. Generally the most indulgent and easy to be entreated of all mothers, still her boys had a very reverent remembrance of a most vehement chastisement she once bestowed on them, because she found them leagued with several graceless boys of the neighborhood, stoning a defenceless kitten.

“I’ll tell you what,” Master Bill used to say, “I was scared that time. Mother came at me so that I thought she was crazy, and I was whipped and tumbled off to bed, without any supper, before I could get over wondering what had come about; and, after that, I heard mother crying outside the door, which made me feel worse than all the rest. I’ll tell you what,” he’d say, “we boys never stoned another kitten!”

On the present occasion, Mrs. Bird rose quickly, with very red cheeks, which quite improved her general appearance, and walked up to her husband, with quite a resolute air, and said, in a determined tone,

“Now, John, I want to know if you think such a law as that is right and Christian?”

“You won’t shoot me, now, Mary, if I say I do!”

“I never could have thought it of you, John; you didn’t vote for it?”

“Even so, my fair politician.”

“You ought to be ashamed, John! Poor, homeless, houseless creatures! It’s a shameful, wicked, abominable law, and I’ll break it, for one, the first time I get a chance; and I hope I _shall_ have a chance, I do! Things have got to a pretty pass, if a woman can’t give a warm supper and a bed to poor, starving creatures, just because they are slaves, and have been abused and oppressed all their lives, poor things!”

“But, Mary, just listen to me. Your feelings are all quite right, dear, and interesting, and I love you for them; but, then, dear, we mustn’t suffer our feelings to run away with our judgment; you must consider it’s a matter of private feeling,—there are great public interests involved,—there is such a state of public agitation rising, that we must put aside our private feelings.”

“Now, John, I don’t know anything about politics, but I can read my Bible; and there I see that I must feed the hungry, clothe the naked, and comfort the desolate; and that Bible I mean to follow.”

“But in cases where your doing so would involve a great public evil—”

“Obeying God never brings on public evils. I know it can’t. It’s always safest, all round, to _do as He_ bids us.

“Now, listen to me, Mary, and I can state to you a very clear argument, to show—”

“O, nonsense, John! you can talk all night, but you wouldn’t do it. I put it to you, John,—would _you_ now turn away a poor, shivering, hungry creature from your door, because he was a runaway? _Would_ you, now?”

Now, if the truth must be told, our senator had the misfortune to be a man who had a particularly humane and accessible nature, and turning away anybody that was in trouble never had been his forte; and what was worse for him in this particular pinch of the argument was, that his wife knew it, and, of course was making an assault on rather an indefensible point. So he had recourse to the usual means of gaining time for such cases made and provided; he said “ahem,” and coughed several times, took out his pocket-handkerchief, and began to wipe his glasses. Mrs. Bird, seeing the defenceless condition of the enemy’s territory, had no more conscience than to push her advantage.

“I should like to see you doing that, John—I really should! Turning a woman out of doors in a snowstorm, for instance; or may be you’d take her up and put her in jail, wouldn’t you? You would make a great hand at that!”

“Of course, it would be a very painful duty,” began Mr. Bird, in a moderate tone.

“Duty, John! don’t use that word! You know it isn’t a duty—it can’t be a duty! If folks want to keep their slaves from running away, let ’em treat ’em well,—that’s my doctrine. If I had slaves (as I hope I never shall have), I’d risk their wanting to run away from me, or you either, John. I tell you folks don’t run away when they are happy; and when they do run, poor creatures! they suffer enough with cold and hunger and fear, without everybody’s turning against them; and, law or no law, I never will, so help me God!”

“Mary! Mary! My dear, let me reason with you.”

“I hate reasoning, John,—especially reasoning on such subjects. There’s a way you political folks have of coming round and round a plain right thing; and you don’t believe in it yourselves, when it comes to practice. I know _you_ well enough, John. You don’t believe it’s right any more than I do; and you wouldn’t do it any sooner than I.”

At this critical juncture, old Cudjoe, the black man-of-all-work, put his head in at the door, and wished “Missis would come into the kitchen;” and our senator, tolerably relieved, looked after his little wife with a whimsical mixture of amusement and vexation, and, seating himself in the arm-chair, began to read the papers.

After a moment, his wife’s voice was heard at the door, in a quick, earnest tone,—“John! John! I do wish you’d come here, a moment.”

He laid down his paper, and went into the kitchen, and started, quite amazed at the sight that presented itself:—A young and slender woman, with garments torn and frozen, with one shoe gone, and the stocking torn away from the cut and bleeding foot, was laid back in a deadly swoon upon two chairs. There was the impress of the despised race on her face, yet none could help feeling

its mournful and pathetic beauty, while its stony sharpness, its cold, fixed, deathly aspect, struck a solemn chill over him. He drew his breath short, and stood in silence. His wife, and their only colored domestic, old Aunt Dinah, were busily engaged in restorative measures; while old Cudjoe had got the boy on his knee, and was busy pulling off his shoes and stockings, and chafing his little cold feet.

“Sure, now, if she an’t a sight to behold!” said old Dinah, compassionately; “‘pears like ’t was the heat that made her faint. She was tol’able peart when she cum in, and asked if she couldn’t warm herself here a spell; and I was just a-askin’ her where she cum from, and she fainted right down. Never done much hard work, guess, by the looks of her hands.”

“Poor creature!” said Mrs. Bird, compassionately, as the woman slowly unclosed her large, dark eyes, and looked vacantly at her. Suddenly an expression of agony crossed her face, and she sprang up, saying, “O, my Harry! Have they got him?”

The boy, at this, jumped from Cudjoe’s knee, and running to her side put up his arms. “O, he’s here! he’s here!” she exclaimed.

“O, ma’am!” said she, wildly, to Mrs. Bird, “do protect us! don’t let them get him!”

“Nobody shall hurt you here, poor woman,” said Mrs. Bird, encouragingly. “You are safe; don’t be afraid.”

“God bless you!” said the woman, covering her face and sobbing; while the little boy, seeing her crying, tried to get into her lap.

With many gentle and womanly offices, which none knew better how to render than Mrs. Bird, the poor woman was, in time, rendered more calm. A temporary bed was provided for her on the settle, near the fire; and, after a short time, she fell into a heavy slumber, with the child, who seemed no less weary, soundly sleeping on her arm; for the mother resisted, with nervous anxiety, the kindest attempts to take him from her; and, even in sleep, her arm encircled him with an unrelaxing clasp, as if she could not even then be beguiled of her vigilant hold.

Mr. and Mrs. Bird had gone back to the parlor, where, strange as it may appear, no reference was made, on either side, to the preceding conversation; but Mrs. Bird busied herself with her knitting-work, and Mr. Bird pretended to be reading the paper.

“I wonder who and what she is!” said Mr. Bird, at last, as he laid it down.

“When she wakes up and feels a little rested, we will see,” said Mrs. Bird.

“I say, wife!” said Mr. Bird after musing in silence over his newspaper.

“Well, dear!”

“She couldn’t wear one of your gowns, could she, by any letting down, or such matter? She seems to be rather larger than you are.”

A quite perceptible smile glimmered on Mrs. Bird’s face, as she answered, “We’ll see.”

Another pause, and Mr. Bird again broke out,

“I say, wife!”

“Well! What now?”

“Why, there’s that old bombazin cloak, that you keep on purpose to put over me when I take my afternoon’s nap; you might as well give her that,—she needs clothes.”

At this instant, Dinah looked in to say that the woman was awake, and wanted to see Missis.

Mr. and Mrs. Bird went into the kitchen, followed by the two eldest boys, the smaller fry having, by this time, been safely disposed of in bed.

The woman was now sitting up on the settle, by the fire. She was looking steadily into the blaze, with a calm, heart-broken expression, very different from her former agitated wildness.

“Did you want me?” said Mrs. Bird, in gentle tones. “I hope you feel better now, poor woman!”

A long-drawn, shivering sigh was the only answer; but she lifted her dark eyes, and fixed them on her with such a forlorn and imploring expression, that the tears came into the little woman’s eyes.

“You needn’t be afraid of anything; we are friends here, poor woman! Tell me where you came from, and what you want,” said she.

“I came from Kentucky,” said the woman.

“When?” said Mr. Bird, taking up the interogatory.

“Tonight.”

“How did you come?”

“I crossed on the ice.”

“Crossed on the ice!” said every one present.

“Yes,” said the woman, slowly, “I did. God helping me, I crossed on the ice; for they were behind me—right behind—and there was no other way!”

“Law, Missis,” said Cudjoe, “the ice is all in broken-up blocks, a swinging and a tetering up and down in the water!”

“I know it was—I know it!” said she, wildly; “but I did it! I wouldn’t have thought I could,—I didn’t think I should get over, but I didn’t care! I could but die, if I didn’t. The Lord helped me; nobody knows how much the Lord can help ’em, till they try,” said the woman, with a flashing eye.

“Were you a slave?” said Mr. Bird.

“Yes, sir; I belonged to a man in Kentucky.”

“Was he unkind to you?”

“No, sir; he was a good master.”

“And was your mistress unkind to you?”

“No, sir—no! my mistress was always good to me.”

“What could induce you to leave a good home, then, and run away, and go through such dangers?”

The woman looked up at Mrs. Bird, with a keen, scrutinizing glance, and it did not escape her that she was dressed in deep mourning.

“Ma’am,” she said, suddenly, “have you ever lost a child?”

The question was unexpected, and it was thrust on a new wound; for it was only a month since a darling child of the family had been laid in the grave.

Mr. Bird turned around and walked to the window, and Mrs. Bird burst into tears; but, recovering her voice, she said,

“Why do you ask that? I have lost a little one.”

“Then you will feel for me. I have lost two, one after another,—left ’em buried there when I came away; and I had only this one left. I never slept a night without him; he was all I had. He was my comfort and pride, day and night; and, ma’am, they were going to take him away from me,—to _sell_ him,—sell him down south, ma’am, to go all alone,—a baby that had never been away from his mother in his life! I couldn’t stand it, ma’am. I knew I never should be good for anything, if they did; and when I knew the papers were signed, and he was sold, I took him and came off in the night; and they chased me,—the man that bought him, and some of Mas’r’s folks,—and they were coming down right behind me, and I heard ’em. I jumped right on to the ice; and how I got across, I don’t know,—but, first I knew, a man was helping me up the bank.”

The woman did not sob nor weep. She had gone to a place where tears are dry; but every one around her was, in some way characteristic of themselves, showing signs of hearty sympathy.

The two little boys, after a desperate rummaging in their pockets, in search of those pocket-handkerchiefs which mothers know are never to be found there, had thrown themselves disconsolately into the skirts of their mother’s gown, where they were sobbing, and

wiping their eyes and noses, to their hearts' content;—Mrs. Bird had her face fairly hidden in her pocket-handkerchief; and old Dinah, with tears streaming down her black, honest face, was ejaculating, "Lord have mercy on us!" with all the fervor of a camp-meeting;—while old Cudjoe, rubbing his eyes very hard with his cuffs, and making a most uncommon variety of wry faces, occasionally responded in the same key, with great fervor. Our senator was a statesman, and of course could not be expected to cry, like other mortals; and so he turned his back to the company, and looked out of the window, and seemed particularly busy in clearing his throat and wiping his spectacle-glasses, occasionally blowing his nose in a manner that was calculated to excite suspicion, had any one been in a state to observe critically.

"How came you to tell me you had a kind master?" he suddenly exclaimed, gulping down very resolutely some kind of rising in his throat, and turning suddenly round upon the woman.

"Because he _was_ a kind master; I'll say that of him, any way;—and my mistress was kind; but they couldn't help themselves. They were owing money; and there was some way, I can't tell how, that a man had a hold on them, and they were obliged to give him his will. I listened, and heard him telling mistress that, and she begging and pleading for me,—and he told her he couldn't help himself, and that the papers were all drawn;—and then it was I took him and left my home, and came away. I knew 't was no use of my trying to live, if they did it; for 't 'pears like this child is all I have."

"Have you no husband?"

"Yes, but he belongs to another man. His master is real hard to him, and won't let him come to see me, hardly ever; and he's grown harder and harder upon us, and he threatens to sell him down south;—it's like I'll never see _him_ again!"

The quiet tone in which the woman pronounced these words might have led a superficial observer to think that she was entirely apathetic; but there was a calm, settled depth of anguish in her large, dark eye, that spoke of something far otherwise.

"And where do you mean to go, my poor woman?" said Mrs. Bird.

"To Canada, if I only knew where that was. Is it very far off, is Canada?" said she, looking up, with a simple, confiding air, to Mrs. Bird's face.

"Poor thing!" said Mrs. Bird, involuntarily.

"Is 't a very great way off, think?" said the woman, earnestly.

"Much further than you think, poor child!" said Mrs. Bird; "but we will try to think what can be done for you. Here, Dinah, make her up a bed in your own room, close by the kitchen, and I'll think what to do for her in the morning. Meanwhile, never fear, poor woman; put your trust in God; he will protect you."

Mrs. Bird and her husband reentered the parlor. She sat down in her little rocking-chair before the fire, swaying thoughtfully to and fro. Mr. Bird strode up and down the room, grumbling to himself, "Pish! pshaw! confounded awkward business!" At length, striding up to his wife, he said,

"I say, wife, she'll have to get away from here, this very night. That fellow will be down on the scent bright and early tomorrow morning: if 't was only the woman, she could lie quiet till it was over; but that little chap can't be kept still by a troop of horse and foot, I'll warrant me; he'll bring it all out, popping his head out of some window or door. A pretty kettle of fish it would be for me, too, to be caught with them both here, just now! No; they'll have to be got off tonight."

"Tonight! How is it possible?—where to?"

"Well, I know pretty well where to," said the senator, beginning to put on his boots, with a reflective air; and, stopping when his leg was half in, he embraced his knee with both hands, and seemed to go off in deep meditation.

"It's a confounded awkward, ugly business," said he, at last, beginning to tug at his boot-straps again, "and that's a fact!" After one boot was fairly on, the senator sat with the other in his hand, profoundly studying the figure of the carpet. "It will have to be done, though, for aught I see,—hang it all!" and he drew the other boot anxiously on, and looked out of the window.

Now, little Mrs. Bird was a discreet woman,—a woman who never in her life said, "I told you so!" and, on the present occasion, though pretty well aware of the shape her husband's meditations were taking, she very prudently forbore to meddle with them, only sat very quietly in her chair, and looked quite ready to hear her liege lord's intentions, when he should think proper to utter them.

“You see,” he said, “there’s my old client, Van Trompe, has come over from Kentucky, and set all his slaves free; and he has bought a place seven miles up the creek, here, back in the woods, where nobody goes, unless they go on purpose; and it’s a place that isn’t found in a hurry. There she’d be safe enough; but the plague of the thing is, nobody could drive a carriage there tonight, but _me_.”

“Why not? Cudjoe is an excellent driver.”

“Ay, ay, but here it is. The creek has to be crossed twice; and the second crossing is quite dangerous, unless one knows it as I do. I have crossed it a hundred times on horseback, and know exactly the turns to take. And so, you see, there’s no help for it. Cudjoe must put in the horses, as quietly as may be, about twelve o’clock, and I’ll take her over; and then, to give color to the matter, he must carry me on to the next tavern to take the stage for Columbus, that comes by about three or four, and so it will look as if I had had the carriage only for that. I shall get into business bright and early in the morning. But I’m thinking I shall feel rather cheap there, after all that’s been said and done; but, hang it, I can’t help it!”

“Your heart is better than your head, in this case, John,” said the wife, laying her little white hand on his. “Could I ever have loved you, had I not known you better than you know yourself?” And the little woman looked so handsome, with the tears sparkling in her eyes, that the senator thought he must be a decidedly clever fellow, to get such a pretty creature into such a passionate admiration of him; and so, what could he do but walk off soberly, to see about the carriage. At the door, however, he stopped a moment, and then coming back, he said, with some hesitation.

“Mary, I don’t know how you’d feel about it, but there’s that drawer full of things—of—of—poor little Henry’s.” So saying, he turned quickly on his heel, and shut the door after him.

His wife opened the little bed-room door adjoining her room and, taking the candle, set it down on the top of a bureau there; then from a small recess she took a key, and put it thoughtfully in the lock of a drawer, and made a sudden pause, while two boys, who, boy like, had followed close on her heels, stood looking, with silent, significant glances, at their mother. And oh! mother that reads this, has there never been in your house a drawer, or a closet, the opening of which has been to you like the opening again of a little grave? Ah! happy mother that you are, if it has not been so.

Mrs. Bird slowly opened the drawer. There were little coats of many a form and pattern, piles of aprons, and rows of small stockings; and even a pair of little shoes, worn and rubbed at the toes, were peeping from the folds of a paper. There was a toy horse and wagon, a top, a ball,—memorials gathered with many a tear and many a heart-break! She sat down by the drawer, and, leaning her head on her hands over it, wept till the tears fell through her fingers into the drawer; then suddenly raising her head, she began, with nervous haste, selecting the plainest and most substantial articles, and gathering them into a bundle.

“Mamma,” said one of the boys, gently touching her arm, “you going to give away _those_ things?”

“My dear boys,” she said, softly and earnestly, “if our dear, loving little Henry looks down from heaven, he would be glad to have us do this. I could not find it in my heart to give them away to any common person—to anybody that was happy; but I give them to a mother more heart-broken and sorrowful than I am; and I hope God will send his blessings with them!”

There are in this world blessed souls, whose sorrows all spring up into joys for others; whose earthly hopes, laid in the grave with many tears, are the seed from which spring healing flowers and balm for the desolate and the distressed. Among such was the delicate woman who sits there by the lamp, dropping slow tears, while she prepares the memorials of her own lost one for the outcast wanderer.

After a while, Mrs. Bird opened a wardrobe, and, taking from thence a plain, serviceable dress or two, she sat down busily to her work-table, and, with needle, scissors, and thimble, at hand, quietly commenced the “letting down” process which her husband had recommended, and continued busily at it till the old clock in the corner struck twelve, and she heard the low rattling of wheels at the door.

“Mary,” said her husband, coming in, with his overcoat in his hand, “you must wake her up now; we must be off.”

Mrs. Bird hastily deposited the various articles she had collected in a small plain trunk, and locking it, desired her husband to see it in the carriage, and then proceeded to call the woman. Soon, arrayed in a cloak, bonnet, and shawl, that had belonged to her benefactress, she appeared at the door with her child in her arms. Mr. Bird hurried her into the carriage, and Mrs. Bird pressed on after her to the carriage steps. Eliza leaned out of the carriage, and put out her hand,—a hand as soft and beautiful as was given in

return. She fixed her large, dark eyes, full of earnest meaning, on Mrs. Bird's face, and seemed going to speak. Her lips moved,—she tried once or twice, but there was no sound,—and pointing upward, with a look never to be forgotten, she fell back in the seat, and covered her face. The door was shut, and the carriage drove on.

What a situation, now, for a patriotic senator, that had been all the week before spurring up the legislature of his native state to pass more stringent resolutions against escaping fugitives, their harborers and abettors!

Our good senator in his native state had not been exceeded by any of his brethren at Washington, in the sort of eloquence which has won for them immortal renown! How sublimely he had sat with his hands in his pockets, and scouted all sentimental weakness of those who would put the welfare of a few miserable fugitives before great state interests!

He was as bold as a lion about it, and "mightily convinced" not only himself, but everybody that heard him;—but then his idea of a fugitive was only an idea of the letters that spell the word,—or at the most, the image of a little newspaper picture of a man with a stick and bundle with "Ran away from the subscriber" under it. The magic of the real presence of distress,—the imploring human eye, the frail, trembling human hand, the despairing appeal of helpless agony,—these he had never tried. He had never thought that a fugitive might be a hapless mother, a defenceless child,—like that one which was now wearing his lost boy's little well-known cap; and so, as our poor senator was not stone or steel,—as he was a man, and a downright noble-hearted one, too,—he was, as everybody must see, in a sad case for his patriotism. And you need not exult over him, good brother of the Southern States; for we have some inklings that many of you, under similar circumstances, would not do much better. We have reason to know, in Kentucky, as in Mississippi, are noble and generous hearts, to whom never was tale of suffering told in vain. Ah, good brother! is it fair for you to expect of us services which your own brave, honorable heart would not allow you to render, were you in our place?

Be that as it may, if our good senator was a political sinner, he was in a fair way to expiate it by his night's penance. There had been a long continuous period of rainy weather, and the soft, rich earth of Ohio, as every one knows, is admirably suited to the manufacture of mud—and the road was an Ohio railroad of the good old times.

"And pray, what sort of a road may that be?" says some eastern traveller, who has been accustomed to connect no ideas with a railroad, but those of smoothness or speed.

Know, then, innocent eastern friend, that in benighted regions of the west, where the mud is of unfathomable and sublime depth, roads are made of round rough logs, arranged transversely side by side, and coated over in their pristine freshness with earth, turf, and whatsoever may come to hand, and then the rejoicing native calleth it a road, and straightway essayeth to ride thereupon. In process of time, the rains wash off all the turf and grass aforesaid, move the logs hither and thither, in picturesque positions, up, down and crosswise, with divers chasms and ruts of black mud intervening.

Over such a road as this our senator went stumbling along, making moral reflections as continuously as under the circumstances could be expected,—the carriage proceeding along much as follows,—bump! bump! bump! slush! down in the mud!—the senator, woman and child, reversing their positions so suddenly as to come, without any very accurate adjustment, against the windows of the down-hill side. Carriage sticks fast, while Cudjoe on the outside is heard making a great muster among the horses. After various ineffectual pullings and twitchings, just as the senator is losing all patience, the carriage suddenly rights itself with a bounce,—two front wheels go down into another abyss, and senator, woman, and child, all tumble promiscuously on to the front seat,—senator's hat is jammed over his eyes and nose quite unceremoniously, and he considers himself fairly extinguished;—child cries, and Cudjoe on the outside delivers animated addresses to the horses, who are kicking, and floundering, and straining under repeated cracks of the whip. Carriage springs up, with another bounce,—down go the hind wheels,—senator, woman, and child, fly over on to the back seat, his elbows encountering her bonnet, and both her feet being jammed into his hat, which flies off in the concussion. After a few moments the "slough" is passed, and the horses stop, panting;—the senator finds his hat, the woman straightens her bonnet and hushes her child, and they brace themselves for what is yet to come.

For a while only the continuous bump! bump! intermingled, just by way of variety, with divers side plunges and compound shakes; and they begin to flatter themselves that they are not so badly off, after all. At last, with a square plunge, which puts all on to their feet and then down into their seats with incredible quickness, the carriage stops,—and, after much outside commotion, Cudjoe appears at the door.

"Please, sir, it's powerful bad spot, this' yer. I don't know how we's to get clar out. I'm a thinkin' we'll have to be a gettin' rails."

The senator despairingly steps out, picking gingerly for some firm foothold; down goes one foot an immeasurable depth,—he tries to pull it up, loses his balance, and tumbles over into the mud, and is fished out, in a very despairing condition, by Cudjoe.

But we forbear, out of sympathy to our readers' bones. Western travellers, who have beguiled the midnight hour in the interesting process of pulling down rail fences, to pry their carriages out of mud holes, will have a respectful and mournful sympathy with our unfortunate hero. We beg them to drop a silent tear, and pass on.

It was full late in the night when the carriage emerged, dripping and bespattered, out of the creek, and stood at the door of a large farmhouse.

It took no inconsiderable perseverance to arouse the inmates; but at last the respectable proprietor appeared, and undid the door. He was a great, tall, bristling Orson of a fellow, full six feet and some inches in his stockings, and arrayed in a red flannel hunting-shirt. A very heavy mat of sandy hair, in a decidedly tousled condition, and a beard of some days' growth, gave the worthy man an appearance, to say the least, not particularly prepossessing. He stood for a few minutes holding the candle aloft, and blinking on our travellers with a dismal and mystified expression that was truly ludicrous. It cost some effort of our senator to induce him to comprehend the case fully; and while he is doing his best at that, we shall give him a little introduction to our readers.

Honest old John Van Trompe was once quite a considerable land-owner and slave-owner in the State of Kentucky. Having "nothing of the bear about him but the skin," and being gifted by nature with a great, honest, just heart, quite equal to his gigantic frame, he had been for some years witnessing with repressed uneasiness the workings of a system equally bad for oppressor and oppressed. At last, one day, John's great heart had swelled altogether too big to wear his bonds any longer; so he just took his pocket-book out of his desk, and went over into Ohio, and bought a quarter of a township of good, rich land, made out free papers for all his people,—men, women, and children,—packed them up in wagons, and sent them off to settle down; and then honest John turned his face up the creek, and sat quietly down on a snug, retired farm, to enjoy his conscience and his reflections.

"Are you the man that will shelter a poor woman and child from slave-catchers?" said the senator, explicitly.

"I rather think I am," said honest John, with some considerable emphasis.

"I thought so," said the senator.

"If there's anybody comes," said the good man, stretching his tall, muscular form upward, "why here I'm ready for him: and I've got seven sons, each six foot high, and they'll be ready for 'em. Give our respects to 'em," said John; "tell 'em it's no matter how soon they call,—make no kinder difference to us," said John, running his fingers through the shock of hair that thatched his head, and bursting out into a great laugh.

Weary, jaded, and spiritless, Eliza dragged herself up to the door, with her child lying in a heavy sleep on her arm. The rough man held the candle to her face, and uttering a kind of compassionate grunt, opened the door of a small bed-room adjoining to the large kitchen where they were standing, and motioned her to go in. He took down a candle, and lighting it, set it upon the table, and then addressed himself to Eliza.

"Now, I say, gal, you needn't be a bit afeard, let who will come here. I'm up to all that sort o' thing," said he, pointing to two or three goodly rifles over the mantel-piece; "and most people that know me know that 't wouldn't be healthy to try to get anybody out o' my house when I'm agin it. So _now_ you jist go to sleep now, as quiet as if yer mother was a rockin' ye," said he, as he shut the door.

"Why, this is an uncommon handsome un," he said to the senator. "Ah, well; handsome uns has the greatest cause to run, sometimes, if they has any kind o' feelin, such as decent women should. I know all about that."

The senator, in a few words, briefly explained Eliza's history.

"O! ou! aw! now, I want to know?" said the good man, pitifully; "sho! now sho! That's natur now, poor crittur! hunted down now like a deer,—hunted down, jest for havin' natural feelin's, and doin' what no kind o' mother could help a doin'! I tell ye what, these yer things make me come the nighest to swearin', now, o' most anything," said honest John, as he wiped his eyes with the back of a great, freckled, yellow hand. "I tell yer what, stranger, it was years and years before I'd jine the church, 'cause the ministers round in our parts used to preach that the Bible went in for these ere cuttings up,—and I couldn't be up to 'em with their Greek and Hebrew, and so I took up agin 'em, Bible and all. I never jined the church till I found a minister that was up to 'em all in Greek and all that, and he said right the contrary; and then I took right hold, and jined the church,—I did now, fact," said John, who had been all this

time uncorking some very frisky bottled cider, which at this juncture he presented.

“Ye’d better jest put up here, now, till daylight,” said he, heartily, “and I’ll call up the old woman, and have a bed got ready for you in no time.”

“Thank you, my good friend,” said the senator, “I must be along, to take the night stage for Columbus.”

“Ah! well, then, if you must, I’ll go a piece with you, and show you a cross road that will take you there better than the road you came on. That road’s mighty bad.”

John equipped himself, and, with a lantern in hand, was soon seen guiding the senator’s carriage towards a road that ran down in a hollow, back of his dwelling. When they parted, the senator put into his hand a ten-dollar bill.

“It’s for her,” he said, briefly.

“Ay, ay,” said John, with equal conciseness.

They shook hands, and parted.

CHAPTER X The Property Is Carried Off

The February morning looked gray and drizzling through the window of Uncle Tom’s cabin. It looked on downcast faces, the images of mournful hearts. The little table stood out before the fire, covered with an ironing-cloth; a coarse but clean shirt or two, fresh from the iron, hung on the back of a chair by the fire, and Aunt Chloe had another spread out before her on the table. Carefully she rubbed and ironed every fold and every hem, with the most scrupulous exactness, every now and then raising her hand to her face to wipe off the tears that were coursing down her cheeks.

Tom sat by, with his Testament open on his knee, and his head leaning upon his hand;—but neither spoke. It was yet early, and the children lay all asleep together in their little rude trundle-bed.

Tom, who had, to the full, the gentle, domestic heart, which woe for them! has been a peculiar characteristic of his unhappy race, got up and walked silently to look at his children.

“It’s the last time,” he said.

Aunt Chloe did not answer, only rubbed away over and over on the coarse shirt, already as smooth as hands could make it; and finally setting her iron suddenly down with a despairing plunge, she sat down to the table, and “lifted up her voice and wept.”

“S’pose we must be resigned; but oh Lord! how ken I? If I know’d anything whar you ’s goin’, or how they’d sarve you! Missis says she’ll try and ’deem ye, in a year or two; but Lor! nobody never comes up that goes down thar! They kills ’em! I’ve hearn ’em tell how dey works ’em up on dem ar plantations.”

“There’ll be the same God there, Chloe, that there is here.”

“Well,” said Aunt Chloe, “s’pose dere will; but de Lord lets drefful things happen, sometimes. I don’t seem to get no comfort dat way.”

“I’m in the Lord’s hands,” said Tom; “nothin’ can go no furder than he lets it;—and thar’s _one_ thing I can thank him for. It’s _me_ that’s sold and going down, and not you nur the chil’en. Here you’re safe;—what comes will come only on me; and the Lord, he’ll help me,—I know he will.”

Ah, brave, manly heart,—smothering thine own sorrow, to comfort thy beloved ones! Tom spoke with a thick utterance, and with a bitter choking in his throat,—but he spoke brave and strong.

“Let’s think on our marcies!” he added, tremulously, as if he was quite sure he needed to think on them very hard indeed.

“Marcies!” said Aunt Chloe; “don’t see no marcy in’t! ’tan’t right! tan’t right it should be so! Mas’r never ought ter left it so that ye _could_ be took for his debts. Ye’ve arnt him all he gets for ye, twice over. He owed ye yer freedom, and ought ter gin ’t to yer years ago. Mebbe he can’t help himself now, but I feel it’s wrong. Nothing can’t beat that ar out o’ me. Sich a faithful crittur as ye’ve been,—and allers sot his business ’fore yer own every way,—and reckoned on him more than yer own wife and chil’en! Them as

sells heart's love and heart's blood, to get out thar scrapes, de Lord'll be up to 'em!"

"Chloe! now, if ye love me, ye won't talk so, when perhaps jest the last time we'll ever have together! And I'll tell ye, Chloe, it goes agin me to hear one word agin Mas'r. Wan't he put in my arms a baby?—it's natur I should think a heap of him. And he couldn't be spected to think so much of poor Tom. Mas'rs is used to havin' all these yer things done for 'em, and nat'lly they don't think so much on 't. They can't be spected to, no way. Set him 'longside of other Mas'rs—who's had the treatment and livin' I've had? And he never would have let this yer come on me, if he could have seed it aforehand. I know he wouldn't."

"Wal, any way, thar's wrong about it _somewhar_," said Aunt Chloe, in whom a stubborn sense of justice was a predominant trait; "I can't jest make out whar 't is, but thar's wrong somewhar, I'm _clar_ o' that."

"Yer ought ter look up to the Lord above—he's above all—thar don't a sparrow fall without him."

"It don't seem to comfort me, but I spect it orter," said Aunt Chloe. "But dar's no use talkin'; I'll jes wet up de corn-cake, and get ye one good breakfast, 'cause nobody knows when you'll get another."

In order to appreciate the sufferings of the negroes sold south, it must be remembered that all the instinctive affections of that race are peculiarly strong. Their local attachments are very abiding. They are not naturally daring and enterprising, but home-loving and affectionate. Add to this all the terrors with which ignorance invests the unknown, and add to this, again, that selling to the south is set before the negro from childhood as the last severity of punishment. The threat that terrifies more than whipping or torture of any kind is the threat of being sent down river. We have ourselves heard this feeling expressed by them, and seen the unaffected horror with which they will sit in their gossipping hours, and tell frightful stories of that "down river," which to them is

"That undiscovered country, from whose bourn No traveller returns."[1]

[1] A slightly inaccurate quotation from _Hamlet_, Act III, scene I, lines 369-370.

A missionary figure among the fugitives in Canada told us that many of the fugitives confessed themselves to have escaped from comparatively kind masters, and that they were induced to brave the perils of escape, in almost every case, by the desperate horror with which they regarded being sold south,—a doom which was hanging either over themselves or their husbands, their wives or children. This nerves the African, naturally patient, timid and unenterprising, with heroic courage, and leads him to suffer hunger, cold, pain, the perils of the wilderness, and the more dread penalties of recapture.

The simple morning meal now smoked on the table, for Mrs. Shelby had excused Aunt Chloe's attendance at the great house that morning. The poor soul had expended all her little energies on this farewell feast,—had killed and dressed her choicest chicken, and prepared her corn-cake with scrupulous exactness, just to her husband's taste, and brought out certain mysterious jars on the mantel-piece, some preserves that were never produced except on extreme occasions.

"Lor, Pete," said Mose, triumphantly, "han't we got a buster of a breakfast!" at the same time catching at a fragment of the chicken.

Aunt Chloe gave him a sudden box on the ear. "Thar now! crowing over the last breakfast yer poor daddy's gwine to have to home!"

"O, Chloe!" said Tom, gently.

"Wal, I can't help it," said Aunt Chloe, hiding her face in her apron; "I 's so tossed about, it makes me act ugly."

The boys stood quite still, looking first at their father and then at their mother, while the baby, climbing up her clothes, began an imperious, commanding cry.

"Thar!" said Aunt Chloe, wiping her eyes and taking up the baby; "now I's done, I hope,—now do eat something. This yer's my nicest chicken. Thar, boys, ye shall have some, poor critturs! Yer mammy's been cross to yer."

The boys needed no second invitation, and went in with great zeal for the eatables; and it was well they did so, as otherwise there would have been very little performed to any purpose by the party.

"Now," said Aunt Chloe, bustling about after breakfast, "I must put up yer clothes. Jest like as not, he'll take 'em all away. I know thar ways—mean as dirt, they is! Wal, now, yer flannels for rhumatis is in this corner; so be careful, 'cause there won't nobody make ye no more. Then here's yer old shirts, and these yer is new ones. I toed off these yer stockings last night, and put de ball in 'em to mend with. But Lor! who'll ever mend for ye?" and Aunt Chloe, again overcome, laid her head on the box side, and sobbed.

“To think on ’t! no crittur to do for ye, sick or well! I don’t railly think I ought ter be good now!”

The boys, having eaten everything there was on the breakfast-table, began now to take some thought of the case; and, seeing their mother crying, and their father looking very sad, began to whimper and put their hands to their eyes. Uncle Tom had the baby on his knee, and was letting her enjoy herself to the utmost extent, scratching his face and pulling his hair, and occasionally breaking out into clamorous explosions of delight, evidently arising out of her own internal reflections.

“Ay, crow away, poor crittur!” said Aunt Chloe; “ye’ll have to come to it, too! ye’ll live to see yer husband sold, or mebbe be sold yerself; and these yer boys, they’s to be sold, I s’pose, too, jest like as not, when dey gets good for somethin’; an’t no use in niggers havin’ nothin’!”

Here one of the boys called out, “Thar’s Missis a-comin’ in!”

“She can’t do no good; what’s she coming for?” said Aunt Chloe.

Mrs. Shelby entered. Aunt Chloe set a chair for her in a manner decidedly gruff and crusty. She did not seem to notice either the action or the manner. She looked pale and anxious.

“Tom,” she said, “I come to—” and stopping suddenly, and regarding the silent group, she sat down in the chair, and, covering her face with her handkerchief, began to sob.

“Lor, now, Missis, don’t—don’t!” said Aunt Chloe, bursting out in her turn; and for a few moments they all wept in company. And in those tears they all shed together, the high and the lowly, melted away all the heart-burnings and anger of the oppressed. O, ye who visit the distressed, do ye know that everything your money can buy, given with a cold, averted face, is not worth one honest tear shed in real sympathy?

“My good fellow,” said Mrs. Shelby, “I can’t give you anything to do you any good. If I give you money, it will only be taken from you. But I tell you solemnly, and before God, that I will keep trace of you, and bring you back as soon as I can command the money;—and, till then, trust in God!”

Here the boys called out that Mas’r Haley was coming, and then an unceremonious kick pushed open the door. Haley stood there in very ill humor, having ridden hard the night before, and being not at all pacified by his ill success in recapturing his prey.

“Come,” said he, “ye nigger, ye’r ready? Servant, ma’am!” said he, taking off his hat, as he saw Mrs. Shelby.

Aunt Chloe shut and corded the box, and, getting up, looked gruffly on the trader, her tears seeming suddenly turned to sparks of fire.

Tom rose up meekly, to follow his new master, and raised up his heavy box on his shoulder. His wife took the baby in her arms to go with him to the wagon, and the children, still crying, trailed on behind.

Mrs. Shelby, walking up to the trader, detained him for a few moments, talking with him in an earnest manner; and while she was thus talking, the whole family party proceeded to a wagon, that stood ready harnessed at the door. A crowd of all the old and young hands on the place stood gathered around it, to bid farewell to their old associate. Tom had been looked up to, both as a head servant and a Christian teacher, by all the place, and there was much honest sympathy and grief about him, particularly among the women.

“Why, Chloe, you bar it better ’n we do!” said one of the women, who had been weeping freely, noticing the gloomy calmness with which Aunt Chloe stood by the wagon.

“I’s done _my_ tears!” she said, looking grimly at the trader, who was coming up. “I does not feel to cry ’fore dat ar old limb, no how!”

“Get in!” said Haley to Tom, as he strode through the crowd of servants, who looked at him with lowering brows.

Tom got in, and Haley, drawing out from under the wagon seat a heavy pair of shackles, made them fast around each ankle.

A smothered groan of indignation ran through the whole circle, and Mrs. Shelby spoke from the verandah,—“Mr. Haley, I assure you that precaution is entirely unnecessary.”

“Don’ know, ma’am; I’ve lost one five hundred dollars from this yer place, and I can’t afford to run no more risks.”

“What else could she spect on him?” said Aunt Chloe, indignantly, while the two boys, who now seemed to comprehend at once their father’s destiny, clung to her gown, sobbing and groaning vehemently.

“I’m sorry,” said Tom, “that Mas’r George happened to be away.”

George had gone to spend two or three days with a companion on a neighboring estate, and having departed early in the morning, before Tom’s misfortune had been made public, had left without hearing of it.

“Give my love to Mas’r George,” he said, earnestly.

Haley whipped up the horse, and, with a steady, mournful look, fixed to the last on the old place, Tom was whirled away.

Mr. Shelby at this time was not at home. He had sold Tom under the spur of a driving necessity, to get out of the power of a man whom he dreaded,—and his first feeling, after the consummation of the bargain, had been that of relief. But his wife’s expostulations awoke his half-slumbering regrets; and Tom’s manly disinterestedness increased the unpleasantness of his feelings. It was in vain that he said to himself that he had a _right_ to do it,—that everybody did it,—and that some did it without even the excuse of necessity;—he could not satisfy his own feelings; and that he might not witness the unpleasant scenes of the consummation, he had gone on a short business tour up the country, hoping that all would be over before he returned.

Tom and Haley rattled on along the dusty road, whirling past every old familiar spot, until the bounds of the estate were fairly passed, and they found themselves out on the open pike. After they had ridden about a mile, Haley suddenly drew up at the door of a blacksmith’s shop, when, taking out with him a pair of handcuffs, he stepped into the shop, to have a little alteration in them.

“These yer ’s a little too small for his build,” said Haley, showing the fetters, and pointing out to Tom.

“Lor! now, if thar an’t Shelby’s Tom. He han’t sold him, now?” said the smith.

“Yes, he has,” said Haley.

“Now, ye don’t! well, reely,” said the smith, “who’d a thought it! Why, ye needn’t go to fetterin’ him up this yer way. He’s the faithfullest, best crittur—”

“Yes, yes,” said Haley; “but your good fellers are just the critturs to want ter run off. Them stupid ones, as doesn’t care whar they go, and shifless, drunken ones, as don’t care for nothin’, they’ll stick by, and like as not be rather pleased to be toted round; but these yer prime fellers, they hates it like sin. No way but to fetter ’em; got legs,—they’ll use ’em,—no mistake.”

“Well,” said the smith, feeling among his tools, “them plantations down thar, stranger, an’t jest the place a Kentuck nigger wants to go to; they dies thar tol’able fast, don’t they?”

“Wal, yes, tol’able fast, ther dying is; what with the ’climating and one thing and another, they dies so as to keep the market up pretty brisk,” said Haley.

“Wal, now, a feller can’t help thinkin’ it’s a mighty pity to have a nice, quiet, likely feller, as good un as Tom is, go down to be fairly ground up on one of them ar sugar plantations.”

“Wal, he’s got a fa’r chance. I promised to do well by him. I’ll get him in house-servant in some good old family, and then, if he stands the fever and ’climating, he’ll have a berth good as any nigger ought ter ask for.”

“He leaves his wife and chil’en up here, s’pose?”

“Yes; but he’ll get another thar. Lord, thar’s women enough everywhar,” said Haley.

Tom was sitting very mournfully on the outside of the shop while this conversation was going on. Suddenly he heard the quick, short click of a horse’s hoof behind him; and, before he could fairly awake from his surprise, young Master George sprang into the wagon, threw his arms tumultuously round his neck, and was sobbing and scolding with energy.

“I declare, it’s real mean! I don’t care what they say, any of ’em! It’s a nasty, mean shame! If I was a man, they shouldn’t do it,—they should not, _so_!” said George, with a kind of subdued howl.

“O! Mas’r George! this does me good!” said Tom. “I couldn’t bar to go off without seein’ ye! It does me real good, ye can’t tell!” Here Tom made some movement of his feet, and George’s eye fell on the fetters.

“What a shame!” he exclaimed, lifting his hands. “I’ll knock that old fellow down—I will!”

“No you won’t, Mas’r George; and you must not talk so loud. It won’t help me any, to anger him.”

“Well, I won’t, then, for your sake; but only to think of it—isn’t it a shame? They never sent for me, nor sent me any word, and, if it hadn’t been for Tom Lincon, I shouldn’t have heard it. I tell you, I blew ’em up well, all of ’em, at home!”

“That ar wasn’t right, I’m ’feard, Mas’r George.”

“Can’t help it! I say it’s a shame! Look here, Uncle Tom,” said he, turning his back to the shop, and speaking in a mysterious tone, _“I’ve brought you my dollar!”_

“O! I couldn’t think o’ takin’ on ’t, Mas’r George, no ways in the world!” said Tom, quite moved.

“But you _shall_ take it!” said George; “look here—I told Aunt Chloe I’d do it, and she advised me just to make a hole in it, and put a string through, so you could hang it round your neck, and keep it out of sight; else this mean scamp would take it away. I tell ye, Tom, I want to blow him up! it would do me good!”

“No, don’t Mas’r George, for it won’t do _me_ any good.”

“Well, I won’t, for your sake,” said George, busily tying his dollar round Tom’s neck; “but there, now, button your coat tight over it, and keep it, and remember, every time you see it, that I’ll come down after you, and bring you back. Aunt Chloe and I have been talking about it. I told her not to fear; I’ll see to it, and I’ll tease father’s life out, if he don’t do it.”

“O! Mas’r George, ye mustn’t talk so ’bout yer father!”

“Lor, Uncle Tom, I don’t mean anything bad.”

“And now, Mas’r George,” said Tom, “ye must be a good boy; ’member how many hearts is sot on ye. Al’ays keep close to yer mother. Don’t be gettin’ into any of them foolish ways boys has of gettin’ too big to mind their mothers. Tell ye what, Mas’r George, the Lord gives good many things twice over; but he don’t give ye a mother but once. Ye’ll never see sich another woman, Mas’r George, if ye live to be a hundred years old. So, now, you hold on to her, and grow up, and be a comfort to her, thar’s my own good boy,—you will now, won’t ye?”

“Yes, I will, Uncle Tom,” said George seriously.

“And be careful of yer speaking, Mas’r George. Young boys, when they comes to your age, is wilful, sometimes—it is natur they should be. But real gentlemen, such as I hopes you’ll be, never lets fall on words that isn’t ’spectful to thar parents. Ye an’t ’fended, Mas’r George?”

“No, indeed, Uncle Tom; you always did give me good advice.”

“I’s older, ye know,” said Tom, stroking the boy’s fine, curly head with his large, strong hand, but speaking in a voice as tender as a woman’s, “and I sees all that’s bound up in you. O, Mas’r George, you has everything,—l’arnin’, privileges, readin’, writin’,—and you’ll grow up to be a great, learned, good man and all the people on the place and your mother and father’ll be so proud on ye! Be a good Mas’r, like yer father; and be a Christian, like yer mother. ’Member yer Creator in the days o’ yer youth, Mas’r George.”

“I’ll be _real_ good, Uncle Tom, I tell you,” said George. “I’m going to be a _first-rater_; and don’t you be discouraged. I’ll have you back to the place, yet. As I told Aunt Chloe this morning, I’ll build our house all over, and you shall have a room for a parlor with a carpet on it, when I’m a man. O, you’ll have good times yet!”

Haley now came to the door, with the handcuffs in his hands.

“Look here, now, Mister,” said George, with an air of great superiority, as he got out, “I shall let father and mother know how you treat Uncle Tom!”

“You’re welcome,” said the trader.

“I should think you’d be ashamed to spend all your life buying men and women, and chaining them, like cattle! I should think you’d feel mean!” said George.

“So long as your grand folks wants to buy men and women, I’m as good as they is,” said Haley; “‘tan’t any meaner sellin’ on ’em, that ’t is buyin’!”

“I’ll never do either, when I’m a man,” said George; “I’m ashamed, this day, that I’m a Kentuckian. I always was proud of it before;” and George sat very straight on his horse, and looked round with an air, as if he expected the state would be impressed with his opinion.

“Well, good-by, Uncle Tom; keep a stiff upper lip,” said George.

“Good-by, Mas’r George,” said Tom, looking fondly and admiringly at him. “God Almighty bless you! Ah! Kentucky han’t got many like you!” he said, in the fulness of his heart, as the frank, boyish face was lost to his view. Away he went, and Tom looked, till the clatter of his horse’s heels died away, the last sound or sight of his home. But over his heart there seemed to be a warm spot, where those young hands had placed that precious dollar. Tom put up his hand, and held it close to his heart.

“Now, I tell ye what, Tom,” said Haley, as he came up to the wagon, and threw in the handcuffs, “I mean to start fa’r with ye, as I gen’ally do with my niggers; and I’ll tell ye now, to begin with, you treat me fa’r, and I’ll treat you fa’r; I an’t never hard on my niggers. Calculates to do the best for ’em I can. Now, ye see, you’d better jest settle down comfortable, and not be tryin’ no tricks; because nigger’s tricks of all sorts I’m up to, and it’s no use. If niggers is quiet, and don’t try to get off, they has good times with me; and if they don’t, why, it’s thar fault, and not mine.”

Tom assured Haley that he had no present intentions of running off. In fact, the exhortation seemed rather a superfluous one to a man with a great pair of iron fetters on his feet. But Mr. Haley had got in the habit of commencing his relations with his stock with little exhortations of this nature, calculated, as he deemed, to inspire cheerfulness and confidence, and prevent the necessity of any unpleasant scenes.

And here, for the present, we take our leave of Tom, to pursue the fortunes of other characters in our story.

CHAPTER XI In Which Property Gets into an Improper State of Mind

It was late in a drizzly afternoon that a traveler alighted at the door of a small country hotel, in the village of N——, in Kentucky. In the barroom he found assembled quite a miscellaneous company, whom stress of weather had driven to harbor, and the place presented the usual scenery of such reunions. Great, tall, raw-boned Kentuckians, attired in hunting-shirts, and trailing their loose joints over a vast extent of territory, with the easy lounge peculiar to the race,—rifles stacked away in the corner, shot-pouches, game-bags, hunting-dogs, and little negroes, all rolled together in the corners,—were the characteristic features in the picture. At each end of the fireplace sat a long-legged gentleman, with his chair tipped back, his hat on his head, and the heels of his muddy boots reposing sublimely on the mantel-piece,—a position, we will inform our readers, decidedly favorable to the turn of reflection incident to western taverns, where travellers exhibit a decided preference for this particular mode of elevating their understandings.

Mine host, who stood behind the bar, like most of his country men, was great of stature, good-natured and loose-jointed, with an enormous shock of hair on his head, and a great tall hat on the top of that.

In fact, everybody in the room bore on his head this characteristic emblem of man’s sovereignty; whether it were felt hat, palm-leaf, greasy beaver, or fine new chapeau, there it reposed with true republican independence. In truth, it appeared to be the characteristic mark of every individual. Some wore them tipped rakishly to one side—these were your men of humor, jolly, free-and-easy dogs; some had them jammed independently down over their noses—these were your hard characters, thorough men, who, when they wore their hats, _wanted_ to wear them, and to wear them just as they had a mind to; there were those who had them set far over back—wide-awake men, who wanted a clear prospect; while careless men, who did not know, or care, how their hats sat, had them shaking about in all directions. The various hats, in fact, were quite a Shakespearean study.

Divers negroes, in very free-and-easy pantaloons, and with no redundancy in the shirt line, were scuttling about, hither and thither, without bringing to pass any very particular results, except expressing a generic willingness to turn over everything in creation generally for the benefit of Mas’r and his guests. Add to this picture a jolly, crackling, rollicking fire, going rejoicingly up a great wide chimney,—the outer door and every window being set wide open, and the calico window-curtain flopping and snapping in a good

stiff breeze of damp raw air,—and you have an idea of the jollities of a Kentucky tavern.

Your Kentuckian of the present day is a good illustration of the doctrine of transmitted instincts and peculiarities. His fathers were mighty hunters,—men who lived in the woods, and slept under the free, open heavens, with the stars to hold their candles; and their descendant to this day always acts as if the house were his camp,—wears his hat at all hours, tumbles himself about, and puts his heels on the tops of chairs or mantelpieces, just as his father rolled on the green sward, and put his upon trees and logs,—keeps all the windows and doors open, winter and summer, that he may get air enough for his great lungs,—calls everybody "stranger," with nonchalant _bonhommie_, and is altogether the frankest, easiest, most jovial creature living.

Into such an assembly of the free and easy our traveller entered. He was a short, thick-set man, carefully dressed, with a round, good-natured countenance, and something rather fussy and particular in his appearance. He was very careful of his valise and umbrella, bringing them in with his own hands, and resisting, pertinaciously, all offers from the various servants to relieve him of them. He looked round the barroom with rather an anxious air, and, retreating with his valuables to the warmest corner, disposed them under his chair, sat down, and looked rather apprehensively up at the worthy whose heels illustrated the end of the mantel-piece, who was spitting from right to left, with a courage and energy rather alarming to gentlemen of weak nerves and particular habits.

"I say, stranger, how are ye?" said the aforesaid gentleman, firing an honorary salute of tobacco-juice in the direction of the new arrival.

"Well, I reckon," was the reply of the other, as he dodged, with some alarm, the threatening honor.

"Any news?" said the respondent, taking out a strip of tobacco and a large hunting-knife from his pocket.

"Not that I know of," said the man.

"Chaw?" said the first speaker, handing the old gentleman a bit of his tobacco, with a decidedly brotherly air.

"No, thank ye—it don't agree with me," said the little man, edging off.

"Don't, eh?" said the other, easily, and stowing away the morsel in his own mouth, in order to keep up the supply of tobacco-juice, for the general benefit of society.

The old gentleman uniformly gave a little start whenever his long-sided brother fired in his direction; and this being observed by his companion, he very good-naturedly turned his artillery to another quarter, and proceeded to storm one of the fire-irons with a degree of military talent fully sufficient to take a city.

"What's that?" said the old gentleman, observing some of the company formed in a group around a large handbill.

"Nigger advertised!" said one of the company, briefly.

Mr. Wilson, for that was the old gentleman's name, rose up, and, after carefully adjusting his valise and umbrella, proceeded deliberately to take out his spectacles and fix them on his nose; and, this operation being performed, read as follows:

"Ran away from the subscriber, my mulatto boy, George. Said George six feet in height, a very light mulatto, brown curly hair; is very intelligent, speaks handsomely, can read and write, will probably try to pass for a white man, is deeply scarred on his back and shoulders, has been branded in his right hand with the letter H. "I will give four hundred dollars for him alive, and the same sum for satisfactory proof that he has been _killed."_

The old gentleman read this advertisement from end to end in a low voice, as if he were studying it.

The long-legged veteran, who had been besieging the fire-iron, as before related, now took down his cumbrous length, and rearing aloft his tall form, walked up to the advertisement and very deliberately spit a full discharge of tobacco-juice on it.

"There's my mind upon that!" said he, briefly, and sat down again.

"Why, now, stranger, what's that for?" said mine host.

"I'd do it all the same to the writer of that ar paper, if he was here," said the long man, coolly resuming his old employment of cutting tobacco. "Any man that owns a boy like that, and can't find any better way o' treating on him, _deserves_ to lose him. Such papers

as these is a shame to Kentucky; that's my mind right out, if anybody wants to know!"

"Well, now, that's a fact," said mine host, as he made an entry in his book.

"I've got a gang of boys, sir," said the long man, resuming his attack on the fire-irons, "and I jest tells 'em—'Boys,' says I,—'_run_ now! dig! put! jest when ye want to! I never shall come to look after you!' That's the way I keep mine. Let 'em know they are free to run any time, and it jest breaks up their wanting to. More 'n all, I've got free papers for 'em all recorded, in case I gets keeled up any o' these times, and they know it; and I tell ye, stranger, there an't a fellow in our parts gets more out of his niggers than I do. Why, my boys have been to Cincinnati, with five hundred dollars' worth of colts, and brought me back the money, all straight, time and agin. It stands to reason they should. Treat 'em like dogs, and you'll have dogs' works and dogs' actions. Treat 'em like men, and you'll have men's works." And the honest drover, in his warmth, endorsed this moral sentiment by firing a perfect _feu de joi_ at the fireplace.

"I think you're altogether right, friend," said Mr. Wilson; "and this boy described here _is_ a fine fellow—no mistake about that. He worked for me some half-dozen years in my bagging factory, and he was my best hand, sir. He is an ingenious fellow, too: he invented a machine for the cleaning of hemp—a really valuable affair; it's gone into use in several factories. His master holds the patent of it."

"I'll warrant ye," said the drover, "holds it and makes money out of it, and then turns round and brands the boy in his right hand. If I had a fair chance, I'd mark him, I reckon so that he'd carry it _one_ while."

"These yer knowin' boys is allers aggravatin' and sarcy," said a coarse-looking fellow, from the other side of the room; "that's why they gets cut up and marked so. If they behaved themselves, they wouldn't."

"That is to say, the Lord made 'em men, and it's a hard squeeze gettin 'em down into beasts," said the drover, dryly.

"Bright niggers isn't no kind of 'vantage to their masters," continued the other, well entrenched, in a coarse, unconscious obtuseness, from the contempt of his opponent; "what's the use o' talents and them things, if you can't get the use on 'em yourself? Why, all the use they make on 't is to get round you. I've had one or two of these fellers, and I jest sold 'em down river. I knew I'd got to lose 'em, first or last, if I didn't."

"Better send orders up to the Lord, to make you a set, and leave out their souls entirely," said the drover.

Here the conversation was interrupted by the approach of a small one-horse buggy to the inn. It had a genteel appearance, and a well-dressed, gentlemanly man sat on the seat, with a colored servant driving.

The whole party examined the new comer with the interest with which a set of loafers in a rainy day usually examine every newcomer. He was very tall, with a dark, Spanish complexion, fine, expressive black eyes, and close-curling hair, also of a glossy blackness. His well-formed aquiline nose, straight thin lips, and the admirable contour of his finely-formed limbs, impressed the whole company instantly with the idea of something uncommon. He walked easily in among the company, and with a nod indicated to his waiter where to place his trunk, bowed to the company, and, with his hat in his hand, walked up leisurely to the bar, and gave in his name as Henry Butter, Oaklands, Shelby County. Turning, with an indifferent air, he sauntered up to the advertisement, and read it over.

"Jim," he said to his man, "seems to me we met a boy something like this, up at Beman's, didn't we?"

"Yes, Mas'r," said Jim, "only I an't sure about the hand."

"Well, I didn't look, of course," said the stranger with a careless yawn. Then walking up to the landlord, he desired him to furnish him with a private apartment, as he had some writing to do immediately.

The landlord was all obsequious, and a relay of about seven negroes, old and young, male and female, little and big, were soon whizzing about, like a covey of partridges, bustling, hurrying, treading on each other's toes, and tumbling over each other, in their zeal to get Mas'r's room ready, while he seated himself easily on a chair in the middle of the room, and entered into conversation with the man who sat next to him.

The manufacturer, Mr. Wilson, from the time of the entrance of the stranger, had regarded him with an air of disturbed and uneasy curiosity. He seemed to himself to have met and been acquainted with him somewhere, but he could not recollect. Every few

moments, when the man spoke, or moved, or smiled, he would start and fix his eyes on him, and then suddenly withdraw them, as the bright, dark eyes met his with such unconcerned coolness. At last, a sudden recollection seemed to flash upon him, for he stared at the stranger with such an air of blank amazement and alarm, that he walked up to him.

“Mr. Wilson, I think,” said he, in a tone of recognition, and extending his hand. “I beg your pardon, I didn’t recollect you before. I see you remember me,—Mr. Butler, of Oaklands, Shelby County.”

“Ye—yes—yes, sir,” said Mr. Wilson, like one speaking in a dream.

Just then a negro boy entered, and announced that Mas’r’s room was ready.

“Jim, see to the trunks,” said the gentleman, negligently; then addressing himself to Mr. Wilson, he added—“I should like to have a few moments’ conversation with you on business, in my room, if you please.”

Mr. Wilson followed him, as one who walks in his sleep; and they proceeded to a large upper chamber, where a new-made fire was crackling, and various servants flying about, putting finishing touches to the arrangements.

When all was done, and the servants departed, the young man deliberately locked the door, and putting the key in his pocket, faced about, and folding his arms on his bosom, looked Mr. Wilson full in the face.

“George!” said Mr. Wilson.

“Yes, George,” said the young man.

“I couldn’t have thought it!”

“I am pretty well disguised, I fancy,” said the young man, with a smile. “A little walnut bark has made my yellow skin a genteel brown, and I’ve dyed my hair black; so you see I don’t answer to the advertisement at all.”

“O, George! but this is a dangerous game you are playing. I could not have advised you to it.”

“I can do it on my own responsibility,” said George, with the same proud smile.

We remark, _en passant_, that George was, by his father’s side, of white descent. His mother was one of those unfortunates of her race, marked out by personal beauty to be the slave of the passions of her possessor, and the mother of children who may never know a father. From one of the proudest families in Kentucky he had inherited a set of fine European features, and a high, indomitable spirit. From his mother he had received only a slight mulatto tinge, amply compensated by its accompanying rich, dark eye. A slight change in the tint of the skin and the color of his hair had metamorphosed him into the Spanish-looking fellow he then appeared; and as gracefulness of movement and gentlemanly manners had always been perfectly natural to him, he found no difficulty in playing the bold part he had adopted—that of a gentleman travelling with his domestic.

Mr. Wilson, a good-natured but extremely fidgety and cautious old gentleman, ambled up and down the room, appearing, as John Bunyan hath it, “much tumbled up and down in his mind,” and divided between his wish to help George, and a certain confused notion of maintaining law and order: so, as he shambled about, he delivered himself as follows:

“Well, George, I s’pose you’re running away—leaving your lawful master, George—(I don’t wonder at it)—at the same time, I’m sorry, George,—yes, decidedly—I think I must say that, George—it’s my duty to tell you so.”

“Why are you sorry, sir?” said George, calmly.

“Why, to see you, as it were, setting yourself in opposition to the laws of your country.”

“_My_ country!” said George, with a strong and bitter emphasis; “what country have I, but the grave,—and I wish to God that I was laid there!”

“Why, George, no—no—it won’t do; this way of talking is wicked—unscriptural. George, you’ve got a hard master—in fact, he is—well he conducts himself reprehensibly—I can’t pretend to defend him. But you know how the angel commanded Hagar to return to her mistress, and submit herself under the hand;[1] and the apostle sent back Onesimus to his master.”[2]

[1] Gen. 16. The angel bade the pregnant Hagar return to her mistress Sarai, even though Sarai had dealt harshly with her.

[2] Phil. 1:10. Onesimus went back to his master to become no longer a servant but a “brother beloved.”

“Don’t quote Bible at me that way, Mr. Wilson,” said George, with a flashing eye, “don’t! for my wife is a Christian, and I mean to be, if ever I get to where I can; but to quote Bible to a fellow in my circumstances, is enough to make him give it up altogether. I appeal to God Almighty;—I’m willing to go with the case to Him, and ask Him if I do wrong to seek my freedom.”

“These feelings are quite natural, George,” said the good-natured man, blowing his nose. “Yes, they’re natural, but it is my duty not to encourage ’em in you. Yes, my boy, I’m sorry for you, now; it’s a bad case—very bad; but the apostle says, ‘Let everyone abide in the condition in which he is called.’ We must all submit to the indications of Providence, George,—don’t you see?”

George stood with his head drawn back, his arms folded tightly over his broad breast, and a bitter smile curling his lips.

“I wonder, Mr. Wilson, if the Indians should come and take you a prisoner away from your wife and children, and want to keep you all your life hoeing corn for them, if you’d think it your duty to abide in the condition in which you were called. I rather think that you’d think the first stray horse you could find an indication of Providence—shouldn’t you?”

The little old gentleman stared with both eyes at this illustration of the case; but, though not much of a reasoner, he had the sense in which some logicians on this particular subject do not excel,—that of saying nothing, where nothing could be said. So, as he stood carefully stroking his umbrella, and folding and patting down all the creases in it, he proceeded on with his exhortations in a general way.

“You see, George, you know, now, I always have stood your friend; and whatever I’ve said, I’ve said for your good. Now, here, it seems to me, you’re running an awful risk. You can’t hope to carry it out. If you’re taken, it will be worse with you than ever; they’ll only abuse you, and half kill you, and sell you down the river.”

“Mr. Wilson, I know all this,” said George. “I _do_ run a risk, but—” he threw open his overcoat, and showed two pistols and a bowie-knife. “There!” he said, “I’m ready for ’em! Down south I never _will_ go. No! if it comes to that, I can earn myself at least six feet of free soil,—the first and last I shall ever own in Kentucky!”

“Why, George, this state of mind is awful; it’s getting really desperate George. I’m concerned. Going to break the laws of your country!”

“My country again! Mr. Wilson, _you_ have a country; but what country have _I_, or any one like me, born of slave mothers? What laws are there for us? We don’t make them,—we don’t consent to them,—we have nothing to do with them; all they do for us is to crush us, and keep us down. Haven’t I heard your Fourth-of-July speeches? Don’t you tell us all, once a year, that governments derive their just power from the consent of the governed? Can’t a fellow _think_, that hears such things? Can’t he put this and that together, and see what it comes to?”

Mr. Wilson’s mind was one of those that may not unaptly be represented by a bale of cotton,—downy, soft, benevolently fuzzy and confused. He really pitied George with all his heart, and had a sort of dim and cloudy perception of the style of feeling that agitated him; but he deemed it his duty to go on talking _good_ to him, with infinite pertinacity.

“George, this is bad. I must tell you, you know, as a friend, you’d better not be meddling with such notions; they are bad, George, very bad, for boys in your condition,—very;” and Mr. Wilson sat down to a table, and began nervously chewing the handle of his umbrella.

“See here, now, Mr. Wilson,” said George, coming up and sitting himself determinately down in front of him; “look at me, now. Don’t I sit before you, every way, just as much a man as you are? Look at my face,—look at my hands,—look at my body,” and the young man drew himself up proudly; “why am I _not_ a man, as much as anybody? Well, Mr. Wilson, hear what I can tell you. I had a father—one of your Kentucky gentlemen—who didn’t think enough of me to keep me from being sold with his dogs and horses, to satisfy the estate, when he died. I saw my mother put up at sheriff’s sale, with her seven children. They were sold before her eyes, one by one, all to different masters; and I was the youngest. She came and kneeled down before old Mas’r, and begged him to buy her with me, that she might have at least one child with her; and he kicked her away with his heavy boot. I saw him do it; and the last that I heard was her moans and screams, when I was tied to his horse’s neck, to be carried off to his place.”

“Well, then?”

“My master traded with one of the men, and bought my oldest sister. She was a pious, good girl,—a member of the Baptist church,—and as handsome as my poor mother had been. She was well brought up, and had good manners. At first, I was glad she was bought, for I had one friend near me. I was soon sorry for it. Sir, I have stood at the door and heard her whipped, when it seemed as if every blow cut into my naked heart, and I couldn’t do anything to help her; and she was whipped, sir, for wanting to live a decent Christian life, such as your laws give no slave girl a right to live; and at last I saw her chained with a trader’s gang, to be sent to market in Orleans,—sent there for nothing else but that,—and that’s the last I know of her. Well, I grew up,—long years and years,—no father, no mother, no sister, not a living soul that cared for me more than a dog; nothing but whipping, scolding, starving. Why, sir, I’ve been so hungry that I have been glad to take the bones they threw to their dogs; and yet, when I was a little fellow, and laid awake whole nights and cried, it wasn’t the hunger, it wasn’t the whipping, I cried for. No, sir, it was for _my mother_ and _my sisters_,—it was because I hadn’t a friend to love me on earth. I never knew what peace or comfort was. I never had a kind word spoken to me till I came to work in your factory. Mr. Wilson, you treated me well; you encouraged me to do well, and to learn to read and write, and to try to make something of myself; and God knows how grateful I am for it. Then, sir, I found my wife; you’ve seen her,—you know how beautiful she is. When I found she loved me, when I married her, I scarcely could believe I was alive, I was so happy; and, sir, she is as good as she is beautiful. But now what? Why, now comes my master, takes me right away from my work, and my friends, and all I like, and grinds me down into the very dirt! And why? Because, he says, I forgot who I was; he says, to teach me that I am only a nigger! After all, and last of all, he comes between me and my wife, and says I shall give her up, and live with another woman. And all this your laws give him power to do, in spite of God or man. Mr. Wilson, look at it! There isn’t _one_ of all these things, that have broken the hearts of my mother and my sister, and my wife and myself, but your laws allow, and give every man power to do, in Kentucky, and none can say to him nay! Do you call these the laws of _my_ country? Sir, I haven’t any country, anymore than I have any father. But I’m going to have one. I don’t want anything of _your_ country, except to be let alone,—to go peaceably out of it; and when I get to Canada, where the laws will own me and protect me, _that_ shall be my country, and its laws I will obey. But if any man tries to stop me, let him take care, for I am desperate. I’ll fight for my liberty to the last breath I breathe. You say your fathers did it; if it was right for them, it is right for me!”

This speech, delivered partly while sitting at the table, and partly walking up and down the room,—delivered with tears, and flashing eyes, and despairing gestures,—was altogether too much for the good-natured old body to whom it was addressed, who had pulled out a great yellow silk pocket-handkerchief, and was mopping up his face with great energy.

“Blast ’em all!” he suddenly broke out. “Haven’t I always said so—the infernal old cusses! I hope I an’t swearing, now. Well! go ahead, George, go ahead; but be careful, my boy; don’t shoot anybody, George, unless—well—you’d _better_ not shoot, I reckon; at least, I wouldn’t _hit_ anybody, you know. Where is your wife, George?” he added, as he nervously rose, and began walking the room.

“Gone, sir gone, with her child in her arms, the Lord only knows where;—gone after the north star; and when we ever meet, or whether we meet at all in this world, no creature can tell.”

“Is it possible! astonishing! from such a kind family?”

“Kind families get in debt, and the laws of _our_ country allow them to sell the child out of its mother’s bosom to pay its master’s debts,” said George, bitterly.

“Well, well,” said the honest old man, fumbling in his pocket: “I s’pose, perhaps, I an’t following my judgment,—hang it, I _won’t_ follow my judgment!” he added, suddenly; “so here, George,” and, taking out a roll of bills from his pocket-book, he offered them to George.

“No, my kind, good sir!” said George, “you’ve done a great deal for me, and this might get you into trouble. I have money enough, I hope, to take me as far as I need it.”

“No; but you must, George. Money is a great help everywhere;—can’t have too much, if you get it honestly. Take it,—_do_ take it, _now_,—do, my boy!”

“On condition, sir, that I may repay it at some future time, I will,” said George, taking up the money.

“And now, George, how long are you going to travel in this way?—not long or far, I hope. It’s well carried on, but too bold. And this black fellow,—who is he?”

“A true fellow, who went to Canada more than a year ago. He heard, after he got there, that his master was so angry at him for going off that he had whipped his poor old mother; and he has come all the way back to comfort her, and get a chance to get her away.”

“Has he got her?”

“Not yet; he has been hanging about the place, and found no chance yet. Meanwhile, he is going with me as far as Ohio, to put me among friends that helped him, and then he will come back after her.

“Dangerous, very dangerous!” said the old man.

George drew himself up, and smiled disdainfully.

The old gentleman eyed him from head to foot, with a sort of innocent wonder.

“George, something has brought you out wonderfully. You hold up your head, and speak and move like another man,” said Mr. Wilson.

“Because I’m a _freeman_!” said George, proudly. “Yes, sir; I’ve said Mas’r for the last time to any man. _I’m free!”_

“Take care! You are not sure,—you may be taken.”

“All men are free and equal _in the grave_, if it comes to that, Mr. Wilson,” said George.

“I’m perfectly dumb-founded with your boldness!” said Mr. Wilson,—“to come right here to the nearest tavern!”

“Mr. Wilson, it is _so_ bold, and this tavern is so near, that they will never think of it; they will look for me on ahead, and you yourself wouldn’t know me. Jim’s master don’t live in this county; he isn’t known in these parts. Besides, he is given up; nobody is looking after him, and nobody will take me up from the advertisement, I think.”

“But the mark in your hand?”

George drew off his glove, and showed a newly-healed scar in his hand.

“That is a parting proof of Mr. Harris’ regard,” he said, scornfully. “A fortnight ago, he took it into his head to give it to me, because he said he believed I should try to get away one of these days. Looks interesting, doesn’t it?” he said, drawing his glove on again.

“I declare, my very blood runs cold when I think of it,—your condition and your risks!” said Mr. Wilson.

“Mine has run cold a good many years, Mr. Wilson; at present, it’s about up to the boiling point,” said George.

“Well, my good sir,” continued George, after a few moments’ silence, “I saw you knew me; I thought I’d just have this talk with you, lest your surprised looks should bring me out. I leave early tomorrow morning, before daylight; by tomorrow night I hope to sleep safe in Ohio. I shall travel by daylight, stop at the best hotels, go to the dinner-tables with the lords of the land. So, good-by, sir; if you hear that I’m taken, you may know that I’m dead!”

George stood up like a rock, and put out his hand with the air of a prince. The friendly little old man shook it heartily, and after a little shower of caution, he took his umbrella, and fumbled his way out of the room.

George stood thoughtfully looking at the door, as the old man closed it. A thought seemed to flash across his mind. He hastily stepped to it, and opening it, said,

“Mr. Wilson, one word more.”

The old gentleman entered again, and George, as before, locked the door, and then stood for a few moments looking on the floor, irresolutely. At last, raising his head with a sudden effort—“Mr. Wilson, you have shown yourself a Christian in your treatment of me,—I want to ask one last deed of Christian kindness of you.”

“Well, George.”

“Well, sir,—what you said was true. I _am_ running a dreadful risk. There isn’t, on earth, a living soul to care if I die,” he added, drawing his breath hard, and speaking with a great effort,—“I shall be kicked out and buried like a dog, and nobody’ll think of it a

day after,—_only my poor wife!_ Poor soul! she'll mourn and grieve; and if you'd only contrive, Mr. Wilson, to send this little pin to her. She gave it to me for a Christmas present, poor child! Give it to her, and tell her I loved her to the last. Will you? _Will_ you?" he added, earnestly.

"Yes, certainly—poor fellow!" said the old gentleman, taking the pin, with watery eyes, and a melancholy quiver in his voice.

"Tell her one thing," said George; "it's my last wish, if she _can_ get to Canada, to go there. No matter how kind her mistress is,—no matter how much she loves her home; beg her not to go back,—for slavery always ends in misery. Tell her to bring up our boy a free man, and then he won't suffer as I have. Tell her this, Mr. Wilson, will you?"

"Yes, George. I'll tell her; but I trust you won't die; take heart,—you're a brave fellow. Trust in the Lord, George. I wish in my heart you were safe through, though,—that's what I do."

"_Is_ there a God to trust in?" said George, in such a tone of bitter despair as arrested the old gentleman's words. "O, I've seen things all my life that have made me feel that there can't be a God. You Christians don't know how these things look to us. There's a God for you, but is there any for us?"

"O, now, don't—don't, my boy!" said the old man, almost sobbing as he spoke; "don't feel so! There is—there is; clouds and darkness are around about him, but righteousness and judgment are the habitation of his throne. There's a _God_, George,—believe it; trust in Him, and I'm sure He'll help you. Everything will be set right,—if not in this life, in another."

The real piety and benevolence of the simple old man invested him with a temporary dignity and authority, as he spoke. George stopped his distracted walk up and down the room, stood thoughtfully a moment, and then said, quietly,

"Thank you for saying that, my good friend; I'll _think of that_."

CHAPTER XII Select Incident of Lawful Trade

"In Ramah there was a voice heard,—weeping, and lamentation, and great mourning; Rachel weeping for her children, and would not be comforted."

Jer. 31:15.

Mr. Haley and Tom jogged onward in their wagon, each, for a time, absorbed in his own reflections. Now, the reflections of two men sitting side by side are a curious thing,—seated on the same seat, having the same eyes, ears, hands and organs of all sorts, and having pass before their eyes the same objects,—it is wonderful what a variety we shall find in these same reflections!

As, for example, Mr. Haley: he thought first of Tom's length, and breadth, and height, and what he would sell for, if he was kept fat and in good case till he got him into market. He thought of how he should make out his gang; he thought of the respective market value of certain supposititious men and women and children who were to compose it, and other kindred topics of the business; then he thought of himself, and how humane he was, that whereas other men chained their "niggers" hand and foot both, he only put fetters on the feet, and left Tom the use of his hands, as long as he behaved well; and he sighed to think how ungrateful human nature was, so that there was even room to doubt whether Tom appreciated his mercies. He had been taken in so by "niggers" whom he had favored; but still he was astonished to consider how good-natured he yet remained!

As to Tom, he was thinking over some words of an unfashionable old book, which kept running through his head, again and again, as follows: "We have here no continuing city, but we seek one to come; wherefore God himself is not ashamed to be called our God; for he hath prepared for us a city." These words of an ancient volume, got up principally by "ignorant and unlearned men," have, through all time, kept up, somehow, a strange sort of power over the minds of poor, simple fellows, like Tom. They stir up the soul from its depths, and rouse, as with trumpet call, courage, energy, and enthusiasm, where before was only the blackness of despair.

Mr. Haley pulled out of his pocket sundry newspapers, and began looking over their advertisements, with absorbed interest. He was not a remarkably fluent reader, and was in the habit of reading in a sort of recitative half-aloud, by way of calling in his ears to verify the deductions of his eyes. In this tone he slowly recited the following paragraph:

“EXECUTOR’S SALE,—NEGROES!—Agreeably to order of court, will be sold, on Tuesday, February 20, before the Court-house door, in the town of Washington, Kentucky, the following negroes: Hagar, aged 60; John, aged 30; Ben, aged 21; Saul, aged 25; Albert, aged 14. Sold for the benefit of the creditors and heirs of the estate of Jesse Blutchford, Esq.

“SAMUEL MORRIS, THOMAS FLINT, _Executors_.”

“This yer I must look at,” said he to Tom, for want of somebody else to talk to.

“Ye see, I’m going to get up a prime gang to take down with ye, Tom; it’ll make it sociable and pleasant like,—good company will, ye know. We must drive right to Washington first and foremost, and then I’ll clap you into jail, while I does the business.”

Tom received this agreeable intelligence quite meekly; simply wondering, in his own heart, how many of these doomed men had wives and children, and whether they would feel as he did about leaving them. It is to be confessed, too, that the naive, off-hand information that he was to be thrown into jail by no means produced an agreeable impression on a poor fellow who had always prided himself on a strictly honest and upright course of life. Yes, Tom, we must confess it, was rather proud of his honesty, poor fellow,—not having very much else to be proud of;—if he had belonged to some of the higher walks of society, he, perhaps, would never have been reduced to such straits. However, the day wore on, and the evening saw Haley and Tom comfortably accommodated in Washington,—the one in a tavern, and the other in a jail.

About eleven o’clock the next day, a mixed throng was gathered around the court-house steps,—smoking, chewing, spitting, swearing, and conversing, according to their respective tastes and turns,—waiting for the auction to commence. The men and women to be sold sat in a group apart, talking in a low tone to each other. The woman who had been advertised by the name of Hagar was a regular African in feature and figure. She might have been sixty, but was older than that by hard work and disease, was partially blind, and somewhat crippled with rheumatism. By her side stood her only remaining son, Albert, a bright-looking little fellow of fourteen years. The boy was the only survivor of a large family, who had been successively sold away from her to a southern market. The mother held on to him with both her shaking hands, and eyed with intense trepidation every one who walked up to examine him.

[Illustration: THE AUCTION SALE.]

“Don’t be feard, Aunt Hagar,” said the oldest of the men, “I spoke to Mas’r Thomas ’bout it, and he thought he might manage to sell you in a lot both together.”

“Dey needn’t call me worn out yet,” said she, lifting her shaking hands. “I can cook yet, and scrub, and scour,—I’m wuth a buying, if I do come cheap;—tell ’em dat ar,—you _tell_ ’em,” she added, earnestly.

Haley here forced his way into the group, walked up to the old man, pulled his mouth open and looked in, felt of his teeth, made him stand and straighten himself, bend his back, and perform various evolutions to show his muscles; and then passed on to the next, and put him through the same trial. Walking up last to the boy, he felt of his arms, straightened his hands, and looked at his fingers, and made him jump, to show his agility.

“He an’t gwine to be sold widout me!” said the old woman, with passionate eagerness; “he and I goes in a lot together; I ’s rail strong yet, Mas’r and can do heaps o’ work,—heaps on it, Mas’r.”

“On plantation?” said Haley, with a contemptuous glance. “Likely story!” and, as if satisfied with his examination, he walked out and looked, and stood with his hands in his pocket, his cigar in his mouth, and his hat cocked on one side, ready for action.

“What think of ’em?” said a man who had been following Haley’s examination, as if to make up his own mind from it.

“Wal,” said Haley, spitting, “I shall put in, I think, for the youngerly ones and the boy.”

“They want to sell the boy and the old woman together,” said the man.

“Find it a tight pull;—why, she’s an old rack o’ bones,—not worth her salt.”

“You wouldn’t then?” said the man.

“Anybody ’d be a fool ’t would. She’s half blind, crooked with rheumatis, and foolish to boot.”

“Some buys up these yer old critturs, and ses there’s a sight more wear in ’em than a body ’d think,” said the man, reflectively.

“No go, ’t all,” said Haley; “wouldn’t take her for a present,—fact,—I’ve _seen_, now.”

“Wal, ’t is kinder pity, now, not to buy her with her son,—her heart seems so sot on him,—s’pose they fling her in cheap.”

“Them that’s got money to spend that ar way, it’s all well enough. I shall bid off on that ar boy for a plantation-hand;—wouldn’t be bothered with her, no way, not if they’d give her to me,” said Haley.

“She’ll take on desp’t,” said the man.

“Nat’lly, she will,” said the trader, coolly.

The conversation was here interrupted by a busy hum in the audience; and the auctioneer, a short, bustling, important fellow, elbowed his way into the crowd. The old woman drew in her breath, and caught instinctively at her son.

“Keep close to yer mammy, Albert,—close,—dey’ll put us up togedder,” she said.

“O, mammy, I’m feard they won’t,” said the boy.

“Dey must, child; I can’t live, no ways, if they don’t” said the old creature, vehemently.

The stentorian tones of the auctioneer, calling out to clear the way, now announced that the sale was about to commence. A place was cleared, and the bidding began. The different men on the list were soon knocked off at prices which showed a pretty brisk demand in the market; two of them fell to Haley.

“Come, now, young un,” said the auctioneer, giving the boy a touch with his hammer, “be up and show your springs, now.”

“Put us two up togedder, togedder,—do please, Mas’r,” said the old woman, holding fast to her boy.

“Be off,” said the man, gruffly, pushing her hands away; “you come last. Now, darkey, spring;” and, with the word, he pushed the boy toward the block, while a deep, heavy groan rose behind him. The boy paused, and looked back; but there was no time to stay, and, dashing the tears from his large, bright eyes, he was up in a moment.

His fine figure, alert limbs, and bright face, raised an instant competition, and half a dozen bids simultaneously met the ear of the auctioneer. Anxious, half-frightened, he looked from side to side, as he heard the clatter of contending bids,—now here, now there,—till the hammer fell. Haley had got him. He was pushed from the block toward his new master, but stopped one moment, and looked back, when his poor old mother, trembling in every limb, held out her shaking hands toward him.

“Buy me too, Mas’r, for de dear Lord’s sake!—buy me,—I shall die if you don’t!”

“You’ll die if I do, that’s the kink of it,” said Haley,—“no!” And he turned on his heel.

The bidding for the poor old creature was summary. The man who had addressed Haley, and who seemed not destitute of compassion, bought her for a trifle, and the spectators began to disperse.

The poor victims of the sale, who had been brought up in one place together for years, gathered round the despairing old mother, whose agony was pitiful to see.

“Couldn’t dey leave me one? Mas’r allers said I should have one,—he did,” she repeated over and over, in heart-broken tones.

“Trust in the Lord, Aunt Hagar,” said the oldest of the men, sorrowfully.

“What good will it do?” said she, sobbing passionately.

“Mother, mother,—don’t! don’t!” said the boy. “They say you ’s got a good master.”

“I don’t care,—I don’t care. O, Albert! oh, my boy! you ’s my last baby. Lord, how ken I?”

“Come, take her off, can’t some of ye?” said Haley, dryly; “don’t do no good for her to go on that ar way.”

The old men of the company, partly by persuasion and partly by force, loosed the poor creature’s last despairing hold, and, as they led her off to her new master’s wagon, strove to comfort her.

“Now!” said Haley, pushing his three purchases together, and producing a bundle of handcuffs, which he proceeded to put on their wrists; and fastening each handcuff to a long chain, he drove them before him to the jail.

A few days saw Haley, with his possessions, safely deposited on one of the Ohio boats. It was the commencement of his gang, to be augmented, as the boat moved on, by various other merchandise of the same kind, which he, or his agent, had stored for him in various points along shore.

The La Belle Riviere, as brave and beautiful a boat as ever walked the waters of her namesake river, was floating gayly down the stream, under a brilliant sky, the stripes and stars of free America waving and fluttering over head; the guards crowded with well-dressed ladies and gentlemen walking and enjoying the delightful day. All was full of life, buoyant and rejoicing;—all but Haley’s gang, who were stored, with other freight, on the lower deck, and who, somehow, did not seem to appreciate their various privileges, as they sat in a knot, talking to each other in low tones.

“Boys,” said Haley, coming up, briskly, “I hope you keep up good heart, and are cheerful. Now, no sulks, ye see; keep stiff upper lip, boys; do well by me, and I’ll do well by you.”

The boys addressed responded the invariable “Yes, Mas’r,” for ages the watchword of poor Africa; but it’s to be owned they did not look particularly cheerful; they had their various little prejudices in favor of wives, mothers, sisters, and children, seen for the last time,—and though “they that wasted them required of them mirth,” it was not instantly forthcoming.

“I’ve got a wife,” spoke out the article enumerated as “John, aged thirty,” and he laid his chained hand on Tom’s knee,—“and she don’t know a word about this, poor girl!”

“Where does she live?” said Tom.

“In a tavern a piece down here,” said John; “I wish, now, I _could_ see her once more in this world,” he added.

Poor John! It _was_ rather natural; and the tears that fell, as he spoke, came as naturally as if he had been a white man. Tom drew a long breath from a sore heart, and tried, in his poor way, to comfort him.

And over head, in the cabin, sat fathers and mothers, husbands and wives; and merry, dancing children moved round among them, like so many little butterflies, and everything was going on quite easy and comfortable.

“O, mamma,” said a boy, who had just come up from below, “there’s a negro trader on board, and he’s brought four or five slaves down there.”

“Poor creatures!” said the mother, in a tone between grief and indignation.

“What’s that?” said another lady.

“Some poor slaves below,” said the mother.

“And they’ve got chains on,” said the boy.

“What a shame to our country that such sights are to be seen!” said another lady.

“O, there’s a great deal to be said on both sides of the subject,” said a genteel woman, who sat at her state-room door sewing, while her little girl and boy were playing round her. “I’ve been south, and I must say I think the negroes are better off than they would be to be free.”

“In some respects, some of them are well off, I grant,” said the lady to whose remark she had answered. “The most dreadful part of slavery, to my mind, is its outrages on the feelings and affections,—the separating of families, for example.”

“That _is_ a bad thing, certainly,” said the other lady, holding up a baby’s dress she had just completed, and looking intently on its trimmings; “but then, I fancy, it don’t occur often.”

“O, it does,” said the first lady, eagerly; “I’ve lived many years in Kentucky and Virginia both, and I’ve seen enough to make any one’s heart sick. Suppose, ma’am, your two children, there, should be taken from you, and sold?”

“We can’t reason from our feelings to those of this class of persons,” said the other lady, sorting out some worsteds on her lap.

“Indeed, ma’am, you can know nothing of them, if you say so,” answered the first lady, warmly. “I was born and brought up among them. I know they _do_ feel, just as keenly,—even more so, perhaps,—as we do.”

The lady said “Indeed!” yawned, and looked out the cabin window, and finally repeated, for a finale, the remark with which she had begun,—“After all, I think they are better off than they would be to be free.”

“It’s undoubtedly the intention of Providence that the African race should be servants,—kept in a low condition,” said a grave-looking gentleman in black, a clergyman, seated by the cabin door. “‘Cursed be Canaan; a servant of servants shall he be,’ the scripture says.”[1]

[1] Gen. 9:25. his is what Noah says when he wakes out of drunkenness and realizes that his youngest son, Ham, father of Canaan, has seen him naked.

“I say, stranger, is that ar what that text means?” said a tall man, standing by.

“Undoubtedly. It pleased Providence, for some inscrutable reason, to doom the race to bondage, ages ago; and we must not set up our opinion against that.”

“Well, then, we’ll all go ahead and buy up niggers,” said the man, “if that’s the way of Providence,—won’t we, Squire?” said he, turning to Haley, who had been standing, with his hands in his pockets, by the stove and intently listening to the conversation.

“Yes,” continued the tall man, “we must all be resigned to the decrees of Providence. Niggers must be sold, and trucked round, and kept under; it’s what they’s made for. ’Pears like this yer view ’s quite refreshing, an’t it, stranger?” said he to Haley.

“I never thought on ’t,” said Haley, “I couldn’t have said as much, myself; I ha’nt no larning. I took up the trade just to make a living; if ’tan’t right, I calculated to ’pent on ’t in time, ye know.”

“And now you’ll save yerself the trouble, won’t ye?” said the tall man. “See what ’t is, now, to know scripture. If ye’d only studied yer Bible, like this yer good man, ye might have know’d it before, and saved ye a heap o’ trouble. Ye could jist have said, ‘Cussed be’—what’s his name?—‘and ’t would all have come right.’” And the stranger, who was no other than the honest drover whom we introduced to our readers in the Kentucky tavern, sat down, and began smoking, with a curious smile on his long, dry face.

A tall, slender young man, with a face expressive of great feeling and intelligence, here broke in, and repeated the words, “‘All things whatsoever ye would that men should do unto you, do ye even so unto them.’ I suppose,” he added, “_that_ is scripture, as much as ‘Cursed be Canaan.’”

“Wal, it seems quite _as_ plain a text, stranger,” said John the drover, “to poor fellows like us, now;” and John smoked on like a volcano.

The young man paused, looked as if he was going to say more, when suddenly the boat stopped, and the company made the usual steamboat rush, to see where they were landing.

“Both them ar chaps parsons?” said John to one of the men, as they were going out.

The man nodded.

As the boat stopped, a black woman came running wildly up the plank, darted into the crowd, flew up to where the slave gang sat, and threw her arms round that unfortunate piece of merchandise before enumerate—“John, aged thirty,” and with sobs and tears bemoaned him as her husband.

But what needs tell the story, told too oft,—every day told,—of heart-strings rent and broken,—the weak broken and torn for the profit and convenience of the strong! It needs not to be told;—every day is telling it,—telling it, too, in the ear of One who is not deaf, though he be long silent.

The young man who had spoken for the cause of humanity and God before stood with folded arms, looking on this scene. He turned, and Haley was standing at his side. “My friend,” he said, speaking with thick utterance, “how can you, how dare you, carry on a trade like this? Look at those poor creatures! Here I am, rejoicing in my heart that I am going home to my wife and child; and the same bell which is a signal to carry me onward towards them will part this poor man and his wife forever. Depend upon it, God will bring you into judgment for this.”

The trader turned away in silence.

“I say, now,” said the drover, touching his elbow, “there’s differences in parsons, an’t there? ‘Cussed be Canaan’ don’t seem to go down with this ’un, does it?”

Haley gave an uneasy growl.

“And that ar an’t the worst on ’t,” said John; “mabbee it won’t go down with the Lord, neither, when ye come to settle with Him, one o’ these days, as all on us must, I reckon.”

Haley walked reflectively to the other end of the boat.

“If I make pretty handsomely on one or two next gangs,” he thought, “I reckon I’ll stop off this yer; it’s really getting dangerous.” And he took out his pocket-book, and began adding over his accounts,—a process which many gentlemen besides Mr. Haley have found a specific for an uneasy conscience.

The boat swept proudly away from the shore, and all went on merrily, as before. Men talked, and loafed, and read, and smoked. Women sewed, and children played, and the boat passed on her way.

One day, when she lay to for a while at a small town in Kentucky, Haley went up into the place on a little matter of business.

Tom, whose fetters did not prevent his taking a moderate circuit, had drawn near the side of the boat, and stood listlessly gazing over the railing. After a time, he saw the trader returning, with an alert step, in company with a colored woman, bearing in her arms a young child. She was dressed quite respectably, and a colored man followed her, bringing along a small trunk. The woman came cheerfully onward, talking, as she came, with the man who bore her trunk, and so passed up the plank into the boat. The bell rung, the steamer whizzed, the engine groaned and coughed, and away swept the boat down the river.

The woman walked forward among the boxes and bales of the lower deck, and, sitting down, busied herself with chirruping to her baby.

Haley made a turn or two about the boat, and then, coming up, seated himself near her, and began saying something to her in an indifferent undertone.

Tom soon noticed a heavy cloud passing over the woman’s brow; and that she answered rapidly, and with great vehemence.

“I don’t believe it,—I won’t believe it!” he heard her say. “You’re jist a foolin’ with me.”

“If you won’t believe it, look here!” said the man, drawing out a paper; “this yer’s the bill of sale, and there’s your master’s name to it; and I paid down good solid cash for it, too, I can tell you,—so, now!”

“I don’t believe Mas’r would cheat me so; it can’t be true!” said the woman, with increasing agitation.

“You can ask any of these men here, that can read writing. Here!” he said, to a man that was passing by, “jist read this yer, won’t you! This yer gal won’t believe me, when I tell her what ’t is.”

“Why, it’s a bill of sale, signed by John Fosdick,” said the man, “making over to you the girl Lucy and her child. It’s all straight enough, for aught I see.”

The woman’s passionate exclamations collected a crowd around her, and the trader briefly explained to them the cause of the agitation.

“He told me that I was going down to Louisville, to hire out as cook to the same tavern where my husband works,—that’s what Mas’r told me, his own self; and I can’t believe he’d lie to me,” said the woman.

“But he has sold you, my poor woman, there’s no doubt about it,” said a good-natured looking man, who had been examining the papers; “he has done it, and no mistake.”

“Then it’s no account talking,” said the woman, suddenly growing quite calm; and, clasping her child tighter in her arms, she sat down on her box, turned her back round, and gazed listlessly into the river.

“Going to take it easy, after all!” said the trader. “Gal’s got grit, I see.”

The woman looked calm, as the boat went on; and a beautiful soft summer breeze passed like a compassionate spirit over her head,—the gentle breeze, that never inquires whether the brow is dusky or fair that it fans. And she saw sunshine sparkling on the water, in golden ripples, and heard gay voices, full of ease and pleasure, talking around her everywhere; but her heart lay as if a great stone had fallen on it. Her baby raised himself up against her, and stroked her cheeks with his little hands; and, springing up and down, crowing and chatting, seemed determined to arouse her. She strained him suddenly and tightly in her arms, and slowly one tear after another fell on his wondering, unconscious face; and gradually she seemed, and little by little, to grow calmer, and busied herself with tending and nursing him.

The child, a boy of ten months, was uncommonly large and strong of his age, and very vigorous in his limbs. Never, for a moment, still, he kept his mother constantly busy in holding him, and guarding his springing activity.

“That’s a fine chap!” said a man, suddenly stopping opposite to him, with his hands in his pockets. “How old is he?”

“Ten months and a half,” said the mother.

The man whistled to the boy, and offered him part of a stick of candy, which he eagerly grabbed at, and very soon had it in a baby’s general depository, to wit, his mouth.

“Rum fellow!” said the man “Knows what’s what!” and he whistled, and walked on. When he had got to the other side of the boat, he came across Haley, who was smoking on top of a pile of boxes.

The stranger produced a match, and lighted a cigar, saying, as he did so,

“Decentish kind o’ wench you’ve got round there, stranger.”

“Why, I reckon she _is_ tol’able fair,” said Haley, blowing the smoke out of his mouth.

“Taking her down south?” said the man.

Haley nodded, and smoked on.

“Plantation hand?” said the man.

“Wal,” said Haley, “I’m fillin’ out an order for a plantation, and I think I shall put her in. They telled me she was a good cook; and they can use her for that, or set her at the cotton-picking. She’s got the right fingers for that; I looked at ’em. Sell well, either way;” and Haley resumed his cigar.

“They won’t want the young ’un on the plantation,” said the man.

“I shall sell him, first chance I find,” said Haley, lighting another cigar.

“S’pose you’d be selling him tol’able cheap,” said the stranger, mounting the pile of boxes, and sitting down comfortably.

“Don’t know ’bout that,” said Haley; “he’s a pretty smart young ’un, straight, fat, strong; flesh as hard as a brick!”

“Very true, but then there’s the bother and expense of raisin’.”

“Nonsense!” said Haley; “they is raised as easy as any kind of critter there is going; they an’t a bit more trouble than pups. This yer chap will be running all around, in a month.”

“I’ve got a good place for raisin’, and I thought of takin’ in a little more stock,” said the man. “One cook lost a young ’un last week,—got drownded in a washtub, while she was a hangin’ out the clothes,—and I reckon it would be well enough to set her to raisin’ this yer.”

Haley and the stranger smoked a while in silence, neither seeming willing to broach the test question of the interview. At last the man resumed:

“You wouldn’t think of wantin’ more than ten dollars for that ar chap, seeing you _must_ get him off yer hand, any how?”

Haley shook his head, and spit impressively.

“That won’t do, no ways,” he said, and began his smoking again.

“Well, stranger, what will you take?”

“Well, now,” said Haley, “I _could_ raise that ar chap myself, or get him raised; he’s oncommon likely and healthy, and he’d fetch a hundred dollars, six months hence; and, in a year or two, he’d bring two hundred, if I had him in the right spot; I shan’t take a cent less nor fifty for him now.”

“O, stranger! that’s ridiculous, altogether,” said the man.

“Fact!” said Haley, with a decisive nod of his head.

“I’ll give thirty for him,” said the stranger, “but not a cent more.”

“Now, I’ll tell ye what I will do,” said Haley, spitting again, with renewed decision. “I’ll split the difference, and say forty-five; and that’s the most I will do.”

“Well, agreed!” said the man, after an interval.

“Done!” said Haley. “Where do you land?”

“At Louisville,” said the man.

“Louisville,” said Haley. “Very fair, we get there about dusk. Chap will be asleep,—all fair,—get him off quietly, and no screaming,—happens beautiful,—I like to do everything quietly,—I hates all kind of agitation and fluster.” And so, after a transfer of certain bills had passed from the man’s pocket-book to the trader’s, he resumed his cigar.

It was a bright, tranquil evening when the boat stopped at the wharf at Louisville. The woman had been sitting with her baby in her arms, now wrapped in a heavy sleep. When she heard the name of the place called out, she hastily laid the child down in a little cradle formed by the hollow among the boxes, first carefully spreading under it her cloak; and then she sprung to the side of the boat, in hopes that, among the various hotel-waiters who thronged the wharf, she might see her husband. In this hope, she pressed forward to the front rails, and, stretching far over them, strained her eyes intently on the moving heads on the shore, and the crowd pressed in between her and the child.

“Now’s your time,” said Haley, taking the sleeping child up, and handing him to the stranger. “Don’t wake him up, and set him to crying, now; it would make a devil of a fuss with the gal.” The man took the bundle carefully, and was soon lost in the crowd that went up the wharf.

When the boat, creaking, and groaning, and puffing, had loosed from the wharf, and was beginning slowly to strain herself along, the woman returned to her old seat. The trader was sitting there,—the child was gone!

“Why, why,—where?” she began, in bewildered surprise.

“Lucy,” said the trader, “your child’s gone; you may as well know it first as last. You see, I know’d you couldn’t take him down south; and I got a chance to sell him to a first-rate family, that’ll raise him better than you can.”

The trader had arrived at that stage of Christian and political perfection which has been recommended by some preachers and politicians of the north, lately, in which he had completely overcome every humane weakness and prejudice. His heart was exactly where yours, sir, and mine could be brought, with proper effort and cultivation. The wild look of anguish and utter despair that the woman cast on him might have disturbed one less practised; but he was used to it. He had seen that same look hundreds of times. You can get used to such things, too, my friend; and it is the great object of recent efforts to make our whole northern community used to them, for the glory of the Union. So the trader only regarded the mortal anguish which he saw working in those dark features, those clenched hands, and suffocating breathings, as necessary incidents of the trade, and merely calculated whether she was going to scream, and get up a commotion on the boat; for, like other supporters of our peculiar institution, he decidedly disliked agitation.

But the woman did not scream. The shot had passed too straight and direct through the heart, for cry or tear.

Dizzily she sat down. Her slack hands fell lifeless by her side. Her eyes looked straight forward, but she saw nothing. All the noise and hum of the boat, the groaning of the machinery, mingled dreamily to her bewildered ear; and the poor, dumb-stricken heart had neither cry not tear to show for its utter misery. She was quite calm.

The trader, who, considering his advantages, was almost as humane as some of our politicians, seemed to feel called on to administer such consolation as the case admitted of.

“I know this yer comes kinder hard, at first, Lucy,” said he; “but such a smart, sensible gal as you are, won’t give way to it. You see it’s _necessary_, and can’t be helped!”

“O! don’t, Mas’r, don’t!” said the woman, with a voice like one that is smothering.

“You’re a smart wench, Lucy,” he persisted; “I mean to do well by ye, and get ye a nice place down river; and you’ll soon get another husband,—such a likely gal as you—”

“O! Mas’r, if you _only_ won’t talk to me now,” said the woman, in a voice of such quick and living anguish that the trader felt that there was something at present in the case beyond his style of operation. He got up, and the woman turned away, and buried her head in her cloak.

The trader walked up and down for a time, and occasionally stopped and looked at her.

“Takes it hard, rather,” he soliloquized, “but quiet, tho’;—let her sweat a while; she’ll come right, by and by!”

Tom had watched the whole transaction from first to last, and had a perfect understanding of its results. To him, it looked like something unutterably horrible and cruel, because, poor, ignorant black soul! he had not learned to generalize, and to take enlarged views. If he had only been instructed by certain ministers of Christianity, he might have thought better of it, and seen in it an every-day incident of a lawful trade; a trade which is the vital support of an institution which an American divine[2] tells us has _“no evils but such as are inseparable from any other relations in social and domestic life_.” But Tom, as we see, being a poor, ignorant fellow, whose reading had been confined entirely to the New Testament, could not comfort and solace himself with views like these. His very soul bled within him for what seemed to him the _wrongs_ of the poor suffering thing that lay like a crushed reed on the boxes; the feeling, living, bleeding, yet immortal _thing_, which American state law coolly classes with the bundles, and bales, and boxes, among which she is lying.

[2] Dr. Joel Parker of Philadelphia. [Mrs. Stowe’s note.] Presbyterian clergyman (1798-1873), a friend of the Beecher family. Mrs. Stowe attempted unsuccessfully to have this identifying note removed from the stereotype-plate of the first edition.

Tom drew near, and tried to say something; but she only groaned. Honestly, and with tears running down his own cheeks, he spoke of a heart of love in the skies, of a pitying Jesus, and an eternal home; but the ear was deaf with anguish, and the palsied heart could not feel.

Night came on,—night calm, unmoved, and glorious, shining down with her innumerable and solemn angel eyes, twinkling, beautiful, but silent. There was no speech nor language, no pitying voice or helping hand, from that distant sky. One after another, the voices of business or pleasure died away; all on the boat were sleeping, and the ripples at the prow were plainly heard. Tom stretched himself out on a box, and there, as he lay, he heard, ever and anon, a smothered sob or cry from the prostrate creature,—“O! what shall I do? O Lord! O good Lord, do help me!” and so, ever and anon, until the murmur died away in silence.

At midnight, Tom waked, with a sudden start. Something black passed quickly by him to the side of the boat, and he heard a splash in the water. No one else saw or heard anything. He raised his head,—the woman’s place was vacant! He got up, and sought about him in vain. The poor bleeding heart was still, at last, and the river rippled and dimpled just as brightly as if it had not closed above it.

Patience! patience! ye whose hearts swell indignant at wrongs like these. Not one throb of anguish, not one tear of the oppressed, is forgotten by the Man of Sorrows, the Lord of Glory. In his patient, generous bosom he bears the anguish of a world. Bear thou, like him, in patience, and labor in love; for sure as he is God, “the year of his redeemed _shall_ come.”

The trader waked up bright and early, and came out to see to his live stock. It was now his turn to look about in perplexity.

“Where alive is that gal?” he said to Tom.

Tom, who had learned the wisdom of keeping counsel, did not feel called upon to state his observations and suspicions, but said he did not know.

“She surely couldn’t have got off in the night at any of the landings, for I was awake, and on the lookout, whenever the boat stopped. I never trust these yer things to other folks.”

This speech was addressed to Tom quite confidentially, as if it was something that would be specially interesting to him. Tom made no answer.

The trader searched the boat from stem to stern, among boxes, bales and barrels, around the machinery, by the chimneys, in vain.

“Now, I say, Tom, be fair about this yer,” he said, when, after a fruitless search, he came where Tom was standing. “You know something about it, now. Don’t tell me,—I know you do. I saw the gal stretched out here about ten o’clock, and ag’in at twelve, and ag’in between one and two; and then at four she was gone, and you was a sleeping right there all the time. Now, you know something,—you can’t help it.”

“Well, Mas’r,” said Tom, “towards morning something brushed by me, and I kinder half woke; and then I hearn a great splash, and then I clare woke up, and the gal was gone. That’s all I know on ’t.”

The trader was not shocked nor amazed; because, as we said before, he was used to a great many things that you are not used to. Even the awful presence of Death struck no solemn chill upon him. He had seen Death many times,—met him in the way of trade, and got acquainted with him,—and he only thought of him as a hard customer, that embarrassed his property operations very unfairly; and so he only swore that the gal was a baggage, and that he was devilish unlucky, and that, if things went on in this way, he should not make a cent on the trip. In short, he seemed to consider himself an ill-used man, decidedly; but there was no help for it, as the woman had escaped into a state which _never will_ give up a fugitive,—not even at the demand of the whole glorious Union. The trader, therefore, sat discontentedly down, with his little account-book, and put down the missing body and soul under the head of _losses!_

“He’s a shocking creature, isn’t he,—this trader? so unfeeling! It’s dreadful, really!”

“O, but nobody thinks anything of these traders! They are universally despised,—never received into any decent society.”

But who, sir, makes the trader? Who is most to blame? The enlightened, cultivated, intelligent man, who supports the system of which the trader is the inevitable result, or the poor trader himself? You make the public statement that calls for his trade, that debauches and depraves him, till he feels no shame in it; and in what are you better than he?

Are you educated and he ignorant, you high and he low, you refined and he coarse, you talented and he simple?

In the day of a future judgment, these very considerations may make it more tolerable for him than for you.

In concluding these little incidents of lawful trade, we must beg the world not to think that American legislators are entirely destitute of humanity, as might, perhaps, be unfairly inferred from the great efforts made in our national body to protect and perpetuate this species of traffic.

Who does not know how our great men are outdoing themselves, in declaiming against the _foreign_ slave-trade. There are a perfect host of Clarksons and Wilberforces[3] risen up among us on that subject, most edifying to hear and behold. Trading negroes from Africa, dear reader, is so horrid! It is not to be thought of! But trading them from Kentucky,—that’s quite another thing!

[3] Thomas Clarkson (1760-1846) and William Wilberforce (1759- 1833), English philanthropists and anti-slavery agitators who helped to secure passage of the Emancipation Bill by Parliament in 1833.

CHAPTER XIII The Quaker Settlement

A quiet scene now rises before us. A large, roomy, neatly-painted kitchen, its yellow floor glossy and smooth, and without a particle of dust; a neat, well-blacked cooking-stove; rows of shining tin, suggestive of unmentionable good things to the appetite; glossy green wood chairs, old and firm; a small flag-bottomed rocking-chair, with a patch-work cushion in it, neatly contrived out of small pieces of different colored woollen goods, and a larger sized one, motherly and old, whose wide arms breathed hospitable invitation, seconded by the solicitation of its feather cushions,—a real comfortable, persuasive old chair, and worth, in the way of honest, homely enjoyment, a dozen of your plush or _brochetelle_ drawing-room gentry; and in the chair, gently swaying back and forward, her eyes bent on some fine sewing, sat our fine old friend Eliza. Yes, there she is, paler and thinner than in her Kentucky

home, with a world of quiet sorrow lying under the shadow of her long eyelashes, and marking the outline of her gentle mouth! It was plain to see how old and firm the girlish heart was grown under the discipline of heavy sorrow; and when, anon, her large dark eye was raised to follow the gambols of her little Harry, who was sporting, like some tropical butterfly, hither and thither over the floor, she showed a depth of firmness and steady resolve that was never there in her earlier and happier days.

By her side sat a woman with a bright tin pan in her lap, into which she was carefully sorting some dried peaches. She might be fifty-five or sixty; but hers was one of those faces that time seems to touch only to brighten and adorn. The snowy lisse crape cap, made after the strait Quaker pattern,—the plain white muslin handkerchief, lying in placid folds across her bosom,—the drab shawl and dress,—showed at once the community to which she belonged. Her face was round and rosy, with a healthful downy softness, suggestive of a ripe peach. Her hair, partially silvered by age, was parted smoothly back from a high placid forehead, on which time had written no inscription, except peace on earth, good will to men, and beneath shone a large pair of clear, honest, loving brown eyes; you only needed to look straight into them, to feel that you saw to the bottom of a heart as good and true as ever throbbed in woman's bosom. So much has been said and sung of beautiful young girls, why don't somebody wake up to the beauty of old women? If any want to get up an inspiration under this head, we refer them to our good friend Rachel Halliday, just as she sits there in her little rocking-chair. It had a turn for quacking and squeaking,—that chair had,—either from having taken cold in early life, or from some asthmatic affection, or perhaps from nervous derangement; but, as she gently swung backward and forward, the chair kept up a kind of subdued "creechy crawchy," that would have been intolerable in any other chair. But old Simeon Halliday often declared it was as good as any music to him, and the children all avowed that they wouldn't miss of hearing mother's chair for anything in the world. For why? for twenty years or more, nothing but loving words, and gentle moralities, and motherly loving kindness, had come from that chair;—head-aches and heart-aches innumerable had been cured there,—difficulties spiritual and temporal solved there,—all by one good, loving woman, God bless her!

"And so thee still thinks of going to Canada, Eliza?" she said, as she was quietly looking over her peaches.

"Yes, ma'am," said Eliza, firmly. "I must go onward. I dare not stop."

"And what'll thee do, when thee gets there? Thee must think about that, my daughter."

"My daughter" came naturally from the lips of Rachel Halliday; for hers was just the face and form that made "mother" seem the most natural word in the world.

Eliza's hands trembled, and some tears fell on her fine work; but she answered, firmly,

"I shall do—anything I can find. I hope I can find something."

"Thee knows thee can stay here, as long as thee pleases," said Rachel.

"O, thank you," said Eliza, "but"—she pointed to Harry—"I can't sleep nights; I can't rest. Last night I dreamed I saw that man coming into the yard," she said, shuddering.

"Poor child!" said Rachel, wiping her eyes; "but thee mustn't feel so. The Lord hath ordered it so that never hath a fugitive been stolen from our village. I trust thine will not be the first."

The door here opened, and a little short, round, pin-cushiony woman stood at the door, with a cheery, blooming face, like a ripe apple. She was dressed, like Rachel, in sober gray, with the muslin folded neatly across her round, plump little chest.

"Ruth Stedman," said Rachel, coming joyfully forward; "how is thee, Ruth? she said, heartily taking both her hands.

"Nicely," said Ruth, taking off her little drab bonnet, and dusting it with her handkerchief, displaying, as she did so, a round little head, on which the Quaker cap sat with a sort of jaunty air, despite all the stroking and patting of the small fat hands, which were busily applied to arranging it. Certain stray locks of decidedly curly hair, too, had escaped here and there, and had to be coaxed and cajoled into their place again; and then the new comer, who might have been five-and-twenty, turned from the small looking-glass, before which she had been making these arrangements, and looked well pleased,—as most people who looked at her might have been,—for she was decidedly a wholesome, whole-hearted, chirruping little woman, as ever gladdened man's heart withal.

"Ruth, this friend is Eliza Harris; and this is the little boy I told thee of."

“I am glad to see thee, Eliza,—very,” said Ruth, shaking hands, as if Eliza were an old friend she had long been expecting; “and this is thy dear boy,—I brought a cake for him,” she said, holding out a little heart to the boy, who came up, gazing through his curls, and accepted it shyly.

“Where’s thy baby, Ruth?” said Rachel.

“O, he’s coming; but thy Mary caught him as I came in, and ran off with him to the barn, to show him to the children.”

At this moment, the door opened, and Mary, an honest, rosy-looking girl, with large brown eyes, like her mother’s, came in with the baby.

“Ah! ha!” said Rachel, coming up, and taking the great, white, fat fellow in her arms, “how good he looks, and how he does grow!”

“To be sure, he does,” said little bustling Ruth, as she took the child, and began taking off a little blue silk hood, and various layers and wrappers of outer garments; and having given a twitch here, and a pull there, and variously adjusted and arranged him, and kissed him heartily, she set him on the floor to collect his thoughts. Baby seemed quite used to this mode of proceeding, for he put his thumb in his mouth (as if it were quite a thing of course), and seemed soon absorbed in his own reflections, while the mother seated herself, and taking out a long stocking of mixed blue and white yarn, began to knit with briskness.

“Mary, thee’d better fill the kettle, hadn’t thee?” gently suggested the mother.

Mary took the kettle to the well, and soon reappearing, placed it over the stove, where it was soon purring and steaming, a sort of censer of hospitality and good cheer. The peaches, moreover, in obedience to a few gentle whispers from Rachel, were soon deposited, by the same hand, in a stew-pan over the fire.

Rachel now took down a snowy moulding-board, and, tying on an apron, proceeded quietly to making up some biscuits, first saying to Mary,—“Mary, hadn’t thee better tell John to get a chicken ready?” and Mary disappeared accordingly.

“And how is Abigail Peters?” said Rachel, as she went on with her biscuits.

“O, she’s better,” said Ruth; “I was in, this morning; made the bed, tidied up the house. Leah Hills went in, this afternoon, and baked bread and pies enough to last some days; and I engaged to go back to get her up, this evening.”

“I will go in tomorrow, and do any cleaning there may be, and look over the mending,” said Rachel.

“Ah! that is well,” said Ruth. “I’ve heard,” she added, “that Hannah Stanwood is sick. John was up there, last night,—I must go there tomorrow.”

“John can come in here to his meals, if thee needs to stay all day,” suggested Rachel.

“Thank thee, Rachel; will see, tomorrow; but, here comes Simeon.”

Simeon Halliday, a tall, straight, muscular man, in drab coat and pantaloons, and broad-brimmed hat, now entered.

“How is thee, Ruth?” he said, warmly, as he spread his broad open hand for her little fat palm; “and how is John?”

“O! John is well, and all the rest of our folks,” said Ruth, cheerily.

“Any news, father?” said Rachel, as she was putting her biscuits into the oven.

“Peter Stebbins told me that they should be along tonight, with _friends_,” said Simeon, significantly, as he was washing his hands at a neat sink, in a little back porch.

“Indeed!” said Rachel, looking thoughtfully, and glancing at Eliza.

“Did thee say thy name was Harris?” said Simeon to Eliza, as he reentered.

Rachel glanced quickly at her husband, as Eliza tremulously answered “yes;” her fears, ever uppermost, suggesting that possibly there might be advertisements out for her.

“Mother!” said Simeon, standing in the porch, and calling Rachel out.

“What does thee want, father?” said Rachel, rubbing her floury hands, as she went into the porch.

“This child’s husband is in the settlement, and will be here tonight,” said Simeon.

“Now, thee doesn’t say that, father?” said Rachel, all her face radiant with joy.

“It’s really true. Peter was down yesterday, with the wagon, to the other stand, and there he found an old woman and two men; and one said his name was George Harris; and from what he told of his history, I am certain who he is. He is a bright, likely fellow, too.”

“Shall we tell her now?” said Simeon.

“Let’s tell Ruth,” said Rachel. “Here, Ruth,—come here.”

Ruth laid down her knitting-work, and was in the back porch in a moment.

“Ruth, what does thee think?” said Rachel. “Father says Eliza’s husband is in the last company, and will be here tonight.”

A burst of joy from the little Quakeress interrupted the speech. She gave such a bound from the floor, as she clapped her little hands, that two stray curls fell from under her Quaker cap, and lay brightly on her white neckerchief.

“Hush thee, dear!” said Rachel, gently; “hush, Ruth! Tell us, shall we tell her now?”

“Now! to be sure,—this very minute. Why, now, suppose ’t was my John, how should I feel? Do tell her, right off.”

“Thee uses thyself only to learn how to love thy neighbor, Ruth,” said Simeon, looking, with a beaming face, on Ruth.

“To be sure. Isn’t it what we are made for? If I didn’t love John and the baby, I should not know how to feel for her. Come, now do tell her,—do!” and she laid her hands persuasively on Rachel’s arm. “Take her into thy bed-room, there, and let me fry the chicken while thee does it.”

Rachel came out into the kitchen, where Eliza was sewing, and opening the door of a small bed-room, said, gently, “Come in here with me, my daughter; I have news to tell thee.”

The blood flushed in Eliza’s pale face; she rose, trembling with nervous anxiety, and looked towards her boy.

“No, no,” said little Ruth, darting up, and seizing her hands. “Never thee fear; it’s good news, Eliza,—go in, go in!” And she gently pushed her to the door which closed after her; and then, turning round, she caught little Harry in her arms, and began kissing him.

“Thee’ll see thy father, little one. Does thee know it? Thy father is coming,” she said, over and over again, as the boy looked wonderingly at her.

Meanwhile, within the door, another scene was going on. Rachel Halliday drew Eliza toward her, and said, “The Lord hath had mercy on thee, daughter; thy husband hath escaped from the house of bondage.”

The blood flushed to Eliza’s cheek in a sudden glow, and went back to her heart with as sudden a rush. She sat down, pale and faint.

“Have courage, child,” said Rachel, laying her hand on her head. “He is among friends, who will bring him here tonight.”

“Tonight!” Eliza repeated, “tonight!” The words lost all meaning to her; her head was dreamy and confused; all was mist for a moment.

When she awoke, she found herself snugly tucked up on the bed, with a blanket over her, and little Ruth rubbing her hands with camphor. She opened her eyes in a state of dreamy, delicious languor, such as one who has long been bearing a heavy load, and now feels it gone, and would rest. The tension of the nerves, which had never ceased a moment since the first hour of her flight, had given way, and a strange feeling of security and rest came over her; and as she lay, with her large, dark eyes open, she followed, as in a quiet dream, the motions of those about her. She saw the door open into the other room; saw the supper-table, with its snowy cloth; heard the dreamy murmur of the singing tea-kettle; saw Ruth tripping backward and forward, with plates of cake and saucers of preserves, and ever and anon stopping to put a cake into Harry’s hand, or pat his head, or twine his long curls round her snowy fingers. She saw the ample, motherly form of Rachel, as she ever and anon came to the bedside, and smoothed and arranged something about the bedclothes, and gave a tuck here and there, by way of expressing her good-will; and was

conscious of a kind of sunshine beaming down upon her from her large, clear, brown eyes. She saw Ruth's husband come in,—saw her fly up to him, and commence whispering very earnestly, ever and anon, with impressive gesture, pointing her little finger toward the room. She saw her, with the baby in her arms, sitting down to tea; she saw them all at table, and little Harry in a high chair, under the shadow of Rachel's ample wing; there were low murmurs of talk, gentle tinkling of tea-spoons, and musical clatter of cups and saucers, and all mingled in a delightful dream of rest; and Eliza slept, as she had not slept before, since the fearful midnight hour when she had taken her child and fled through the frosty starlight.

She dreamed of a beautiful country,—a land, it seemed to her, of rest,—green shores, pleasant islands, and beautifully glittering water; and there, in a house which kind voices told her was a home, she saw her boy playing, free and happy child. She heard her husband's footsteps; she felt him coming nearer; his arms were around her, his tears falling on her face, and she awoke! It was no dream. The daylight had long faded; her child lay calmly sleeping by her side; a candle was burning dimly on the stand, and her husband was sobbing by her pillow.

The next morning was a cheerful one at the Quaker house. "Mother" was up betimes, and surrounded by busy girls and boys, whom we had scarce time to introduce to our readers yesterday, and who all moved obediently to Rachel's gentle "Thee had better," or more gentle "Hadn't thee better?" in the work of getting breakfast; for a breakfast in the luxurious valleys of Indiana is a thing complicated and multiform, and, like picking up the rose-leaves and trimming the bushes in Paradise, asking other hands than those of the original mother. While, therefore, John ran to the spring for fresh water, and Simeon the second sifted meal for corn-cakes, and Mary ground coffee, Rachel moved gently, and quietly about, making biscuits, cutting up chicken, and diffusing a sort of sunny radiance over the whole proceeding generally. If there was any danger of friction or collision from the ill-regulated zeal of so many young operators, her gentle "Come! come!" or "I wouldn't, now," was quite sufficient to allay the difficulty. Bards have written of the cestus of Venus, that turned the heads of all the world in successive generations. We had rather, for our part, have the cestus of Rachel Halliday, that kept heads from being turned, and made everything go on harmoniously. We think it is more suited to our modern days, decidedly.

While all other preparations were going on, Simeon the elder stood in his shirt-sleeves before a little looking-glass in the corner, engaged in the anti-patriarchal operation of shaving. Everything went on so sociably, so quietly, so harmoniously, in the great kitchen,—it seemed so pleasant to every one to do just what they were doing, there was such an atmosphere of mutual confidence and good fellowship everywhere,—even the knives and forks had a social clatter as they went on to the table; and the chicken and ham had a cheerful and joyous fizzle in the pan, as if they rather enjoyed being cooked than otherwise;—and when George and Eliza and little Harry came out, they met such a hearty, rejoicing welcome, no wonder it seemed to them like a dream.

At last, they were all seated at breakfast, while Mary stood at the stove, baking griddle-cakes, which, as they gained the true exact golden-brown tint of perfection, were transferred quite handily to the table.

Rachel never looked so truly and benignly happy as at the head of her table. There was so much motherliness and full-heartedness even in the way she passed a plate of cakes or poured a cup of coffee, that it seemed to put a spirit into the food and drink she offered.

It was the first time that ever George had sat down on equal terms at any white man's table; and he sat down, at first, with some constraint and awkwardness; but they all exhaled and went off like fog, in the genial morning rays of this simple, overflowing kindness.

This, indeed, was a home,—_home_,—a word that George had never yet known a meaning for; and a belief in God, and trust in his providence, began to encircle his heart, as, with a golden cloud of protection and confidence, dark, misanthropic, pining atheistic doubts, and fierce despair, melted away before the light of a living Gospel, breathed in living faces, preached by a thousand unconscious acts of love and good will, which, like the cup of cold water given in the name of a disciple, shall never lose their reward.

"Father, what if thee should get found out again?" said Simeon second, as he buttered his cake.

"I should pay my fine," said Simeon, quietly.

"But what if they put thee in prison?"

"Couldn't thee and mother manage the farm?" said Simeon, smiling.

“Mother can do almost everything,” said the boy. “But isn’t it a shame to make such laws?”

“Thee mustn’t speak evil of thy rulers, Simeon,” said his father, gravely. “The Lord only gives us our worldly goods that we may do justice and mercy; if our rulers require a price of us for it, we must deliver it up.

“Well, I hate those old slaveholders!” said the boy, who felt as unchristian as became any modern reformer.

“I am surprised at thee, son,” said Simeon; “thy mother never taught thee so. I would do even the same for the slaveholder as for the slave, if the Lord brought him to my door in affliction.”

Simeon second blushed scarlet; but his mother only smiled, and said, “Simeon is my good boy; he will grow older, by and by, and then he will be like his father.”

“I hope, my good sir, that you are not exposed to any difficulty on our account,” said George, anxiously.

“Fear nothing, George, for therefore are we sent into the world. If we would not meet trouble for a good cause, we were not worthy of our name.”

“But, for _me_,” said George, “I could not bear it.”

“Fear not, then, friend George; it is not for thee, but for God and man, we do it,” said Simeon. “And now thou must lie by quietly this day, and tonight, at ten o’clock, Phineas Fletcher will carry thee onward to the next stand,—thee and the rest of thy company. The pursuers are hard after thee; we must not delay.”

“If that is the case, why wait till evening?” said George.

“Thou art safe here by daylight, for every one in the settlement is a Friend, and all are watching. It has been found safer to travel by night.”

CHAPTER XIV Evangeline

“A young star! which shone O’er life—too sweet an image, for such glass! A lovely being, scarcely formed or moulded; A rose with all its sweetest leaves yet folded.”

The Mississippi! How, as by an enchanted wand, have its scenes been changed, since Chateaubriand wrote his prose-poetic description of it,[1] as a river of mighty, unbroken solitudes, rolling amid undreamed wonders of vegetable and animal existence.

[1] _In Atala; or the Love and Constantcy of Two Savages in the Desert_ (1801) by Francois Auguste Rene, Vicomte de Chateaubriand (1768-1848).

But as in an hour, this river of dreams and wild romance has emerged to a reality scarcely less visionary and splendid. What other river of the world bears on its bosom to the ocean the wealth and enterprise of such another country?—a country whose products embrace all between the tropics and the poles! Those turbid waters, hurrying, foaming, tearing along, an apt resemblance of that headlong tide of business which is poured along its wave by a race more vehement and energetic than any the old world ever saw. Ah! would that they did not also bear along a more fearful freight,—the tears of the oppressed, the sighs of the helpless, the bitter prayers of poor, ignorant hearts to an unknown God—unknown, unseen and silent, but who will yet “come out of his place to save all the poor of the earth!”

The slanting light of the setting sun quivers on the sea-like expanse of the river; the shivery canes, and the tall, dark cypress, hung with wreaths of dark, funereal moss, glow in the golden ray, as the heavily-laden steamboat marches onward.
